GREAT TREASURY OF WESTERN THOUGHT

A Compendium of
Important Statements on Man and
His Institutions by the
Great Thinkers in Western History

EDITED BY
Mortimer J. Adler & Charles Van Doren

R. R. Bowker Company
NEW YORK & LONDON, 1977

For

Elizabeth, John, Douglas, and Philip

Preface

In the field of standard reference materials—dictionaries, encyclopedias, books of quotations, and the like—a mark of rare distinction belongs to those that not only perform their reference function efficiently but also serve another important purpose as well. By this criterion the great *Oxford English Dictionary* and the new Fifteenth Edition of *Encyclopaedia Britannica* stand out among all other works in the categories to which they belong. Because it is constructed on historical principles, the Oxford English Dictionary not only enables its user to look up the meaning, spelling, etymology, or pronunciation of a word, but also to descry the history of the word, amply documented by statements and examples that exhibit the growth and alteration of its significance. Because it is accompanied by a systematic outline of human knowledge that serves as a topical guide to its contents, the new *Encyclopaedia Britannica* — "Britannica 3"—not only enables its user to look up single items of information or obtain knowledge about a single subject, but also to pursue in a systematic fashion the sustained study of almost any field of subject matter.

The editors believe that *Great Treasury of Western Thought* will be recognized, in the category of books of quotations, as possessing the mark of rare distinction that makes the Oxford English Dictionary stand out among dictionaries and the new Encyclopedia Britannica among

encyclopedias. Its alphabetical Subject and Proper Name Index, containing upwards of 50,000 entries, enables it to serve as an efficient reference book, in which particular passages on particular subjects can be looked up. In addition, its carefully constructed Author Index allows the reader to discover whether favorite works or parts of works by particular authors have been mined for quotation, and where such quotations appear. At the same time, its organization, which consists of twenty chapters, each concerned with a set of related great ideas, totaling 127 sections, each prefaced by explanatory text, makes *Great Treasury of Western Thought* a book to be read for enjoyment and instruction as well as a reference book.

Great Treasury of Western Thought can be read with both enjoyment and profit primarily for two reasons. One has to do with its intellectual progenitor, as it were. The other has to do with the criteria employed by the editors in their choice of passages to be quoted.

When, just a quarter of a century ago, Great Books of the Western World was published, that collection of the most worthwhile books to be read both for pleasure and enlightenment was accompanied by an innovation that enabled the set to be used also as a reference work. The Syntopicon, or topical guide to passages in the great books wherein are discussed the fundamental ideas in the tradition of Western thought, allowed the user to look up the whole discussion of an idea or of one or more topics under it, as well as to be entertained or instructed by reading the great works contained in the set. The Syntopicon was hailed as a reference book in the sphere of ideas comparable to a dictionary in the sphere of words and an encyclopedia in the sphere of facts.

The publication of *Great Treasury of Western Thought* is a fitting and proper celebration of the twenty-fifth anniversary of the publication in 1952 of Great Books of the Western World and of its Syntopicon. Without the years of intellectual labor and the 400,000 man-hours of reading that produced the Syntopicon, the present work would probably not have been possible. In fact, without the Syntopicon in existence, both as a comprehensive chart of the great ideas in Western thought and as a systematic guide to their discussion in the great books, the present work might never have been conceived; and, even if it had been conceived, it could not have been produced with the thoroughness that the conception deserves.

This leads us to the second reason for this book's special character. Other books of quotations—among them are some notable works of recognized excellence—consist mainly of short passages, often no more than a line or two. These passages are often well-known or familiar; they have been quoted again and again; they are memorable and should be remembered, but the individual who fails to remember them must have recourse to such books of quotations in order to recollect and quote them. The purpose behind the desire accurately to recall such memorable quotations is usually to enliven the style of a speech to be delivered or an essay to be written.

However, it is a striking and notable fact about Great Treasury of Western Thought that many if not most of the passages quoted in it are not either generally familiar or readily memorable. For one thing, the quoted passages are typically longer than those that appear in other books of quotations, running to more than 100 words on the average. For another thing, as many as three-quarters of the passages selected for quotation do not appear in other current books

of quotations and may indeed never have appeared in such books, because the principle of selection that guided the editors was that each passage quoted should be a seminal statement about one of the great ideas in the tradition of Western thought. If the passage was either memorable or familiar, so much the better; the editors insisted that each passage had to be interesting and important in its own right; but they also demanded that it should be significant in relation to other passages on the same subject.

In a sense, then, the passages here assembled and quoted from the great books are precisely those to which reference is made in the Syntopicon; and Great Treasury of Western Thought is therefore a concrete realization of the Syntopicon and may satisfy those readers—not a few—who have regretted that the Syntopicon was "only" an index and did not contain within its pages the passages to which it referred. In another sense the passages from the great books that are gathered here are the very heart and soul of the Western tradition, that small part of it that will almost certainly survive any disaster, any holocaust, that can be imagined in the future. All of the great books, in their entirety, may not survive; many great works have already been lost in the vicissitudes of human history; but the essential things that the great books say, the irrecoverable insights that they offer us, are more likely to endure because they are collected here, "that he who runs may read."

Of course, not all of the passages referred to by the Syntopicon are quoted here; many such passages are inappropriate for a general audience (for example, technical discourses in science or philosophy), and others are too long. Nor, indeed, are the writers from whose works quotations were selected limited to those appearing in Great Books of the Western World, Almost twice as many other

writers are included, and they are drawn not only from the literature of classical antiquity and the Middle Ages, but also from the literature of modern times. Consulting the Author Index (pp. 1431-1449) and examining the Contents on pp. vii-xi should enable anyone quickly to appraise the scope and the characteristics of the present work, which will distinguish it among all other books of quotations.

The possessor of *Great Treasury of Western Thought* may still wish to resort to those other books of quotations for the special purposes they serve—as aids to the memory or as stylistic aids. It is not the memory of the user that this work seeks to stimulate, but rather the user's intellect and imagination—the user's understanding and intuition of the greatest thought on the most important subjects. It is not the reader's style, either in speech or writing, but his mind, that *Great Treasury of Western Thought* aims to enliven, and enlighten as well in the process.

The editors of *Great Treasury of Western Thought* have been reading and teaching the great books, and other works quoted in this anthology, for many years—one of them for more than fifty years, the other for more than thirty. Nevertheless, they confess their own delight and fascination at being able—for the first time—to read in appropriate sequence (for the most part chronological) the passages that are here collected under each of the 127 subject headings that constitute the divisions of this book. They have found such reading to be both highly instructive and immensely enjoyable. They can think of nothing simpler and more truthful to say by way of recommending this book to those for whom they made it—as a work to read with pleasure, to dwell on, to learn from, as well as to refer to when that need arises. The more time that is spent with it, the more valuable it will become, for it is, literally, a compact treasury of the

best thinking and deepest wisdom of the West. It reflects and epitomizes the intellectual tradition on which every cultivated person must build.

The editors wish to express their indebtedness to the many persons who worked on this book over a period of almost a quarter of a century. They especially wish to thank three friends without whose help the book could not have come to be: Marlys Allen, George Ducas, and Wayne Moquin.

Mortimer J. Adler
Charles Van Doren

Chapter 1

MAN

Chapter 1 is divided into nine sections: 1.1 Man in the Universe: The Grandeur and Misery of Man; 1.2 The Human Condition; 1.3 The Ages of Man; Young and Old; 1.4 Self-Knowledge and Self-Love; 1.5 Honor, Reputation, and Fame or Glory; 1.6 Human Greatness: The Hero; 1.7 Woman and Man; 1.8 Life and Death: The Fear of Death; and 1.9 Suicide.

The consideration of man—of human nature, human life, and the human condition—begins in this opening chapter but it does not end here. It is inextricably connected with almost all of the subjects treated in the chapters that follow, where passages can be found that throw light on the nature, powers, and propensities of man. The consideration of man's place in the universe recurs in Chapter 20 on Religion and in Chapter 19 on Nature and the Cosmos; the discussion of the human condition recurs in Chapter 9 on Ethics, Chapter 10 on Politics, Chapter 11 on Economics, and Chapter 15 on History; the treatment of young and old and of women in relation to men will also be found in Chapter 2 on Family and in several sections of Chapter 3 on Love; certain aspects of man's concern with honor and reputation as well as fame and shame will also be found in Chapter 4 on Emotion, especially the sections dealing with desire, ambition, pride and humility, as well as in sections of Chapter 9 on Ethics dealing with virtue and vice; the consideration of great men and the heroic recurs in the section of Chapter 9 that treats

courage and cowardice; and the discussion of the fear of death and of suicide recurs in other contexts in certain sections of Chapter 20 on Religion.

Of all the subjects to which chapters of this book are devoted, the subject of this opening chapter—the human species—is least in need of prefatory elucidation. In spite of all the different and often conflicting views of human nature, of man's relation to the rest of the universe, and of man's strengths and weaknesses, everyone has the same object in mind when using the word "man" in this general sense, and there is almost universal agreement about the range and significance of the questions that can be asked about it. In these respects, man comes near to being an ideal subject of controversy, for the differences of opinion can almost always be brought into sharp focus. The passages assembled in this chapter indicate and often epitomize the main lines in the age-old and continuing controversy about man. The issues in that controversy are as multifarious as the sections of this chapter.

...

1.1 Man in the Universe

The Grandeur and Misery of Man

What man is and how he differs from everything else in the universe are questions that call for definitions and comparisons. Many of the texts presented in this section formulate definitions of man or state the respects in which man has certain unique properties or attributes that

differentiate him from everything else. The latter are, of course, balanced by statements to the opposite effect—statements that point out the respects in which man is indistinguishable from other things except, perhaps, in the degree to which he possesses properties that are commonly shared by all.

However man is defined, and in whatever manner he is said to differ from or resemble other things, questions arise concerning his relation to them—especially his relation to other animals, to God or the gods, and to nature as a whole. The passages providing diverse and conflicting answers to such questions are plentiful. Because the relation of man to other animals, as well as the contrast between men and other animals, is of such central interest, quotations may not always mention animals in relation to men, or men in relation to animals, but they are almost always taken from contexts in which that is the subject of discussion.

Dominating the consideration of man's place in the universe, from antiquity on, is the view that man is at the apex of creation or at the center of the cosmos and that everything else is ordered to his good, subservient to his needs, and subject to his dominion. That view becomes less prevalent in modern times, and the reader will find a number of quotations in which it is rejected as an illusory conceit on man's part.

There are other quotations that tend to support the latter view by their emphasis on the weakness or puniness of man—how he is a plaything of the gods, a flitting shadow on the surface of the cosmos, a thing of the moment, here today and gone tomorrow. Some writers express cynical delight in depicting man as the most miserable of creatures, and enjoy deflating his ego by satirical barbs that puncture his self-esteem. These are, in turn, balanced by many quotations in

the opposite vein—passages that put man on a pedestal, see him as having a tincture of the divine, or conceive his special grandeur in terms of the place he occupies in the cosmic scale, halfway between the beasts and the angels or on the borderline between the material and the spiritual worlds. Man is a connecting link between them.

■ ■ ■

1 And God said, let us make man in our image, after our likeness; and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth.

So God created man in his own image, in the image of God created he him; male and female created he them.

And God blessed them, and God said unto them, Be fruitful, and multiply, and replenish the earth, and subdue it: and have dominion over the fish of the sea, and over the fowl of the air, and over every living thing that moveth upon the earth.

Geneses 1:26-28

2 Then (he Lord answered Job out of the whirlwind, and said. Who is this that darkeneth counsel by words without knowledge?

Gird up now thy loins like a man; for I will demand of thee, and answer thou me.

Where wast thou when I laid the foundations of the earth? declare, if thou hast understanding.

Who hath laid the measures thereof, if thou knowest?
or who hath stretched the line upon it?

Whereupon are the foundations thereof fastened? or
who laid the corner stone thereof;

When the morning stars sang together, and all the
sons of God shouted for joy?

Or who shut up the sea with doors, when it brake forth,
as if it had issued out of the womb?

When I made the cloud the garment thereof, and thick
darkness a swaddling band for it.

And brake up for it my decreed place, and set ban and
doors,

And said, Hitherto shall thou come, but no further: and
here shall thy proud waves be stayed?

Hast thou commanded the morning since thy days;
and caused the dayspring to know his place;

That it might take hold of the ends of the earth, that
the wicked might be shaken out of it?

It is turned as clay to the seal; and they stand as a
garment.

And from the wicked their light is withholden, and the
high arm shall be broken.

Hast thou entered into the springs of the sea? or hast
thou walked in the search of the depth?

Have the gates of death been opened unto thee? or
hast thou seen the doors of the shadow of death?

Hast thou perceived the breadth of the earth? declare
If thou knowest it all.

Where is the way where light dwelleth? and as for
darkness, where is the place thereof,

That thou shouldest lake it to the bound thereof, and
that thou shouldest know the paths to the house thereof?

Knowest thou it, because thou wast then born? or or
because the number of thy days is great?

Hast thou entered into the treasures of the snow? or
hast thou seen the treasures of the hail,

Which I have reserved against the time of trouble,
against the day of battle and war?

By what way is the light parted, which scattereth the
cast wind upon the earth?

Who hath divided a watercourse for the overflowing of
waters, or a way for the lightning of thunder;

To cause it to rain on the earth, where no man is; on
the wilderness, wherein there is no man;

To satisfy the desolate and waste ground; and to cause
the bud of the tender herb to spring forth?

Hath the rain a father? or who hath begotten the drops
of dew?

Out of whose womb came the ice? and the hoary' frost
of heaven, who hath gendered it?

The waters are hid as with a stone, and the face of the
deep is frozen.

Canst thou bind the sweet influences of Plci-a-dcs, or
loose the bands of O-ri-on?

Canst thou bring forth Marzz-a-roth in his season? or
canst thou guide Arc-tu-rus with his sons?

Knowest thou the ordinances of heaven? canst thou
set the dominion thereof in the earth?

Canst thou lift up thy voice to the clouds, that
abundance of waters may cover thee?

Canst thou send lightnings, that they may go, and say
unto thee, Here we are?

Who hath put wisdom in the inward parts? or who hath
given understanding to the heart?

Who can number the clouds in wisdom? or who can
stay the bottles of heaven,

When the dust groweth into hardness, and the clods
cleave fast together?

Wilt thou hunt the prey for the lion? or fill (he appetite
of the young lions,

When they couch in their dens, and abide in the
covert to lie in wait?

Who provideth for the raven his food? when his young
ones cry unto God, they wander for lack of meat.

Knowest thou the time when the wild goats of the rock
bring forth? or canst thou mark when the hinds do calve?

Canst thou number the months that they fulfil? or
knowest thou the time when they bring forth?

They bow themselves, they bring forth their young
ones, they cast out their sorrows.

Their young ones are in good liking, they grow up with
corn; they go forth, and return not unto them.

Who hath sent out the wild ass free? or who hath
loosed the bands of the wild ass?

Whose house I have made the wilderness, and the
barren land his dwellings.

He scorneth the multitude of the city, neither
regardeth he the crying of the driver.

The range of the mountains is his pasture, and he
searcheth after every green thing.

Will the unicorn be willing to serve thee, or abide by
thy crib?

Canst thou bind the unicorn with his band in the
furrow? or will he harrow the valleys after thee?

Wilt thou trust him, because his strength is great? or
wilt thou leave thy labour to him?

Wilt thou believe him, that he will bring home thy seed, and gather it into thy barn?

Gavest thou the goodly wings unto the peacocks? or wings and feathers unto the ostrich?

Which leaveth her eggs in the earth, and warmeth them in dust,

And forgetteth that the foot may crush them, or that the wild beast may break them.

She is hardened against her young ones, as though they were not her's: her labour is in vain without fear;

Because God hath deprived her of wisdom, neither hath he imparted to her understanding.

What time she lifteth up herself on high, she scorneth the horse and his rider.

Hast thou given the horse strength? hast thou clothed his neck with thunder?

Canst thou make him afraid as a grasshopper? the glory of his nostrils is terrible.

He paweth in the valley, and rejoiceth in his strength: he goeth on to meet the armed men.

He mocketh at fear, and is not affrighted; neither turneth he back from the sword.

The quiver rattleth against him, the glittering spear and the shield.

He swalloweth the ground with fierceness and rage: neither believeth he that it is the sound of the trumpet.

He saith among the trumpets, Ha, ha; and he smelleth the battle afar off, the thunder of the captains, and the shouting.

Doth the hawk fly by thy wisdom, and stretch her wings toward the south?

Doth the eagle mount up at thy command, and make her nest on high?

She dwelleth and abideth on the rock, upon the crag
of the rock, and the strong place.

From thence she seeketh the prey, and her eyes
behold afar off.

Her young ones also suck up blood: and where the
slain are, there is she.

Moreover the Lord answered Job, and said,
Shall he that contendeth with the Almighty instruct
him? he that reproveth God, let him answer it.

Then Job answered the Lord, and said.
Behold, I am vile.

Job 38-40:4

3 O Lord our Lord, how excellent is thy name in all the earth!
who hast set thy glory above the heavens.

Out of the mouth of babes and sucklings hast thou
ordained strength because of thine enemies, that thou
mightest still the enemy and the avenger.

When I consider thy heavens, the work of thy fingers,
the moon and the stars, which thou hast ordained;

What is man, that thou art mindful of him? and the
son of man, that thou visitest him?

For thou hast made him a little lower than the angels,
and hast crowned him with glory and honour.

Thou madest him to have dominion over the works of
thy hands; thou hast put all things under his feet:

All sheep and oxen, yea, and the beasts of the field;

The fowl of the air, and the fish of the sea, and
whatsoever passeth through the paths of the seas.

O Lord our Lord, how excellent is thy name in all the
earth!

Psalms 8:1-9

4 As he [Zeus] watched the mourning horses the son of Kronos pitied them, and stirred his head and spoke to his own spirit:

‘Poor wretches, why then did we ever give you to the lord Pelcus, a mortal man, and you yourselves are immortal and ageless?

Only so that among unhappy men you also might be grieved?

Since among all creatures that breathe on earth and crawl on it there is not anywhere a thing more dismal than man is.’

Homer, Iliad, XVII, 441

5 *Odysseus*. Of mortal creatures, all that breathe and move, earth bears none frailer than mankind.

What man believes in woe to come, so long as valor and tough knees are supplied him by the gods? But when the gods in bliss bring miseries on, then willy-nilly, blindly, he endures.

Our minds are as the days arc, dark or bright, blown over by the father of gods and men.

Homer, Odyssey, XVIII, 131

6 *Prometheus*. Hear what troubles there were among men, how I found them witless and gave them the use of their wits and made them masters of their minds. I will tell you this, not because I would blame men, but to explain the goodwill of my gift. For men at first had eyes but saw to no purpose; they had ears but did not hear. Like the shapes of dreams they dragged through their long lives and handled all things in bewilderment and confusion.

They did not know of building houses with bricks to face the sun; they did not know how to work in wood. They lived like swarming ants in holes in the ground, in the sunless caves of the earth. For them there was no secure token by which to tell winter nor the flowering spring nor the summer with its crops; all their doings were indeed without intelligent calculation until I showed them the rising of the stars, and the settings, hard to observe. And further I discovered to them numbering, pre-eminent among subtle devices, and the combining of letters as a means of remembering all things, the Muses' mother, skilled in craft. It was I who first yoked beasts for them in the yokes and made of those beasts the slaves of trace chain and pack saddle that they might be man's substitute in the hardest tasks; and I harnessed to the carriage, so that they loved the rein, horses, the crowning pride of the rich man's luxury. It was I and none other who discovered ships, the sail-driven wagons that the sea buffets. Such were the contrivances that I discovered for men.

Aeschylus, Prometheus Bound, 441

7 *Chorus.* Many the wonders but nothing walks stranger than man.

This thing crosses the sea in the winter's storm, making his path through the roaring waves.

And she, (he greatest of gods, the earth— ageless she is, and unwearied—he wears her away as the ploughs go up and down from year to year and his mules turn up the soil.

Gay nations of birds he snares and leads, wild beast tribes and the salty brood of the sea, with the twisted mesh of his nets, this clever man. He controls with craft

the beasts of the open air, walkers on hills. The horse with his shaggy mane he holds and harnesses, yoked about the neck, and the strong bull of the mountain.

Language, and thought like the wind and the feelings that make the town, he has taught himself, and shelter against the cold, refuge from rain. He can always help himself.

He faces no future helpless. There's only death that he cannot find an escape from. He has contrived refuge from illnesses once beyond all cure.

Clever beyond all dreams the inventive craft that he has which may drive him one time or another to well or ill.

Sophocles, Antigone, 332

8 *Chorus*. Ye men who are dimly existing below, who perish and fade as the leaf,

Pale, weebegone, shadowlike, spiritless folk, life feeble and wingless and brief,

Frail castings in clay, who are gone in a day, like a dream full of sorrow and sighing.

Come listen with care to the Birds of the air, the ageless, the deathless, who flying

In the joy and the freshness of Ether, are wont to muse upon wisdom undying.

Aristophanes, Birds, 685

9 *Timaeus*. Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe addressed them in these words: "Gods, children of gods, who are my works, and of

whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions:—Three tribes of mortal beings remain to be created— without them the universe will be incomplete, for it will not contain every' kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and you—of that divine part I will myself sow the seed, and having made a beginning, I will hand the work over to you. And do ye then interweave the mortal with the immortal, and make and beget living creatures, and give them food, and make them to grow, and receive them again in death."

Thus he spake, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls

equal in number to the stars, and assigned each soul to a star; and having there placed them as in a chariot, he showed them the nature of the universe, and declared to them the laws of destiny, according to which their first birth would be one and the same for all,—no one should suffer a disadvantage at his hands; they were to be sown in the instruments of time severally adapted to them, and to come forth the most religious of animals; and as human nature was of two kinds, the superior race would hereafter be called man.

Plato, Timaeus, 41A

- 10 Man, he [Protagoras] says, is the measure of all things, of the existence of things that are, and of the non-existence of things that are not.

Plato, Theaetetus, 152A

- 11 *Athenian Stranger.* Man ... is a tame or civilized animal; nevertheless, he requires proper instruction and a fortunate nature, and then of all animals he becomes the most divine and most civilized; but if he be insufficiently or ill-educated he is the most savage of earthly creatures.

Plato, Laws, VI, 766A

- 12 Of the psychic powers... some kinds of living things... possess all, some less than all, others one only. Those we have mentioned are the nutritive, the appetitive, the sensory, the locomotive, and the power of thinking. Plants have none but the first, the nutritive, while another order of living things has this plus the sensory. If any order of living things has the sensory it must also have the appetitive; for appetite is the genus of which

desire, passion, and wish are the species; now all animals have one sense at least, viz. touch.... Certain kinds of animals possess in addition the power of locomotion, and still another order of animate beings, that is, man and possibly another order like man or superior to him, the power of thinking, that is, mind.

Aristotle, On the Soul, 414a28

- 13 Taking the size of his body into account, man emits more sperm than any other animal.

Aristotle, History of Animals, 523a15

- 14 In the great majority of animals there are traces of psychical qualities or attitudes, which qualities are more markedly differentiated in the case of human beings. For just as we pointed out resemblances in the physical organs, so in a number of animals we observe gentleness or fierceness, mildness or cross temper, courage, or timidity, fear or confidence, high spirit or low cunning, and, with regard to intelligence, something equivalent to sagacity. Some of these qualities in man, as compared with the corresponding qualities in animals, differ only quantitatively; that is to say, a man has more or less of this quality, and an animal has more or less of some other; other qualities in man are represented by analogous and not identical qualities; for instance, just as in man we find knowledge, wisdom, and sagacity, so in certain animals there exists some other natural potentiality akin to these. The truth of this statement will be the more clearly apprehended if we have regard to the phenomena of childhood: for in children may be observed the traces and seeds of what will one day be settled

psychological habits, though psychologically a child hardly differs for the time being from an animal; so that one is quite justified in saying that, as regards man and animals, certain psychical qualities are identical with one another, whilst others resemble, and others are analogous to, each other.

Aristotle, History of Animals, 588a17

- 15 Of all living beings with which we are acquainted man alone partakes of the divine, or at any rate partakes of it in a fuller measure than the rest.

Aristotle, Parts of Animals, 656a8

- 16 That man alone is affected by tickling is due firstly to the delicacy of his skin, and secondly to his being the only animal that laughs.

Aristotle, Parts of Animals, 673a7

- 17 Of all animals man alone stands erect, in accordance with his god-like nature and essence. For it is the function of the god-like to think and to be wise; and no easy task were this under the burden of a heavy body, pressing down from above and obstructing by its weight the motions of the intellect and of the general sense.

Aristotle, Parts of Animals, 686a27

- 18 It is the opinion of Anaxagoras that the possession of... hands is the cause of man being of all animals the most intelligent. But it is more rational to suppose that his endowment with hands is the consequence rather than the cause of his superior intelligence. For the hands are instruments or organs, and the invariable plan of nature

in distributing the organs is to give each to such animal as can make use of it; nature acting in this matter as any prudent man would do. For it is a better plan to take a person who is already a flute-player and give him a flute, than to take one who possesses a flute and teach him the art of flute-playing. For nature adds that which is less to that which is greater and more important, and not that which is more valuable and greater to that which is less. Seeing then that such is the better course, and seeing also that of what is possible nature invariably brings about the best, we must conclude that man does not owe his superior intelligence to his hands, but his hands to his superior intelligence. For the most intelligent of animals is the one w'ho would put the most organs to use; and the hand is not to be looked on as one organ but as many; for it is, as it were, an instrument for further instruments. This instrument, therefore,— the hand—of all instruments the most variously serviceable, has been given by nature to man, the animal of all animals the most capable of acquiring the most varied handicrafts.

Aristotle, Parts of Animals, 687a8

- 19 No one would choose the whole world on condition of being alone, since man is a political creature and one whose nature is to live with others.

Aristotle, Ethics, 1169b18

- 20 That which is proper to each thing is by nature best and most pleasant for each thing; for man, therefore, the life according to reason is best and pleasantest, since reason more than anything else is man.

Aristotle, Ethics, 1178a5

21 While the whole life of the gods is blessed, and that of men too in so far as some likeness of such activity belongs to them, none of the other animals is happy, since they in no way share in contemplation.

Aristotle, Ethics, 1178b25

22 Man, when perfected, is the best of animals, but, when separated from law and justice, he is the worst of all; since armed injustice is the more dangerous, and he is equipped at birth with arms, meant to be used by intelligence and virtue, which he may use for the worst ends. Wherefore, if he have not virtue, he is the most unholy and the most savage of animals, and the most full of lust and gluttony.

Aristotle, Politics, 1253a31

23 If nature makes nothing incomplete, and nothing in vain, the inference must be that she has made all animals for the sake of man.

Aristotle, Politics, 1236b20

24 Imitation is natural to man from childhood, one of his advantages over the lower animals being this, that he is the most imitative creature in the world, and learns at first by imitation.

Aristotle, Potties, 1448b6

25 The most evident difference between man and animal is this: the beast, in as much as it largely motivated by the senses and with little perception of the past or future, lives only for the present. But man, because he is endowed with reason by which he is able to perceive

relationships, sees the causes of things, understands the reciprocal nature of cause and effect, makes analogies, easily surveys the whole course of his life, and makes the necessary preparations for its conduct.

Cicero, De Officiis, I, 4

26 In every inquiry about duty we must keep in mind the natural superiority of men over cattle and other animals. Animals deal only in sensual pleasure and are by instinct impelled to seek it. But the mind of man is nurtured by study and contemplation. He is always investigating or doing something. He is captivated by the pleasures of seeing and hearing.

Cicero, Dt Officiis, I, 30

27 Suppose he [a man] has a beautiful home and a handsome collection of servants, a lot of land under cultivation and a lot of money out at interest; not one of these things can be said to be in him— they are just things around him. Praise in him what can neither be given nor snatched away, what is peculiarly a man's. You ask what that is? It is his spirit, and the perfection of his reason in that spirit. For man is a rational animal. Man's ideal state is realized when he has fulfilled the purpose for which he was born.

Seneca, Letters to Lucilius, 41

28 And so it is written, The first man Adam was made a living soul; the last Adam was made a quickening spirit.

Howbeit that was not first which is spiritual, but that which is natural; and afterward that which is spiritual.

The first man is of the earth, earthy: the second man is the Lord from heaven.

As is the earthy, such are they also that are earthy:
and as is the heavenly, such are they also that are
heavenly.

And as we have borne the image of the earthy, we
shall also bear the image of the heavenly.

I Corinthians, 15:45-49

29 Man is the only animal that knows nothing, and can learn
nothing without being taught. He can neither speak nor
walk nor eat, nor do anything at the prompting of nature,
but only weep.

Pliny the Elder, Natural History, VII, 77

30 No beast is more savage than man when possessed with
power answerable to his rage.

Plutarch, Cicero

31 God had need of irrational animals to make use of
appearances, but of us to understand the use of
appearances. It is therefore enough for them to eat and to
drink, and to sleep and to copulate, and to do all the
other things which they severally do. But for us, to whom
He has given also the intellectual faculty, these things
are not sufficient; for unless we act in a proper and
orderly manner, and conformably to the nature and
constitution of each thing, we shall never attain our true
end. For where the constitutions of living beings are
different, there also the acts and the ends are different. In
those animals, then, whose constitution is adapted only
to use, use alone is enough: but in an animal which has
also the power of understanding the use, unless there be
the due exercise of the understanding, he will never

attain his proper end. Well then God constitutes every animal, one to be eaten, another to serve for agriculture, another to supply cheese, and another for some like use; for which purposes what need is there to understand appearances and to be able to distinguish them? But God has introduced man to be a spectator of God and of His works; and not only a spectator of them, but an interpreter. For this reason it is shameful for man to begin and to end where irrational animals do, but rather he ought to begin where they begin, and to end where nature ends in us; and nature ends in contemplation and understanding.

Epictetus, Discourses, I, 6

- 32 If a thing is difficult to be accomplished by thyself, do not think that it is impossible for man: but if anything is possible for man and conformable to his nature, think that this can be attained by thyself too.

Marcus Aurelius, Meditations, VI, 19

- 33 If the gods have determined about me and about the things which must happen to me, they have determined well, for it is not easy even to imagine a deity without forethought; and as to doing me harm, why should they have any desire towards that? For what advantage would result to them from this or to the whole, which is the special object of their providence? But if they have not determined about me individually, they have certainly determined about the whole at least, and the things which happen by way of sequence in this general arrangement I ought to accept with pleasure and to be content with them. But if they determine about nothing—

which it is wicked to believe, or if we do believe it, let us neither sacrifice nor pray nor swear by them nor do anything else which we do as if the gods were present and lived with us—but if however the gods determine about none of the things which concern us, I am able to determine about myself, and I can inquire about that which is useful; and that is useful to every man which is conformable to his own constitution and nature.

Marcus Aurelius, Meditations, VI, 44

34 Now in every living being the upper parts—head, face—are the most beautiful, the mid and lower members inferior. In the Universe the middle and lower members are human beings; above them, the Heavens and the Gods that dwell there; these Gods with the entire circling expanse of the heavens constitute the greater part of the Kosmos: the earth is but a central point, and may be considered as simply one among the stars. Yet human wrong-doing is made a matter of wonder; we are evidently asked to take humanity as the choice member of the Universe, nothing wiser existent! But humanity, in reality, is poised midway between gods and beasts, and inclines now to the one order, now to the other; some men grow like to the divine, others to the brute, the greater number stand neutral.

Plotinus, Third Ennead, 11, 8

35 Man has come into existence, a living being but not a member of the noblest order; he occupies by choice an intermediate rank; still, in that place in which he exists. Providence does not allow him to be reduced to nothing; on the contrary he is ever being led upwards by all those

varied devices which the Divine employs in its labour to increase the dominance of moral value. The human race, therefore, is not deprived by Providence of its rational being; it retains its share, though necessarily limited, in wisdom, intelligence, executive pow'-er and right doing, the right doing, at least, of individuals to each other—and even in wronging others people think they are doing right and only paying what is due.

Man is, therefore, a noble creation, as perfect as the scheme allows; a part, no doubt, in the fabric of the All, he yet holds a lot higher than that of all the other living things of earth,

Plotinus, Third Ennead, II, 9

- 36 How much human nature loves the knowledge of its existence, and how it shrinks from being deceived, will be sufficiently understood from this fact, that every man prefers to grieve in a sane mind, rather than to be glad in madness. And this grand and wonderful instinct belongs to men alone of all animals; for, though some of them have keener eyesight than ourselves for this world's light, they cannot attain to that spiritual light with which our mind is somehow irradiated, so that we can form right judgments of all things.

Augustine, City of God, XI, 27

- 37 God created only one single man, not, certainly, that he might be a solitary, bereft of all society, but that by this means the unity of society and the bond of concord might be more effectually commended to him, men being bound together not only by similarity of nature, but by family affection. And indeed He did not even create the

woman that was to be given him as his wife, as he created the man, but created her out of the man, that the whole human race might derive from one man.

Augustine, City of God, XII, 21

38 Even in the body, though it dies like that of the beasts, and is in many ways weaker than theirs, what goodness of God, what providence of the great Creator, is apparent! The organs of sense and the rest of the members, are not they so placed, the appearance, and form, and stature of the body as a whole, is it not so fashioned as to indicate that it was made for the service of a reasonable soul? Man has not been created stooping towards the earth, like the irrational animals; but his bodily form, erect and looking heavenwards, admonishes him to mind the things that are above.

Augustine, City of God, XXII. 24

39 the saying that man and animals have a like beginning in generation is true of the body. for all animals alike are made of earth. But it is not true of the soul. For the souls of brutes are produced by some power of the body, whereas the human soul is produced by God.

Aquinas, Summa Theologica, I, 75, G

40 The modes of living are distinguished according to the degrees of living things. There are some living things in which there exists only vegetative power, as the plants. There are others in which with the vegetative there exists also the sensitive, but not the power of local movement; such are immovable animals, as shellfish. There are others which besides this have powers of local

movement, as perfect animals, which require many things for their life, and consequently movement to seek necessities of life from a distance. And there are some living things which with these have intellectual power — namely, men.

Aquinas, Summa Theologica, I, 78, 1

- 41 The human intellect. . .is the lowest in the order of intellects and the most removed from the perfection of the Divine intellect,

Aquinas, Summa Theologica, I, 79, 2

- 42 Other animals are so much lower than man that they cannot attain to the knowledge of truth, which reason seeks. But man attains, although imperfectly, to the knowledge of intelligible truth, which angels know. Therefore in the angels the power of knowledge is not of a different genus from that which is in the human reason, but is compared to it as the perfect to the imperfect,

Aquinas, Summa Theologica, I, 79, 8

- 43 Horns and claws, which are the weapons of some animals, and toughness of hide and quantity of hair or feathers, which are the clothing of animals, are signs of an abundance of the earthly element, which does not agree with the equability and softness of the human temperament. Therefore such things do not suit the nature of man. Instead of these, he has reason and hands whereby he can make himself arms and clothes, and other necessities of life, of infinite variety. And so the hand is called by Aristotle "the organ of organs." Moreover this was more becoming to the rational nature,

which is capable of conceiving an infinite number of things so as to make for itself an infinite number of instruments.

Aquinas, Summa Theologica, I, 91, 3

- 44 An upright stature was becoming to man for four reasons. First, because the senses are given to man, not only for the purpose of procuring the necessities of life for which they are bestowed on other animals, but also for the purpose of knowledge. Hence, whereas the other animals take delight in the objects of the senses only as ordered to food and sex, man alone takes pleasure in the beauty of sensible objects for its own sake. Therefore, as the senses are situated chiefly in the face, other animals have the face turned to the ground, as it were for the purpose of seeking food and procuring a livelihood; but man has his face erect, in order that by the senses, and chiefly by sight, which is more subtle and penetrates further into the differences of things, he may freely survey the sensible objects around him, both heavenly and earthly, so as to gather intelligible truth from all things. Secondly, for the greater freedom of the acts of the interior powers; the brain, wherein these actions are, in a way, performed, not being low down, but lifted up above other parts of the body. Thirdly, because if man's stature were prone to the ground he would need to use his hands as fore-feet, and thus their utility for other purposes would cease. Fourthly, because if man's stature were prone to the ground and he used his hands as fore-feet, he would be obliged to take hold of his food with his mouth. Thus he would have a protruding mouth, with thick and hard lips, and also a hard tongue, so as to keep it from being hurt by exterior things, as we see in other

animals. Moreover, such an attitude would quite hinder speech, which is reason's proper operation.

Nevertheless, though of erect nature, man is far above plants. For man's superior part, his head, is turned towards the superior part of the world, and his inferior part is turned towards the inferior world; and therefore he is perfectly disposed as to the general situation of his body. Plants have the superior part turned towards the lower world, since their roots correspond to the mouth, and their inferior parts towards the upper world. But brute animals have a middle disposition, for the superior part of the animal is that by which it takes food, and the inferior part that by which it rids itself of the surplus.

Aquinas, Summa Theologica, 1, 91, 3

- 45 Man is as it were the horizon and boundary line of spiritual and corporeal nature, and intermediate, so to speak, between the two, sharing in both corporeal and spiritual perfections.

Aquinas, Commentary on the Sentences of Peter Lombard, 111, Prologue

- 4G Man's basic capacity is to have a potentiality or power for being intellectual. And since this power can not be completely actualized in a single man or in any of the particular communities of men above mentioned, there must be a multitude in mankind through whom this whole power can be actualized; just as there must be a multitude of created beings to manifest adequately the whole power of prime matter, otherwise there would have to be a power distinct from prime matter, which is impossible.

Dante, De Monarchia, I, 3

47 Because in the intellectual order of the universe the ascent and descent is by almost continuous steps, from the lowest form to the highest and from the highest to the lowest (as we see is the case in the sensible order), and between the angelic nature, which is an intellectual thing, and the human soul there is no intermediate step, but the one is, as it were, continuous with the other in the order of steps; and between the human soul and the most perfect soul of the brute animals there is also no intermediary, and we see many men so vile and of such base condition as scarce to seem other than beasts; in like manner we are to lay it down, and firmly to believe, that there be some so noble and of so lofty condition as to be scarce other than angels; otherwise the human species would not be continued in either direction, which may not be.

Dante, Convivio, III, 7

48 We have altogether a confounded, corrupt, and poisoned nature, both in body and soul; throughout the whole of man is nothing that is good.

Luther, Table Talk, H262

49 *Panurge*. Behold how nature,—having a fervent desire after its production of plants, trees, shrubs, herbs, sponges, and plant-animals, to eternize, and continue them unto all succession of ages—in their several kinds or sorts, at least, although the individuals perish—unruinable, and in an everlasting being,—hath most curiously armed and fenced their buds, sprouts, shoots, and seeds, wherein the above-mentioned perpetuity

consisteth, by strengthening, covering, guarding, and fortifying them with an admirable industry, with husks, cases, scarfs and swads, hulls, cods, stones, films, cartels, shells, ears, rinds, barks, skins, ridges, and prickles, which serve them instead of strong, fair, and natural codpieces. As is manifestly apparent in pease, beans, fasels, pomegranates, peaches, cottons, gourds, pumpions, melons, corn, lemons, almonds, walnuts, filberts, and chestnuts; as likewise in all plants, slips or sets whatsoever, wherein it is plainly and evidently seen that the sperm and semence is more closely veiled, overshadowed, corroborated, and thoroughly harnessed, than any other part, portion, or parcel of the whole.

Nature, nevertheless, did not after that manner provide for the sempiternizing of the human race: but, on the contrary, created man naked, tender, and frail, without either offensive or defensive arms; and that in the estate of innocence, in the first age of all, which was the golden season; not as a plant, but living creature, born for peace, not war, and brought forth into the world with an unquestionable right and title to the plenary fruition and enjoyment of all fruits and vegetables, as also to a certain calm and gentle rule and dominion over all kinds of beasts, fowls, fishes, reptiles, and insects. Yet afterwards it happening in the time of the iron age, under the reign of Jupiter, when, to the multiplication of mischievous actions, wickedness and malice began to take root and footing within the then perverted hearts of men, that the earth began to bring forth nettles, thistles, thorns, briars, and such other stubborn and rebellious vegetables to the nature of man. Nor scarce was there any animal, which by a fatal disposition did not then revolt from him, and tacitly conspire, and covenant with

one another, to serve him no longer, nor, in case of their ability to resist, to do him any manner of obedience, but rather, to the uttermost of their power, to annoy him with all the hurt and harm they could. The man, then, that he might maintain his primitive right and prerogative, and continue his sway and dominion over all, both vegetable and sensitive creatures; and knowing of a truth, that he could not be well accommodated, as he ought, without the servitude and subjection of several animals, bethought himself, that of necessity he must needs put on arms, and make provision of harness against wars and violence. By the holy Saint Babingoose, cried out Pantagrue, you are become, since the last rain, a great lifrelofre,—philosopher, I should say. Take notice, Sir, quoth Panurge, when Dame Nature had prompted him to his own arming, what part of the body it was, where, by her inspiration, he clapped on the first harness. It was forsooth by the double pluck of my little dog the ballock, and good Señor Don Priapos Stabostando,—which done, he was content, and sought no more.

Rabelais, Gargantua and Pantagrue, III, 8

50 Let us then consider for the moment man alone, without outside assistance, armed solely with his own weapons, and deprived of divine grace and knowledge, which is his whole honor, his strength, and the foundation of his being. Let us see how much presence he has in this fine array. Let him help me to understand, by the force of his reason, on what foundations he has built these great advantages that he thinks he has over other creatures. Who has persuaded him that that admirable motion of the celestial vault, the eternal light of those torches rolling so proudly above his head, the fearful movements

of that infinite sea, were established and have lasted so many centuries for his convenience and his service? Is it possible to imagine anything so ridiculous as that this miserable and puny creature, who is not even master of himself, exposed to the attacks of all things, should call himself master and emperor of the universe, the least part of which it is not in his power to know, much less to command? And this privilege that he attributes to himself of being the only one in this great edifice who has the capacity to recognize its beauty and its parts, the only one who can give thanks for it to the architect and keep an account of the receipts and expenses of the world: who has sealed him this privilege? Let him show us his letters patent for this great and splendid charge.

Montaigne, Essays, 11, 12, Apology for Raymond Sebond

51 Presumption is our natural and original malady. The most vulnerable and frail of all creatures is man, and at the same time the most arrogant. He feels and sees himself lodged here, amid the mire and dung of the world, nailed and riveted to the worst, the dearest, and the most stagnant part of the universe, on the lowest story of the house and the farthest from the vault of heaven, with the animals of the worst condition of the three; and in his imagination he goes planting himself above the circle of the moon, and bringing the sky down beneath his feet, it is by the vanity of this same imagination that he equals himself to God, attributes to himself divine characteristics, picks himself out and separates himself from the horde of other creatures, carves out their shares to his fellows and companions the animals, and distributes among them such portions of faculties and

powers as he sees fit. How does he know, by the force of his intelligence, the secret internal stirrings of animals? By what comparison between them and us does he infer the stupidity that he attributes to them?

Montaigne. Essays, II, 12, Apology for Raymond Sebond

52 When I play with my cat, who knows if I am not a pastime to her more than she is to me?

Montaigne, Essays II, 12, Apology for Raymond Sebond

53 Man must be constrained and forced into line inside the barriers of this order. The poor wretch is in no position really to step outside them; he is fettered and bound, he is subjected to the same obligation as the other creatures of his class, and in a very ordinary condition, without any real and essential prerogative or preeminence. That which he accords himself in his mind and in his fancy has neither body nor taste. And if it is true that he alone of all the animals has this freedom of imagination and this unruliness in thought that represents to him what is, what is not, what he wants, the fake and the true, it is an advantage that is sold him very dear, and in which he has little cause to glory', for from it springs the principal source of the ills that oppress him; sin, disease, irresolution, confusion, despair.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

54 Movement belongs to the Earth as the home of the speculative creature. For it was not fitting that man, who was going to be the dweller in this world and its contemplator, should reside in one place of it as in a closed cubicle: in that way he would never have arrived

at the measurement and contemplation of the so distant stars, unless he had been furnished with more than human gifts; or rather since he was furnished with the eyes which he now has and with the faculties of his mind, it was his office to move around in this very spacious edifice by means of the transportation of the Earth his home and to get to know the different stations, according as they are measurers—that is, to take a promenade—so that he could all the more correctly view and measure the single parts of his house.

Kepler, Epitome of Copernican Astronomy, Bk. IV, II, 5

55 *Hamlet*. What a piece of work is a man! how noble in reason! how infinite in faculty! in form and moving how express and admirable! in action how like an angel! in apprehension how like a god! the beauty of the world! the paragon of animals! And yet, to me, what is this quintessence of dust?

Shakespeare, Hamlet, II, ii, 315

56 *Isabella*. Merciful Heaven,
Thou rather with thy sharp and sulphurous bolt
Split'st the unwedgeable and gnarled oak
Than the soft myrtle; but man, proud man.
Drest in a little brief authority,
Most ignorant of what he's most assured.
His glassy essence, like an angry ape,
Plays such fantastic tricks before high heaven
As make the angels weep.

Shakespeare, Measure for Measure, II, ii, 114

57 *Lear*. Why, thou wert better in thy grave than to answer with thy uncovered body this extremity of the skies. Is man no more than this? Consider him well. Thou owest the worm no silk, the beast no hide, the sheep no wool, the calf no perfume. Ha! here's three on 's are sophisticated! Thou art the thing itself. Unaccommodated man is no more but such a poor, bare, forked animal as thou art. Off, off, you lendings! come, unbutton here.
[*Tearing off his clothes.*]

Fool. Prithee, nuncle, be contented; 'tis a naughty night to swim in.

Shakespeare, Lear, III, iv, 105

58 *Gloucester*. As flies to wanton boys, are we to the gods,
They kill us for their sport.

Shakespeare, Lear, IV, i, 38

59 *Trinculo*. What have we here? a man or a fish? Dead or alive? A fish; he smells like a fish; a very ancient and fish-like smell; a kind of not-of-the newest Poor-John. A strange fish! Were I in England now, as once I was, and had but this fish painted, not a holiday fool there but would give a piece of silver. There would this monster make a man; any strange beast there makes a man; when they will not give a doit to relieve a lame beggar, they will lay out ten to see a dead Indian. Legged like a man! and his fins like arms! Warm o' my troth! I do now let loose my opinion; hold it no longer. This is no fish, but an islander, that hath lately suffered by a thunderbolt.

Shakespeare, Tempest, II, ii, 25

60 *Miranda*. O, wonder!

How many goodly creatures are there here!
How beauteous mankind is! O brave new world,
That has such people in't!

Prospero. 'Tis new to thee.

Shakespeare, Tempest, V, i, 182

61 I am a little world made cunningly Of Elements, and an
Angelike spright.

Donne, Holy Sonnet V

62 They that deny a God destroy man's nobility; for
certainly man is of kin to the beasts by his body; and if
he be not of kin to God by his spirit, he is a base and
ignoble creature.

Bacon, Of Atheism

63 Man, if we look to final causes, may be regarded as the
centre of the world; insomuch that if man were taken
away from the world, the rest would seem to be all astray,
without aim or purpose, to be like a besom without a
binding, as the saying is, and to be leading to nothing.
For the whole world works together in the service of man;
and there is nothing from which he does not derive use
and fruit. The revolutions and courses of the stars serve
him both for distinction of the seasons and distribution of
the quarters of the world. The appearances of the middle
sky afford him prognostications of weather. The winds sail
his ships and work his mills and engines. Plants and
animals of all kinds are made to furnish him either with
dwelling and shelter or clothing or food or medicine, or to
lighten his labour, or to give him pleasure and comfort;

insomuch that all things seem to be going about man's business and not their own.

Bacon, Wisdom of the Ancients: Prometheus

64 Man comes into the world naked and unarmed, as if Nature had destined him for a social creature, and ordained him to live under equitable laws and in peace; as if she had desired that he should be guided by reason rather than be driven by force; therefore did she endow him with understanding, and furnish him with hands, that he might himself contrive what was necessary to his clothing and protection.

William Harvey, Animal Generation, 56

65 Man is but a great mischievous baboon.

William Harvey, qu. by Aubrey, Brief Lives

66 As for the understanding or thought attributed by Montaigne and others to brutes, I cannot hold their opinion; not, however, because I am doubtful of the truth of what is commonly said, that men have absolute dominion over all the other animals; for while I allow that there are some which are stronger than we are, and I believe there may be some, also, which have natural cunning capable of deceiving the most sagacious men; yet I consider that they imitate or surpass us only in those of our actions which are not directed by thought.

Descartes, Letter to the Marquis of Newcastle

67 I know, indeed, that brutes do many things better than we do, but I am not surprised at it; for that, also, goes to prove that they act by force of nature and by springs, like

a clock, which tells better what the hour is than our judgment can inform us.

Descartes, Letter to the Marquis of Newcastle

68 The principal argument, to my mind, which may convince us that the brutes are devoid of reason, is that, although among those of the same species, some are more perfect than others, as among men, which is particularly noticeable in horses and dogs, some of which have more capacity than others to retain what is taught them, and although all of them make us clearly understand their natural movements of anger, of fear, of hunger, and others of like kind, either by the voice or by other bodily motions, it has never yet been observed that any animal has arrived at such a degree of perfection as to make use of a true language; that is to say, as to be able to indicate to us by the voice, or by other signs, anything which could be referred to thought alone, rather than to a movement of mere nature; for the word is the sole sign and the only certain mark of the presence of thought hidden and wrapped up in the body; now all men, the most stupid and the most foolish, those even who are deprived of the organs of speech, make use of signs, whereas the brutes never do anything of the kind; which may be taken for the true distinction between man and brute.

Descartes, Letter to Henry More (1649)

69 It is yet not at all probable that all things have been created for us in such a manner that God has had no other end in creating them.... Such a supposition would be certainly ridiculous and inept in reference to questions

of Physics, for we cannot doubt that an infinitude of things exist, or did exist, though now they have ceased to exist, which have never been beheld or comprehended by man and which have never been of any use to him.

Descartes, Principles of Philosophy, III, 3

70 Nature tells me I am the Image of God, as well as Scripture: he that understands not thus much, hath not his introduction or first lesson, and is yet to begin the Alphabet of man.

Sir Thomas Browne, Religio Medici, II, 11

71 For, in fact, what is man in nature? A Nothing in comparison with the Infinite, an All in comparison with the Nothing, a mean between nothing and everything. Since he is infinitely removed from comprehending the extremes, the end of things and their beginning are hopelessly hidden from him in an impenetrable secret; he is equally incapable of seeing the Nothing from which he was made, and the Infinite in which he is swallowed up.

What will he do then, but perceive the appearance of the middle of things, in an eternal despair of knowing either their beginning or their end. All things proceed from the Nothing, and are borne towards the Infinite. Who will follow these marvellous processes? The Author of these wonders understands them. None other can do so.

Pascal, Palsies, II, 72

72 Man is but a reed, the most feeble thing in nature; but he is a thinking reed. The entire universe need not arm itself to crush him. A vapour, a drop of water suffices to kill him. But, if the universe were to crush him, man would

still be more noble than that which killed him, because he knows that he dies and the advantage which the universe has over him; the universe knows nothing of this.

Pascal, Pensées, VI, 347

73 The brutes do not admire each other. A horse does not admire his companion. Not that there is no rivalry between them in a race, but that is of no consequence; for, when in the stable, the heaviest and most ill-formed does not give up his oats to another, as men would have others do to them. Their virtue is satisfied with itself.

Pascal, Pensées, VI, 401

74 What a chimera, then, is man! What a novelty! What a monster, what a chaos, what a contradiction, what a prodigy! Judge of all things, imbecile worm of the earth; depository of truth, a sink of uncertainty and error; the pride and refuse of the universe!

Pascal, Pensées, VII, 434

75 Let us make now Man in our image, Man
In our similitude, and let them rule
Over the Fish and Fowle of Sea and Aire,
Beast of the Field, and over all the Earth,
And every creeping thing that creeps the ground.
This said, he formd thee, Adam, thee O Man
Dust of the ground, and in thy nostrils breath'd
The breath of Life; in his own Image hee
Created thee, in the Image of God
Express, and thou becam'st a living Soul.
Male he created thee, but thy consort
Femal for Race; then bless'd Mankinde, and said,

Be fruitful, multiplie, and fill the Earth,
Subdue it, and throughout Dominion hold
Over Fish of the Sea, and Fowle of the Aire,
And every living thing that moves on the Earth.

Milton, Paradise Lost, VII, 519

76 The essence of man consists of certain modifications of the attributes of God; for the Being of substance does not pertain to the essence of man. It is therefore something which is in God, and which without God can neither be nor be conceived, or an affection or mode which expresses the nature of God in a certain and indeterminate manner.

Spinoza, Ethics, II, Prop. 10, Corol.

77 A proper regard, indeed, to one's own profit teaches us to unite in friendship with men, and not with brutes, nor with things whose nature is different from human nature. It teaches us, too, that the same right which they have over us we have over them. Indeed, since the right of any person is limited by his virtue or power, men possess a far greater right over brutes than brutes possess over men. I by no means deny that brutes feel, but I do deny that on this account it is unlawful for us to consult our own profit by using them for our own pleasure and treating them as is most convenient for us, inasmuch as they do not agree in nature with us, and their affects are different from our own.

Spinoza, Ethics, IV, Prop. 37, Schol. 1

78 All the different classes of beings whose union form the universe exist in the ideas of God only as so many

ordinates of the same curve, the union of which does not allow the placing of others between them, because that would indicate disorder and imperfection. Men are connected with the animals, these with the plants, and these again with the fossils, which will be united in their turn with bodies which the senses and the imagination represent to us as perfectly dead and shapeless. Now since the law of continuity demands that when the essential determinations of a being approach those of another so that likewise accordingly all the properties of the first must gradually approach those of the last, it is necessary that all the orders of natural beings form only one chain, in which the different classes, like so many links, connect so closely the one to the other, that it is impossible for the senses and the imagination to fix the precise point where any one begins or ends.

Leibniz, Letter to an Unknown Person (Oct. 16, 1707)

79 There are creatures in the world that have shapes like ours, but are hairy, and want language and reason. There are naturals amongst us that have perfectly our shape, but want reason, and some of them language too. There are creatures, as it is said... that, with language and reason and a shape in other things agreeing with ours, have hairy tails; others where the males have no beards, and others where the females have. If it be asked whether these be all men or no, all of human species? it is plain, the question refers only to the nominal essence: for those of them to whom the definition of the word man, or the complex idea signified by the name, agrees, are men, and the other not. But if the inquiry be made concerning the supposed real essence; and whether the internal constitution and frame of these several creatures be

specifically different, it is wholly impossible for us to answer, no part of that going into our specific idea: only we have reason to think, that where the faculties or outward frame so much differs, the internal constitution is not exactly the same. But what difference in the real internal constitution makes a specific difference it is in vain to inquire; whilst our measures of species be, as they are, only our abstract ideas, which we know; and not that internal constitution, which makes no part of them. Shall the difference of hair only on the skin be a mark of a different internal specific constitution between a changeling and a dril, when they agree in shape, and want of reason and speech? And shall not the want of reason and speech be a sign to us of different real constitutions and species between a changeling and a reasonable man? And so of the rest, if we pretend that distinction of species or sorts is fixedly established by the real frame and secret constitutions of things.

Locke, Concerning Human Understanding, Bk. III, VI,
22

80 His Majesty [the King of Brobdignag] in another audience, was at the pains to recapitulate the sum of all I had spoken; compared the questions he made, with the answers I had given; then taking me into his hands, and streaking me gently, delivered himself in these words, which I shall never forget, nor the manner he spoke them in. "My little friend Grildrig; you have made a most admirable panegyrick upon your country. You have clearly proved that ignorance, idleness, and vice, are the proper ingredients for qualifying a legislator. That laws are best explained, interpreted, and applied by those whose interest and abilities lie in perverting,

confounding, and eluding them. I observe among you some lines of an institution, which in its original might have been tolerable; but these half erased, and the rest wholly blurred and blotted by corruptions. It doth not appear, from all you have said, how any one perfection is required towards the procurement of any one station among you; much less that men are ennobled on account of their virtue, that priests are advanced for their piety or learning, soldiers for their conduct or valour, judges for their integrity, senators for the love of their country, or counsellors for their wisdom. As for yourself (continued the king) who have spent the greatest part of your life in travelling, I am well disposed to hope you may hitherto have escaped many vices of your country. But, by what I have gathered from your own relation, and the answers I have with much pains wringed and extorted from you, I cannot but conclude the bulk of your natives, to be the most pernicious race of little odious vermin that nature ever suffered to crawl upon the surface of the earth."

Swift, Gulliver's Travels, II, 6

81 Know then thyself, presume not God to scan;
The proper study of Mankind is Man.
Plac'd on this isthmus of a middle state,
A being darkly wise, and rudely great:
With too much knowledge for the Sceptic side,
With too much weakness for the Stoic's pride,
He hangs between; in doubt to act, or rest,
In doubt to deem himself a God, or Beast;
In doubt his Mind or Body to prefer.
Born but to die, and reasoning but to err;
Alike in ignorance, his reason such.
Whether he thinks too little, or too much;

Chaos of Thought and Passion, all confus'd;
Still by himself abus'd, or disabus'd;
Created half to rise, and half to fall;
Great lord of all things, yet a prey to all;
Sole judge of Truth, in endless Error hurl'd;
The glory, jest, and riddle of the world!

Pope, Essay on Man, Epistle II, I

82 Brutes are deprived of the high advantages which we have; but they have some which we have not. They have not our hopes, but they are without our fears; they are subject like us to death, but without knowing it; even most of them are more attentive than we to self-preservation, and do not make so bad a use of their passions.

Man, as a physical being, is like other bodies governed by invariable laws. As an intelligent being, he incessantly transgresses the laws established by God, and changes those of his own instituting. He is left to his private direction, though a limited being, and subject, like all finite intelligences, to ignorance and error: even his imperfect knowledge he loses; and as a sensible creature, he is hurried away by a thousand impetuous passions. Such a being might every instant forget his Creator; God has therefore reminded him of his duty by the laws of religion. Such a being is liable every moment to forget himself; philosophy has provided against this by the laws of morality. Formed to live in society, he might forget his fellow-creatures; legislators have therefore by political and civil laws confined him to his duty.

Montesquieu, Spirit of Laws I, 1

83 What a pitiful, what a sorry thing to have said that animals are machines bereft of understanding and feeling, which perform their operations always in the same way, which learn nothing, perfect nothing, etc.!

What! that bird which makes its nest in a semicircle when it is attaching it to a wall, which builds it in a quarter circle when it is in an angle, and in a circle upon a tree; that bird acts always in the same way? That hunting-dog which you have disciplined for three months, does it not know more at the end of this time than it knew before your lessons? Does the canary to which you teach a tune repeat it at once? do you not spend a considerable time in teaching it? have you not seen that it has made a mistake and that it corrects itself?

Is it because I speak to you, that you judge that I have feeling, memory, ideas? Well, I do not speak to you; you see me going home looking disconsolate, seeking a paper anxiously, opening the desk where I remember having shut it, finding it, reading it joyfully. You judge that I have experienced the feeling of distress and that of pleasure, that I have memory and understanding.

Bring the same judgment to bear on this dog which has lost its master, which has sought him on every road with sorrowful cries, which enters the house agitated, uneasy, which goes down the stairs, up the stairs, from room to room, which at last finds in his study the master it loves, and which shows him its joy by its cries of delight, by its leaps, by its caresses.

Voltaire, Philosophical Dictionary: Animals

84 Every animal has ideas, since it has senses; it even combines those ideas in a certain degree; and it is only in degree that man differs, in this respect, from the brute.

Some philosophers have even maintained that there is a greater difference between one man and another than between some men and some beasts. It is not, therefore, so much the understanding that constitutes the specific difference between the man and the brute, as the human quality of free-agency. Nature lays her commands on every animal, and the brute obeys her voice, Man receives the same impulsion, but at the same time knows himself at liberty to acquiesce or resist: and it is particularly in his consciousness of this liberty that the spirituality of his soul is displayed. For physics may explain, in some measure, the mechanism of the senses and the formation of ideas; but in the power of willing or rather of choosing, and in the feeling of this power, nothing is to be found but acts which are purely spiritual and wholly inexplicable by the laws of mechanism.

Rousseau, Origin of Inequality, I

85 Oh, man! live your own life and you will no longer be wretched. Keep to your appointed place in the order of nature and nothing can tear you from it. Do not kick against the stern law of necessity....Your freedom and your power extend as far and no further than your natural strength; anything more is but slavery, deceit, and trickery.

Rousseau, Emile, II

86 *Boswell*. "He [Harris] says plain things in a formal and abstract way, to be sure: but his method is good: for to have clear notions upon any subject, we must have recourse to analytick arrangement." *Johnson*. "Sir, it is what everybody does, whether they will or no. But

sometimes things may be made darker by definition. I see a cow, I define her, *Animal quadrupes ruminans cornulum*. But a goat ruminates, and a cow' may have no horns. Cow is plainer." *Boswell*. "I think Dr. Franklin's definition of Man a good one—tool-making animal.' " *Johnson*. "But many a man never made a tool; and suppose a man without arms, he could not make a tool."

Boswell, Life of Johnson (Apr. 7, 1778)

87 Nobody ever saw a dog make a fair and deliberate exchange of one bone for another with another dog. Nobody ever saw one animal by its gestures and natural cries signify to another, this is mine, that yours; I am willing to give this for that. When an animal wants to obtain something either of a man or of another animal, it has no other means of persuasion but to gain the favour of those whose service it requires. A puppy fawns upon its dam, and a spaniel endeavours by a thousand attractions to engage the attention of its master who is at dinner, when it wants to be fed by him. Man sometimes uses the same arts with his brethren, and when he has no other means of engaging them to act according to his inclinations, endeavours by every servile and fawning attention to obtain their good will.

Adam Smith, Wealth of Nations, I, 2

88 Man and generally any rational being exists as an end in himself, not merely as a means to be arbitrarily used by this or that will, but in all his actions, whether they concern himself or other rational beings, must be always regarded at the same time as an end.

*Kant, Fundamental Principles of the Metaphysic of
Morals, II*

89 Man is a being who, as belonging to the world of sense, has wants, and so far his reason has an office which it cannot refuse, namely, to attend to the interest of his sensible nature, and to form practical maxims, even with a view to the happiness of this life, and if possible even to that of a future. But he is not so completely an animal as to be indifferent to what reason says on its own account, and to use it merely as an instrument for the satisfaction of his wants as a sensible being. For the possession of reason would not raise his worth above that of the brutes, if it is to serve him only for the same purpose that instinct serves in them; it would in that case be only a particular method which nature had employed to equip man for the same ends for which it has qualified brutes, without qualifying him for any higher purpose.

Kant, Critique of Practical Reason, Ft. I, I, 2

90 If we go through the whole of nature, we do not find in it, as nature, any being capable of laying claim to the distinction of being the final end of creation. In fact it may even be proved a priori that what might do perhaps as an ultimate end for nature, endowing it with any conceivable qualities or properties we choose, could nevertheless in its character of a natural thing never be a final end.

Looking to the vegetable kingdom, we might at first be induced by the boundless fertility with which it spreads itself abroad upon almost every soil to think that it should be regarded as a mere product of the mechanism which nature displays in its formations in the mineral kingdom.

But a more intimate knowledge of its indescribably wise organization precludes us from entertaining this view, and drives us to ask; For what purpose do these forms of life exist? Suppose we reply: For the animal kingdom, which is thus provided with the means of sustenance, so that it has been enabled to spread over the face of the earth in such a manifold variety of genera. The question again arises: For what purpose then do these herbivora exist? The answer would be something like this: For the carnivora, which are only able to live on what itself has animal life. At last we get down to the question: What is the end and purpose of these and all the preceding natural kingdoms? For man, we say, and the multifarious uses to which his intelligence teaches him to put all these forms of life. He is the ultimate end of creation here upon earth, because he is the one and only being upon it that is able to form a conception of ends and, from an aggregate of things purposively fashioned, to construct by the aid of his reason a system of ends.

Kant, Critique of Teleological Judgement, 82

- 91 There is a judgement which even the commonest understanding finds irresistible when it reflects upon the existence of the things in the world and the real existence of the world itself. It is the verdict that all the manifold forms of life, co-ordinated though they may be with the greatest art and concatenated with the utmost variety of final adaptations, and even the entire complex that embraces their numerous systems, incorrectly called worlds, would all exist for nothing, if man, or rational beings of some sort, were not to be found in their midst. Without man, in other words, the whole of creation would

be a mere wilderness, a thing in vain, and have no final end.

Kant, Critique of Teleological Judgement, 86

92 If there is to be a *final end* at all, which reason must assign a *priori*, then it can only be *man* —or any rational being in the world— *subject to moral laws*. For—and this is the verdict of everyone—if the world only consisted of lifeless beings, or even consisted partly of living, but yet irrational beings, the existence of such a world would have no worth whatever, because there would exist in it no being with the least conception of what worth is.

Kant, Critique of Teleological Judgement, 87

93 *Mephistopheles*. Since you, O Lord, once more draw near
And ask how all is getting on, and you
Were ever well content to see me here,
You see me also midst your retinue.
Forgive, fine speeches I can never make.
Though all the circle look on me with scorn;
Pathos from me would make your sides with laughter
shake.
Had you not laughter long ago forsworn.
Of suns and worlds I've naught to say worth mention.
How men torment them claims my whole attention.
Earth's little god retains his same old stamp and ways
And is as singular as on the first of days.
A little better would he live, poor wight.
Had you not given him that gleam of heavenly light.
He calls it Reason, only to pollute
Its use by being brutaler than any brute.
It seems to me, if you'll allow, Your Grace,

He's like a grasshopper, that long-legged race
That's made to fly and flying spring
And in the grass to sing the same old thing.
If in the grass he always were reposing!
But in each filthy heap he keeps on nosing.

Goethe, Faust, Prologue in Heaven, 271

- 94 If a man is not rising upwards to be an angel, depend upon it, he is sinking downwards to be a devil. He cannot stop at the beast. The most savage of men are not beasts; they are worse, a great deal worse.

Coleridge, Table Talk (Aug. 30, 1833)

- 95 Oh, man! thou feeble tenant of an hour.
Debased by slavery, or corrupt by power,
Who knot's thee well must quit thee with disgust.
Degraded mass of animated dust!
Thy love is lust, thy friendship all a cheat,
Thy smiles hypocrisy, thy words deceit!
By nature vile, ennobled but by name,
Each kindred brute might bid thee blush for shame,

Byron, Inscription on the Monument of a Newfoundland Dog

- 96 The lower animals are the truly incomprehensible, A man cannot by imagination or conception enter into the nature of a dog, whatever resemblance he himself might have to it; it remains something altogether alien to him.

Hegel, Philosophy of History, Pt. I, III, 3

- 97 Man, finite when regarded for himself, is yet at the same time the image of God and a fountain of infinity m

himself. He is the object of his own existence—has in himself an infinite value, an eternal destiny.

Hegel, Philosophy of History, Pt. III, III, 2

98 One might say with truth, Mankind are the devils of the earth, and the animals the souls they torment.

Schopenhauer, Christian System

99 Man is at bottom a wild and terrible animal. We know him only as what we call civilization has tamed and trained him; hence we are alarmed by the occasional breaking out of his true nature. But whenever the locks and chains of law and order are cast off, and anarchy comes in, he shouts himself for what he really is.

Schopenhauer, Parerga und Paralipomena, II

100 A man is a god in ruin.

Emerson, Nature, VIII

101 Not in nature but in man is all the beauty and worth he sees. The world is very empty, and is indebted to this gilding, exalting soul for all its pride.

Emerson, Spiritual Laws

102 Man is the end of nature; nothing so easily organizes itself in every part of the universe as he; no moss, no lichen is so easily born; and he takes along with him and puts out from himself the whole apparatus of society and condition *extempore*, as an army encamps in a desert, and where all was just now blowing sand, creates a white city in an hour, a government, a market, a place for feasting, for conversation, and for love.

Emerson, The Conservative

103 Men may seem detestable as joint-stock companies and nations; knaves, fools, and murderers there may be; men may have mean and meagre faces; but man, in the ideal, is so noble and so sparkling, such a grand and glowing creature, that over any ignominious blemish in him all his fellow's should run to throw their costliest robes. That immaculate manliness we feel within ourselves—so far within us, that it remains intact though all the outer character seem gone—bleeds with keenest anguish at the undraped spectacle of a valour-ruined man. Nor can piety itself, at such a shameful sight, completely stifle her upbraidings against the permitting stars. But this august dignity I treat of, is not the dignity of kings and robes, but that abounding dignity which has no robed investiture. Thou shall see it shining in the arm that wields a pick or drives a spike; that democratic dignity which, on all hands, radiates without end from God Himself! The great God absolute! The centre and circumference of all democracy! His omnipresence, our divine equality!

Melville, Moby Dick, XXVI

104 There is no folly of the beasts of the earth which is not infinitely outdone by the madness of men.

Melville, Moby Dick, LXXXVII

105 Man's capacities have never been measured; nor are we to judge of what he can do by any precedents, so little has been tried.

Thoreau, Walden: Economy

106 We are conscious of an animal in us, which awakens in proportion as our higher nature slumbers. It is reptile and sensual, and perhaps cannot be wholly expelled; like the worms which, even in life and health, occupy our bodies. Possibly we may withdraw from it, but never change its nature. I fear that it may enjoy a certain health of its own; that we may be well, yet not pure. The other day I picked up the lower jaw of a hog, with white and sound teeth and tusks, which suggested that there was an animal health and vigor distinct from the spiritual. This creature succeeded by other means than temperance and purity. 'That in which men differ from brute beasts,' says Mencius, 'is a thing very inconsiderable; the common herd lose it very soon; superior men preserve it carefully.' Who knows what sort of life would result if we had attained to purity? If I knew so wise a man as could teach me purity I would go to seek him forthwith. 'A command over our passions, and over the external senses of the body, and good acts, are declared by the Ved to be indispensable in the mind's approximation to God.' Yet the spirit can for the time pervade and control every member and function of the body, and transmute what in form is the grossest sensuality into purity and devotion. The generative energy, which, when we are loose, dissipates and makes us unclean, when we are continent invigorates and inspires us. Chastity is the flowering of man; and what are called Genius, Heroism, Holiness, and the like, are but various fruits which succeed it. Man flows at once to God when the channel of purity is open. By turns our purity inspires and our impurity casts us down. He is blessed who is assured that the animal is dying out in him day by day, and the divine being established. Perhaps there is none but has cause for shame on

account of the inferior and brutish nature to which he is allied. I fear that we are such gods or demigods only as fauns and satyrs, the divine allied to beasts, the creatures of appetite, and that, to some extent, our very life is our disgrace.

Thoreau, Walden: Higher Laws

107 I think I could turn and live with animals, they're so
placid and self-contain'd,
I stand and look at them long and long.
They do not sweat and whine about their condition.
They do not lie awake in the dark and weep for their
sins.
They do not make me sick discussing their duty to
God,
Not one is dissatisfied, not one is demented with the
mania of owning things,
Not one kneels to another, nor to his kind that lived
thousands of years ago,
Not one is respectable or unhappy over the whole
earth.

Whitman, Song of Myself XXXII

108 Man in the rudest state in which he now exists is the most dominant animal that has ever appeared on this earth. He has spread more widely than any other highly organised form: and all others have yielded before him. He manifestly owes this immense superiority to his intellectual faculties, to his social habits, which lead him to aid and defend his fellows, and to his corporeal structure. The supreme importance of these characters has been proved by the final arbitrament of the battle for

life. Through his powers of intellect, articulate language has been evolved; and on this his wonderful advancement has mainly depended.... He has invented and is able to use various weapons, tools, traps, etc., with which he defends himself, kills or catches prey, and otherwise obtains food. He has made rafts or canoes for fishing or crossing over to neighbouring fertile islands. He has discovered the art of making fire, by which hard and stringy roots can be rendered digestible, and poisonous roots or herbs innocuous. This discovery of fire, probably the greatest ever made by man, excepting language, dates from before the dawn of history. These several inventions, by which man in the rudest state has become so preeminent, are the direct results of the development of his powers of observation, memory, curiosity, imagination, and reason.

Darwin, Descent of Man, I, 2

109 Most of the more complex emotions are common to the higher animals and ourselves. Every one has seen how jealous a dog is of his master's affection, if lavished on any other creature; and I have observed the same fact with monkeys. This shews that animals not only love, but have desire to be loved. Animals manifestly feel emulation. They love approbation or praise; and a dog carrying a basket for his master exhibits in a high degree self-complacency or pride. There can, I think, be no doubt that a dog feels shame, as distinct from fear, and something very like modesty when begging too often for food. A great dog scorns the snarling of a little dog, and this may be called magnanimity. Several observers have stated that monkeys certainly dislike being laughed at; and they sometimes invent imaginary offences.... Dogs

shew what may be fairly called a sense of humour, as distinct from mere play; if a bit of stick or other such object be thrown to one, he will often carry it away for a short distance; and then squatting down with it on the ground close before him, will wait until his master comes quite close to take it away. The dog will then seize it and rush away in triumph, repeating the same manoeuvre, and evidently enjoying the practical joke.

Darwin, Descent of Man, I, 3

110 There can be no doubt that the difference between the mind of the lowest man and that of the highest animal is immense. An anthropomorphous ape, if he could take a dispassionate view of his own case, would admit that though he could form an artful plan to plunder a garden—though he could use stones for fighting or for breaking open nuts, yet that the thought of fashioning a stone into a tool was quite beyond his scope. Still less, as he would admit, could he follow out a train of metaphysical reasoning, or solve a mathematical problem, or reflect on God, or admire a grand natural scene. Some apes, however, would probably declare that they could and did admire the beauty of the coloured skin and fur of their partners in marriage. They would admit, that though they could make other apes understand by cries some of their perceptions and simpler wants, the notion of expressing definite ideas by definite sounds had never crossed their minds. They might insist that they were ready to aid their fellow-apes of the same troop in many ways, to risk their lives for them, and to take charge of their orphans; but they would be forced to acknowledge that disinterested love for all living creatures, the most noble attribute of man, was quite beyond their comprehension.

Nevertheless the difference in mind between man and the higher animals, great as it is, certainly is one of degree and not of kind.

Darwin, Descent of Man, I, 4

111 The great break in the organic chain between man and his nearest allies, which cannot be bridged over by any extinct or living species, has often been advanced as a grave objection to the belief that man is descended from some lower form; but this objection will not appear of much weight to those who, from general reasons, believe in the general principle of evolution. Breaks often occur in all parts of the series, some being wide, sharp and defined, others less so in various degrees; as between the orang and its nearest allies—between the *Tarsius* and the other *Lemurida*:—between the elephant, and in a more striking manner between the *Ornithorhynchus* or *Echidna*, and all other mammals. But these breaks depend merely on the number of related forms which have become extinct. At some future period, not very distant as measured by centuries, the civilised races of man will almost certainly exterminate, and replace, the savage races throughout the world. At the same time the anthropomorphous apes, as Professor Schaaffhausen has remarked, will no doubt be exterminated. The break between man and his nearest allies will then be wider, for it will intervene between man in a more civilised state, as we may hope, even than the Caucasian, and some ape as low as a baboon, instead of as now between the negro or Australian and the gorilla.

Darwin, Descent of Man, I, 6

112 Man may be excused for feeling some pride at having risen, though not through his own exertions, to the very summit of the organic scale; and the fact of his having thus risen, instead of having been aboriginally placed there, may give him hope for a still higher destiny in the distant future. But we are not here concerned with hopes or fears, only with the truth as far as our reason permits us to discover it; and I have given the evidence to the best of my ability. We must, however, acknowledge, as it seems to me, that man with all his noble qualities, with sympathy which feels for the most debased, with benevolence which extends not only to other men but to the humblest living creature, with his god-like intellect which has penetrated into the movements and constitution of the solar system—with all these exalted powers—Man still bears in his bodily frame the indelible stamp of his lowly origin.

Darwin, Descent of Man, III, 21

113 The question of questions for mankind—the problem which underlies all others, and is more deeply interesting than any other—is the ascertainment of the place which man occupies in nature and of his relations to the universe of things. Whence our race has come; what are the limits of our power over nature, and of nature's power over us; to what goal we are tending; are the problems which present themselves anew and with undiminished interest to every man born into the world.

T. H. Huxley, Relations of Man to the Lower Animals

114 Our reverence for the nobility of manhood will not be lessened by the knowledge that man is, in substance and

in structure, one with the brutes; for, he alone possesses the marvellous endowment of intelligible and rational speech, whereby, in the secular period of his existence, he has slowly accumulated and organized the experience which is almost wholly lost with the cessation of every individual life in other animals; so that, now, he stands raised upon it as on a mountain top, far above the level of his humble fellows, and transfigured from his grosser nature by reflecting, here and there, a ray from the infinite source of truth.

T. H. Huxley, Relations of Man to the Lower Animals

- 115 Man is in the most literal sense of the word a zoon politikon, not only a social animal, but an animal which can develop into an individual only in society.

Marx, Contribution to the Criticism of Political Economy, Appendix, 1

- 116 Human nature is not a machine to be built after a model, and set to do exactly the work prescribed for it, but a tree, which requires to grow and develop itself on all sides, according to the tendency of the inward forces which make it a living thing.

Mill, On Liberty, III

- 117 O man, strange composite of Heaven and earth!
Majesty dwarf'd to baseness! fragrant flower Running
to poisonous seed! and seeming worth Cloaking
corruption! weakness mastering power!

Newman, The Dream of Gerontius

118 A bee settling on a flower has stung a child. And the child is afraid of bees and declares that bees exist to sting people. A poet admires the bee sucking from the chalice of a flower and says it exists to suck the fragrance of flowers. A beekeeper, seeing the bee collect pollen from flowers and carry it to the hive, says that it exists to gather honey. Another beekeeper who has studied the life of the hive more closely says that the bee gathers pollen dust to feed the young bees and rear a queen, and that it exists to perpetuate its race. A botanist notices that the bee flying with the pollen of a male flower to a pistil fertilizes the latter, and sees in this the purpose of the bee's existence. Another, observing the migration of plants, notices that the bee helps in this work, and may say that in this lies the purpose of the bee. But the ultimate purpose of the bee is not exhausted by the first, the second, or any of the processes the human mind can discern. The higher the human intellect rises in the discovery of these purposes, the more obvious it becomes that the ultimate purpose is beyond our comprehension.

All that is accessible to man is the relation of the life of the bee to other manifestations of life. And so it is with the purpose of historic characters and nations.

Tolstoy, War and Peace, I Epilogue, IV

119 To imagine a man perfectly free and not subject to the law of inevitability, we must imagine him all alone, beyond space, beyond time, and free from dependence on cause.

Tolstoy, War and Peace, II Epilogue, X

120 Man is the only animal that blushes. Or needs to.

Mark Twain, Pudd'nhead Wilson's New Calendar, XXVII

121 I'm quite sure that... I have no race prejudices, and I think I have no color prejudices nor creed prejudices. Indeed, I know it. I can stand any society. All I care to know is that a man is a human being—that is enough for me; he can't be any worse.

Mark Twain, Concerning the Jews

122 Man is absolutely not the crown of creation: every creature stands beside him at the same stage of perfection.

Nietzsche, Antichrist, XIV

123 Man is a rope stretched between the animal and the Superman—a rope over an abyss.

Nietzsche, Thus Spake Zarathustra, Prologue, 4

124 The earth, said he, hath a skin; and this skin hath diseases. One of these diseases, for example, is called "man."

Nietzsche, Thus Spake Zarathustra, II, 40

125 Man is born with a tendency to do more things than he has ready-made arrangements for in his nerve-centres. Most of the performances of other animals are automatic. But in him the number of them is so enormous, that most of them must be the fruit of painful study. If practice did not make perfect, nor habit economize the expense of nervous and muscular energy, he would therefore be in a sorry plight.

William James, Psychology, IV

126 The whole story of our dealings with the lower wild animals is the history of our taking advantage of the way in which they judge of everything by its mere label, as it were, so as to ensnare or kill them. Nature, in them, has left matters in this rough way, and made them act *always* in the manner which would be *oftenest* right. There are more worms unattached to hooks than impaled upon them; therefore, on the whole, says Nature to her fishy children, bite at *every* worm and take your chances. But as her children get higher, and their lives more precious, she reduces the risks. Since what seems to be the same object may be now a genuine food and now a bait; since in gregarious species each individual may prove to be either the friend or the rival, according to the circumstances, of another; since any entirely unknown object may be fraught with weal or woe, *Nature implants contrary impulses to act on many classes of things*, and leaves it to slight alterations in the conditions of the individual case to decide which impulse shall carry the day. Thus, greediness and suspicion, curiosity and timidity, coyness and desire, bashfulness and vanity, sociability and pugnacity, seem to shoot over into each other as quickly, and to remain in as unstable equilibrium, in the higher birds and mammals as in man. They are all impulses, congenital, blind at first, and productive of motor reactions of a rigorously determinate sort. *Each one of them, then, is an instinct, as instincts are commonly defined. But they contradict each other —* "experience" in each particular opportunity of application usually deciding the issue. *The animal that exhibits them loses the 'instinctive' demeanor* and appears to lead a life of hesitation and choice, an intellectual life; *not,*

however, because he has no instincts—rather because he has so many that they block each other's path.

William James, Psychology, XXIV

127 In many respects man is the most ruthlessly ferocious of beasts. As with all gregarious animals, "two souls," as Faust says, "dwell within his breast," the one of sociability and helpfulness, the other of jealousy and antagonism to his mates. Though in a general way he cannot live without them, yet, as regards certain individuals, it often falls out that he cannot live with them either. Constrained to be a member of a tribe, he still has a right to decide, as far as in him lies, of which other members the tribe shall consist. Killing off a few obnoxious ones may often better the chances of those that remain. And killing off a neighboring tribe from whom no good thing comes, but only competition, may materially better the lot of the whole tribe. Hence the gory cradle, the *bellum omnium contra omnes*, in which our race was reared; hence the fickleness of human ties, the ease with which the foe of yesterday becomes the ally of today, the friend of to-day the enemy of to-morrow; hence the fact that we, the lineal representatives of the successful enactors of one scene of slaughter after another, must, whatever more pacific virtues we may also possess, still carry about with us, ready at any moment to burst into flame, the smouldering and sinister traits of character by means of which they lived through so many massacres, harming others, but themselves unharmed.

William James, Psychology, XXIV

128 Man is simply the most formidable of all the beasts of prey, and, indeed, the only one that preys systematically on its own species,

William James, Remarks at the Peace Banquet (Oct. 7, 1904)

129 The rich are instinctively crying "Let us eat and drink; for tomorrow we die," and the poor, "How long, O Lord, how long?" But the pitiless reply still is that God helps those who help themselves. This does not mean that if Man cannot find the remedy no remedy will be found. The power that produced Man when the monkey was not up to the mark, can produce a higher creature than Man if Man does not come up to the mark. What it means is that if Man is to be saved, Man must save himself. There seems no compelling reason why he should be saved. He is by no means an ideal creature. At his present best many of his ways are so unpleasant that they are unmentionable in polite society, and so painful that he is compelled to pretend that pain is often a good. Nature holds no brief for the human experiment: it must stand or fall by its results. If Man will not serve, Nature will try another experiment.

Shaw, Back to Methuselah, Pref.

130 Man differs from the lower animals because he preserves his past experiences. What happened in the past is lived again in memory. About what goes on today hangs a cloud of thoughts concerning similar things undergone in bygone days. With the animals, an experience perishes as it happens, and each new doing or suffering stands alone. But man lives in a world where

each occurrence is charged with echoes and reminiscences of what has gone before, where each event is a reminder of other things. Hence he lives not, like the beasts of the field, in a world of merely physical things but in a world of signs and symbols. A stone is not merely hard, a thing into which one bumps; but it is a monument of a deceased ancestor. A flame is not merely something which warms or burns, but is a symbol of the enduring life of the household, of the abiding source of cheer, nourishment and shelter to which man returns from his casual wanderings. Instead of being a quick fork of fire which may sting and hurt, it is the hearth at which one worships and for which one fights. And all this which marks the difference between bestiality and humanity, between culture and merely physical nature, is because man remembers, preserving and recording his experiences.

Dewey, Reconstruction in Philosophy, I

131 When a philosopher explains to us that it is reason, present in each of us, which constitutes the dignity of man ... we must take care to know what we mean. That reason is the distinguishing mark of man no one will deny. That it is a thing of superior value, in the sense in which a fine work of art is indeed valuable, will also be granted. But we must explain how it is that its orders are absolute and why they are obeyed. Reason can only put forward reasons, which we are apparently always at liberty to counter with other reasons. Let us not then merely assert that reason, present in each of us, compels our respect and commands our obedience by virtue of its paramount value. We must add that there are, behind reason, the men who have made mankind divine, and

who have thus stamped a divine character on reason, which is the essential attribute of man. It is these men who draw us towards an ideal society, while we yield to the pressure of the real one.

Bergson, Two Sources of Morality and Religion, I

132 What is meant here by saying that existence precedes essence? It means that, first of all, man exists, turns up, appears on the scene, and, only afterwards, defines himself. If man, as the existentialist conceives him, is indefinable, it is because at first he is nothing. Only afterward will he be something, and he himself will have made what he will be. Thus, there is no human nature, since there is no God to conceive it. Not only is man what he conceives himself to be, but he is also only what he wills himself to be after this thrust toward existence.

Sartre, Existentialism

1.2 The Human Condition

This section contains many quotations that express general views of human life. The operative word here is "general." We have tried to exclude anything that does not comment on the state of man in general terms, that does not offer general recommendations or prescriptions for the conduct of life, or that does not deal generally with what might be called "the phenomenon of man."

The general descriptions of that phenomenon include portrayals of human nature in terms of its distinctive traits, discussions of the range of human abilities or capacities, comments on man's propensities and proclivities, and enumerations of human traits.

The quotations assembled here are not exclusively descriptive of man's condition.

Some evaluate it, varying from self-pity at one extreme to self-satisfaction at the other. Still another line of passages raises general questions about the difficulties of living like a human being; these are accompanied by quotations that offer counsel or guidance for facing up to the trials and tribulations of human life.

Some of the statements collected here might have been placed in the preceding section, dealing with the grandeur and misery of man, and some in Section 1.8 on Life AND Death: The Fear of Death. They are here because the terms in which they are stated are identical with terms that are central to quotations that belong here and nowhere else.

■ ■ ■

- 1 Man that is born of a woman is of few days, and full of trouble.

He cometh forth like a flower, and is cut down: he fleeth also as a shadow, and continueth not.

Job 14:1-2

- 2 Lord, make me to know mine end, and the measure of my days, what it is; that I may know how frail I am.

Behold, thou hast made my days as an hand-breadth; and mine age is as nothing before thee: verily every man at his best state is altogether vanity. Selah.

Surely every man walketh in a vain shew: surely they are disquieted in vain: he heapeth up riches, and knoweth not who shall gather them...

When thou with rebukes dost correct man for iniquity, thou makest his beauty to consume away like a moth: surely every man is vanity.

Psalms 39:4-11

- 3 *Apollo*. Insignificant mortals, who are as leaves are, and now flourish and grow warm with life, and feed on what the ground gives, but then again fade away and are dead.

Homer, Iliad, XXI, 463

- 4 *Odysseus*. The cruel belly, can you hide its ache? How many bitter days it brings! Long ships with good stout

planks athwart—would fighters rig them to ride the barren sea, except for hunger?

Homer, Odyssey, XVII, 287

5 Oh! would that Nature had denied me birth
Midst this fifth race, this iron age of earth;
That long before within the grave I lay.
Or long hereafter could behold the day!
Corrupt the race, with toils and griefs oppress'd.
Nor day nor night can yield a pause of rest:
Still do the gods a weight of care bestow.
Though still some good is mingled with the woe.
Jove on this race of many-languaged man
Speeds the swift ruin, which but slow began;
For scarcely spring they to the light of day,
E'er age untimely strews their temples gray.
No fathers in the sons their features trace;
The sons reflect no more the father's face:
The most with kindness greets his guest no more;
And friends and brethren love not as of yore.
Reckless of Heaven's revenge, the sons behold
The hoary parents wax to swiftly old.
And impious point the keen dishonouring tongue,
With hard reproofs, and bitter mockeries hung;
Nor grateful in declining age repay
The nurturing fondness of their better day.
Now man's right hand is law; for spoil they wait,
And lay their mutual cities desolate.
Unhonour'd he, by whom his oath is fear'd,
Nor are the good beloved, the just revered.
With favour graced, the evil doer stands.
Nor curbs with shame nor equity his hands;
With crooked slanders wounds the virtuous man.

And stamps with perjury what hate began.
Lo! ill-rejoicing Envy, wing'd with lies,
Scattering calumnious rumours as she flies,
The steps of miserable men pursue.
With haggard aspect, blasting to the view:
Till those fair forms, in snowy raiment bright,
Quit the broad earth, and heavenward soar from sight:
Justice and Modesty, from mortals driven,
Rise to th' immortal family of heaven:
Dread sorrow's to forsaken man remain;
No cure of ills; no remedy of pain.

Hesiod, Works and Days

- 6 *Cassandra*. Alas, poor men, their destiny. When all goes well
a shadow will overthrow it. If it be unkind one stroke of a
wet sponge wipes all the picture out;
and that is far the most unhappy thing of all.

Aeschylus, Agamemnon, 1327

- 7 *Amasis*. My wish for myself and for those whom I love is to
be now successful, and now' to meet with a check; thus
passing through life amid alternate good and ill, rather
than with perpetual good fortune. For never yet did I hear
tell of anyone succeeding in all his undertakings, who did
not meet with calamity at last, and come to utter ruin.

Herodotus, History, III, 40

- 8 When a child is born [to the Trausi] all its kindred sit round
about it in a circle and weep for the woes it will have to
undergo now that it is come into the world, making
mention of every ill that falls to the lot of humankind;

when, on the other hand, a man has died, they bury him with laughter and rejoicings, and say that now he is free from a host of sufferings, and enjoys the completest happiness.

Herodotus, History, V, 4

9 And now, as he looked and saw the whole Hellespont covered with the vessels of his fleet, and all the shore and every plain about Abydos as full as possible of men, Xerxes congratulated himself on his good fortune; but after a little while he wept.

Then Artabanus, the king's uncle (the same who at the first so freely spake his mind to the king, and advised him not to lead his army against Greece), when he heard that Xerxes was in tears, went to him, and said:—

"How different, sire, is what thou art now doing, from what thou didst a little while ago!

Then thou didst congratulate thyself; and now, behold! thou weepest."

"There came upon me," replied he, "a sudden pity, when I thought of the shortness of man's life, and considered that of all this host, so numerous as it is, not one will be alive when a hundred years are gone by."

Herodotus, History, VII, 45-46

10 *Chorus*. Not to be born surpasses thought and speech.

The second best is to have seen the light

And then to go back quickly whence we came.

The feathery follies of his youth once over.

What trouble is beyond the range of man?

What heavy burden will he not endure?

Jealousy, faction, quarreling, and battle—

The bloodiness of war, the grief of war.
And in the end he comes to strengthless age,
Abhorred by all men, without company. Unfriended in
that uttermost twilight
Where he must live with every bitter thing.

Sophocles, Oedipus at Colonus, 1224

- 11 *Orestes*. Alas,
 we look for good on earth and cannot recognize it
when met, since all our human heritage runs mongrel.
 At times I have seen descendants of the noblest family
 grow worthless though the cowards had courageous
sons;
 inside the souls of wealthy men bleak famine lives
 while minds of stature struggle trapped in starving
bodies.
 How then can man distinguish man, what test can he
use?
 the test of wealth? that measure means poverty of
mind;
 of poverty? the pauper owns one thing, the sickness
of his condition, a compelling teacher of evil;
 by nerve in war? yet who, when a spear is cast across
his face, will stand to witness his companion's
courage?
 We can only toss our judgments random on the wind.

Euripides, Electra, 367

- 12 Someone will say: Yes, Socrates, but cannot you hold
your tongue, and then you may go into a foreign city, and
no one will interfere with you? Now I have great difficulty
in making you [men of Athens] understand my answer to

this. For if I tell you that to do as you say would be a disobedience to the God, and therefore that I cannot hold my tongue, you will not believe that I am serious; and if I say again that daily to discourse about virtue, and of those other things about which you hear me examining myself and others, is the greatest good of man, and that the unexamined life is not worth living, you are still less likely to believe me. Yet I say what is true, although a thing of which it is hard for me to persuade you.

Plato, Apology, 37B

13 *Socrates.* And now, I said, let me show in a figure how far our nature is enlightened or unenlightened:—Behold! human beings living in an underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you [Glaucou] will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

I see.

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

You have shown me a strange image, and they are strange prisoners.

Like ourselves, I replied; and they see only their own shadows, the shadows of one another, which the fire throws on the opposite wall of the cave?

True, he said; how could they see anything but the shadows if they were never allowed to move their heads?

And of the objects which are being carried in like manner they would only see the shadows?

Yes, he said.

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

Very true.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

No question, he replied.

To them, I said, the truth would be literally nothing but the shadows of the images.

That is certain.

And now look again, and see what will naturally follow if the prisoners are released and disabused of their error. At first, when any of them is liberated and compelled suddenly to stand up and turn his neck round and walk and look towards the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then conceive some one saying to him, that what he saw before was an illusion, but that now, when he is approaching nearer to being and his eye is turned towards more real existence, he has a clearer vision—what will be his reply? And you may further imagine that his instructor is pointing to the objects as

they pass and requiring him to name them—will he not be perplexed? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

Far truer.

And if he is compelled to look straight at the light, will he not have a pain in his eyes which will make him turn away to take refuge in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

True, he said.

And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he is forced into the presence of the sun himself, is he not likely to be pained and irritated? When he approaches the light his eyes will be dazzled, and he will not be able to see anything at all of what are now called realities.

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the moon and the stars and the spangled heaven; and he will see the sky and the stars by night better than the sun or the light of the sun by day?

Certainly.

Last of all he will be able to see the sun, and not mere reflections of him in the water, but he will see him in his own proper place, and not in another; and he will contemplate him as he is.

Certainly.

He will then proceed to argue that this is he who gives the season and the years, and is the guardian of all that

is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold?

Clearly, he said, he would first see the sun and then reason about him.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them?

Certainly, he would.

And if they were in the habit of conferring honours among themselves on those who were quickest to observe the passing shadows and to remark which of them went before, and which followed after, and which were together; and who were therefore best able to draw conclusions as to the future, do you think that he would care for such honours and glories, or envy the possessors of them? Would he not say with Homer,

Better to be the poor servant of a poor master, and to endure anything, rather than think as they do and live after their manner?

Yes, he said, I think that he would rather suffer anything than entertain these false notions and live in this miserable manner.

Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation; would he not be certain to have his eyes full of darkness?

To be sure, he said.

And if there were a contest, and he had to compete in measuring the shadow's with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the

time which would be needed to acquire this new habit of sight might be very considerable), would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that it was better not even to think of ascending; and if anyone tried to loose another and lead him up to the light, let them only catch the offender, and they would put him to Death.

No question, he said.

This entire allegory, I said, you may now append, dear Glaucon, to the previous argument; the prison-house is the world of sight, the light of the fire is the sun, and you will not misapprehend me if you interpret the journey upwards to be the ascent of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed—whether rightly or wrongly God knows. But, whether true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this visible world, and the immediate source of reason and truth in the intellectual; and that this is the power upon which he who would act rationally either in public or private life must have his eye fixed.

I agree, he said, as far as I am able to understand you.

Moreover, I said, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Plato, Republic, VII, 514A

14 It is sweet, when on the great sea the winds trouble its waters, to behold from land another's deep distress; not that it is a pleasure and delight that any should be afflicted, but because it is sweet to see from what evils you are yourself exempt. It is sweet also to look upon the mighty struggles of war arrayed along the plains without sharing yourself in the danger. But nothing is more welcome that to hold the lofty and serene positions well fortified by the learning of the wise, from which you may look down upon others and see them wandering all abroad and going astray in their search for the path of life, see the contest among them of intellect, the rivalry of birth, the striving night and day with surpassing effort to struggle up to the summit of power and be masters of the world.

O miserable minds of men! O blinded breasts! in what darkness of life and in how great dangers is passed this term of life whatever its duration!

Lucretius, Nature of Things, II

15 The man who is sick of home often issues forth from his large mansion, and as suddenly comes back to it, finding as he does that he is no better off abroad. He races to his country-house, driving his Jennets in headlong haste, as if hurrying to bring help to a house on fire: he yawns the moment he has reached the door of his house, or sinks heavily into sleep and seeks forgetfulness, or even in haste goes back again to town. In this way each man flies from himself (but self from whom, as you may be sure is commonly the case, he cannot escape, clings to him in his own despite).

Lucretius, Nature of Things, III

16 O mortals, blind in fate, who never know To bear high fortune, or endure the low!

Virgil, Aeneid, X

17 He [Aemilius Paulus] began to discourse of fortune and human affairs. "Is it meet," said he, "for him that knows he is but man, in his greatest prosperity to pride himself, and be exalted at the conquest of a city, nation, or kingdom, and not, rather, well to weigh this change of fortune, in which all warriors may see an example of their common frailty, and learn a lesson that there is nothing durable or constant? For what time can men select to think themselves secure, when that of victory itself forces us more than any to dread our own fortune? And a very little consideration on the law of things, and how all are hurried round, and each man's station changed, will introduce sadness in the midst of the greatest joy."

Plutarch, Aemilius Paulus

18 Nothing is more intractable than man when in felicity, nor anything more docile, when he has been reduced and humbled by fortune.

Plutarch, Lucullus

19 Good fortune will elevate even petty minds, and give them the appearance of a certain greatness and stateliness, as from their high place they look down upon the world; but the truly noble and resolved spirit raises itself, and becomes more conspicuous in times of disaster and ill fortune.

Plutarch, Eumenes

20 Know you not that in the course of a long time many and various kinds of things must happen; that a fever shall overpower one, a robber another, and a third a tyrant? Such is the condition of things around us, such are those who live with us in the world: cold and heat, and unsuitable ways of living, and journeys by land, and voyages by sea, and winds, and various circumstances which surround us, destroy one man, and banish another, and throw one upon an embassy and another into an army. Sit down, then, in a flutter at all these things, lamenting, unhappy, unfortunate, dependent on another, and dependent not on one or two, but on ten thousands upon ten thousands.

Epictetus, Discourses, III, 24

21 Of human life the time is a point, and the substance is in a flux, and the perception dull, and the composition of the whole body subject to putrefaction, and the soul a whirl, and fortune hard to divine, and fame a thing devoid of judgement. And, to say all in a word, everything which belongs to the body is a stream, and what belongs to the soul is a dream and vapour, and life is a warfare and a stranger's sojourn, and after-fame is oblivion.

Marcus Aurelius, Meditations, II, 17

22 To have contemplated human life for forty years is the same as to have contemplated it for ten thousand years. For what more wilt thou see?

Marcus Aurelius, Meditations, VII, 49

23 The art of life is more like the wrestler's art than the dancer's, in respect of this, that it should stand ready and

firm to meet onsets which are sudden and unexpected.

Marcus Aurelius, Meditations, VII, 61

24 Murders, death in all its guises, the reduction and sacking of cities, all must be to us just such a spectacle as the changing scenes of a play; all is but the varied incident of a plot, costume on and off, acted grief and lament. For on earth, in all the succession of life, it is not the Soul within but the Shadow outside of the authentic man, that grieves and complains and acts out the plot on this world stage which men have dotted with stages of their own constructing. All this is the doing of man knowing no more than to live the lower and outer life.

Plotinus, Third Ennead, II, 15

25 Another of the king's chief men... presently added; "The present life of man, O king, seems to me, in comparison of that time which is unknown to us, like to the swift flight of a sparrow through the room wherein you sit at supper in winter, with your commanders and ministers, and a good fire in the midst, whilst the storms of rain and snow prevail abroad; the sparrow, I say, flying in at one door, and immediately out at another, whilst he is within, is safe from the wintry storm; but after a short space of fair weather, he immediately vanishes out of your sight, into the dark winter from which he had emerged. So this life of man appears for a short space, but of what went before, or what is to follow, we are utterly ignorant."
Bede, Ecclesiastical History, II, 13

26 O wretched lot of man, when he hath lost that for which he was made! O hard and terrible fate! Alas, what has he lost, and what has he found? What has departed, and

what remains? He has lost the blessedness for which he was made, and has found the misery for which he was not made. That has departed without which nothing is happy, and that remains which, in itself, is only miserable. Man once did eat the bread of angels, for which he hungers now; he eateth now the bread of sorrows, of which he knew not then. Alas! for the mourning of all mankind, for the universal lamentation of the sons of Hades! He choked with satiety, we sigh with hunger. He abounded, we beg. He possessed in happiness, and miserably forsook his possession; we suffer want in unhappiness and feel a miserable longing, and alas! we remain empty.

Why did he not keep for us, when he could so easily, that whose lack we should feel so heavily? Why did he shut us away from the light, and cover us over with darkness? With what purpose did he rob us of life, and inflict death upon us? Wretches that we are, whence have we been driven out; whither are we driven on? Whence hurled? Whither consigned to ruin? From a native country into exile, from the vision of God into our present blindness, from the joy of immortality into the bitterness and horror of death. Miserable exchange of how great a good, for how great an evil! Heavy loss, heavy grief heavy all our fate!

Anselm of Canterbury, Proslogium, I

- 27 Man's nature may be looked at in two ways: first, in its integrity, as it was in our first parent before sin; secondly, as it is corrupted in us after the sin of our first parent. Now in both states human nature needs the help of God as First Mover to do or will any good whatsoever.... But in the state of integrity of nature, as regards the sufficiency of the operative power, man by his natural endowments

could will and do the good proportionate to his nature, such as the good of acquired virtue, but not surpassing good, as the good of infused virtue. But in the state of corrupt nature, man falls short even of what he could do by his nature, so that he is unable to fulfil it by his own natural powers. Yet because human nature is not altogether corrupted by sin, so as to be shorn of every natural good, even in the state of corrupted nature it can, by virtue of its natural endowments, work some particular good, as to build dwellings, plant vineyards, and the like; yet it cannot do all the good natural to it, so as to fall short in nothing, just as a sick man can of himself make some movements, yet he cannot be perfectly moved with the movements of one in health, unless by the help of medicine he be cured.

Aquinas, Summa Theologica, I—II, 109, 2

28 *Cacciaguida*. Thou shalt abandon everything beloved most dearly; this is the arrow which the bow of exile shall first shoot.

Thou shalt make trial of how salt doth taste another's bread, and how hard the path to descend and mount upon another's stair.

Dante, Paradiso, XVII, 55

29 He will be successful who directs his actions according to the spirit of the times, and ... he whose actions do not accord with the times will not be successful. Because men are seen, in affairs that lead to the end which every man has before him, namely, glory and riches, to get there by various methods; one with caution, another with haste; one by force, another by skill; one by patience, another

by its opposite; and each one succeeds in reaching the goal by a different method. One can also see of two cautious men the one attain his end, the other fail; and similarly, two men by different observances are equally successful, the one being cautious, the other impetuous; all this arises from nothing else than whether or not they conform in their methods to the spirit of the times.

Machiavelli, Prince, XXV

- 30 The world is like a drunken peasant. If you lift him into the saddle on one side, he will fall off on the other side. One can't help him, no matter how one tries. He wants to be the devil's.

Luther, Table Talk, 630

- 31 Those who accuse men of always gaping after future things, and teach us to lay hold of present goods and settle ourselves in them, since we have no grip on what is to come (indeed a good deal less than we have on what is past), put their finger on the commonest of human errors—if they dare to call an error something to which Nature herself leads us in serving the continuation of her work, and which, more zealous for our action than for our knowledge, she imprints in us like many other false notions. We are never at home, we are always beyond. Fear, desire, hope, project us toward the future and steal from us the feeling and consideration of what is, to busy us with what will be, even when we shall no longer be.

Montaigne, Essays, I, 3, Our Feelings Reach Out

- 32 It is pleasanter to laugh than to weep,... because it is more disdainful, and condemns us more than the other;

and it seems to me that we can never be despised as much as we deserve. Pity and commiseration are mingled with some esteem for the thing we pity; the things we laugh at we consider worthless. I do not think there is as much unhappiness in us as vanity, nor as much malice as stupidity. We are not so full of evil as of inanity; we are not as wretched as we are worthless.

Montaigne, Essays, I, 50, Of Democritus and Heraclitus

33 We have as our share inconstancy, irresolution, uncertainty, grief, superstition, worry over things to come, even after our life, ambition, avarice, jealousy, envy, unruly, frantic, and untamable appetites, war, falsehood, disloyalty, detraction, and curiosity. Indeed we have strangely overpaid for this fine reason that we glory in, and this capacity to judge and know, if we have bought it at the price of this infinite number of passions to which we are incessantly a prey.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

34 Alas, poor man! You have enough necessary ills without increasing them by your invention, and you are miserable enough by nature without being so by art. You have real and essential deformities enough without forging imaginary ones.

Montaigne, Essays, III, 5, On Some Verses of Virgil

35 We are great fools. "He has spent his life in idleness," we say; "I have done nothing today." What, have you not lived? That is not only the fundamental but the most illustrious of your occupations. "If I had been placed in a position to manage great affairs, I would have shown

what I could do." Have you been able to think out and manage your own life? You have done the greatest task of all. To show and exploit her resources Nature has no need of fortune; she shows herself equally on all levels and behind a curtain as well as without one. To compose our character is our duty, not to compose books, and to win, not battles and provinces, but order and tranquility in our conduct. Our great and glorious masterpiece is to live appropriately. All other things, ruling, hoarding, building, are only little appendages and props, at most.

Montaigne, Essays, III, 13, Of Experience

36 What man that sees the ever-whirling wheele
Of Change, the which all mortall things doth sway.
But that therby doth find, and plainly feelee,
How Mutability in them doth play Her cruell sports, to
many mens decay?

Spenser, Faerie Queene, Bk. VII, VI, 1

37 Full little knowest thou that hast not tride,
What hell it is, in suing long to bide:
To loose good dayes, that might be better spent;
To wast long nights in pensive discontent;
To speed to day, to be put back to morrow;
To feed on hope, to pine with feare and sorrow;
To have thy Princes grace, yet want her Peeres;
To have thy asking, yet waite manie yeeres;
To fret thy soule with crosses and with cares;
To eate thy heart through comfortlesse dispaire;
To fawne, to crowche, to waite, to ride, to ronne,
To spend, to give, to want, to be undonne.

Unhappie wight, borne to desastrous end,
That doth his life in so long tendance spend I

Spenser, Complaints: Motlier Hubberds Tale, 895

38 *King Henry*. O God! methinks it were a happy life,
To be no better than a homely swain;
To sit upon a hill, as I do now,
To carve out dials quaintly, point by point.
Thereby to see the minutes how they run.
How many make the hour full complete;
How many hours bring about the day;
How many days will finish up the year;
How many years a mortal man may live.
When this is known, then to divide the times:
So many hours must I tend my flock;
So many hours must I take my rest;
So many hours must I contemplate;
So many hours must I sport myself;
So many days my ewes have been with young;
So many weeks ere the poor fools will can;
So many years ere I shall shear the fleece:
So minutes, hours, days, months, and years,
Pass'd over to the end they were created,
Would bring white hairs unto a quiet grave.

Shakespeare, III Henry VI, II, v, 21

39 *Puch*. Lord, what fools these mortals be!

Shakespeare, Midsummer-Night's Dream, III, ii, 115

40 *Lewis*. There's nothing in this world can make me joy:
Life is as tedious as a twice-told tale
Vexing the dull ear of a drowsy man.

Shakespeare, King John, III, iv, 107

- 41 *Gratiano*. You look not well, Signior Antonio;
You have too much respect upon the world:
They lose it that do buy it with much care:
Believe me, you are marvellously changed.
Antonio. I hold the world but as the world, Gratiano;
A stage where every man must play a part,
And mine a sad one.

Shakespeare, Merchant of Venice, I, i, 73

- 42 *Brutus*. There is a tide in the affairs of men
Which, taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries.
On such a full sea are we now afloat;
And we must take the current when it serves
Or lose our ventures.

Shakespeare, Julius Caesar, IV, iii, 218

- 43 *Duke*. Thou seest we are not all alone unhappy:
This wide and universal theatre
Presents more woeful pageants than the scene
Wherein we play in.
Jaques. All the world's a stage,
And all the men and women merely players:
They have their exits and their entrances;
And one man in his time plays many parts.

Shakespeare, As You Like It, II, vii, 136

- 44 *Macbeth*. To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day
To the last syllable of recorded time.

And all our yesterdays have lighted fools
The way to dusty death. Out, out, brief candle!
Life's but a walking shadow, a poor player
That struts and frets his hour upon the stage
And then is heard no more. It is a tale
Told by an idiot, full of sound and fury,
Signifying nothing.

Shakespeare, Macbeth, V, v, 19

45 *3rd Fisherman*. Master, I marvel how the fishes live in the sea.

1st Fisherman. Why, as men do a-land; the great ones eat up the little ones. I can compare our rich misers to nothing so fitly as to a whale; a' plays and tumbles, driving the poor fry before him, and at last devours them all at a mouthful. Such whales have I heard on o' the land, who never leave gaping till they've swallowed the whole parish, church, steeple, bells, and all....

Pericles. [Aside] How from the finny subject of the sea These fishers tell the infirmities of men;
And from their watery empire recollect
All that may men approve or men detect!

Shakespeare, Pericles, II, i, 30

46 *Prospero*. Our revels now are ended. These our actors,
As I foretold you, were all spirits and
Are melted into air, into thin air.
And, like the baseless fabric of this vision,
The cloud-capp'd towers, the gorgeous palaces,
The solemn temples, that great globe itself,
Yea, all which it inherit, shall dissolve
And, like this insubstantial pageant faded,

Leave not a rack behind. We are such stuff
As dreams are made on, and our little life
Is rounded with a sleep.

Shakespeare, Tempest, IV, i, 148

47 Like as the waves make towards the pebbled shore,
So do our minutes hasten to their end;
Each changing place with that which goes before,
In sequent toil all forwards do contend.
Nativity, once in the main of light,
Crawls to maturity, wherewith being crown'd,
Crooked eclipses 'gainst his glory fight,
And Time that gave doth now his gift confound.
Time doth transfix the flourish set on youth
And delves the parallels in beauty's brow,
Feeds on the rarities of nature's truth.
And nothing stands but for his scythe to mow.

Shakespeare, Sonnet LX

48 Ah, but says Sancho, your strolling Emperor's Crowns and
Sceptres are not of pure Gold, but Tinsel and Copper. I
grant it, said Don Quixote; nor is it fit the Decorations of
the Stage should be real, but rather Imitations, and the
Resemblance of Realities, as the Plays themselves must
be; which, by the way, I wou'd have you love and esteem,
Sancho, and consequently those that write, and also
those that act 'em; for they are all instrumental to the
Good of the Commonwealth, and set before our Eyes
those Looking-glasses that reflect a lively Representation
of human Life; nothing being able to give us a more just
Idea of Nature, and what we are or ought to be, than
Comedians and Comedies. Prithee tell me, Hast thou

never seen a Play acted, where Kings, Emperors, Prelates, Knights, Ladies, and other Characters, are introduced on the Stage? One acts a Ruffian, another a Soldier; this Man a Cheat, and that a Merchant; one plays a designing Fool, and another a foolish Lover: But the Play done, and the Actors undress'd, they are all equal, and as they were before. All this I have seen, quoth Sancho. Just such a Comedy, said Don Quixote is acted on the great Stage of the World, where some play the Emperors, others the Prelates, and, in short, all the Parts that can be brought into a Dramatick Piece; till Death, which is the Catastrophe and End of the Action, strips the Actors of all their Marks of Distinction, and levels their Quality in the Grave. A rare Comparison, quoth Sancho, though not so new, but that I have heard it over and over. Just such another is that of a Game at Chess, where while the Play lasts, every Piece has its particular Office; but when the Game's over, they are all mingl'd and huddled together, and clapp'd into a Bag, just as when Life's ended we are laid up in the Grave. Truly, Sancho, said Don thy Simplicity lessens, and thy Sense improves every Day.

Cervantes, Don Quixote, II, 12

- 49 If a man meditate much upon the universal frame of nature, the earth with men upon it (the divineness of souls except) will not seem much other than an anthill, whereas some ants carry corn, and some carry their young, and some go empty, and all to and fro a little heap of dust.

Bacon, Advancement of Learning, Bk. I, VIII, 1

50 Whatsoever therefore is consequent to a time of war, where every man is enemy to every man, the same is consequent to the time wherein men live without other security than what their own strength and their own invention shall furnish them withal. In such condition there is no place for industry, because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving and removing such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short.

Hobbes, Leviathan, I, 13

51 For the laws of nature, ns justice, equity, modesty, mercy, and, in sum, doing to others as we would be done to, of themselves, without the terror of some power to cause them to be observed, are contrary to our natural passions, that carry us to partiality, pride, revenge, and the like. And covenants, without the sword, are but words and of no strength to secure a man at all. Therefore, notwithstanding the la%vs of nature (which every one hath then kept, when he has the will to keep them, when he can do it safely), if there be no power erected, or not great enough for our security, every man will and may lawfully rely on his owm strength and art for caution against all other men. And in all places, where men have lived by small families, to rob and spoil one another has been a trade, and so far from being reputed against the law of nature that the greater spoils they gained, the

greater was their honour; and men observed no other laws therein but the laws of honour; that is, to abstain from cruelty, leaving to men their lives and instruments of husbandry. And as small families did then; so now do cities and kingdoms, which are but greater families (for their own security), enlarge their dominions upon all pretences of danger, and fear of invasion, or assistance that may be given to invaders; endeavour as much as they can to subdue or weaken their neighbours by open force, and secret arts, for want of other caution, justly; and are remembered for it in after ages with honour.

Hobbes, Leviathan, II, 17

52 For the World, I count it not an Inn, but an Hospital; and a place not to live, but to die in.

Sir Thomas Browne, Religio Medici, II, 11

53 When I have occasionally set myself to consider the different distractions of men, the pains and perils to which they expose themselves at court or in war, whence arise so many quarrels, passions, bold and often bad ventures, etc., I have discovered that all the unhappiness of men arises from one single fact, that they cannot stay quietly in their own chamber. A man who has enough to live on, if he knew how to stay with pleasure at home, would not leave it to go to sea or to besiege a town. A commission in the army would not be bought so dearly, but that it is found insufferable not to budge from the town; and men only seek conversation and entering games, because they cannot remain with pleasure at home.

But, on further consideration, when, after finding the cause of all our ills, I have sought to discover the reason of it, I have found that there is one very real reason, namely, the natural poverty of our feeble and mortal condition, so miserable that nothing can comfort us when we think of it closely.

Pascal, Pensées, II, 139

54 Let us imagine a number of men in chains and all condemned to death, where some are killed each day in the sight of the others, and those who remain see their own fate in that of their fellows and wait their turn, looking at each other sorrowfully and without hope. It is an image of the condition of men.

Pascal, Pensées, III, 199

55 The last act is tragic, however happy all the rest of the play is; at the last a little earth is thrown upon our head, and that is the end forever.

Pascal, Pensées, III, 210

56 As I walked through the wilderness of this world, I lighted on a certain place where was a Den, and I laid me down in that place to sleep; and, as I slept, I dreamed a dream. I dreamed, and behold I saw a man clothed with rags, standing in a certain place, with his face from his own house, a book in his hand, and a great burden upon his back. ... I looked and saw him open the book and read therein; and, as he read, he wept, and trembled; and not being able longer to contain, he brake out with a lamentable cry, saying, "What shall I do?"...

Now I saw, upon a time, when he was walking in the fields, that he was (as he was wont) reading in this book, and greatly distressed in his mind; and as he read, he burst out, as he had done before, crying, "What shall I do to be saved?"

Bunyan, Pilgrim's Progress, I

57 Behold the child, by Nature's kindly law,
Pleas'd with a rattle, tickled with a straw:
Some livelier play-thing gives his youth delight,
A little louder, but as empty quite:
Scarfs, garters, gold, amuse his riper stage;
And beads and pray'r-books are the toys of age:
Pleas'd with this bauble still, as that before;
Till tir'd he sleeps, and Life's poor play is o'er!

Pope, Essay on Man, Epistle II, 275

58 It is universally acknowledged that there is a great uniformity among the actions of men, in all nations and ages, and that human nature remains still the same, in its principles and operations. The same motives always produce the same actions: The same events follow from the same causes. Ambition, avarice, self-love, vanity, friendship, generosity, public spirit: these passions, mixed in various degrees, and distributed through society, have been, from the beginning of the world, and still are, the source of all the actions and enterprises, which have ever been observed among mankind.

Hume, Concerning Human Understanding, VIII, 65

59 We are placed in this world, as in a great theatre, where the true springs and causes of every event are entirely

concealed from us; nor have we either sufficient wisdom to foresee, or power to prevent, those ills with which we are continually threatened. We hang in perpetual suspense between life and death, health and sickness, plenty and want, which are distributed amongst the human species by secret and unknown causes, whose operation is oft unexpected, and always unaccountable.

Hume, Natural History of Religion, III

60 I live in a constant endeavour to fence against the infirmities of ill health, and other evils of life, by mirth; being firmly persuaded that ever >' time a man smiles,—but much more so, when he laughs, it adds something to this Fragment of Life.

Sterne, Tristram Shandy, Dedication

61 What is the life of man! Is it not to shift from side reside?—from sorrow to sorrow?—to button up one cause of vexation—and unbutton another?

Sterne, Tristram Shandy, IV, 31

62 "Do you believe," said Candide, "that mankind have always been cutting one another's throats; that they were always liars, knaves, treacherous and ungrateful; always thieves, sharpers, highwaymen, lazy, envious and gluttons; always drunkards, misers, ambitious and blood-thirsty; always backbiters, debauchees, fanatics, hypocrites and fools?" "Do you not believe," said Martin, "that hawks have always preyed upon pigeons, when they could light upon them?"

Voltaire, Candide, XXI

63 "I [The Old Woman] want to know which is the worst;—to be ravished an hundred times by negro pirates, to run the gauntlet among the Bulgarians, to be whipped and hanged, to be dissected, to row in the galleys; in a word, to have suffered all the miseries we have undergone, or to stay here, without doing anything?" "That is a great question," said Candide.

Voltaire, Candide, XXX

64 "Let us work," said Martin, "without disputing; it is the only way to render life supportable."

All their little society entered into this laudable design, according to their different abilities. Their little piece of ground produced a plentiful crop. Cunegonde was indeed very homely, but she became an excellent pastry cook. Paquetta worked at embroidery and the old woman took care of the linen. There was no idle person in the company, not excepting even Girofflee; he made a very good carpenter, and became a very honest man.

As to Pangloss, he evidently had a lurking consciousness that his theory required unceasing exertions, and all his ingenuity, to sustain it. Yet he stuck to it to the last; his thinking and talking faculties could hardly be diverted from it for a moment. He seized every occasion to say to Candide, "All the events in this best of possible worlds are admirably connected. If a single link in the great chain were omitted, the harmony of the entire universe would be destroyed. If you had not been expelled from that beautiful castle, with those cruel kicks, for your love to Miss Cunegonde; if you had not been imprisoned by the inquisition; if you had not travelled over a great portion of America on foot; if you had not plunged your sword through the baron; if you had not

lost all the sheep you brought from that fine country', Eldorado, together with the riches with which they were laden, you would not be here to-day, eating preserved citrons, and pistachio nuts."

"That's very well said, and may all be true," said Candide; "but let's cultivate our garden."

Voltaire, Candide, XXX

65 It needs twenty years to lead man from the plant state in which he is within his mother's womb, and the pure animal state which is the lot of his early childhood, to the state when the maturity of the reason begins to appear. It has needed thirty centuries to learn a little about his structure. It would need eternity to learn something about his soul. It takes an instant to kill him.

Voltaire, Philosophical Dictionary: General Reflection on Man

66 "They are surely happy," said the prince, "who have all these conveniencies, of which I envy none so much as the facility with which separated friends interchange their thoughts,"

"The Europeans," answered Imlac, "are less unhappy than we, but they are not happy. Human life is everywhere a state in which much is to be endured, and little to be enjoyed."

Johnson, Rasselas, XI

67 Johnson. We would all be idle if we could.

Boswell, Life of Johnson (Apr. 3, 1776)

68 For though management and persuasion are always the easiest and the safest instruments of governments, as force and violence are the worst and the most dangerous, yet such, it seems, is the natural insolence of man that he almost always disdains to use the good instrument, except when he cannot or dare not use the bad one.

Adam Smith, Wealth of Nations, V, 1

69 There are two very natural propensities which we may distinguish in the most virtuous and liberal dispositions, the love of pleasure and the love of action. If the former is refined by art and learning, improved by the charms of social intercourse, and corrected by a just regard to economy, to health, and to reputation, it is productive of the greatest part of the happiness of private life. The love of action is a principle of a much stronger and more doubtful nature. It often leads to anger, to ambition, and to revenge; but when it is guided by the sense of propriety and benevolence, it becomes the parent of every virtue, and, if those virtues are accompanied with equal abilities, a family, a state, or an empire may be indebted for their safety and prosperity to the undaunted courage of a single man. To the love of pleasure we may therefore ascribe most of the agreeable, to the love of action we may attribute most of the useful and respectable qualifications. The character in which both the one and the other should be united and harmonised would seem to constitute the most perfect idea of human nature.

Gibbon, Decline and Fall of the Roman Empire, XV

70 In the fall and the sack of great cities an historian is condemned to repeat the talc of uniform calamity: the same effects must be produced by the same passions; and when those passions may be indulged without control, small, alas! is the difference between civilised and savage man.

Gibbon, Decline and Fall of the Roman Empire, LXVIII

71 I think I may fairly make two postulata.

First, that food is necessary to the existence of man.

Secondly, that the passion between the sexes is necessary and will remain nearly in its present state.

These two laws, ever since we have had any knowledge of mankind, appear to have been fixed laws of our nature, and, as we have not hitherto seen any alteration in them, we have no right to conclude that they will ever cease to be what they now are without an immediate act of power in that Being who first arranged the system of the universe, and for the advantage of his creatures, still executes, according to fixed laws, all its various operations...

Assuming then, my postulata is granted, I say that the power of population is indefinitely grater than the power in the earth to produce substinance for man.

Population, when unchecked, increases in a geometrical ration. A slight acquaintance with numbers will show the immensity of the first power in comparison of the second.

By the law of our nature which makes food necessary to the life of man, the effects of these two unequal powers must be kept equal.

This implies a strong and constantly operating check on population from the difficulty of subsistence. This

difficulty must fall somewhere and must necessarily be severely felt by a large portion of mankind.

Trough the animal and vegetable kingdoms, nature has scattered the seeds of life abroad with the most profuse and liberal hand. She has been comparatively sparing in the room and the nourishment necessary to rear them. The germs of existence contained in this spot of earth, with ample food, and ample room to expand in, would fill millions of worlds in the course of a few thousand years. Necessity, that imperious all-pervading law of nature , restrains them within the prescribed bounds. The race of plants and the race of animals shrink under the great restrictive law. And the race of man cannot, by any efforts or reason, escape from it. Among plants and animals its effects are waste of seed, sickness, and premature death; among mankind, misery and vice. The former, misery, is an absolutely necessary consequence of it. Vice is a highly probable consequence, and we therefore see it abundantly prevail, but it ought not, perhaps, to be called an absolutely necessary consequence. The ordeal of virtue is to resist all temptations of evil.

The natural inequality of the two powers of population and or production in the earth and that great law of our nature which must constantly keep their effects equal from the great difficulty that to me appears insurmountable in the way to the perfectibility of society. All other arguments are of slight and subordinate consideration in comparison to this. I see no way by which man can escape from weight of this law, which pervades all animated nature. No fancied equality, no agrarian regulations in the utmost extent, could remove the pressure of it even for a single century. And it

appears, therefore, to be decisive against the possible existence of a society all the members of which should live in ease, happiness, and comparative leisure, and feel no anxiety about providing the means of subsistence for themselves and families.

Consequently, if the premises are just, the argument is conclusive against the perfectibility of the mass of mankind

Malthus, Population, I

72 *Oswald*. Action is transitory - a step, a blow
The motion of a muscle - this way or that -
'Tis done, and in the after-vacancy
We wonder at ourselves like men betrayed
Suffering is permanent, obscure and dark,
And shares the nature of infinity.

Wordsworth, The Borderers, III, 405

73 *Mr. Bennet*. For what do we live, but to make sport for our neighbors, and laugh at them in our turn?

Jane Austen, Pride and Prejudice, LVII

74 *Demogorgon*. To suffer woes which Hope thinks infinite;
To forgive wrongs darker than death or night;
To defy Power, which seems omnipotent;
To love, and bear; to hope till Hope creates
From its own wreck the thing it contemplates;
Neither to change, not falter, nor repent;
This, like the glory, Titan, is to be
Good, great and joyous, beautiful and free;
This is alone Life, Joy, Empire, and Victory!

Shelly, Prometheus Unbound, IV, 570

75 Human life must be some kind of mistake.

Schopenhauer, Vanity of Existence

76 If we turn from contemplating the world as a whole, and, in particular, the generations of men as they live their little hour of mock-existence and then are swept away in rapid succession; if we turn from this, and look at life in its small details, as presented, say, in a comedy, how ridiculous it all seems! It is like a drop of water seen through a microscope, a single drop teeming with *infusoria*, or speck of cheese full of mites invisible to the naked eye. How we laugh as they bustle about so eagerly, and struggle with one another in so tiny a space! And whether here, or in the little span of human life, this terrible activity produces a cosmic effect.

Schopenhauer, Vanity of Existence

77 Alas, poor devil! spectres are appointed to haunt him: one age he is hagridden, bewitched; the next, priestridden, befooled; in all ages, bedevilled. And now the Genius of Mechanism smothers him worse than any Nightmare did; till the Soul is nigh choked out of him, and only a kind of Digestive, Mechanic life remains.

Carlyle, Sartor Resartus, III, 3

78 Like a God-created, fire-breathing Spirit-host, we emerge from the Inane; haste stormfully across the astonished Earth; then plunge again into the Inane

Carlyle, Sartor Resartus, III, 8

79 In the hour of death the only adequate consolation is that one has not evaded life, but has endured it. What a man

shall accomplish or not accomplish, does not lie in his power to decide; he is not the One who will guide the world; he has only to obey. Everyone has, therefore, first and foremost (instead of asking which place is most comfortable for him, which connection is the most advantageous to him), to assure himself on the question of where Providence can use him, if it so pleases Providence. The point consists precisely in loving his neighbor, or, what is essentially the same thing, in living equally for every man. Every other point of view is a contentious one, however advantageous and comfortable and apparently significant this position may be. Providence cannot use one who has placed himself there, for he is plainly in rebellion against Providence. But he who duly took that overlooked, that despised and disdained place, without insisting on his earthly rights, without attaching himself to just one single man, essentially existing equally for all men, he will, even though he apparently achieves nothing, even if he becomes exposed to the derision of the poor, or to the ridicule of his superiors, or to both insult and ridicule, yet in the hour of death, he will confidently dare say to his soul: "I have done my best; whether I have accomplished anything, I do not know; whether I have helped anyone, I do not know; but that I have lived for them, that I do know, I know it from the fact that they insulted me. And this is my consolation, that I shall not have to take the secret with me to the grave, that I, in order to have good and undisturbed and comfortable days in life, have denied my kinship to other men, kinship with the poor, in order to live in aristocratic seclusion, or with the distinguished, in order to live in secret obscurity,"

Kierkegaard, Works of Love, I, 2C

80 Life is a festival only to the wise. Seen from the nook and chimney-side of prudence, it wears a ragged and dangerous front.

Emerson, Heroism

81 Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life.
With sweeter manners, purer laws.
 Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes.
But ring the fuller minstrel in.
 Ring out false pride in place and blood.
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.
 Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.
 Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

Tennyson, In Memoriam, CVI

82 There are certain queer times and occasions in this strange mixed affair we call life when a man takes this whole universe for a vast practical joke, though the wit thereof he but dimly discerns, and more than suspects

that the joke is at nobody's expense but his own. However, nothing dispirits, and nothing seems worth while disputing. He bolts down all events, all creeds, and beliefs, and persuasions, all hard things visible and invisible, never mind how knobby; as an ostrich of potent digestion gobbles down bullets and gun flints. And as for small difficulties and worryings, prospects of sudden disaster, peril of life and limb; all these, and death itself, seem to him only sly, good-natured hits, and jolly punches in the side bestowed by the unseen and unaccountable old joker. That odd sort of wayward mood I am speaking of, comes over a man only in some time of extreme tribulation; it comes in the very midst of his earnestness, so that what just before might have seemed to him a thing most momentous, now seems but a part of the general joke.

Melville, Moby Dick, XLIX

83 Consider the subtleness of the sea; how its most dreaded creatures glide under water, unapparent for the most part, and treacherously hidden beneath the loveliest tints of azure. Consider also the devilish brilliance and beauty of many of its most remorseless tribes, as the dainty embellished shape of many species of sharks. Consider, once more, the universal cannibalism of the sea; all whose creatures prey upon each other, carrying on eternal war since the world began.

Consider all this; and then turn to this green, gentle, and most docile earth; consider them both, the sea and the land; and do you not find a strange analogy to something in yourself? For as this appalling ocean surrounds the verdant land, so in the soul of man there lies one insular Tahiti, full of peace and joy, but

encompassed by all the horrors of the half-known life.
God keep thee! Push not off from that isle, thou canst
never return!

Melville, Moby Dick, LVIII

84 All men live enveloped in whale-lines. All are born with
halters round their necks; but it is only when caught in
the swift, sudden turn of death, that mortals realise the
silent, subtle, everpresent perils of life.

Melville, Moby Dick, LX

85 Still we live meanly, like ants; though the fable tells us
that we were long ago changed into men; like pygmies
we fight with cranes; it is error upon error, and clout upon
clout, and our best virtue has for its occasion a
superfluous and evitable 'wretchedness. Our life is
frittered away by detail. An honest man has hardly need
to count more than his ten fingers, or in extreme cases he
may add his ten toes, and lump the rest. Simplicity,
simplicity, simplicity! I say, let your affairs be as two or
three, and not a hundred or a thousand; instead of a
million count half a dozen, and keep your accounts on
your thumb-nail. In the midst of this chopping sea of
civilized life, such are the clouds and storms and
quicksands and thousand-and-one items to be allowed
for, that a man has to live, if he would not founder and go
to the bottom and not make his port at all, by dead
reckoning, and he must be a great calculator indeed who
succeeds. Simplify, simplify.

Thoreau, Walden: Where I Lived, and What I Lived For

86 Why I left the woods? I do not think that I can tell..
Perhaps it is none of my business, even if it is yours...
There was a little stagnation, it may be. About two o'clock
in the afternoon the world's axle creaked as if it needed
greasing... Perhaps if I lived there much longer, I might
live there forever. One would think twice before he
accepted heaven on such terms. A ticket to Heaven must
include tickets to Limbo, Purgatory, and Hell.

Thoreau, Journal {1851}

87 We are no other than a moving row
Of Magic Shadow-shapes that come and go
Round with the Sun-illuminated Lantern held
In Midnight by the Master of the Show;
But helpless Pieces of the Game He plays
Upon this Checkerboard of Nights and Days;
Hither and thither moves, and checks, and slap.
And one by one back in the Closet lap.

FitzGerald, Rubáiyát, LXVIII-LXIX

88 Ah, Love! could you and I with Him conspire
To grasp this sorry' Scheme of Things entire,
Would not we shatter it to bits—and then
Remold it nearer to the Heart's Desire!

FitzGerald, Rubáiyát, XCIX

89 It is a very plain and elementary' truth, that the life, the
fortune, and the happiness of every one of us, and, more
or less, of those who are connected with us, do depend
upon our knowing something of the rules of a game.. . . It
is a game which has been played for untold ages, every'
man and woman of us being one of the two players in a

game of his or her own. The chess-board is the world, the pieces are the phenomena of the universe, the rules of the game are what we call the laws of Nature. The player on the other side is hidden from us. We know that his play is not fair, just and patient. But also we know, to our cost, that he never overlooks a mistake, or makes the smallest allowance for ignorance. To the man who plays well, the highest stakes are paid, with that sort of overflowing generosity with which the strong shoe's delight in strength. And one who plays ill is checkmated—without haste, but without remorse.

T. H. Huxley, A Liberal Education

90 There are three material things, not only useful, but essential to life. No one "knows how to live" till he has got them.

These are pure air, water, and earth.

There are three immaterial things, not only useful, but essential to life. No one knows how to live till he has got them also.

These are admiration, hope, and love.

Admiration—the power of discerning and taking delight in what is beautiful in visible form and lovely in human character; and, necessarily, striving to produce what is beautiful in form and to become what is lovely in character.

Hope—the recognition, by true foresight, of better things to be reached hereafter, whether by ourselves or others; necessarily issuing in the straightforward and undisappointable effort to advance, according to our proper power, the gaining of them.

Love—both of family and neighbour, faithful and satisfied.

Ruskin, An Idealist's Arraignment of the Age

91 Ah, love, let us be true
To one another! for the world, which seems
To lie before us like a land of dreams,
So various, so beautiful, so new,
Hath really neither joy, nor love, nor light.
Nor certitude, nor peace, nor help for pain;
And we are here as on a darkling plain
Swept with confused alarms of struggle and flight,
Where ignorant armies clash by night.

Arnold, Dover Beach

92 As a general rule, people, even the wicked, are much more naive and simple-hearted than we suppose. And we ourselves are, too.

Dostoevsky, Brothers Karamazov, Pt. I, I, 1

93 Tom Sawyer. There's plenty of boys that will come hankering and gruvvelling around when you've got an apple, and beg the core off you; but when they've got one, and you beg for the core and remind them how you give them a core one time, they make a mouth at you and say thank you 'most to death, but there ain't-a-going to be no core.

Mark Twain, Tom Sawyer Abroad, I

94 Do not will anything beyond your power: there is a bad falseness in those who will beyond their power.

Especially when they will great things! For they awaken distrust in great things, these subtle false-coiners and stageplayers;—

—Until at last they are false towards themselves,
squint-eyed, whited cankers, glossed over with strong
words, parade virtues and brilliant false deeds.

Nietzsche, Thus Spake Zarathustra, IV, 73

- 95 If my reader can succeed in abstracting from all
conceptual interpretation and lapse back into his
immediate sensible life at this very moment, he will find
it to be what someone has called a big blooming buzzing
confusion, as free from contradiction in its 'much-at-
onceness' as it is all alive and evidently there.

William James, Some Problems of Philosophy, IV

- 96 Who can decide offhand which is absolutely better, to
live or to understand life? We must do both alternately,
and a man can no more limit himself to either than a pair
of scissors can cut with a single one of its blades.

William James, Some Problems of Philosophy, IV

- 97 Men are not gentle, friendly creatures wishing for love,
who simply defend themselves if they are attacked, but ...
a powerful measure of desire for aggression has to be
reckoned as part of their instinctual endowment. The
result is that their neighbour is to them not only a
possible helper or sexual object, but also a temptation to
them to gratify their aggressiveness on him, to exploit his
capacity for work without recompense, to use him
sexually without his consent, to seize his possessions, to
humiliate him, to cause him pain, to torture and kill him.
Homo homini lupus; who has the courage to dispute it in
the face of all the evidence in his own life and in history?

Freud, Civilization and Its Discontents, V

98 Mankind likes to think in terms of extreme opposites. It is given to formulating its beliefs in terms of Either-Ors, between which it recognizes no intermediate possibilities. When forced to recognize that the extremes cannot be acted upon, it is still inclined to hold that they are all right in theory but that when it comes to practical matters circumstances compel us to compromise.

Dewey, Experience and Education, I

99 Happiness is the only sanction of life; where happiness fails, existence remains a mad and lamentable experiment.

Santayana, Life of Reason, I, 10

100 That life is worth living is the most necessary of assumptions and, were it not assumed, the most impossible of conclusions.

Santayana, Life of Reason, I, 10

101 Between the laughing and the weeping philosopher there is no opposition: the same facts that make one laugh make one weep. No whole-hearted man, no sane art, can be limited to either mood.

Santayana, Persons and Places, X

102 Nothing can be meaner than the anxiety to live on, to live on anyhow and in any shape; a spirit with any honour is not willing to live except in its own way, and a spirit with any wisdom is not over-eager to live at all.

Santayana, Winds of Doctrine, I

1.3 The Ages of Man YOUNG AND OLD

The quotations assembled here fall into two groups; on the one hand, statements about the general course of human life from birth to death—its various stages or periods and its developmental pattern; on the other hand, considerations of the differences between youth and age—the advantages and disadvantages of each, as well as the contrasts and conflicts between them.

Different writers enumerate and characterize the stages of human life differently, but they all appear to agree about the general pattern of human development—its cycle of growth and decline. Each of the main periods of human life has its defenders and its detractors—those who praise the innocence, exuberance, and joy of infancy and childhood and those who condemn the savagery and self-indulgence of the young; those who admire the full-bloom of human maturity, the calm of old age, the wisdom gained with years; and those who paint the opposite picture of crotchety and crabbed inflexibility in the aged, verging on the frailties and ineptitudes of the senile. A few quotations express the view that the best of human life lies in the middle years between youth and age.

Quotations on other aspects of the varying relationships between the young and the old will be found in Section 2.2 on Parents and Children.

■ ■ ■

- 1 For all our days are passed away in thy wrath: we spend our years as a tale that is told.

The days of our years are three-score years and ten; and if by reason of strength they be fourscore years, yet is their strength labour and sorrow; for it is soon cut off, and we fly away.

Psalm 90:9-10

- 2 Rejoice, O young man, in thy youth; and let thy heart cheer thee in the days of thy youth, and walk in the ways of thine heart, and in the sight of thine eyes: but know thou, that for all these things God will bring thee into judgment.

Therefore remove sorrow from thy heart, and put away evil from thy flesh: for childhood and youth are vanity.

Ecclesiastes 11:9-10

- 3 Remember now thy Creator in the days of thy youth, while the evil days come not, nor the years draw nigh, when thou shalt say, I have no pleasure in them;

While the sun, or the light, or the moon, or the stars, be not darkened, nor the clouds return after the rain:

In the day when the keepers of the house shall tremble, and the strong men shall bow themselves, and the grinders cease because they are few, and those that look out of the windows be darkened.

And the doors shall be shut in the streets, when the sound of the grinding is low, and he shall rise up at the

voice of the bird, and all the daughters of musick shall be brought low;

Also when they shall be afraid of that which is high, and fears shall be in the way, and the almond tree shall flourish, and the grasshopper shall be a burden, and desire shall fail: because man goeth to his long home, and the mourners go about the streets:

Or ever the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern.

Then shall the dust return to the earth as it was: and the spirit shall return unto God who gave it.

Ecclesiastes 12:1—7

- 4 *Priam*. For a young man all is decorous when he is cut down in battle and torn with the sharp bronze, and lies there dead, and though dead still all that shows about him is beautiful; but when an old man is dead and down, and the dogs mutilate the grey head and the grey beard and the parts that are secret, this, for all sad mortality, is the sight most pitiful.

Homer, Iliad, XXII, 71

- 5 Penelope. Men grow old soon in hardship.

Homer, Odyssey, XIX, 361

- 6 Odysseus.

"My strange one,
must you again, and even now,

urge me to talk? Here is a plodding tale;
no charm in it, no relish in the telling.
Teiresias told me I must take an oar
and trudge the mainland, going from town to town,
until I discover men who have never known
the salt blue sea, nor flavor of salt meat—
strangers to painted prows, to watercraft
and oars like wings, dipping across the water.
The moment of revelation he foretold
was this, for you may share the prophecy:
some traveller falling in with me will say:
'A winnowing fan, that on your shoulder, sir?'
There I must plant my oar, on the very spot,
with burnt offerings to Poseidon of the Waters:
a ram, a bull, a great buck boar. Thereafter
when I come home again, I am to slay
full hekatombs to the gods who own broad heaven,
one by one.

Then death will drift upon me
from seaward, mild as air, mild as your hand,
in my well-tended weariness of age,
contented folk around me on our island.
He said all this must come."

Penelope said:

"If by the gods' grace age at least is kind, we have
that promise—trials will end in peace."

Homer, Odyssey, XXIII, 264

7 Chorus. Since the young vigor that urges
inward to the heart
is frail as age, no warcraft yet perfect,
while beyond age, leaf
withered, man goes three footed

no stronger than a child is,
a dream that falters in daylight.

Aeschylus, Agamemnon, 76

8 Chorus.

Though he has watched a decent age pass by.
A man will sometimes still desire the world.
I swear I see no wisdom in that man.
The endless hours pile up a drift of pain
More unrelieved each day; and as for pleasure,
When he is sunken in excessive age,
You will not see his pleasure anywhere.
The last attendant is the same for all,
Old men and young alike, as in its season
Man's heritage of underworld appears:
There being then no epithalamion.
No music and no dance. Death is the finish.

Sophocles, Oedipus at Colonus, 1211

9 Chorus.

The feathery follies of his youth once over,
What trouble is beyond the range of man?
What heavy burden will he not endure?
Jealousy, faction, quarreling, and battle—
The bloodiness of war, the grief of war.
And in the end he comes to strengthless age,
Abhorred by all men, without company,
Unfriended in that uttermost twilight
Where he must live with every bitter thing.

Sophocles, Oedipus at Colonus, 1230

- 10 *Deianira*. I see her youth is coming to full bloom while mine is fading. The eyes of men love to pluck the blossoms; from the faded flowers they turn away.

Sophocles, Women of Trachis, 547

- 11 Growing bodies have the most innate heat; they therefore require the most food, for otherwise their bodies are wasted. In old persons the heat is feeble, and therefore they require little fuel, as it were, to the flame, for it would be extinguished by much. On this account, also, fevers in old persons are not equally acute, because their bodies are cold.

Hippocrates, Aphorisms, I, 14

- 12 Old people, on the whole, have fewer complaints than young; but those chronic diseases which do befall them generally never leave them.

Hippocrates, Aphorisms, 11, 39

- 13 I [Socrates] replied: There is nothing which for my part I like better, Cephalus, than conversing with aged men; for I regard them as travellers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the "threshold of old age"—Is life harder towards the end, or what report do you give of it?

I will tell you, Socrates, he said, what my own feeling is. Men of my age flock together; we are birds of a feather, as the old proverb says; and at our meetings the tale of my acquaintance commonly is—I cannot eat, I

cannot drink; the pleasures of youth and love are fled away: there was a good time once, but now that is gone, and life is no longer life. Some complain of the slights which are put upon them by relations, and they will tell you sadly of how many evils their old age is the cause. But to me, Socrates, these complainers seem to blame that which is not really in fault. For if old age were the cause, I too being old, and every other old man, would have felt as they do. But this is not my own experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question. How does love suit with age, Sophocles—are you still the man you were? Peace, he replied; most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master. His words have often occurred to my mind since, and they seem as good to me now as at the time when he uttered them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, we are freed from the grasp not of one mad master only, but of many. The truth is, Socrates, that these regrets, and also the complaints about relations, are to be attributed to the same cause, which is not old age, but men's characters and tempers; for he who is of a calm and happy nature will hardly feel the pressure of age, but to him who is of an opposite disposition youth and age are equally a burden.

Plato, Republic, I, 328B

- 14 Socrates. In youth good men often appear to be simple, and are easily practised upon by the dishonest, because they have no examples of what evil is in their own souls.

Plato, Republic, III, 409A

- 15 *Athenian Stranger*. Where old men have no shame, there young men will most certainly be devoid of reverence. The best way of training the young is to train yourself at the same time; not to admonish them, but to be always carrying out your own admonitions in practice.

Plato, Laws V, 729A

- 16 A young man is not a proper hearer of lectures on political science; for he is inexperienced in the actions that occur in life, but its discussions start from these and are about these; and further, since he tends to follow his passions, his study will be vain and unprofitable, because the end aimed at is not knowledge but action. And it makes no difference whether he is young in years or youthful in character; The defect does not depend on time, but on his living, and pursuing each successive object, as passion directs. For to such persons, as to the incontinent, knowledge brings no profit; but to those who desire and act in accordance with a rational principle knowledge about such matters will be of great benefit.

Aristotle, Ethics, 1095a2

- 17 The friendship of young people seems to aim at pleasure; for they live under the guidance of emotion, and pursue above all what is pleasant to themselves and what is immediately before them.... This is why they quickly become friends and quickly cease to be so; their friendship changes with the object that is found pleasant, and such pleasure alters quickly. Young people are amorous too; for the greater part of the friendship of love depends on emotion and aims at pleasure; this is why

they fall in love and quickly fall out of love, changing often within a single day. But these people do wish to spend their days and lives together; for it is thus that they attain the purpose of their friendship.

Aristotle, Ethics, 1156a32

18 Young men have strong passions, and tend to gratify them indiscriminately. Of the bodily desires, it is the sexual by which they are most swayed and in which they show absence of self-control. They are changeable and fickle in their desires, which are violent while they last, but quickly over: their impulses are keen but not deep-rooted, and are like sick people's attacks of hunger and thirst. They are hot-tempered, and quick-tempered, and apt to give way to their anger; bad temper often gets the better of them, for owing to their love of honour they cannot bear being slighted, and are indignant if they imagine themselves unfairly treated. While they love honour, they love victory still more; for youth is eager for superiority over others, and victory is one form of this. They love both more than they love money, which indeed they love very little, not having yet learnt what it means to be without it... They look at the good side rather than the bad, not having yet witnessed many instances of wickedness. They trust others readily, because they have not yet often been cheated. They are sanguine; nature warms their blood as though with excess of wine; and besides that, they have as yet met with few disappointments. Their lives are mainly spent not in memory but in expectation; for expectation refers to the future, memory to the past, and youth has a long future before it and a short past behind it: on the first day of one's life one has nothing at all to remember, and can

only look forward. They are easily cheated, owing to the sanguine disposition just mentioned. Their hot tempers and hopeful dispositions make them more courageous than older men are; the hot temper prevents fear, and the hopeful disposition creates confidence; we cannot feel fear so long as we are feeling angry, and any expectation of good makes us confident. They are shy, accepting the rules of society in which they have been trained, and not yet believing in any other standard of honour. They have exalted notions, because they have not yet been humbled by life or learnt its necessary limitations; moreover, their hopeful disposition makes them think themselves equal to great things—and that means having exalted notions. They w'ould always rather do noble deeds than useful ones; their lives are regulated more by moral feeling than by reasoning; and whereas reasoning leads us to choose what is useful, moral goodness leads us to choose what is noble. They are fonder of their friends, intimates, and companions than older men are, because they like spending their days in the company of others, and have not yet come to value either their friends or anything else by their usefulness to themselves. All their mistakes are in the direction of doing things excessively and vehemently. They disobey Chilon's precept by overdoing everything; they love too much and hate too much, and the same thing with everything else. They think they know everything, and are always quite sure about it; this, in fact, is why they overdo everything. If they do wrong to others, it is because they mean to insult them, not to do them actual harm. They are ready to pity others, because they think every one an honest man, or anyhow better than he is: they judge their neighbour by their own harmless

natures, and so cannot think he deserves to be treated in that way. They are fond of fun and therefore witty, wit being well-bred insolence.

Aristotle, Rhetoric, 1389a3

19 Elderly Men... have lived many years; they have often been taken in, and often made mistakes; and life on the whole is a bad business. The result is that they are sure about nothing and under-do everything. They 'think' but they never 'know'; and because of their hesitation they always add a 'possibly' or a 'perhaps', putting everything this way and nothing positively. They are cynical; that is, they tend to put the worse construction on everything. Further, their experience makes them distrustful and therefore suspicious of evil. Consequently they neither love warmly nor hate bitterly, but... love as though they will some day hate and hate as though they will some day love. They are small-minded, because they have been humbled by life: their desires are set upon nothing more exalted or unusual than what will help them to keep alive. They are not generous, because money is one of the things they must have, and at the same time their experience has taught them how hard it is to get and how easy to lose. They are cowardly, and are always anticipating danger; unlike that of the young, who are warm-blooded, their temperament is chilly; old age has paved the way for cowardice; fear is, in fact, a form of chill. They love life; and all the more when their last day has come... They are too fond of themselves; this is one form that small-mindedness takes. Because of this, they guide their lives too much by considerations of what is useful and too little by what is noble—for the useful is what is good for oneself, and the noble what is good

absolutely. They are not shy, but shameless rather; caring less for what is noble than for what is useful, they feel contempt for what people may think of them. They lack confidence in the future; partly through experience—for most things go wrong, or anyhow turn out worse than one expects; and partly because of their cowardice. They live by memory rather than by hope; for what is left to them of life is but little as compared with the long past; and hope is of the future, memory of the past. This, again, is the cause of their loquacity; they are continually talking of the past, because they enjoy remembering it. Their fits of anger are sudden but feeble. Their sensual passions have either altogether gone or have lost their vigour: consequently they do not feel their passions much, and their actions are inspired less by what they do feel than by the love of gain. Hence men at this time of life are often supposed to have a self-controlled character; the fact is that their passions have slackened, and they are slaves to the love of gain. They guide their lives by reasoning more than by moral feeling; reasoning being directed to utility and moral feeling to moral goodness. If they wrong others, they mean to injure them, not to insult them. Old men may feel pity, as well as young men, but not for the same reason. Young men feel it out of kindness; old men out of weakness, imagining that anything that befalls any one else might easily happen to them. . . . Hence they are querulous, and not disposed to jesting or laughter — the love of laughter being; the very opposite of querulousness.

Aristotle, Rhetoric 1389b13

20 As for Men in their Prime, clearly we shall find that they have a character between that of the young and that o!

the old, free from the extremes of either. They have neither that excess of confidence which amounts to rashness, nor too much timidity, but the right amount of each. They neither trust everybody nor distrust everybody, but judge people correctly. Their lives will be guided not by the sole consideration either of what is noble or of what is useful, but by both; neither by parsimony nor by prodigality, but by what is fit and proper. So, too, in regard to anger and desire; they will be brave as well as temperate, and temperate as well as brave; these virtues are divided between the young and the old; the young are brave but intemperate, the old temperate but cowardly. To put it generally, all the valuable qualities that youth and age divide between them are united in the prime of life, while all their excesses or defects are replaced by moderation and fitness. The body is in its prime from thirty to five-and-thirty; the mind about forty-nine.

Aristotle, Rhetoric, 1390a28

- 21 *Cato*. The great affairs of life are not performed by physical strength, or activity, or nimbleness of body, but by deliberation, character, expression of opinion. Of these old age is not only not deprived, but, as a rule, has them in a greater degree.

Cicero, Old Age, VI

- 22 *Cato*. The course of life is fixed, and nature admits of its being run but in one way, and only once; and to each part of our life there is something specially seasonable; so that the feebleness of children, as well as the high spirit of youth, the soberness of maturer years, and the

ripe wisdom of old age—all have a certain natural advantage which should be secured in its proper season.

Cicero, Old Age, X

- 23 *Cato*. The fact is that old age is respectable just as long as it asserts itself, maintains its proper rights, and is not enslaved to any one. For as I admire a young man who has something of the old man in him, so do I an old one who has something of a young man. The man who aims at this may possibly become old in body—in mind he never will.

Cicero, Old Age, XI

- 24 "Perhaps you may of Priam's fate enquire.
He, when he saw his regal town on fire.
His ruin'd palace, and his ent'ring foes,
On ev'ry side inevitable woes.
In arms, disus'd, invests his limbs, decay'd.
Like them, with age; a late and useless aid.
His feeble shoulders scarce the weight sustain;
Loaded, not arm'd, he creeps along with pain.
Despairing of success, ambitious to be slain!
Uncover'd but by heav'n, there stood in view
An altar; near the hearth a laurel grew.
Dodder'd with age, whose boughs encompass round
The household gods, and shade the holy ground.
Here Hecuba, with all her helpless train
Of dames, for shelter sought, but sought in vain.
Driv'n like a flock of doves along the sky,
Their images they hug, and to their altars fly.
The Queen, when she beheld her trembling lord,
And hanging by his side a heavy sword,

'What rage,' she cried, 'has seiz'd my husband's mind?
What arms are these, and to what use design'd?
These times want other aids! Were Hector here,
Ev'n Hector now in vain, like Priam, would appear.
With us, one common shelter thou shalt find.
Or in one common fate with us be join'd.'
She said, and with a last salute embrac'd
The poor old man, and by the laurel plac'd.

Virgil, Aeneid, II

25 We should cherish old age and enjoy it. It is full of pleasure if you know how to use it. Fruit tastes most delicious just when its season is ending. The charms of youth are at their greatest at the time of its passing. It is the final glass which pleases the inveterate drinker, the one that sets the crowning touch on his intoxication and sends him off into oblivion. Every pleasure defers till its last its greatest delights. The time of life which offers the greatest delight is the age that sees the downward movement—not the steep decline—already begun; and in my opinion even the age that stands on the brink has pleasures of its own—or else the very fact of not experiencing the want of any pleasures takes their place. How nice it is to have outworn one's desires and left them behind!

Seneca, Letters to Lucilius, 12

26 At the same time came the disciples unto Jesus, saying. Who is the greatest in the kingdom of Heaven?
And Jesus called a little child unto him, and set him in the midst of them,

And said, Verily I say unto you. Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven.

Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven.

And whoso shall receive one such little child in my name receiveth me.

But whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck, and that he were drowned in the depth of the sea.

Matthew 18:1-6

27 Verily, verily, I say unto thee, When thou wast young, thou girdest thyself, and walkedst whither thou wouldst: but when thou shalt be old, thou shalt stretch forth thy hands, and another shall gird thee, and carry thee whither thou wouldst not.

John 21:18

28 How are you desirous at the same time to live to old age, and at the same time not to see the death of any person whom you love?

Epictetus, Discourses, III, 24

29 The innocence of children is in the helplessness of their bodies rather than any quality in their minds. I have myself seen a small baby jealous; it was too young to speak, but it was livid with anger as it watched another infant at the breast.

There is nothing unusual in this. Mothers and nurses will tell you that they have their own way of curing these

fits of jealousy. But at any rate it is an odd kind of innocence when a baby cannot bear that another—in great need, since upon that one food his very life depends—should share the milk that flows in such abundance. These childish tempers are borne with lightly, not because they are not faults, or only small faults; but because they will pass with the years. This is clearly so: for though we bear with them now, the same things would not be tolerated in an older person.

Augustine, Confessions, I, 7

30 Lord, I do not remember living this age of my infancy; I must take the word of others about it and can only conjecture how I spent it—even if with a fair amount of certainty—from watching others now in the same stage. I am loth, indeed, to count it as part of the life I live in this world. For it is buried in the darkness of the forgotten as completely as the period earlier still that I spent in my mother's womb.

Augustine, Confessions, I, 7

31 Such is God's mercy towards the vessels of mercy' which He has prepared for glory that even the first age of man, that is, infancy, which submits without any resistance to the flesh, and which has not yet understanding enough to undertake this warfare, and therefore yields to almost every' vicious pleasure (because though this age has the power of speech, and may therefore seem to have passed infancy, the mind is still too weak to comprehend the commandment), yet if either of these ages has received the sacraments of the Mediator, then, although the present life be immediately brought to an end, the child

having been translated from the power of darkness to the kingdom of Christ, shall not only be saved from eternal punishments, but shall not even suffer purgatorial torments after death. For spiritual regeneration of itself suffices to prevent any evil consequences resulting after death from the connection with death which carnal generation forms. But when we reach that age which can now comprehend the commandment, and submit to the dominion of law, we must declare war upon vices and wage this war keenly. lest we be landed in damnable sins. And if Vices have not gathered strength, by habitual victory they are more easily overcome and subdued; but if they have been used to conquer and rule, it is only with difficulty and labour they are mastered.

Augustine, of God, XXI, 16

- 32 Few indeed are they who are so happy as to have passed their youth without committing any damnable sins, either by dissolute or violent conduct, or by following some godless and unlawful opinions.

Augustine, City of God, XXI, 16

- 33 Youth is a cause of hope for three reasons.... And these three reasons may be gathered from the three conditions of the good which is the object of hope—namely, that it is future, arduous and possible.... For youth has much of the future before it, and little of the past; and therefore since memory' is of the past, and hope of the future, it has little to remember and lives very much in hope. Again, youths, on account of the heat of their nature, are full of spirit, so that their heart expands, and it is owing to the heart being expanded that one tends to that which is arduous;

therefore youths are spirited and hopeful. Likewise they who have not suffered defeat, nor had experience of obstacles to their efforts, are prone to count a thing possible to them. Therefore youths, through inexperience of obstacles and of their own shortcomings, easily count a thing possible, and consequently are of good hope.

Aquinas, Summa Theologica, I-II, 40, 6

34 Human life is divided into four ages. The first is called adolescence, that is, the 'increasing' of life. The second is called 'manhood,' that is to say, the age of achievement, which may give perfection, and in this sense it is itself called perfect, because none can give aught save what he hath. The third is called old age. The fourth is called decrepitude...

As to the first, no one hesitates, but every sage agrees that it lasts up to the twenty-fifth year; and because up to that time our soul is chiefly intent on conferring growth and beauty on the body, whence many and great changes take place in the person, the rational part cannot come to perfect discretion; wherefore Reason lays down that before this age there are certain things a man may not do without a guardian of full age.

As for the second, which is truly the summit of our life, (here is great diversity concerning the period to be taken; but passing over what philosophers and physicians have written about it, and having recourse to my own argumentation, I say that in the majority (on whom every judgment about a natural phenomenon may and should be based) this age lasts twenty years. And the argument which gives me this is that, if the apex of our arch is at thirty-five, the age under discussion should have as long a period of descent as it has of ascent; and this rising and

descending may be likened to the sustained height of the arch wherein but slight bending is to be discerned. We have it, then, that the prime of life is completed at the forty-fifth year.

And as adolescence lasts twenty-five years, mounting up to the prime of life, so the descent, that is, age, is a like period, succeeding to the prime of life; and so age ends at the seventieth year.

But inasmuch as adolescence (taking it as we have done above) does not begin at the beginning of life, but some eight months after, and inasmuch as our nature is eager to rise and hangs back from descending (because the natural heat is reduced and has small power, and the humid is thickened, not in quantity but in quality, and so is less easily evaporated and consumed) it comes to pass that beyond old age there remains perhaps to the amount of ten years of our life, or a little more or a little less. And this period is called decrepitude. Whence we have it of Plato—whom (both in the strength of his own nature, and because of the physiognomistope which Socrates cast for him when first he saw him) we may believe to have had the most excellent nature—that he lived eighty-one years, as testifies Tully in that *Of Old Age*. And I believe that if Christ had not been crucified and had lived out the space which his life had power to cover according to its nature, he would have been changed at the eighty-first year from mortal body to eternal.

Dante, Convivio, IV, 24

35 Pandar, Remember time is wasting every hour
Some share of all the beauty now we see,
And thus, ere age shall all they charms devour,

Go love, for old, none will have aught of thee!
This saying may a lesson to you be,
'It might have been,' said Beauty, beauty past.

Chaucer, Troilus and Cressida, II, 57

36 For true it is, age has great advantage;
Experience and wisdom come with age;
Men may the old out-run, but not out-wit.

Chaucer, Canterbury Tales: Knight's Tale

37 But I am old; I will not play, for age;
Grass time is done, my fodder is rummage.
This white top advertises my old years,
My heart, too, is as mouldy as my hairs,
Unless I fare like medlar, all perverse.
For that fruit's never ripe until it's worse,
And falls among the refuse or in straw.
We ancient men, I fear, obey this law:
Until we're rotten we cannot be ripe;
We dance, indeed, the while the world will pipe.
Desire sticks in our nature like a nail
To have, if hoary head, a verdant tail,
As has the leek; for though our strength be gone.
Our wish is yet for folly till life's done.
For when we may not act, then will we speak;
Yet in our ashes is there fire to reek
 Four embers have we, which I shall confess:
Boasting and lying, anger, covetousness;
These four remaining sparks belong to eld.
Our ancient limbs may well be hard to wield.
But lust will never fail us, that is truth.
And yet I have had always a colt's tooth.

As many years as now are past and done
Since first my tap of life began to run.
For certainly, when I was born, I know
Death turned my tap of life and let it flow;
And ever since that day the tap has run
Till nearly empty now is all the tun.
The stream of life now drips upon the chime;
The silly tongue may well ring out the time
Of wretchedness that passed so long before;
For oldsters, save for dotage, there's no more.

Chaucer, Canterbury Tales: Reeve's Prologue

38 But Lord Christ! When I do remember me
Upon my youth and on my jollity,
It tickles me about my heart's deep root.
To this day does my heart sing in salute
That I have had my world in my own time.
But age, alas! that poisons every prime,
Has taken away my beauty and my pith;
Let go, farewell, the devil go therewith!
The flour is gone, there is no more to tell,
The bran, as best I may, must I now sell;
But yet to be right merry I'll try.

Chaucer, Canterbury Tales: Wife of Bath's Prologue

39 And though your time of green youth flower as yet.
Age creeps in always, silent as a stone;
Death threatens every age, nor will forget
For any state, and there escapes him none:
And just as surely as we know, each one,
That we shall die, uncertain are we all
What day it is when death shall on us fall.

Chaucer, Canterbury Tales: Clerk's Tale

40 Young fellows are tempted by girls, men who are thirty years old are tempted by gold, when they are forty years old they are tempted by honor and glory% and those who are sixty years old say to themselves, 'What a pious man I have become!'

Luther, Table Talk, 1601

41 Youth is impertinent. So we see lawyers who in their first year are masters of all law's, in their second year are Justinians, in their third year are licentiates, in their fourth year give formal opinions, and in their fifth year finally become trembling students. This is the way a boy acts in a bowling alley. First he expects to strike twelve pins, then nine, then six, then three, and at last he's satisfied with one, and probably misses the alley at that. It would be a good thing if young people were wise and old people were strong, but God has arranged things better.

Luther, Table Talk, 4091

42 Gargantua, from three years upwards unto five, was brought up and instructed in all convenient discipline, by the commandment of his father; and spent that time like the other little children of the country, that is, in drinking, eating, and sleeping: in eating, sleeping, and drinking: and in sleeping, drinking, and eating. Still he wallowed and rolled himself up and down in the mire and dirt: he blurred and sullied his nose with filth; he blotted and smutched his face with any kind of scurvy and stuff; he trod down his shoes in the heel; at the flies he did often

times yawm, and ran very heartily after the butterflies, the empire whereof belonged to his father.

Rabelais, Gargantua and Pantagruel, I, 11

43 It is possible that in those who employ their time well, knowledge and experience grow with living; but vivacity, quickness, firmness, and other qualities much more our own, more important and essential, wither and languish.... Sometimes it is the body that first surrenders to age, sometimes, too, it is the mind; and I have seen enough whose brains were enfeebled before their stomach and legs; and inasmuch as this is a malady hardly perceptible to the sufferer and obscure in its symptoms, it is all the more dangerous. For the time, I complain of the laws, not that they leave us at work too long, but that they set us to work too late. It seems to me that considering the frailty of our life and how many ordinary natural reefs it is exposed to, we should not allot so great a part of it to birth, idleness, and apprenticeship.

Montaigne, Essays, I, 57, Of Age

44 This fault of not being able to recognize oneself early and not feeling the impotence and extreme alteration that age naturally brings to both body and soul, and in my opinion equally, unless the soul receives more than half of it, has ruined the reputation of most of the world's great men.

Montaigne, Essays, II, 8, Affection of Fathers

45 Old age puts more wrinkles in our minds than on our faces; and we never, or rarely, see a soul that in growing

old does not come to smell sour and musty. Man grows and dwindles in his entirety.

Montaigne, Essays, III, 2, Of Repentance

46 The whiles some one did chaunt this lovely lay:—

Ah! see, who so fayre thing doest faine to see,
In springing flowre the image of thy day;
Ah! see the virgin rose, how sweetly shee
Doth first peepe foorth with bashful modestee,
That fairer seemes, the lesse ye see her may;
Lo! see soone after, how more bold and free
Her bared bosome she doth broad display;
Lo! see soone after, how she fades and falls away.

So passeth, in the passing of a day,
Of mortall life the leafe, the bud, the flowre,
Ne more doth flourish after first decay,
That earst was sought to deck both bed and bowre
Of many a lady, and many a paramowre:
Gather therefore the rose, whitest yet is prime.
For soone comes age, that will her pride deflowre:
Gather the rose of love, whilst yet is time,
Whilst loving thou mayst loved be with equall crime.

Spenser, Faerie Queen, Bk. II, XII, 74-75

47 *Chief Justice.* Do you set down your name in the scroll of youth, that are written down old with all the characters of age? Have you not a moist eye? a dry hand? a yellow cheek? a white beard? a decreasing leg? an increasing belly? is not your voice broken? your wind short? your chin double? your wit single? and every part about you blasted with antiquity? and will you yet call yourself young? Fie, fie, fie, Sir John!

Falstaff My lord, I was born about three of the clock in the afternoon, with a white head and something a round belly. For my voice, I have lost it with halloing and singing of anthems. To approve my youth further, I will not: the truth is, I am only old in judgement and understanding; and he that will caper with me for a thousand marks, let him lend me the money, and have at him!

Shakespeare, II Henry IV, I, ii, 201

48 *Shallow*. O, Sir John, do you remember since we lay all night in the windmill in Saint George's field?

Falstaff No more of that, good Master Shallow, no more of that.

Shal. Ha! 'twas a merry night. And is Jane Nightwork alive?

Fal. She lives, Master Shallow.

Shal. She never could away with me.

Fal. Never, never; she would always say she could not abide Master Shallow.

Shal. By the mass, I could anger her to the heart. She was then a bona-roba. Doth she hold her own well?

Fal. Old, old. Master Shallow.

Shal. Nay, she must be old; she cannot choose but be old; certain she's old; and had Robin Nightwork by old Nightwork before I came to Clement's Inn.

Silence. That's fifty five year ago.

Shal. Ha, cousin Silence, that thou hadst seen that that this knight and I have seen! Ha, Sir John, said I well?

Fal. We have heard the chimes at midnight. Master Shallow.

Shal. That we have, that we have, that we have; in faith, Sir John, we have: our watchword was "Hem, boys!"

Come, let's to dinner; come, let's to dinner: Jesus, the days that we have seen! Come, come.

Shakespeare, II Henry IV, III, ii, 206

49 *Falstaff*. Lord, Lord, how subject we old men are to this vice of lying!

Shakespeare, II Henry IV, III, ii, 325

50 King. I know thee not, old man: fall to thy prayers; How ill white hairs become a fool and jester!

Shakespeare, II Henry IV, V, v, 51

51 *Jaques*.

All the world's a stage.

And all the men and women merely players:

They have their exits and their entrances;

And the man in his time plays many parts.

His acts being seven ages. At first the infant,

Mewling and puking in the nurse's arms.

And then the whining school-boy, with his satchel

And shining morning face, creeping like snail

Unwillingly to school. And then the lover.

Sighing like furnace, with a woeful ballad

Made to his mistress' eyebrow. Then a soldier.

Full of strange oaths and bearded like the pard,

Jealous in honour, sudden and quick in quarrel,

Seeking the bubble reputation

Even in the cannon's mouth. And then the justice,

In fair round belly with good capon lined,

With eyes severe and beard of formal cut.

Full of wise saws and modern instances;

And so he plays his part. The sixth age shifts

Into the lean and slipper'd pantaloon,
With spectacles on nose and pouch on side.
His youthful hose, well saved, a world too wide
For his shrunk shank; and his big manly voice,
Turning again toward childish treble, pipes
And whistles in his sound. Last scene of all.
That ends this strange eventful history,
Is second childishness and mere oblivion,
Sans teeth, sans eyes, sans taste, sans everything,

Shakespeare, As You Like It, II, vii, 139

52 *Clown*. What is love? 'tis not hereafter;
Present mirth hath present laughter;
What's to come is still unsure:
In delay there lies no plenty;
Then come kiss me, sweet and twenty,
Youth's a stuff will not endure.

Shakespeare, Twelfth Night, II, iii, 48

53 *Polonius*. What do you read, my lord?
Hamlet. Words, words, words.
Pol. What is the matter, my lord?
Ham. Between who?
Pol. I mean, the matter that you read, my lord. *Ham*.
Slanders, sir: for the satirical rogue says here that old
men have grey beards, that their faces are wrinkled, their
eyes purging thick amber and plum-tree gum and that
they have a plentiful lack of wit, together with most weak
hams.

Shakespeare, Hamlet, II, ii, 193

54 *Hamlet*.

Rebellious hell,
If thou canst mutine in a matron's bones,
To flaming youth let virtue be as wax,
And melt in her own fire.

Shakespeare, Hamlet, III, iv, 82

55 *Regan*.

O, sir, you are old;
Nature in you stands on the very verge
Of her confine. You should be ruled and led
By some discretion that discerns your state
Better than you yourself. Therefore, I pray you
That to our sister you do make return;
Say you have wrong'd her, sir.

Lear.

Ask her forgiveness?
Do you but mark how this becomes the house;
"Dear daughter, I confess that I am old;

Kneeling.

Age is unnecessary. On my knees I beg
That you'll vouchsafe me raiment, bed, and food."

Reg. Good sir, no more; these are unsightly tricks.

Shakespeare, Lear, II, iv, 148

56 *Macbeth*. I have lived long enough; my way of life

Is fall'n into the sear, the yellow leaf;
And that which should accompany old age,
As honour, love, obedience, troops of friends,
I must not look to have; but, in their stead,
Curses, not loud but deep, mouth-honour, breath,
Which the poor heart would fain deny, and dare not.

Shakespeare, Macbeth, V, iii, 22

57 *Cleopatra.*

My salad days.

When I was green in judgement, cold in blood,
To say as I said then!

Shakespeare, Antony and Cleopatra, I, v, 73

58 *Hermione.* Come, I'll question you

Of my Lord's tricks and yours when you were boys.
You were pretty lordings then?

Polixenes. We were, fair Queen,
Two lads that thought there was no more behind
But such a day to-morrow as to-day,
And to be boy eternal.

Her. Was not my lord
The verier wag o' the two?

Pol. We were as twinn'd lambs that did frisk i' the sun,
And bleat the one at the other. What we changed
Was innocence for innocence; we knew not
The doctrine of ill-doing, nor dream'd
That any did. Had we pursued that life,
And our weak spirits ne'er been higher rear'd
With stronger blood, we should have answer'd heaven
Boldly, "Not guilty."

Shakespeare, Winter's Tale, I, ii, 60

59 Thou art thy mother's glass, and she in thee

Calls back the lovely April of her prime.

So thou through windows of thine age shalt see
Despite of wrinkles this thy golden time.

Shakespeare, Sonnet III

60 When I consider every thing that grows
Holds in perfection but a little moment.
That this huge stage presenteth nought but shows
Whereon the stars in secret influence comment;
When I perceive that men as plants increase.
Cheered and check'd even by the self-same sky,
Vaunt in their youthful sap, at height decrease,
And wear their brave state out of memory;
Then the conceit of this inconstant stay
Sets you most rich in youth before my sight,
Where wasteful Time debateth with Decay,
To change your day of youth to sullied night.

Shakespeare, Sonnet XV

61 That time of year thou mayst in me behold
When yellow leaves, or none, or few, do hang
Upon those boughs which shake against the cold, Bare
ruin'd choirs, where late the sweet birds sang.
In me thou see'st the twilight of such day
As after sunset fadeth in the west,
Which by and by black night doth take away,
Death's second self, that seals up all in rest.
In me thou see'st the glowing of such fire
That on the ashes of his youth doth lie,
As the death-bed whereon it must expire
Consumed with that which it was nourish'd by.

Shakespeare, Sonnet LXXIII

62 To me, fair friend, you never can be old,
For as you were when first your eye I eyed,
Such seems your beauty still.

Shakespeare, Sonnet CIV

63 When my love swears that she is made of truth
I do believe her, though I know she lies,
That she might think me some untutor'd youth,
Unlearned in the world's false subtleties.
Thus vainly thinking that she thinks me young,
Although she knows my days are past the best,
Simply I credit her false-speaking tongue:
On both sides thus is simple truth suppress'd.
But wherefore says she not she is unjust?
And wherefore say not I that I am old?
O, love's best habit is in seeming trust,
And age in love loves not to have years told.

Shakespeare, Sonnet CXXXVIII

64 Crabbed age and youth cannot live together:
Youth is full of pleasance, age is full of care;
Youth like summer mom, age like winter weather;
Youth like summer brave, age like winter bare.
Youth is full of sport, age's breath is short; Youth is
nimble, age is lame;
Youth is hot and bold, age is weak and cold;
Youth is wild, and age is tame.
Age, I do abhor thee; youth, I do adore thee.

Shakespeare, The Passionate Pilgrim, XII

65 Come, my Celia, let us prove.
While we can, the sports of love;
Time will not be ours forever;
He at length our good will sever.

Jonson, Come, My Celia

66 Young men are fitter to invent than to judge; fitter for execution than for counsel; and fitter for new projects than for settled business. For the experience of age, in things that fall within the compass of it, directeth them; but in new things, abuseth them. The errors of young men are the ruin of business; but the errors of aged men amount but to this, that more might have been done, or sooner. Young men, in the conduct and manage of actions, embrace more than they can hold; stir more than they can quiet; fly to the end, without consideration of the means and degrees; pursue some few principles which they have chanced upon absurdly; care not to innovate, which draws unknown inconveniences; use extreme remedies at first; and, that which doubleth all errors, will not acknowledge or retract them; like an unready horse, that will neither stop nor turn. Men of age object too much, consult too long, adventure too little, repent too soon, and seldom drive business home to the full period, but content themselves with a mediocrity of success.

Bacon, Of Youth and Age

67 Alonso of Arragon was wont to say, in commendation of age, That age appeared to be best in four things: Old wood best to bum; old wine to drink; old friends to trust; and old authors to read.

Bacon, Apophthegms, LXXV

68 The proportion of the body to the extremities in children after their birth continues excessive until they begin to stand and run. Infants, therefore, resemble dwarfs in the beginning, and they creep about like quadrupeds,

attempting progressive motion with the assistance of all their extremities; but they cannot stand erect until the length of the leg and thigh together exceeds the length of the rest of the body. And so it happens, that when they first attempt to walk, they move with the body prone, like the quadruped, and can scarcely rise so erect as the common dunghill fowl.

William Harvey, Animal Generation, 56

69 Age doth not rectifie, but incurvate our natures, turning bad dispositions into worser habits, and (like diseases) brings on incurable vices; for every day as we grow weaker in age, we grow stronger in sin; and the number of our days doth make but our sins innumerable. The same vice committed at sixteen, is not the same, though it agree in all other circumstances, at forty, but swells and doubles from the circumstances of our ages, wherein, besides the constant and inexcusable habit of transgressing, the maturity of our judgement cuts off pretence unto excuse or pardon: every sin the oftner it is committed, the more it acquireth in the quality of evil; as it succeeds in time, so it proceeds in degrees of badness; for as they proceed they ever multiply, and like figures in Arithmetick, the last stands for more than all that went before it. And though I think no man can live well once, but he that could live twice, yet for my own part I would not live over my hours past, or begin again the thred of my days: not upon Cicero's ground, because I have lived them well, but for fear I should live them worse.

Sir Thomas Browne, Religio Medici, I, 42

70 Confound not the distinctions of thy Life which Nature hath divided: that is. Youth, Adolescence, Manhood, and old Age, nor in these divided Periods, wherein thou art in a manner Four, conceive thyself but One. Let every division be happy in its proper Virtues, nor one Vice run through all. Let each distinction have its salutary transition, and critically deliver thee from the imperfections of the former, so ordering the whole, that Prudence and Virtue may have the largest section. Do as a Child but when thou art a Child, and ride not on a Reed at twenty. He who hath not taken leave of the follies of his Youth, and in his maturer state scarce got out of that division, disproportionately divideth his Days, crowds up the latter part of his Life, and leaves too narrow a corner for the Age of Wisdom.

Sir Thomas Browne, Christian Morals, III, 8

71 How soon hath Time the subtle thief of youth,
Stoln on his wing my three and twentieth yeer!
My hasting dayes flie on with full career,
But my late spring no bud or blossom shew'th.
Perhaps my semblance might deceive the truth, That I to
manhood am arriv'd so near,
And inward ripenes doth much less appear.
That som more timely-happy spirits indu'th.

Milton, How soon hath Time the subtle thief of youth

72 This is old age; but then thou must outlive
Thy youth, thy strength, thy beauty, which will change
To withered weak & gray; thy Senses then
Obtuse, all taste of pleasure must forgoe,
To what thou hast, and for the Aire of youth

Hopeful and cheerful, in thy blood will reigne
A melancholly damp of cold and dry
To waigh thy spirits down, and last consume
The Balme of Life.

Milton, Paradise Lost, XI, 535

73 The childhood shews the man,
As morning shews the day.

Milton, Paradise Regained, IV, 220

74 *Dollabella*. Men are but children of a larger growth;
Our appetites as apt to change as theirs,
And full as craving too, and full as vain.

Dryden. All for Love, IV, 43

75 *Mirabell*. An old woman's appetite is depraved like that of
a girl— 'tis the greensickness of a second childhood; and
like the faint offer of a latter spring, serves but to usher in
the fall and withers in an affected bloom.

Congreve, Way of the World, II, iv

76 He [the interpreter] gave me a particular account of the
Struldbuggs among them. He said they commonly acted
like mortals, until about thirty years old, after which by
degrees they grew melancholy and dejected, increasing
in both until they came to fourscore. This he learned from
their own confession; for otherwise, there not being
above two or three of that species born in an age, they
were too few to form a general observation by. When they
came to fourscore years, which is reckoned the extremity
of living in this country, they had not only all the follies
and infirmities of other old men, but many more which

arose from the dreadful prospect of never dying. They were not only opinionative, peevish, covetous, morose, vain, talkative; but incapable of friendship, and dead to all natural affection, which never descended below their grand-children. Envy and impotent desires, are their prevailing passions. But those objects against which their envy seems principally directed, are the vices of the younger sort, and the deaths of the old. By reflecting on the former, they find themselves cut off from all possibility of pleasure; and whenever they see a funeral, they lament and repine that others are gone to a harbour of rest, to which they themselves never can hope to arrive. They have no remembrance of any thing but what they learned and observed in their youth and middle age, and even that is very imperfect: and for the truth or particulars of any fact, it is safer to depend on common traditions, than upon their best recollections. The least miserable among them, appear to be those who turn to dotage, and entirely lose their memories; these meet with more pity and assistance, because they want many bad qualities which abound in others.

If a Struldbrugg happen to marry one of his own kind, the marriage is dissolved of course by the courtesy of the kingdom, as soon as the younger of the two comes to be fourscore. For the law thinks it a reasonable indulgence, that those who are condemned without any fault of their own, to a perpetual continuance in the world, should not have their misery doubled by the load of a wife.

As soon as they have compleated the term of eighty years, they are looked on as dead in law; their heirs immediately succeed to their estates, only a small pittance is reserved for their support, and the poor ones are maintained at the publick charge. After that period,

they are held incapable of any employment of trust or profit; they cannot purchase lands, or take leases; neither are they allowed to be witnesses in any cause, either civil or criminal, not even for the decision of meers and bounds.

At ninety they lose their teeth and hair; they have at that age no distinction of taste, but eat and drink what ever they can get, without relish or appetite. The diseases they were subject to, still continue without encreasing or diminishing. In talking, they forget the common appellation of things, and the names of persons, even of those who are their nearest friends and relations. For the same reason, they never can amuse themselves with reading, because their memory will not serve to carry them from the beginning of a sentence to the end; and by this defect, they are deprived of the only entertainment whereof they might otherwise be capable.

The language of this country being always upon the flux, the Struldbruggs of one age, do not understand those of another; neither are they able after two hundred years, to hold any conversation (farther than by a few general words) with their neighbours the mortals; and thus they lye under the disadvantage of living like foreigners in their own country.

Swift, Gulliver's Travels, III, 10

77 They [the Yahoos] are prodigiously nimble from their infancy; however, I once caught a young male of three years old, and endeavoured by all marks of tenderness to make it quiet; but the little imp fell a squalling, and scratching, and biting with such violence, that I was forced to let it go; and it was high time, for a whole troop of old ones came about us at the noise; but finding the

cub was safe, (for away it ran) and my sorrel nag being by, they durst not venture near us. I observed the young animal's flesh to smell very rank, and the stink was somewhat between a weasel and s.fox, but much more disagreeable. I forgot another circumstance, (and perhaps I might have the readers pardon, if it were wholly omitted) that while I held the odious vermin in my hands, it voided its filthy excrements of a yellow liquid substance, all over my deaths; but by good fortune there was a small brook hard by, where I washed myself as clean as I could; although I durst not come into my master's presence, until I was sufficiently aired.

Swift, Gulliver's Travels, IV, 8

78 Invention is the Talent of Youth, and Judgment of Age; so that our Judgment grows harder to please, when we have fewer Things to offer it: This goes through the whole Commerce of Life. When we are old, our Friends find it difficult to please us, and are less concern'd whether we be pleas'd or no.

Swift, Thoughts on Various Subjects

79 No wise Man ever wished to be younger.

Swift, Thoughts on Various Subjects

80 Every Man desires to live long; but no Man would be old.

Swift, Thoughts on Various Subjects

81 Man has other enemies more formidable, against which he is not provided with such means of defence: these are the natural infirmities of infancy, old age, and illness of every kind, melancholy proofs of our weakness, of which

the two first are common to all animals, and the last belongs chiefly to man in a state of society. With regard to infancy, it is observable that the mother, carrying her child always with her, can nurse it with much greater ease than the females of many other animals, which are forced to be perpetually going and coming, with great fatigue, one way to find subsistence, and another to suckle or feed their young. It is true that if the woman happens to perish, the infant is in great danger of perishing with her; but this risk is common to many other species of animals, whose young take a long time before they are able to provide for themselves. And if our infancy is longer than theirs, our lives are longer in proportion; so that all things are in this respect fairly equal; though there are other rules to be considered regarding the duration of the first period of life, and the number of young, which do not affect the present subject. In old age, when men are less active and perspire little, the need for food diminishes with the ability to provide it. As the savage state also protects them from gout and rheumatism, and old age is, of all ills, that which human aid can least alleviate, they cease to be, without others perceiving that they are no more, and almost without perceiving it themselves.

Rousseau, Origin of Inequality, I

- 82 Fix your eyes on nature, follow the path traced by her. She keeps children at work, she hardens them by all kinds of difficulties, she soon teaches them the meaning of pain and grief. They cut their teeth and are feverish, sharp colics bring on convulsions, they are choked by fits of coughing and tormented by worms, evil humours corrupt the blood, germs of various kinds ferment in it,

causing dangerous eruptions. Sickness and danger play the chief part in infancy. One half of the children who are born die before their eighth year. The child who has overcome hardships has gained strength, and as soon as he can use his life he holds it more securely.

This is nature's law; why contradict it? Do you not see that in your efforts to improve upon her handiwork you are destroying it; her cares are wasted? To do from without what she does within is according to you to increase the danger twofold. On the contrary, it is the way to avert it; experience shows that children delicately nurtured are more likely to die. Provided we do not overdo it, there is less risk in using their strength than in sparing it. Accustom them therefore to the hardships they will have to face; train them to endure extremes of temperature, climate, and condition, hunger, thirst, and weariness. Dip them in the waters of Styx. Before bodily habits become fixed you may teach what habits you will without any risk, but once habits are established any change is fraught with peril. A child will bear changes which a man cannot bear, the muscles of the one are soft and flexible, they take whatever direction you give them without any effort; the muscles of the grown man are harder and they only change their accustomed mode of action when subjected to violence. So we can make a child strong without risking his life or health, and even if there were some risk, it should not be taken into consideration. Since human life is full of dangers, can we do better than face them at a time when they can do the least harm?

Rousseau, Emile, I

83 The new-born infant cries, his early days are spent in crying. He is alternately petted and shaken by way of soothing him; sometimes he is threatened, sometimes beaten, to keep him quiet. We do what he wants or we make him do what we want, we submit to his whims or subject him to our own. There is no middle course; he must rule or obey.

Rousseau, Emile, I

84 Every old man complains of the growing depravity of the world, of the petulance and insolence of the rising generation. He recounts the decency and regularity of former times, and celebrates the discipline and sobriety of the age in which his youth was passed; a happy age which is now no more to be expected, since confusion has broken in upon the world, and thrown down all the boundaries of civility and reverence.

Johnson, Rambler No. 50

85 He that would pass the latter part of life with honour and decency, must, when he is young, consider that he shall one day be old; and remember, when he is old, that he has once been young.

Johnson, Rambler No. 50

86 To youth ... it should be carefully inculcated, that to enter the road of life without caution or reserve, in expectation of general fidelity and justice, is to launch on the wide ocean without the instruments of steerage, and to hope that every wind will be prosperous and that every coast will afford a harbour.

Johnson, Rambler No. 175

87 Rasselas rose next day, and resolved to begin his experiments upon life. "Youth, cried he, is the time of gladness: I will join myself to the young men, whose only business is to gratify their desires, and whose time is all spent in a succession of enjoyments."

To such societies he was readily admitted, but a few days brought him back weary and disgusted. Their mirth was without images, their laughter without motive: their pleasures were gross and sensual, in which the mind had no part; their conduct was at once wild and mean; they laughed at order and at law', but the frown of power dejected, and the eye of wisdom abashed them.

Johnson, Rasselas, XVII

88 The old man trusts wholly to slow' contrivance and gradual progression: the youth expects to force his way by genius, vigour, and precipitance. The old man pays regard to riches, and the youth reverences virtue. The old man defies prudence; the youth commits himself to magnanimity and chance. The young man, who intends no ill, believes that none is intended, and therefore acts with openness and candour: but his father, having suffered the injuries of fraud, is impelled to suspect, and too often allured to practice it. Age looks with anger on the temerity of youth, and youth with contempt on the scrupulosity of age.

Johnson, Rasselas, XXVI

89 There are few things that we so unwillingly give up, even in advanced age, as the supposition that we have still the power of ingratiating ourselves with the fair sex.

Johnson, Miscellanies, II

90 *Johnson*. Sir, I love the acquaintance of young people; because, in the first place, I don't like to think myself growing old. In the next place, young acquaintances must last longest, if they do last; and then. Sir, young men have more virtue than old men; they have more generous sentiments in every respect. I love the young dogs of this age: they have more wit and humour and knowledge of life than we had; but then the dogs are not so good scholars. Sir, in my early years I read very hard. It is a sad reflection, but a true one, that I knew almost as much at eighteen as I do now. My judgement, to be sure, was not so good; but I had all the facts, I remember very well, when I was at Oxford, an old gentleman said to me, 'Young man, ply your book diligently now, and acquire a stock of knowledge; for when years come upon you, you will find that poring upon books will be but an irksome task.'

Boswell, Life of Johnson (July 21, 1763)

91 *Goldsmith*. "I think, Mr. Johnson, you don't go near the theatres now. You give yourself no more concern about a new play, than if you had never had any thing to do with the stage." *Johnson*. "Why, Sir, our tastes greatly alter. The lad does not care for the child's rattle, and the old man does not care for the young man's whore."
Goldsmith. "Nay, Sir, but your Muse was not a whore."
Johnson. "Sir, I do not think she was. But as we advance in the journey of life, we drop some of the things which have pleased us; whether it be that we are fatigued and don't choose to carry so many things any farther, or that we find other things which we like better." *Boswell*. "But, Sir, why don't you give us something in some other way?"
Goldsmith. "Ay, Sir, we have a claim upon you," *Johnson*.

"No, Sir, I am not obliged to do any more. No man is obliged to do as much as he can do. A man is to have part of his life to himself. If a soldier has fought a good many campaigns, he is not to be blamed if he retires to ease and tranquillity. A physician, who has practised long in a great city, may be excused if he retires to a small town, and takes less practice. Now, Sir, the good I can do by my conversation bears the same proportion to the good I can do by my writings, that the practice of a physician, retired to a small town, does to his practice in a great city." *Boswell* "But I wonder. Sir, you have not more pleasure in writing than in not writing." *Johnson*. "Sir, you may wonder."

Boswell, Life of Johnson (1766)

92 John Anderson, my jo, John,
When we were first acquant;
Your locks were like the raven,
Your bonnie brow' was brent;
But now your brow' is held, John,
Your locks are like the snow;
But blessings on your frosty pow,
John Anderson, my jo.

Burns, John Anderson, My Jo

93 The constitution of New York, to avoid investigations that must for ever be vague and dangerous, has taken a particular age as the criterion of inability, No man can be a judge beyond sixty. I believe there are few at present W'ho do not disapprove of this provision. There is no station, in relation to which it is less proper than to that of a judge. The deliberating and comparing faculties

generally preserve their strength much beyond that period in men who survive it; and when, in addition to this circumstance, we consider how few there are who outlive the season of intellectual vigour, and how improbable it is that any considerable portion of the bench, whether more or less numerous, should be in such a situation at the same time, we shall be ready to conclude that limitations of this sort have little to recommend them. In a republic, where fortunes are not affluent and pensions not expedient, the dismissal of men from stations in which they have served their country long and usefully, on which they depend for subsistence, and from which it will be too late to resort to any other occupation for a livelihood, ought to have some better apology to humanity than is to be found in the imaginary danger of a superannuated bench.

Hamilton, Federalist 79

94 We are moved in the presence of childhood, but it is not because from the height of our strength and of our perfection we drop a look of pity on it; it is, on the contrary, because from the depths of our impotence, of which the feeling is inseparable from that of the real and determinate state to which we have arrived, we raise our eyes to the child's determinableness and pure innocence. The feeling we then experience is too evidently mingled with sadness for us to mistake its source. In the child all is disposition and destination; in us all is in the state of a completed, finished thing, and the completion always remains infinitely below the destination. It follows that the child is to us like a representation of the ideal; not, indeed, of the ideal as we have realized it, but such as our destination admitted; and, consequently, it is not at

all the idea of its indigence, of its hindrances, that makes us experience emotion in the child's presence; it is, on the contrary, the idea of its pure and free force, of the integrity, the infinity of its being. This is the reason why, in the sight of every moral and sensible man, the child will always be a sacred thing; I mean an object which, by the grandeur of an idea, reduces to nothingness all grandeur realized by experience; an object which, in spite of all it may lose in the judgment of the understanding, regains largely the advantage before the judgment of reason.

Schiller, Simple and Sentimental Poetry

95 *Faust*. I'll feel, whatever my attire.
The pain of life, earth's narrow way.
I am too old to be content with play,
Too young to be without desire.
What can the world afford me now?
Thou shalt renounce! Renounce shalt thou!
That is the never-ending song
Which in the ears of all is ringing,
Which always, through our whole life long.
Hour after hour is hoarsely singing.

Goethe, Faust I, 1544

96 *Mephistopheles*. If, unadulterate, one says to youth What
does not please the callow brook—the truth!
And later after many a tide
They learn it painfully on their own hide,
Each fancies then it came from his own head;
"The Master was a fool!" is what is said.

Goethe, Faust, II, 2, 6744

97 Bachelor of Arts.

This is youth's noblest message and most fit!
The world was not till I created it.
'Twas I that led the sun up from the sea;
The moon began its changeful course with me.
The day put on rich garments, me to meet;
The earth grew green and blossomed, me to greet.
At my behest in that primeval night
The stars unveiled their splendour to my sight.
Who, if not I, your own deliverance wrought
From fetters of Philistine, cramping thought?
I, as my spirit bids me, with delight
I follow onward mine own inner light.
Swift I proceed with mine own raptured mind.
Glory before me, darkness far behind.

Goethe, Faust, II, 2, 6793

98 — A Simple Child,

That lightly draws its breath.
And feels its life in every limb.
What should it know of death?

Wordsworth, We Are Seven

99 My heart leaps up when I behold

A rainbow in the sky:
So was it when my life began;
So is it now I am a man;
So be it when I shall grow old.
Or let me die!
The Child is father of the Man;
And I could wish my days to be
Bound each to each by natural piety,

Wordsworth, My Heart Leaps Up When I Behold

100 There is a Flower, the lesser Celandine,
That shrinks, like many more, from cold and rain;
And, the first moment that the sun may shine,
Bright as the sun himself, 'tis out again!
When hailstones have been falling, swarm on swarm,
Or blasts the green field and the trees distress.
Oft have I seen it muffled up from harm.
In close self-shelter, like a Thing at rest.
But lately, one rough day, this Flower I passed
And recognised it, though an altered form,
Now standing forth an offering to the blast,
And buffeted at will by rain and storm.
I stopped and said with inly-muttered voice,
"It doth not love the shower, nor seek the cold;
This neither is its courage nor its choice,
But its necessity in being old.
"The sunshine may not cheer it, nor the dew;
It cannot help itself in its decay;
Stiff in its members, withered, changed of hue."
And, in my spleen, I smiled that it was grey.

Wordsworth, The Small Celandine

101 There was a time when meadow, grove, and stream,
The earth, and every common sight,
To me did seem
Apparelled in celestial light,
The glory and the freshness of a dream.
It is not now as it hath been of yore;—
Turn wheresoe'er I may,
By night or day,
The things which I have seen I now can see no more.

Wordsworth, Ode: Intimations of Immortality, I

102 Our birth is but a sleep and a forgetting:
The Soul that rises with us, our lifers Star,
Hath had elsewhere its setting.
And cometh from afar:
Not in entire forgetfulness,
And not in utter nakedness.
But trailing clouds of glory do we come
From God, who is our home:
Heaven lies about us in our infancy!
Shades of the prison-house begin to close
Upon the growing Boy,
But He beholds the light, and whence it flows.
He sees it in his joy;
The Youth, who daily farther from the east
Must travel, still is Nature's Priest,
And by the vision splendid Is on his way attended;
At length the Man perceives it die away.
And fade into the light of common day.

Wordsworth, Ode: Intimations of Immortality, V

103 And O, ye Fountains, Meadows, Hills and Groves,
Forebode not any severing of our loves!
Yet in my heart of hearts I feel your might;
I only have relinquished one delight
To live beneath your more habitual sway.
I love the Brooks which down their channels fret,
Even more than when I tripped lightly as they;
The innocent brightness of a new-born Day
Is lovely yet;
The Clouds that gather round the setting sun
Do take a sober colouring from an eye

That hath kept watch o'er man's mortality;
Another race hath been, and other palms are won.
Thanks to the human heart by which we live.
Thanks to its tenderness, its joys, and fears,
To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears.

Wordsworth, Ode: Intimations of Immortality, XI

104 Bliss was it in that dawn to be alive.
But to be young was very Heaven!

Wordsworth, The Prelude, XI, 108

105 What is the worst of woes that wait on age?
What stamps the wrinkle deeper on the brow?
To view each loved one blotted from life's page,
And be alone on earth, as I am now.

Byron, Childe Harold's Pilgrimage, II, 98

106 'Tis true, your budding Miss is very charming,
But shy and awkward at first coming out,
So much alarm'd that she is quite alarming,
All Giggle, Blush; half Pertness and half Pout;
And glancing at Mamma, for fear there's harm in
What you, she, it, or they, may be about.
The Nursery still lisps out in all they utter—
Besides, they always smell of bread and butter.

Byron, Beppo, XXXIX

107 Oh, talk not to me of a name great in story;
The days of our youth are the days of our glory;
And the myrtle and ivy of sweet two-and-twenty
are worth all your laurels, though ever so plenty.

*Byron, Stanzas Written on the Road Between Florence
and Pisa*

108 Age generally makes men more tolerant; youth is always discontented. The tolerance of age is the result of the ripeness of a judgment which, not merely as the result of indifference, is satisfied even with what is inferior, but, more deeply taught by the grave experience of life, has been led to perceive the substantial, solid worth of the object in question. The insight then to which—in contradistinction from those ideals—philosophy is to lead us, is, that the real world is as it ought to be, that the truly good, the universal divine reason, is not a mere abstraction, but a vital principle capable of realizing itself.

Hegel, Philosophy of History, Introduction, 3

109 Among the Greeks we feel ourselves immediately at home, for we are in the region of spirit; and though the origin of the nation, as also its philological peculiarities, may be traced farther—even to India—the proper emergence, the true palingenesis of spirit must be looked for in Greece first. At an earlier stage I compared the Greek world with the period of adolescence; not, indeed, in that sense, that youth bears within it a serious, anticipative destiny, and consequently by the very conditions of its culture urges towards an ulterior aim—presenting thus an inherently incomplete and immature form, and being then most defective when it would deem itself perfect—but in that sense, that youth does not yet present the activity of work, does not yet exert itself for a definite intelligent aim, but rather exhibits a concrete freshness of the soul's life. It appears in the sensuous,

actual world, as incarnate spirit and spiritualized sense—in a unity which owed its origin to spirit. Greece presents to us the cheerful aspect of youthful freshness, or spiritual vitality. It is here first that advancing spirit makes itself the content of its volition and its knowledge; but in such a way that state, family, law, religion, are at the same time objects aimed at by individuality, while the latter is individuality only in virtue of those aims. The man, on the other hand, devotes his life to labor for an objective aim; which he pursues consistently, even at the cost of his individuality.

Hegel, Philosophy of History, II, Introduction

110 He who lives to see two or three generations is like a man who sits some time in the conjurer's booth at a fair, and witnesses the performance twice or thrice in succession. The tricks were meant to be seen only once; and when they are no longer a novelty and cease to deceive their effect is gone.

Schopenhauer, Sufferings of the World

111 A man's life begins with the illusion that a long, long time and a whole world lie before him, and he begins with the foolish conceit that he has plenty of time for all his many claims. The poet is the eloquent, inspired advocate of this foolish but beautiful conceit. But when in the infinite transformation a man discovers the eternal so near to life that there is not a single one of its claims, not a single one of its evasions, not a single one of its excuses, not a single one of its moments at a distance from what he must do at this very moment, this very second, this very instant: then he is in the way of

becoming a Christian. The sign of childishness is to say: "Me wants, me — me"; the sign of youth is to say: "I"—and "I"—and "I"; the sign of maturity and the introduction to the eternal is to will to understand that this "I" signifies nothing if it does not become the "thou" to whom eternity unceasingly speaks, and says; "Thou shalt, thou shalt, thou shalt." The youth wishes to be the only "I" in the whole world; maturity consists in understanding this "thou" for itself, even if it is not said to any other single man. Thou shalt, thou shalt love thy neighbor. O my hearer, it is not you to whom I speak; it is to me, to whom eternity says: "Thou shalt."

Kierkegaard, Works of Love, I, 2C

112 What pretty oracles nature yields us on this text in the face and behavior of children, babes, and even brutes! That divided and rebel mind, that distrust of a sentiment because our arithmetic has computed the strength and means opposed to our purpose, these have not. Their mind being whole, their eye is as yet unconquered; and when we look in their faces we are disconcerted. Infancy conforms to nobody; all conform to it; so that one babe commonly makes four or five out of the adults who prattle and play to it. So God has armed youth and puberty and manhood no less with its own piquancy and charm, and made it enviable and gracious and its claims not to be put by, if it will stand by itself. Do not think the youth has no force, because he cannot speak to you and me. Hark! in the next room his voice is sufficiently clear and emphatic. It seems he knows how to speak to his contemporaries. Bashful or bold then, he will know how to make us seniors very unnecessary.

Emerson, Self-Reliance

113 A boy is in the parlor what the pit is in the playhouse;
independent, irresponsible, looking out from his corner on
such people and facts as pass by, he tries and sentences
them on their merits, in the swift, summary way of boys,
as good, bad, interesting, silly, eloquent, troublesome. He
cumbers himself never about consequences, about
interests; he gives an independent, genuine verdict. You
must court him; he does not court you. But the man is as
it were clapped into jail by his consciousness. As soon as
he has once acted or spoken with éclat he is a committed
person, watched by the sympathy or the hatred of
hundreds, whose affections must now enter into his
account.

Emerson, Self-Reliance

114 It is time to be old,
To take in sail:
The gods of bounds.
Who sets to seas a shore,
Came to me in his fatal rounds,
And said: "No more!
No farther shoot
Thy broad ambitious branches, and thy root.
Fancy departs: no more invent;
Contract thy firmament To compass of a tent."

Emerson, Terminus

115 My mariners,
Souls that have toil'd, and wrought, and thought with me,
—
That ever with a frolic welcome took

The thunder and the sunshine, and opposed
Free hearts, free foreheads,—you and I are old;
Old age hath yet his honor and his toil.
Death closes all; but something ere the end,
Some work of noble note, may yet be done,
Not unbecoming men that strove with Gods.
The lights begin to twinkle from the rocks;
The long day wanes; the slow moon climbs; the deep
Moans round with many voices. Come, my friends,
'Tis not too late to seek a newer world.
Push off, and sitting well in order smite
The sounding furrows; for my purpose holds
To sail beyond the sunset, and the baths
Of all the western stars, until I die.
It may be that the gulfs will wash us down;
It may be we shall touch the Happy Isles,
And see the great Achilles, whom we knew.
Tho' much is taken, much abides; and tho'
We are not now that strength which in old days
Moved earth and heaven, that which we are, we are,—
One equal temper of heroic hearts,
Made weak by time and fate, but strong in will
To strive, to seek, to find, and not to yield.

Tennyson, Ulysses

116 Practically, the old have no very important advice to give the young, their own experience has been so partial, and their lives have been such miserable failures, for private reasons, as they must believe; and it may be that they have some faith left which belies that experience, and they are only less young than they were. I have lived some thirty years on this planet, and I have yet to hear the first syllable of valuable or even earnest advice from

my seniors. They have told me nothing, and probably cannot tell me anything to the purpose. Here is life, an experiment to a great extent untried by me; but it does not avail me that they have tried it.

Thoreau, Walden: Economy

117 The youth gets together his materials to build a bridge to the moon, or perchance a palace or temple on the earth, and at length the middleaged man concludes to build a wood-shed with them.

Thoreau, Journal (July 14, 1852)

118 How earthy old people become—mouldy as the grave! Their wisdom smacks of the earth. There is no foretaste of immortality in it. They remind me of earthworms and mole crickets.

Thoreau, Journal (Aug. 16, 1853)

119 Old age, calm, expanded, broad with the haughty breadth of the universe.
Old age, flowing free with the delicious near-by freedom of death.

Whitman, Song of the Open Road, XII

120 Grow old along with me!
The best is yet to be,
The last of life, for which the first wets made;
Our times are in his hand
Who saith, "A whole I planned,
Youth shows but half; trust God: see all, nor be afraid!"

Browning, Rabbi Ben Ezra

121 He (Alyosha] was to some extent a youth of our last epoch—that is, honest in nature, desiring the truth, seeking for it and believing in it, and seeking to serve it at once with all the strength of his soul, seeking for immediate action, and ready to sacrifice everything, life itself, for it. Though these young men unhappily fail to understand that the sacrifice of life is, in many cases, the easiest of all sacrifices, and that to sacrifice, for instance, five or six years of their seething youth to hard and tedious study, if only to multiply tenfold their powers of serving the truth and the cause they have set before them as their goal—such a sacrifice is utterly beyond the strength of many of them.

Dostoevsky, Brothers Karamazov, Pt. I, I, 5

122 Prince Vasili seized Pierre's hand and said to Anna Pavlovna: "Educate this bear for me! He has been staying with me a whole month and this is the first time I have seen him in society. Nothing is so necessary for a young man as the society of clever women."

Tolstoy, War and Peace, I, 4

123 Natasha had not had a moment free since early morning and had not once had time to think of what lay before her.

In the damp chill air and crowded closeness of the swaying carriage, she for the first time vividly imagined what was in store for her there at the ball, in those brightly lighted rooms—with music, flowers, dances, the Emperor, and all the brilliant young people of Petersburg. The prospect was so splendid that she hardly believed it would come true, so out of keeping was it with the chill

darkness and closeness of the carriage. She understood all that awaited her only when, after stepping over the red baize at the entrance, she entered the hall, took off her fur cloak, and, beside Sonya and in front of her mother, mounted the brightly illuminated stairs between the flowers. Only then did she remember how she must behave at a ball, and tried to assume the majestic air she considered indispensable for a girl on such an occasion. But, fortunately for her, she felt her eyes growing misty, she saw nothing clearly, her pulse beat a hundred to the minute, and the blood throbbed at her heart. She could not assume that pose, which would have made her ridiculous, and she moved on almost fainting from excitement and trying with all her might to conceal it. And this was the very attitude that became her best.

Tolstoy, War and Peace, VI, 15

124 Consider well the proportions of things. It is better to be a young June-bug than an old bird of paradise.

Mark Twain, Pudd'nhead Wilson's Calendar, VIII

125 The same space of time seems shorter as we grow older — that is, the days, the months, and the years do so; whether the hours do so is doubtful, and the minutes and seconds to all appearance remain about the same.... In youth we may have an absolutely new experience, subjective or objective, every hour of the day. Apprehension is vivid, retentiveness strong, and our recollections of that time, like those of a time spent in rapid and interesting travel, are of something intricate, multitudinous, and long-drawn-out. But as each passing year converts some of this experience into automatic

routine which we hardly note at all, the days and the weeks smooth themselves out in recollection to contentless units, and the years grow hollow and collapse.

William James, Psychology, XV

126 With the child, life is all play and fairy-tales and learning the external properties of "things"; with the youth, it is bodily exercises of a more systematic sort, novels of the real world, boon-fellowship and song, friendship and love, nature, travel and adventure, science and philosophy; with the man, ambition and policy, acquisitiveness, responsibility to others, and the selfish zest of the battle of life. If a boy grows up alone at the age of games and sports, and learns neither to play ball, nor row, nor sail, nor ride, nor skate, nor fish, nor shoot, probably he will be sedentary to the end of his days; and, though the best of opportunities be afforded him for learning these things later, it is a hundred to one but he will pass them by and shrink back from the effort of taking those necessary first steps the prospect of which, at an earlier age, would have filled him with eager delight. The sexual passion expires after a protracted reign; but it is well known that its peculiar manifestation in a given individual depend almost entirely on the habits he may form during the early period of its activity. Exposure to bad company then makes him a loose liver all his days; chastity kept at first makes the same easy later on.

William James, Psychology, XXIV

127 Men do not live long enough: they are, for all the purposes of high civilization, mere children when they die; and our Prime Ministers, though rated as mature, divide their time between the golf course and the Treasury Bench in parliament. Presumably, however, the same power that made this mistake can remedy it. If on opportunist grounds Man now fixes the term of his life at three score and ten years, he can equally fix it as three hundred, or three thousand, or even at the genuine Circumstantial Selection limit, which would be until a sooner-or-later-inevitable fatal accident makes an end of the individual. All that is necessary to make him extend his present span is that tremendous catastrophes such as the late war shall convince him of the necessity of at least outliving his taste for golf and cigars if the race is to be saved. This is not fantastic speculation: it is deductive biology, if there is such a science as biology. Here, then, is a stone that we have left unturned, and that may be worth turning. To make the suggestion more entertaining than it would be to most people in the form of a biological treatise, I have written *Back to Methuselah* as a contribution to the modern Bible.

Shaw, Back to Methuselah, Pref.

128 *Conrad*. We're not blaming you: you hadn't lived long enough. No more had we. Can't you see that three-score-and-ten, though it may be long enough for a very crude sort of village life, isn't long enough for a complicated civilization like ours? Flinders Petrie has counted nine attempts at civilization made by people exactly like us; and every one of them failed just as ours is failing. They failed because the citizens and statesmen died of old age or over-eating before they had grown out of schoolboy

games and savage sports and cigars and champagne. The signs of the end are always the same: Democracy, Socialism, and Votes for Women, We shall go to smash within the lifetime of men now living unless we recognize that we must live longer.

Shaw, Back to Methuselah, II

129 *The Maiden*. Clothes are a nuisance. I think I shall do without them some day, as you ancients do.

The Ancient. Signs of maturity. Soon you will give up all these toys and games and sweets.

The Youth. What! And be as miserable as you?

The Ancient. Infant: one moment of the ecstasy of life as we live it would strike you dead.

Shaw, Back to Methuselah, V

130 Is there an infantile sexuality? you will ask. Is childhood not rather that period of life which is distinguished by the lack of the sexual impulse? No, gentlemen, it is not at all true that the sexual impulse enters into the child at puberty, as the devils in the gospel entered into the swine. The child has his sexual impulses and activities from the beginning, he brings them with him into the world, and from these the so-called normal sexuality of adults emerges by a significant development through manifold stages. It is not very difficult to observe the expressions of this childish sexual activity; it needs rather a certain art to overlook them or to fail to interpret them.

Freud, Origin and Development of Psycho-Analysis, IV

131 To be sure, if it is the purpose of educators to stifle the child's power of independent thought as early as possible, in order to produce that "good behaviour" which is so highly prized, they cannot do better than deceive children in sexual matters and intimidate them by religious means. The stronger characters will, it is true, withstand these influences; they will become rebels against the authority of their parents and later against every other form of authority. When children do not receive the explanations for which they turn to their elders, they go on tormenting themselves in secret with the problem, and produce attempts at solution in which the truth they have guessed is mixed up in the most extraordinary way with grotesque inventions; or else they whisper confidences to each other which, because of the sense of guilt in the youthful inquirers, stamp everything sexual as horrible and disgusting.

Freud, Sexual Enlightenment of Children

132 This age of childhood, in which the sense of shame is unknown, seems a paradise when we look back upon it later, and paradise itself is nothing but the mass-phantasy of the childhood of the individual. This is why in paradise men are naked and unashamed, until the moment arrives when shame and fear awaken; expulsion follows, and sexual life and cultural development begin.

Freud, Interpretation of Dreams, V, D

133 If the infant could express itself, it would undoubtedly acknowledge that the act of sucking at its mother's breast is far and away the most important thing in life. It would not be wrong in this, for by this act it gratifies at

the same moment the two greatest needs in life. Then we learn from psycho-analysis, not without astonishment, how much of the mental significance of this act is retained throughout life. Sucking for nourishment becomes the point of departure from which the whole sexual life develops, the unattainable prototype of every later sexual satisfaction, to which in times of need phantasy often enough reverts. The desire to suck includes within it the desire for the mother's breast, which is therefore the first object of sexual desire; I cannot convey to you any adequate idea of the importance of this first object in determining every later object adopted, of the profound influence it exerts, through transformation and substitution, upon the most distant fields of mental life,

Freud, General Introduction to Psycho-Analysis, XX

134 In the act of birth there is a real danger to life. We know what this means objectively; but what it means in a psychological sense we have no idea. The danger of birth has yet no mental content for the subject. One cannot possibly suppose that the foetus has any sort of knowledge that its life is in danger of being destroyed. It can only be aware of some vast upheaval in the economy of its narcissistic libido. Very large quantities of excitation crowd in upon it, giving rise to new sensations of unpleasure, and many organs acquire an increased cathexis, thus foreshadowing the object-cathexis which will soon set in.

Freud, Inhibitions, Symptoms, and Anxiety, VIII

135 God guard me from those thoughts men think
In the mind alone;
He that sings a lasting song
Thinks in a marrow-bone;

From all that makes a wise old man
That can be praised of all;
O what am I that I should not seem
For the song's sake a fool?

I pray—for fashion's word is out
And prayer comes round again—
That I may seem, though I die old,
A foolish, passionate man.

Yeats, A Prayer for Old Age

136 That is no country for old men. The young
In one another's arms, birds in the trees
—Those dying generations—at their song,
The salmon-falls, the mackerel-crowded seas,
Fish, flesh, or fowl, commend all summer long
Whatever is begotten, born, and dies.
Caught in that sensual music all neglect
Monuments of unaging intellect.

An aged man is but a paltry thing,
A tattered coat upon a stick, unless
Soul clap its hands and sing, and louder sing
For every tatter in its mortal dress,
Nor is there singing school but studying
Monuments of its own magnificence;
And therefore I have sailed the seas and come
To the holy city of Byzantium.

Yeats, Sailing to Byzantium

137 Old places and old persons in their turn, when spirit dwells in them, have an intrinsic vitality of which youth is incapable; precisely the balance and wisdom that comes from long perspectives and broad foundations.

Santayana, My Host the World, II

138 Never have I enjoyed youth so thoroughly as I have in my old age. ... I have drunk the pleasure of life more pure, more joyful, than it ever was when mingled with all the hidden anxieties and little annoyances of actual living. Nothing is inherently and invincibly young except spirit. And spirit can enter a human being perhaps better in the quiet of old age and dwell there more undisturbed than in the turmoil of adventure.

Santayana, My Host the World, II

139 I at least have found that old age is the time for happiness, even for enjoying in retrospect the years of youth that were so distracted in their day; and I seem to detect a certain sardonic defiance, a sort of pride, in the whining old beggars that look so wretched as they stretch out a trembling hand for a penny. They are not dead yet; they can hold together in spite of everything; and they are not deceived about you, you well-dressed young person. Your new shoes pinch you, and you are secretly racked by hopeless desires.

Santayana, Persons and Places, II

140 The young man who has not wept is a savage, and the old man who will not laugh is a fool.

Santayana, Dialogues in Limbo, III

1.4 Self-Knowledge and Self-Love

The fact that man is a self-conscious or self-regarding animal underlines the two main themes treated in this section. One is the injunction first uttered by one of the seven wise men of Greece- "Know thyself!" That commandment gets repeated in one form or another century after century, as a counsel of perfection or as the key to wisdom. Clearly, the task to be performed is not an easy one, since by implication it is one that few men discharge adequately.

Illusion and self-deception stand in the way of an honest, penetrating, and fearless self-appraisal. Though it would appear that we have access to the innermost core of our individual being, and that there is nothing in the world with which we are on the more intimate terms than our own self, the self remains an elusive object of knowledge and understanding. Different reasons for this are given or suggested by different writers; and they also recommend different ways to overcome obstacles. For all these differences, the basic insight about the desirability and the difficulty of self-knowledge remain very much the same from Socrates and the Roman Stoics and Emerson, and the psychoanalysts and existentialists in our own day.

According to many of the passages quoted in Chapter 3 on Love, the proper objects of love are God, other human beings, one's country, and such ideals as truth, beauty, and goodness. Yet one of the most famous of all statements about love - the Christian precepts of charity - commands us, first, to love God, and second, to love our neighbor as our

self. And the same injunction is implied in Aristotle's conception of the ideal friend, the proper beloved, as an *alter ego* - another self. Self-love is in a sense the basis of true love of another.

Self-love, then, far from being castigated as a misdirection of the benevolent impulse, is conceived as inseparable from benevolence toward others. There are other terms for what is being discussed here - "self-esteem", "self-respect", "*amour propre*", and even "pride", when that term is used to signify a well-founded and well-deserved approval of one's self. Yet the fact that pride is also condemned as an overestimation of one's worth suggests that self-love can become so excessive or perverted that it excludes or subordinates all other loves. Whereas the passages dealing with the first theme in this section - self-knowledge - tend to be of the same tenor, the passages dealing with the second - self-love - are often ambivalent.

■ ■ ■

- 1 Let another man praise thee, and not thine own mouth; a stranger, and not thine own lips.

Proverbs 27:2

- 2 The gods help him who helps himself.

Euripides, Fragment

- 3 *Critias*. Self-knowledge would certainly be maintained by me to be the very essence of knowledge, and in this I agree with him who dedicated the inscription, "Know thyself!" at Delphi.

Plato, Charmides, 164B

- 4 *Socrates*. The wise or temperate man, and he only, will know himself.

Plato, Charmides, 167 A

- 5 *Athenian Stranger*. The excessive love of self is in reality the source to each man of all offences.... Wherefore let every man avoid excess of self-love, and condescend to follow a better man than himself, not allowing any false shame to stand in the way.

Plato, Laws, V, 731B

- 6 Everyone has the obligation to ponder well his own specific traits of character. He must also regulate them adequately and not wonder whether someone else's traits might suit him better. The more definitely his own a man's character is, the better it fits him.

Cicero, De Officiis, I, 31

- 7 Every animal is attached to nothing so much as to its own interest. Whatever then appears to it an impediment to this interest, whether this be a brother, or a father, or a child, or beloved, or lover, it hates, spurns, curses; for its nature is to love nothing so much as its own interest; this is father, and brother and kinsman, and country, and God....

If a man put in the same place his interest, sanctity, goodness, and country, and parents, and friends, all these are secured: but if he puts in one place his interest, in another his friends, and his country and his kinsmen and justice itself, all these give way being borne down by the weight of interest.

Epictetus, Discourses, II, 22

- 8 How much trouble he avoids who does not look to see what his neighbour says or does or thinks, but only to what he does himself, that it may be just and pure.

Marcus Aurelius, Meditations, IV, 18

- 9 Look within. Within is the fountain of good, and it will ever bubble up, if thou wilt ever dig.

Marcus Aurelius, Meditations, VII, 59

- 10 I have often wondered how it is that every man loves himself more than all the rest of men, but yet sets less value on his own opinion of himself than on the opinion of others.

Marcus Aurelius, Meditations, XII, 4

- 11 Withdraw into yourself and look. And if you do not find yourself beautiful yet, act as does the creator of a statue that is to be made beautiful: he cuts away here, he smooths there, he makes this line lighter, this other purer, until a lovely face has grown upon his work. So do you also: cut away all that is excessive, straighten all that is crooked, bring light to all that is overcast, labour to make all one glow of beauty and never cease chiselling your statue, until there shall shine out on you from it the godlike splendour of virtue, until you shall see the perfect goodness surely established in the stainless shrine.

Plotinus, First Ennead, VI, 9

- 12 Man is a great deep, Lord. You number his very hairs and they are not lost in Your sight: but the hairs of his head

are easier to number than his affections and the movements of his heart.

Augustine, Confessions, IV, 14

- 13 If I am deceived, I am. For he who is not, cannot be deceived; and if I am deceived, by this same token I am.

Augustine, City of God, XI, 26

- 14 For the most part, the human mind cannot attain to self-knowledge otherwise than by making trial of its powers through temptation, by some kind of experimental and not merely verbal self-interrogation.

Augustine, City of God, XVI, 32

- 15 It is a very ordinary and common thing amongst men to conceive, foresee, know, and presage the misfortune, bad luck, or disaster of another; but to have the understanding, providence, knowledge, and prediction of a man's own mishap, is very scarce, and rare to be found any where.

Rabelais, Gargantua and Pantagruel, III, 15

- 16 If, as who study ourselves have learned to do, each man who hears a true statement immediately considered how it properly pertains to him, each man would find that it is not so much a good saying as a good whiplash to the ordinary stupidity of his Judgment.

Montaigne, Essays, I, 23, Of Custom

- 17 This capacity for sifting truth, whatever it may amount to in me, and this free will not to enslave my belief easily, I owe principally to myself. For the firmest and most

general ideas I have are those which, in a manner of speaking, were born with me. They are natural and all mine. I produced them crude and simple, with a conception bold and strong, but a little confused and imperfect, Since then I have established and fortified them by the authority of others and the sound arguments of the ancients, with whom I found my judgment in agreement. These men have given me a firmer grip on my ideas and a more complete enjoyment and possession of them.

Montaigne, Essays, U, 17, Of Presumption

- 18 It is a rare life that remains well ordered even in private. Any man can play his part in the side show and represent a worthy man on the boards; but to be disciplined within. in his own bosom, where all is permissible, where all is concealed— that's the point.

Montaigne, Essays, III, 2, Of Repentance

- 19 It was a paradoxical command that was given us of old by that god at Delphi: "Look into yourself, know yourself, keep to yourself; bring back your mind and your will, which are spending themselves elsewhere, into themselves; you are running out, you are scattering yourself; concentrate yourself, resist yourself; you are being betrayed, dispersed, and stolen away from yourself. Do you not see that this world keeps its sight all concentrated inward and its eyes open to contemplate itself? It is always vanity for you, within and without; but it is less vanity when it is less extensive. Except for you, O man," said that god, "each thing studies itself first, and, according to its needs, has limits to its labors and

desires. There is not a single thing as empty and needy as you, who embrace the universe: you are the investigator without knowledge, the magistrate without jurisdiction, and all in all, the fool of the farce."

Montaigne, Essays, III, 9, Of Vanity

20 It is an absolute perfection and virtually divine to know how to enjoy our being rightfully. We seek other conditions because we do not understand the use of our own, and go outside of ourselves because we do not know what it is like inside. Yet there is no use our mounting on .stills, for on stilts we must still walk on our own legs. And on the loftiest throne in the world we are still sitting only on our own rump.

Montaigne, Essays, 111. 13, Of Experience

21 *Potomius*. This above all: to thine own self be true, And it must follow, as the night the day,
Thou canst not then be false to any man.

Shakespeare, Hamlet, I, iii, 78

22 *Iago*. O villainous! I have looked upon the world for four times seven years; and since I could distinguish betwixt a benefit and an injury, I never found a man that knew how to love himself.

Shakespeare, Othello, I, lit, 312

23 It hath been well said that the arch-flatterer, with whom all the petty flatterers have intelligence, is a man's self.

Bacon, Of Love

24 For a long time I had remarked that it is sometimes requisite in common life to follow opinions which one knows to be most uncertain, exactly as though they were indisputable, as has been said above. But because in this ease I wished to give myself entirely to the search after Truth, I thought that it was necessary for me to take an apparently opposite course, and to reject as absolutely false everything as to which I could imagine the least ground of doubt, in order to see if afterwards there remained anything in my belief that was entirely certain. Thus, because our senses sometimes deceive us, I wished to suppose that nothing is just as they cause us to imagine it to be; and because there are men who deceive themselves in their reasoning and fall into paralogisms, even concerning the simplest matters of geometry, and judging that I was as subject to error as was any other, I rejected as false all the reasons formerly accepted by me as demonstrations. And since all the same thoughts and conceptions which we have while awake may also come to us in sleep, without any of them lacing at that time true, I resolved to assume that everything that ever entered into my mind was no more true than the illusions of my dreams. But immediately afterwards I noticed that whilst I thus wished to think all things false, it was absolutely essential that the "I" who thought this should be somewhat, and remarking that this truth "I think, therefore I am" was so certain and so assured that all the most extravagant suppositions brought forward by the sceptics were incapable of shaking it, I came to the conclusion that I could receive it without scruple as the first principle of the Philosophy.

Descartes, Discourse on Method, IV

25 Whosoever looketh into himself and considereth what he doth when he does think, opine, reason, hope, fear, etc., and upon what grounds; he shall thereby read and know what are the thoughts and passions of all other men upon the like occasions. I say the similitude of passions, which are the .same in all men,—desire, fear, hope, etc.; not the similitude of the objects of the passions, which are the things desired, feared, hoped, etc.; for these the constitution individual, and particular education, do so vary, and they are so easy to be kept from our knowledge, that the characters of man's heart, blotted and confounded as they are with dissembling, lying, counterfeiting, and erroneous doctrines, are legible only to him that searcheth hearts. And though by men's actions we do discover their design sometimes; yet to do it without comparing them with our own, and distinguishing all circumstances by which the case may come to be altered, is to decipher without a key, and be for the most part deceived, by too much trust or by too much diffidence, as he that reads is himself a good or evil man.

Hobbes, Leviathan, Intro.

26 One must know oneself. If this does not serve to discover truth, it at least serves as a rule of life, and there is nothing better.

Pascal, Pensées, II, 66

27 Man is to himself the most wonderful object in nature; for he cannot conceive what the body is, still less what the mind is, and least of all how a body should be united to a

mind. This is the consummation of his difficulties, and yet it is his very being.

Pascal, Pensées, II, 72

28 The nature of self-love and of this human Ego is to love self only and consider self only. But what will man do? He cannot prevent this object that he loves from being full of faults and wants. He wants to be great, and he sees himself small. He wants to be happy, and he sees himself miserable. He wants to be perfect, and he sees himself full of imperfections. He wants to be the object of love and esteem among men, and he sees that his faults merit only their hatred and contempt. This embarrassment in which he finds himself produces in him the most unrighteous and criminal passion that can be imagined; for he conceives a mortal enmity against that truth which reproves him and which convinces him of his faults. He would annihilate it, but, unable to destroy it in its essence, he destroys it as far as possible in his own knowledge and in that of others; that is to say, he devotes all his attention to hiding his faults both from others and from himself, and he cannot endure either that others should point them out to him, or that they should see them.

Truly it is an evil to be full of faults; but it is a still greater evil to be full of them and to be unwilling to recognise them, since that is to add the further fault of a voluntary illusion.

Pascal, Pensées, II, 100

29 If we do not know ourselves to be full of pride, ambition, lust, weakness, misery, and injustice, we are indeed

blind. And if, knowing this, we do not desire deliverance, what can we say of a man...?

Pascal, Pensées, VII, 450

- 30 Since reason demands nothing which is opposed to nature, it demands, therefore, that every person should love himself, should seek his own profit,— what is truly profitable to him,—should desire everything that really leads man to greater perfection, and absolutely that every one should endeavour, as far as in him lies, to preserve his own being. This is all true as necessarily as that the whole is greater than its part.

Spinoza, Ethics, IV, Prop. 18, Schol.

- 31 We must consider what person stands for;—which, I think, is a thinking intelligent being, that has reason and reflection, and can consider itself as itself, the same thinking thing, in different times and places; which it does only by that consciousness which is inseparable from thinking, and, as it seems to me, essential to it: it being impossible for any one to perceive without perceiving that he does perceive. When we see, hear, smell, taste, feel, meditate, or will anything, we know that we do so. Thus it is always as to our present sensations and perceptions: and by this every one is to himself that which he calls self.

Locke, Concerning Human Understanding, Bk. II, XXVII, 9

- 32 Suppose I wholly lose the memory of some parts of my life, beyond a possibility of retrieving them, so that perhaps I shall never be conscious of them again; yet am I not the same person that did those actions, had those

thoughts that I once was conscious of, though I have now forgot them? To which I answer, that we must here take notice what the word I is applied to; which, in this case, is the man only. And the same man being presumed to be the same person, I is easily here supposed to stand also for the same person. But if it be possible for the same man to have distinct incommunicable consciousness at different times, it is past doubt the same man would at different times make different persons; which, we see, is the sense of mankind in the solemnest declaration of their opinions, human laws not punishing the mad man for the sober man's actions, nor the sober man for what the mad man did,—thereby making them two persons; which is somewhat explained by our way of speaking in English when we say such an one is "not himself," or is "beside himself"; in which phrases it is insinuated, as if those who now, or at least first used them, thought that self was changed; the self-same person was no longer in that man.

Locke, Concerning Human Understanding, Bk. II, XXVII,
20

- 33 Self-esteem is the instrument of our conservation; it resembles the instrument of the perpetuity of the species: it is necessary, it is dear to us, it gives us pleasure, and it has to be hidden.

Voltaire, Philosophical Dictionary: Self-Esteem

- 34 Our first duties are to ourselves; our first feelings are centred on self; all our instincts are at first directed to our own preservation and our own welfare. Thus the first

notion of justice springs not from what we owe to others, but from what is due to us.

Rousseau, Emile, 11

- 35 *Johnson*. A man should be careful never to tell tales of himself to his own disadvantage. People may be amused and laugh at the time, but they will be remembered, and brought out against him upon some subsequent occasion.

Boswell, Life of Johnson (Mar. 14, 1776)

- 36 *Johnson*. All censure of a man's self is oblique praise. It is in order to shew how much he can spare. It has all the invidiousness of self-praise, and all the reproach of falsehood.

Boswell, Life of Johnson (Apr. 25, 1778)

- 37 Man has almost constant occasion for the help of his brethren, and it is in vain for him to expect it from their benevolence only. He will be more likely to prevail if he can interest their self-love in his favour, and show them that it is for their own advantage to do for him what he requires of them. Whoever offers to another a bargain of any kind, proposes to do this. Give me that which I want, and you shall have this which you want, is the meaning of every such offer; and it is in this manner that we obtain from one another the far greater part of those good offices which we stand in need of. It is not from the benevolence of the butcher, the brewer, or the baker that we expect our dinner, but from their regard to their own interest. we address ourselves, not to their humanity but to their self-love, and never talk to them of our own necessities but of their advantages.

Adam Smith, Wealth of Nations, 1, 2

38 It is absolutely impossible to make out by experience with complete certainty a single ease in which the maxim of an action, however right in itself, rested simply on moral grounds and on the conception of duty. Sometimes it happens that with the sharpest self-examination we can find nothing beside the moral principle of duty which could have been powerful enough to move us to this or that action and to so great a sacrifice; yet we cannot from this infer with certainty that it was not really some secret impulse of self-love, under the false appearance of duty, that was the actual determining cause of the will. We like them to flatter ourselves by falsely taking credit for a more noble motive; whereas in fact we can never, even by the strictest examination, get completely behind the secret springs of action.

*Kant, Fundamental Principles of the Metaphysic of
Morals, 11*

39 Men often oppose a thing, merely because they have had no agency in planning it, or because it may have been planned by those whom they dislike. But if they have been consulted, and have happened to disapprove, opposition then becomes, in their estimation, an indispensable duty of self-love. They seem to think themselves bound in honour, and by all the motives of personal infallibility, to defeat the success of what has been resolved upon contrary to their sentiments. Men of upright, benevolent tempers have too many opportunities of remarking, with horror, to what desperate lengths this disposition is sometimes carried, and how often the great interests of society are sacrificed

to the vanity, to the conceit, and to the obstinacy of individuals who have credit enough to make their passions and their caprices interesting to mankind.

Hamilton, Federalist 70

40 *Countess Tersky*. Every individual character is in the right that is in strict consistence with itself. Self-contradiction is the only wrong.

Schiller, Wallenstein's Death, I

41 Why is it that, in spite of all the mirrors in the world, no one really knows what he looks like?

Schopenhauer, Further Psychological Observations

42 Our Works are the mirror wherein the spirit first sees its natural lineaments. Hence, too, the folly of that impossible Precept, Know thyself; till it lie translated into this partially possible one, *Know what thou const work at*.

Carlyle, Sartor Resartus, 11, 7

43 What I really lack is to be clear in my mind what / am to do, not what I am to know, except in so far as a certain understanding must precede every action, The thing is to understand myself, to .see what God really wishes me to do; the thing is to find a truth which is true for me, to find the idea for which I can live and die. What would be the use of discovering so-called objective truth, of working through all the systems of philosophy and of being able, if required, to review them all and show up the inconsistencies within each system;—what good would it do me to be able to develop a theory' of the state and combine all the details into a single whole, and so

construct a world in which I did not live, but only held up to the view of others;—what good would it do me to be able to explain the meaning of Christianity if it had no deeper significance for me and for my life; —what good would it do me if truth stood before me, cold and naked, not caring whether I recognised her or not, and producing in me a shudder of fear rather than a trusting devotion? I certainly do not deny that I still recognise an imperative of understanding and that through it one can work upon men, but it must be taken up into my life, and that is what I now recognise as the most important thing. That is what my soul longs after, as the African desert thirsts for water.

Kierkegaard, Journals (Aug. 1, 1835)

- 44 When a man has gone astray to the point of perdition and is about to sink, his last speech, the sign is: 'and yet something better in me is being lost'. It is like the bubbles rising to the surface from a drowning man; that is the sign—then he sinks. Just as self-isolation can be a man's downfall, because he will not reveal what is hidden, in the same way to pronounce those words spells destruction. For that declaration expresses the fact that he has become so objective to himself that he can talk of his own destruction as of something settled, which can now be of psychological interest to a third person. The hope that there was something better in him, which should have been used in silence to work for his salvation, that hope is made public and used as an ingredient in the funeral oration he pronounces upon himself.

Kierkegaard, Journals (1846)

45 To believe your own thought, to believe that what is true for you in your private heart is true for all men—that is genius. Speak your latent conviction, and it shall be the universal sense; for the inmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment. Familiar as the voice of the mind is to each, the highest merit we ascribe to Moses, Plato and Milton is that they set at naught books and traditions, and spoke not what men, but what they thought. A man should learn to detect and watch that gleam of light which flashes across his mind from within, more than the lustre of the firmament of bards and sages. Yet he dismisses without notice his thought, because it is his. In every work of genius we recognize our own rejected thoughts; they come back to us with a certain alienated majesty. Great works of art have no more affecting lesson for us than this. They teach us to abide by our spontaneous impression with good-humored inflexibility then most when the whole cry of voices is on the other side. Else to-morrow a stranger will say with masterly good sense precisely what we have thought and felt all the time, and we shall be forced to take with shame our own opinion from another.

Emerson, Self-Reliance

46 Trust thyself: every heart vibrates to that iron string.

Emerson, Self-Reliance

47 What I must do is all that concerns me, not what the people think. This rule, equally arduous in actual and in intellectual life, may serve for the whole distinction between greatness and meanness. It is the harder

because you will always find those who think they know what is your duty better than you know it. It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who in the midst of the crowd keeps with perfect sweetness the independence of solitude.

Emerson, Self-Reliance

- 48 The other terror that scares us from self-trust is our consistency; a reverence for our past act or word because the eyes of others have no other data for computing our orbit than our past acts, and we are loth to disappoint them.

But why should you keep your head over your shoulder? Why drag about this corpse of your memory, lest you contradict somewhat you have stated in this or that public place? Suppose you should contradict yourself; what then?

Emerson, Self-Reliance

- 49 Among those points of self-education which take up the form of mental discipline, there is one of great importance, and, moreover, difficult to deal with, because it involves an internal conflict, and equally touches our vanity and our ease. It consists in the tendency to deceive ourselves regarding all we wish for, and the necessity of resistance to these desires. It is impossible for any one who has not been constrained, by the course of his occupation and thoughts, to a habit of continual self-correction to be aware of the amount of error in relation to judgment arising from this tendency. The force of the temptation which urges us to seek for such

evidence and appearances as are in favour of our desires, and to disregard those which oppose them, is wonderfully great. In this respect we are all, more or less, active promoters of error. In place of practising wholesome self-abnegation, we ever make the wish the father to the thought: we receive as friendly that which agrees with, we resist with dislike that which opposes us; whereas the very reverse is required by every dictate of common sense.

Faraday, Observations on Mental Education

50 I would rather sit on a pumpkin and have it all to myself than be crowded on a velvet cushion. I would rather ride on earth in an ox cart, with a free circulation, than go to heaven in the fancy car of an excursion train and breathe a malaria all the way.

Thoreau, Walden: Economy

51 I never dreamed of any enormity greater than I have committed. I never knew, and never shall know, a worse man than myself.

Thoreau, Walden: Economy

52 I only know myself as a human entity; the scene, so to speak, of thoughts and affections; and am sensible of a certain doubleness by which I can stand as remote from myself as from another. However intense my experience, I am conscious of the presence and criticism of a part of me, which, as it were, is not a part of me, but spectator, sharing no experience, but taking note of it, and that is no more I than it is you.

Thoreau, Walden: Solitude

53 I celebrate myself, and sing myself.

Whitman, Song of Myself, I

54 Do I contradict myself?

Very well then I contradict myself,
(I am large, I contain multitudes.)

Whitman, Song of Myself LI

55 It is not by wearing down into uniformity all that is individual in themselves, but by cultivating it, and calling it forth, within the limits imposed by the rights and interests of others, that human beings become a noble and beautiful object of contemplation; and as the works partake the character of those who do them, by the same process human life also becomes rich, diversified, and animating, furnishing more abundant aliment to high thoughts and elevating feelings, and strengthening the tie which binds every individual to the race, by making the race infinitely better worth belonging to.

Mill, On Liberty, III

56 Because the tyranny of opinion is such as to make eccentricity a reproach, it is desirable, in order to break through that tyranny, that people should be eccentric. Eccentricity has always abounded when and where strength of character has abounded; and the amount of eccentricity in a society has generally been proportional to the amount of genius, mental vigour, and moral courage it contained. That so few now dare to be eccentric marks the chief danger of the time.

Mill, On Liberty, III

57 We are all of us born in moral stupidity, taking the world as an udder to feed our supreme selves: Dorothea had early begun to emerge from that stupidity, but yet it had been easier to her to imagine how she would devote herself to Mr Casaubon, and become wise and strong in his strength and wisdom, than to conceive with that distinctness which is no longer reflection but feeling—an idea wrought back to the directness of sense, like the solidity of objects—that he had an equivalent centre of self, whence the lights and shadows must always fall with a certain difference.

George Eliot, Middlemarch, II, 21

58 An eminent philosopher among my friends, who can dignify even your ugly furniture by lifting it into the serene light of science, has shown me this pregnant little fact. Your pier-glass or extensive surface of polished steel made to be rubbed by a housemaid, will be minutely and multitudinously scratched in all directions; but place now against it a lighted candle as a centre of illumination, and lo! the scratches will seem to arrange themselves in a fine series of concentric circles round that little sun. It is demonstrable that the scratches are going everywhere impartially, and it is only your candle which produces the flattering illusion of a concentric arrangement, its light falling with an exclusive optical selection. These things are a parable. The scratches are events, and the candle is the egoism of any person now absent.

George Eliot, Middlemarch, III, 27

59 She [Mary Garth] sat to-night revolving, as she was wont, the scenes of the day, her lips often curling with

amusement at the oddities to which her fancy added fresh drollery: people were so ridiculous with their illusions, carrying their fool's caps unawares, thinking their own lies opaque while everybody else's were transparent, making themselves exceptions to everything, as if when all the world looked yellow under a lamp they alone were rosy.

George Eliot, Middlemarch, III, 33

60 Consciousness is a source of self-cognition quite apart from and independent of reason. Through his reason man observes himself, but only through consciousness does he know himself.

Tolstoy, War and Peace, II Epilogue, VIII

61 We are unknown, we knowers, ourselves to ourselves: this has its own good reason. We have never searched for ourselves—how should it then come to pass, that we should ever find ourselves?

Nietzsche, Genealogy of Morals, Preface, 1

62 The most spiritual human beings, as the strongest, find their happiness where others would find their destruction: in the labyrinth, in severity towards themselves and others, in attempting; their joy lies in self-constraint: with them asceticism becomes nature, need, instinct.

Nietzsche, Antichrist, LVII

63 I am often confronted by the necessity of standing by one of my empirical selves and relinquishing the rest. Not that I would not, if I could, be both handsome and fat and

well dressed, and a great athlete, and make a million a year, be a wit, a *bon-vivant*, and a lady-killer, as well as a philosopher; a philanthropist, statesman, warrior, and African explorer, as well as a "tone-poet" and saint. But the thing is simply impossible. The millionaire's work would run counter to the saint's; the *bon-vivant* and the philanthropist would trip each other up; the philosopher and the lady-killer could not well keep house in the same tenement of clay. Such different characters may conceivably at the outset of life be alike possible to a man. But to make any one of them actual, the rest must more or less be suppressed. So the seeker of his truest, strongest, deepest self must review the list carefully, and pick out the one on which to stake his salvation. All other selves thereupon become unreal, but the fortunes of this self are real. Its failures are real failures, its triumphs real triumphs, carrying shame and gladness with them,... Our thought, incessantly deciding, among many things of a kind, which ones for it shall be realities, here chooses one of many possible selves or characters, and forthwith reckons it no shame to fail in any of those not adopted expressly as its own.

William James, Psychology, X

- 64 The consciousness of Self involves a stream of thought, each part of which as "I" can 1) remember those which went before, and know the things they knew; and 2) emphasize and care paramountly for certain ones among them as "me," and appropriate to these the rest. The nucleus of the "me" is always the bodily existence felt to be present at the time. Whatever remembered-past-feelings resemble this present feeling are deemed to belong to the same me with it. Whatever other things are

perceived to be associated with this feeling are deemed to form part of that me's experience, and of them certain ones (which fluctuate more or less) are reckoned to be themselves constituents of the me in a larger sense,—such are the clothes, the material possessions, the friends, the honors and esteem which the person receives or may receive. This me is an empirical aggregate of things objectively known. The I which knows them cannot itself be an aggregate; neither for psychological purposes need it be considered to be an unchanging metaphysical entity like the Soul, or a principle like the pure Ego, viewed as "out of time." It is a Thought, at each moment different from that of the last moment, but appropriative of the latter, together with all that the latter called its own. All the experiential facts find their place in this description, unencumbered with any hypothesis save that of the existence of passing thoughts or states of mind. The same brain may subserve many conscious selves, either alternate or coexisting; but by what modifications in its action, or whether ultra-cerebral conditions may intervene, are questions which cannot now be answered.

William James, Psychology, X

65 The blindness in human beings ... is the blindness with which we all are afflicted in regard to the feelings of creatures and people different from ourselves.

We are practical beings, each of us with limited functions and duties to perform. Each is bound to feel intensely the importance of his own duties and the significance of the situations that call these forth. But this feeling is in each of us a vital secret, for sympathy with which we vainly look to others. The others are too

much absorbed in their own vital secrets to take an interest in ours. Hence the stupidity and injustice of our opinions, so far as they deal with the significance of alien lives. Hence the falsity of our judgments, so far as they presume to decide in an absolute way on the value of other persons' conditions or ideals.

William James, On a Certain Blindness in Human Beings

66 A return from the over-estimation of the property of consciousness is the indispensable preliminary to any genuine insight into the course of psychic events . . . , The unconscious must be accepted as the general basis of the (ps)'chic life. The unconscious is the larger circle which includes the smaller circle of the conscious; everything conscious has a preliminary unconscious stage, whereas the unconscious can stop at this stage, and yet claim to be considered a full psychic function. The unconscious is the true psychic reality; in its inner nature it is just as much unknown to us as the reality of the external world, and it is just as imperfectly communicated to us by the data of consciousness as is the external world by the reports of our sense-organs.

Freud, Interpretation of Dreams, VII, F

67 We must say that all the acts and manifestations which I notice in myself and do not know how to link up with the rest of my mental life must be judged as if they belonged to someone else and are to be explained by the mental life ascribed to that person. Further, experience shows that we understand very well how to interpret in others (i.e., how to fit into their mental context) those same acts which we refuse to acknowledge as mentally conditioned

in ourselves. Some special hindrance evidently deflects our investigations from ourselves and interferes with our obtaining true knowledge of ourselves.

Freud, The Unconscious, I

68 Many good words get spoiled when the word self is prefixed to them: Words like pity, confidence, sacrifice, control, love. The reason is not far to seek. The word self infects them with a fixed introversion and isolation. It implies that the act of love or trust or control is turned back upon a self which already is in full existence and in whose behalf the act operates. Pity fulfils and creates a self when it is directed outward, opening the mind to new contacts and receptions. Pity for self withdraws the mind back into itself, rendering its subject unable to learn from the buffetings of fortune. Sacrifice may enlarge a self by bringing about surrender of acquired possessions to requirements of new growth. Self-sacrifice means a self-maiming which asks for compensatory pay in some later possession or indulgence. Confidence as an outgoing act is directness and courage in meeting the facts of life, trusting them to bring instruction and support to a developing self. Confidence which terminates in the self means a smug complacency that renders a person obtuse to instruction by events. Control means a command of resources that enlarges the self; self-control denotes a self which is contracting, concentrating itself upon its own achievements, hugging them tight, and thereby estopping the growth that comes when the self is generously released; a self-conscious moral athleticism that ends in a disproportionate enlargement of some organ.

Dewey, Human Nature and Conduct, II, 5

69 "Never shall a young man.
Thrown into despair
By those great honey-colored
Ramparts at your ear.
Love you for yourself alone
And not your yellow hair."

"But I can get a hair-dye
And set such color there,
Brown, or black, or carrot,
That young men in despair
May love me for myself alone
And not my yellow hair."

"I heard an old religious man
But yesternight declare
That he had found a text to prove
That only God, my dear.
Could love you for yourself alone
And not your yellow hair."

Yeats, For Anne Gregory

70 The philosophies of Descartes and Kant' to the contrary, through the I think we reach our own self in the presence of others, and the others are just as real to us as our own self. Thus, the man who becomes aware of himself through the *cogito* also perceives all others, and he perceives them as the condition of his own existence. He realizes that he can not be anything (in the sense that we say that someone is witty or nasty or jealous) unless others recognize it as such. In order to get any truth

about myself, I must have contact with another person. The other is indispensable to my own existence, as well as to my knowledge about myself. This being so, in discovering my inner being I discover the other person at the same time, like a freedom placed in front of me which thinks and wills only for or against me. Hence, let us at once announce the discovery of a world which we shall call inter-subjectivity; this is the world in which man decides what he is and what others are.

Sartre, Existentialism

1.5 Honor, Reputation, and Fame or Glory

That the individual man should seek to know himself for what he really is and should esteem himself for his true worth make inevitable his desire to be known and esteemed by others according to his merits. Honor is the name that the ancients gave to the good that satisfies this natural desire; and they prized it highly among the goods that a virtuous man should seek—higher than wealth or sensual pleasure. The Greek and Roman writers quoted here stress the relation of honor to virtue or merit. They are, therefore, concerned with justice in the distribution or award of honors and with the distinction between true honor and its counterfeits, the latter being undeserved.

Modern writers, in contrast, tend to substitute reputation for honor; though when they distinguish between a well-deserved reputation and one that is meretricious, they, too, are drawing a line that parallels the one that the ancients drew between honor and its counterfeits. Whether the term

used is "honor" or "reputation," both ancient and modern writers also tend to agree that being well regarded or praised by others has little worth when those others are foolish or vicious, and so are not worthy enough to set store by their opinion. It is sometimes questioned whether one should care at all about the opinion of others; God alone is the judge of one's ultimate worth, and virtue is its own reward.

Three other terms were operative in the selection of the passages to be quoted here. One is shame, which is partly a synonym for dishonor or disgrace, and partly the name for the emotion or sentiment an individual experiences when he is aware of deficiencies in himself that stand in the way of his being justly honored. The other two terms are fame and glory which are sometimes synonyms for reputation or at least for renown, but never synonyms for honor. Honor, properly conceived, or even a good reputation in the eyes of those whose judgment is worth heeding, cannot be pursued to the detriment of one's moral character; not so fame, for it belongs to the triad of things—money, fame, and power—that tempt men to those excesses of appetite which moralists condemn as lust and inordinate ambition. The price that one must pay for fame and glory is sometimes too high. Nevertheless, it is also recognized that fame and glory can be well deserved; and when not pursued they need not be gained at the expense of virtue.

These matters overlap the discussion of envy, and also of pride and humility, in Chapter 4 on Emotion. They also have relation to the consideration of virtue and vice in Chapter 9 on Ethics.

■ ■ ■

1 *Hektor.*

I would feel deep shame
before the Trojans, and the Trojan women with trailing
garments,
if like a coward I were to shrink aside from the
fighting;
and the spirit will not let me, since I have learned to
be valiant
and to fight always among the foremost ranks of tire
Trojans,
winning for my own self great glory, and for my father.

Homer, Iliad, VI, 441

2 *Achilles.* Fate is the same for the man who holds back, the
same if he fights hard.

We are all held in a single honour, the brave with the
weaklings.

A man dies still if he has done nothing, as one who has
done much.

Homer, Iliad, IX, 318

3 *Hektor.* Man, supposing you and I, escaping this battle,
would be able to live on forever, ageless, immortal,
so neither would I myself go on fighting in the
foremost

nor would I urge you into the fighting where men win
glory.

But now, seeing that the spirits of death stand close
about us

in their thousands, no man can turn aside nor escape them,

let us go on and win glory for ourselves, or yield it to others.

Homer, Iliad, XII. 322

4 *Andromache*. Repute! repute! repute! how you've ballooned

Thousands of good-for-nothings to celebrity!
Men whose glory is come by honestly
Have all my admiration. But impostors
Deserve none; luck and humbug's all they are.

Euripides, Andromache, 319

5 *Peleus*. When the public sets a war memorial up Do those who really sweated get the credit?
Oh no! Some general wangles the prestige!—
Who, brandishing his one spear among thousands,
Did one man's work, but gets a world of praise.

Euripides, Andromache, 694

6 It is only the love of honour that never grows old;
and honour it is, not gain, as some would have it,
that rejoices the heart of age and helplessness.

Thucydides, Peloponnesian War, 11, 44

7 *The Athenians*. In too many cases the very men that have their eyes perfectly open to what they are rushing into, let the thing called disgrace, by the mere influence of a seductive name, lead them on to a point at which they become so enslaved by the phrase as in fact to fall wilfully into hopeless disaster, and incur disgrace more

disgraceful as the companion of error, than when it comes as the result of misfortune.

Thucydides, Peloponnesian War, V, 111

- 8 *Phaedrus*. The principle which ought to be the guide of men who would nobly live - that principle, I say, neither kindred, nor honour, nor wealth, nor any other motive is able to implant so well as love. Of what am I speaking? Of the sense of honour and dishonour, without which neither states nor individuals ever do any good or great work.

Plato, Symposium, 178B

- 9 *Pausanias*. There is a dishonour in being overcome by the love of money, or of wealth, or of political power, whether a man is frightened into surrender by the loss of them, or, having experienced the benefits of money and political corruption, is unable to rise above the seductions of them. For none of these things are of a permanent or lasting nature; not to mention that no generous friendship ever sprang from them.

Plato, Symposium, 184A

- 10 *Diotima*. "Marvel not then at the love which all men have of their offspring; for that universal love and interest is for the sake of immortality."

I was astonished at her words, and said: "Is this really true, O thou wise Diotima?" And she answered with all the authority of an accomplished sophist: "Of that, Socrates, you may be assured; - think only of the ambition of men, and you will wonder at the senselessness of their ways, unless you consider how they are stirred by the love of an immortality of fame.

They are ready to run all risks greater far than they would have run for their children, and to spend money and undergo any sort of toil, and even to die, for the sake of leaving behind them a name which shall be eternal."

Plato, Symposium, 208A

- 11 *Socrates*. He who at every age, as boy and youth and in mature life, has come out of the trial victorious and pure, shall be appointed a ruler and guardian of the State; he shall be honoured in life and death, and shall receive sepulture and other memorials of honour, the greatest that we have to give. But him who fails, we must reject. I am inclined to think that this is the sort of way in which our rulers and guardians should be chosen and appointed.

Plato, Republic, III, 413B

- 12 *Athenian Stranger*. A State which would be safe and happy, as far as the nature of man allows, must and ought to distribute honour and dishonour in the right way. And the right way is to place the goods of the soul first and highest in the scale, always assuming temperance to be the condition of them; and to assign the second place to the goods of the body; and the third place to money and property. And if any legislator or state departs from this rule by giving money the place of honour, or in any way preferring that which is really last, may we not say, that he or the state is doing an unholy and unpatriotic thing?

Plato, Laws, III, 697A

- 13 *Athenian Stranger*. Worthy of honour is he who does no injustice, and of more than twofold honour, if he not only does no injustice himself, but hinders others from doing any; the first may count as one man, the second is worth many men.

Plato, Laws, V, 730B

- 14 *Athenian Stranger*. The generality of cities are quite right in exhorting us to value a good reputation in the world, for there is no truth greater and more important than this - that he who is really good (I am speaking of the man who would be perfect) seeks for reputation with, but not without, the reality of goodness.

Plato, Laws, XII, 950A

- 15 With regard to honour and dishonour the mean is the proper pride, the excess is known as a sort of 'empty vanity', and the deficiency is undue humility.

Aristotle, Ethics, 1107b21

- 16 It is chiefly with honours and dishonours, then, that the proud man is concerned; and at honours that are great and conferred by good men he will be moderately pleased, thinking that he is coming by his own or even less than his own; for there can be no honour that is worthy of perfect virtue, yet he will at any rate accept it since they have nothing greater to bestow on him; but honour from casual people and on trifling grounds he will utterly despise, since it is not this that he deserves, and dishonour too, since in his case it cannot be just. In the first place, then, as has been said, the proud man is concerned with honours; yet he will also bear himself

with moderation towards wealth and power and all good or evil fortune, whatever may befall him, and will be neither over-joyed by good fortune nor over-pained by evil. For not even towards honour does he bear himself as if it were a very great thing. Power and wealth are desirable for the sake of honour (at least those who have them wish to get honour by means of them); and for him to whom even honour is a little thing the others must be so too.

Aristotle, Ethics, 1124a4

- 17 Shame should not be described as a virtue; for it is more like a feeling than a state of character. It is defined, at any rate, as a kind of fear of dishonour, and produces an effect similar to that produced by fear of danger; for people who feel disgraced blush, and those who fear death turn pale. Both, therefore, seem to be in a sense bodily conditions, which is thought to be characteristic of feeling rather than a state of character.

The feeling is not becoming to every age, but only to youth. For we think young people should be prone to the feeling of shame because they live by feeling and therefore commit many errors, but are restrained by shame; and we praise young people who are prone to this feeling, but an older person no one would praise for being prone to the sense of disgrace, since we think he should not do anything that need cause this sense. For the sense of disgrace is not even characteristic of a good man, since it is consequent on bad actions (for such actions should not be done; and if some actions are disgraceful in very truth and others only according to common opinion, this makes no difference; for neither class of actions should be done, so that no disgrace should be felt); and it

is a mark of a bad man even to be such as to do any disgraceful action. To be so constituted as to feel disgraced if one does such an action, and for this reason to think oneself good, is absurd; for it is for voluntary actions that shame is felt, and the good man will never voluntarily do bad actions. But shame may be said to be conditionally a good thing; 1 / a good man does such actions, he will feel disgraced; but the virtues are not subject to such a qualification. And if shamelessness—not to be ashamed of doing base actions—is bad, that does not make it good to be ashamed of doing such actions.

Aristotle, Ethics 1128b10

- 18 Those who desire honour from good men, and men who know, are aiming at confirming their own opinion of themselves; they delight in honour, therefore, because they believe in their own goodness on the strength of the judgement of those who speak about them.

Aristotle, Ethic, 1159a22

- 19 Fame means being respected by everybody, or having some quality that is desired by all men, or by most, or by the good, or by the wise.

Aristotle, Rhetoric, 1361a25

- 20 Since shame is a mental picture of disgrace, in which we shrink from the disgrace itself and not from its consequences, and we only care what opinion is held of us because of the people who form that opinion, it follows that the people before whom we feel shame are those whose opinion of us matters to us. Such persons are: those who admire us, those whom we admire, those by

whom we wish to be admired, those with whom we are competing, and those whose opinion of us we respect. We admire those, and wish those to admire us, who possess any good thing that is highly esteemed; or from whom we are very anxious to get something that they are able to give us—as a lover feels. We compete with our equals. We respect, as true, the views of sensible people, such as our elders and those who have been well educated. And we feel more shame about a thing if it is done openly, before all men's eyes. Hence the proverb, 'shame dwells in the eyes.' For this reason we feel most shame before those who will always be with us and those who notice what we do, since in both cases eyes are upon us.

Aristotle, Rhetoric, 1384a23

- 21 Time as it goes round changes the seasons of things. That which was in esteem, falls at length into utter disrepute; and then another thing mounts up and issues out of its degraded state and every day is more and more coveted and blossoms forth high in honour when discovered and is in marvellous repute with men.

Lucretius, Nature of Things, V

- 22 No list of successes can bestow so much happiness as their diminution will cause annoyance.

Cicero, Disputations, I, 46

- 23 True fame has real substance and is precisely fashioned. It is not something ephemeral. It is, rather, the unanimous opinion of good men and the verdict of honest judges on an issue of outstanding merit. It is the echo of virtue's voice. Because fame is concerned with duties

rightly done, good men do not disdain it. False fame, which tries to pass itself off as the true, is headstrong and thoughtless, It is compounded of faults and errors and seeks only public acclaim. By its counterfeit nature, it tarnishes the luster of real honor.

Cicero, Disputations, III, 2

24 Whom does false honour delight, or lying calumny terrify, except the vicious and sickly-minded?

Horace, Epistles, I, 16

25 What utter foolishness it is to be afraid that those who have a bad name can rob you of a good one.

Seneca, Letters to Lucilius, 91

26 A prophet is not without honour, save in his own country, and in his own house.

Matthew 13:57

27 Woe unto you, when all men shall speak well of you! for so did their fathers to the false prophets.

Luke 6:26

28 It is the fortune of all good men that their virtue rises in glory after their deaths, and that the envy which evil men conceive against them never outlives them long.

Plutarch, Numa Pompilius

29 It may be observed, in general, that when young men arrive early at fame and repute, if they are of a nature but slightly touched with emulation, this early attainment is apt to extinguish their thirst and satiate their small

appetite; whereas the first distinctions of more solid and weighty characters do but stimulate and quicken them and take them away like a wind in the pursuit of honour; they look upon these marks and testimonies to their virtue not as a recompense received for what they have already done, but as a pledge given by themselves of what they will perform hereafter, ashamed now to forsake or underlive the credit they have won, or, rather, not to exceed and obscure all that is gone before by the lustre of their following actions.

Plutarch, Coriolanus

- 30 He who least likes courting favour, ought also least to think of resenting neglect; to feel wounded at being refused a distinction can only arise from an overweening appetite to have it.

Plutarch, Alcibiades and Coriolanus Compared

- 31 There is something higher and greater in the admiration rendered by enemies to the virtue that had been their own obstacle, than in the grateful acknowledgments of friends. Since, in the one case, it is virtue alone that challenges itself the honour; while, in the other, it may be rather men's personal profit and advantage that is the real origin of what they do.

Plutarch, Marcdlus and Pdopidas Compared

- 32 Lysander's father is said to have been Aristoclitus, who was not indeed of the royal family but yet of the stock of the Heraclides. He was brought up in poverty, and showed himself obedient and conformable, as ever any one did, to the customs of his country; of a manly spirit,

also, and superior to all pleasures, excepting only that which their good actions bring to those who are honoured and successful; and it is accounted no base thing in Sparta for their young men to be overcome with this kind of pleasure. For they are desirous, from the very first, to have their youth susceptible to good and bad repute, to feel pain at disgrace, and exultation at being commended; and any one who is insensible and unaffected in these respects is thought poor-spirited and of no capacity for virtue.

Plutarch, Lysander

- 33 The man who is completely wise and virtuous has no need at all of glory, except so far as it disposes and eases his way to action by the greater trust that it procures him, A young man... may be permitted, while yet eager for distinction, to pride himself a little in his good deeds; for... his virtues, which are yet tender and, as it were, in the blade, cherished and supported by praises, grow stronger, and take the deeper root. But when this passion is exorbitant, it is dangerous in all men, and in those who govern a commonwealth, utterly destructive. For in the possession of large power and authority, it transports men to a degree of madness; so that now they no more think what is good, glorious, but will have those actions only esteemed good that are glorious.

Plutarch, Agis

- 34 Returning to Rome with a great opinion of himself for these things, a ludicrous incident befell him, as he tells us himself. Meeting an eminent citizen in Campania, whom he accounted his friend, he asked him what the

Romans said and thought of his actions, as if the whole city had been filled with the glory of what he had done. His friend asked him in reply, "Where is it you have been, Cicero?" This for the time utterly mortified and cast him down, to perceive that the report of his actions had sunk into the city of Rome as into an immense ocean, without any visible effect or result in reputation. And afterwards considering with himself that the glory he contended for was an infinite thing, and that there was no fixed end nor measure in its pursuit, he abated much of his ambitious thoughts. Nevertheless, he was always excessively pleased with his own praise, and continued to the very last to be passionately fond of glory; which often interfered with the prosecution of his wisest resolutions.

Plutarch, Cicero

- 35 An excessive display of outward honour would seem to be the most uncertain attestation of the real affection of a people for any king or potentate. Such shows lose their whole credit as tokens of affection... when we reflect that they may equally proceed from fear. The same decrees are voted upon the latter motive as upon the former. And therefore judicious men do not look so much to statues, paintings, or divine honours that are paid them, as to their own actions and conduct, judging hence whether they shall trust these as a genuine, or discredit them as a forced homage. As in fact nothing is less unusual than for a people, even while offering compliments, to be disgusted with those who accept them greedily, or arrogantly, or without respect to the free-will of the givers.

Plutarch, Demetrius

36 Be a good soldier, be good to your ward, be a person of honor.

If you are summoned to court, in a case uncertain and doubtful.

Even though Phalaris threatens and brings up his bull to suborn you,

Tell no lie, believe that the worst sin of all is preferring Life to honor; don't lose, for life's sake, your reasons for living.

If a man is worthy of death, he is dead, though he banquets on oysters,

Though he bathes in a tub that reeks with the perfumes of Cosmos.

Juvenal, Satire VIII

37 Is anyone preferred before you at an entertainment, or in courtesies, or in confidential intercourse? If these things are good, you ought to rejoice that he has them; and if they are evil, do not be grieved that you have them not. And remember that you cannot be permitted to rival others in externals without using the same means to obtain them. For how can he who will not haunt the door of any man, will not attend him, will not praise him have an equal share with him who does these things? You are unjust, then, and unreasonable if you are unwilling to pay the price for which these things are sold, and would have them for nothing. For how much are lettuces sold? An obulus, for instance. If another, then, paying an obulus, takes the lettuces, and you, not paying it, go without them, do not imagine that he has gained any advantage over you. For as he has the lettuces, so you have the obulus which you did not give. So, in the present case, you have not been invited to such a person's

entertainment because you have not paid him the price for which a supper is sold. It is sold for praise; it is sold for attendance. Give him, then, the value if it be for your advantage. But if you would at the same time not pay the one, and yet receive the other, you are unreasonable and foolish. Have you nothing, then, in place of the supper? Yes, indeed, you have—not to praise him whom you do not like to praise; not to bear the insolence of his lackeys.

Epictetus, Encheiridion, XXV

38 I [Tiberius] am mortal and limited to the functions of humanity, content if I can adequately fill the highest place; of this, I solemnly assure you [the Senators], and would have posterity remember it. They will more than sufficiently honour my memory by believing me to have been worthy of my ancestry, watchful over your interests, courageous in danger, fearless of enmity, when the State required it. These sentiments of your hearts are my temples, these my most glorious and abiding monuments. Those built of stone are despised as mere tombs, if the judgment of posterity passes into hatred. And therefore this is my prayer to our allies, our citizens, and to heaven itself; to the last, that, to my life's close, it grant me a tranquil mind, which can discern alike human and divine claims; to the first, that, when I die, they honour my career and the reputation of my name with praise and kindly remembrance.

Tacitus, Annals, IV, 38

39 The desire of glory is the last infirmity cast off even by the wise.

Tacitus, Histories, IV, 6

40 Perhaps the desire of the thing called fame will torment thee.—See how soon everything is forgotten, and look at the chaos of infinite time on each side of the present, and the emptiness of applause, and the changeableness and want of judgement in those who pretend to give praise, and the narrowness of the space within which it is circumscribed, and be quiet at last. For the whole earth is a point, and how small a nook in it is this thy dwelling, and how few are there in it, and what kind of people are they who will praise thee.

Marcus Aurelius, Meditations, IV, 3

41 Consider... the life lived by others in olden time, and the life of those who will live after thee, and the life now lived among barbarous nations, and how many know not even thy name, and how many will soon forget it, and how they who perhaps now are praising thee will very soon blame thee, and that neither a posthumous name is of any value, nor reputation, nor anything else.

Marcus Aurelius, Meditations, IX, 30

42 A man seeking the fame of eloquence—before a judge who is also a man, with a multitude of men standing about—inveighs against his adversary with inhuman hatred. Such a man will be most vigilantly on guard lest by a slip of the tongue he drop an 'h' and murder the word "human": yet worries not at all that by the fury of his mind he may murder a real human.

Augustine, Confessions, I, 18

43 Here, then, O God, is the memory still vivid in my mind. I would not have committed that theft alone: my pleasure

in it was not what I stole but that I stole: yet I would not have enjoyed doing it, I would not have done it, alone. O friendship unfriendly, unanalysable attraction for the mind, greediness to do damage for the mere sport and jest of it, desire for another's loss with no gain to oneself or vengeance to be satisfied! Someone cries "Come on, let's do it"—and we would be ashamed to be ashamed!

Augustine, Confessions, II, 9

- 44 Love of praise tempts me even when I reprove it in myself, indeed in the very fact that I do reprove it; a man often glories the more vainly for his very contempt of vainglory; for which reason he does not really glory in his contempt of glory; in that he glories in it, he does not condemn it.

Augustine, Confessions, X, 38

- 45 Let the desire of glory be surpassed by the love of righteousness, so that, if there be seen anywhere "lying neglected things which are generally discredited," if they are good, if they are right, even the love of human praise may blush and yield to the love of truth. For so hostile is this vice to pious faith, if the love of glory be greater in the heart than the fear or love of God, that the Lord said, "How can ye believe, who look for glory from one another, and do not seek the glory which is from God alone?"

Augustine, City of God, V, 14

- 46 I do not see what it makes for the safety, good morals, and certainly not for the dignity, of men, that some have conquered and others have been conquered, except that it yields them that most insane pomp of human glory, in

which "they have received their reward" who burned with excessive desire of it and carried on most eager wars.

Augustine, City of God, V, 17

47 Whosoever, without possessing that desire of glory which makes one fear to displease those who judge his conduct, desires domination and power, very often seeks to obtain what he loves by most open crimes. Therefore he who desires glory presses on to obtain it either by the true way, or certainly by deceit and artifice, wishing to appear good when he is not. Therefore to him who possesses virtues it is a great virtue to despise glory; for contempt of it is seen by God, but is not manifest to human judgment.

Augustine, City of God, V, 19

48 Many men have got a great name from the false opinions of the crowd. And what could be baser than such a thing? For those who are falsely praised, must blush to hear their praises. And if they are justly won by merits, what can they add to the pleasure of a wise man's conscience? For he measures his happiness not by popular talk, but by the truth of his conscience.

Boethius, Consolation of Philosophy, III

49 It is impossible for happiness to consist in honour. For honour is given to a man on account of some excellence in him, and consequently it is a sign and testimony of the excellence that is in the person honoured. Now a man's excellence is in proportion to his happiness, which is man's perfect good; and to its parts, that is those goods by which he has a certain share of happiness. And

therefore honour can result from happiness, but happiness cannot principally consist therein.

Aquinas, Summa Theologica, I-II, 2, 2

50 Honour is not that reward of virtue, for which the virtuous work, but they receive honour from men by way of reward, as from those who have nothing greater to offer. But virtue's true reward is happiness itself, for which the virtuous work, whereas if they worked for honour, it would no longer be virtue, but ambition.

Aquinas, Summa Theologica, I-II, 2, 2

51 O empty glory of human powers! How short the time its green endures upon the top, if it be not overtaken by rude ages!

Cimabue thought to hold the field in painting, and now Giotto hath the cry, so that the fame of the other is obscured.

Even so one Guido hath taken from the other the glory of our tongue; and perchance one is born who shall chase both from the nest.

Earthly fame is naught but a breath of wind, which now cometh hence and now thence, and changes name because it changes direction.

What greater fame shalt thou have, if thou strip thee of thy flesh when old, than if thou hadst died ere thou wert done with pap and chink,

before a thousand years are passed? which is shorter space to eternity than the twinkling of an eye to the circle which slowest is turned in heaven.

Dante, Purgatorio, XI, 91

52 *Duke Theseus*. And gladder ought a friend be of his death
When, in much honour, he yields up his breath,
Than when his name's grown feeble with old age;
For all forgotten, then, is his courage.
Hence it is best for all of noble name
To die when at the summit of their fame.

Chaucer, Canterbury Tales: Knight's Tale

53 It is unnecessary for a prince to have all... good qualities... but it is very necessary to appear to have them. And I shall dare to say this also, that to have them and always to observe them is injurious, and that to appear to have them is useful; to appear merciful, faithful, humane, religious, upright, and to be so, but with a mind so framed that should you require not to be so, you may be able and know how to change to the opposite.

And you have to understand this, that a prince, especially a new one, cannot observe all those things for which men are esteemed, being often forced, in order to maintain the state, to act contrary to faith, friendship, humanity, and religion. Therefore it is necessary for him to have a mind ready to turn itself accordingly as the winds and variations of fortune force it, yet, as I have said above, not to diverge from the good if he can avoid doing so, but, if compelled, then to know how to set about it.

For this reason a prince ought to take care that he never lets anything slip from his lips that is not replete with the above-named five qualities, that he may appear to him who sees and hears him altogether merciful, faithful, humane, upright, and religious. There is nothing more necessary to appear to have than this last quality, inasmuch as men judge generally more by the eye than

by the hand, because it belongs to everybody to see you, to few to come in touch with you. Every one sees what you appear to be, few really know what you are, and those few dare not oppose themselves to the opinion of the many, who have the majesty of the state to defend them; and in the actions of all men, and especially of princes, which it is not prudent to challenge, one judges by the result.

Machiavelli, Prince, XVIII

- 54 The role of true victory is in fighting, not in coming off safely; and the honor of valor consists in combating, not in beating.

Montaigne, Essays, I, 31, Of Cannibals

- 55 Of all the illusions in the world, the most universally received is the concern for reputation and glory, which we espouse even to the point of giving up riches, rest, life, and health, which are effectual and substantial goods, to follow that vain phantom and mere sound that has neither body nor substance.... And of the irrational humors of men, it seems that even the philosophers get rid of this one later and more reluctantly than any other.

Montaigne, Essays, I, 41, Not Communicating One's Glory

- 56 We lend our goods and our lives to the need of our friends; but to communicate one's honor and endow another with one's glory, that is hardly ever seen.

Montaigne, Essays, I, 41, Not Communicating One's Glory

57 God, who is himself all fullness and the acme of all perfection, cannot grow and increase within; but his name may grow and increase by the blessing and praise we give to his external works. Which praise, since we cannot incorporate it in him, inasmuch as he can have no accession of good, we attribute to his name, which is the part outside him that is nearest him. That is why it is to God alone that glory and honor belong. And there is nothing so remote from reason as for us to go in quest of it for ourselves; for since we are indigent and necessitous within, since our essence is imperfect and continually in need of betterment, it is this betterment that we should work for.

Montaigne, Essays, II, 16, Of Glory

58 We care more that people should speak of us than how they speak of us; and it is enough for us that our name should be current in men's mouths, no matter in what way it may be current. It seems that to be known is to have one's life and duration somehow in the keeping of others.

Montaigne, Essays, II, 16, Of Glory

59 It might perhaps be excusable for a painter or another artisan, or even for a rhetorician or a grammarian, to toil to acquire a name by his works; but the actions of virtue are too noble in themselves to seek any other reward than from their own worth, and especially to seek it in the vanity of human judgments.

Montaigne, Essays, II, 16, Of Glory

60 Those who judge and touch us inwardly make little account of the brilliance of our public acts, and see that these are only thin streams and jets of water spurting from a bottom otherwise muddy and thick; so likewise those who judge us by this brave outward appearance draw similar conclusions about our inner constitution, and cannot associate common faculties, just like their own, with these other faculties that astonish them and are so far beyond their scope.

Montaigne, Essays, III, 2, Of Repentance

61 Whatever it is, whether art or nature, that imprints in us this disposition to live with reference to others, it does us much more harm than good. We defraud ourselves of our own advantages to make appearances conform with public opinion. We do not care so much what we are in ourselves and in reality as what we are in the public mind. Even the joys of the mind, and wisdom, appear fruitless to us, if they are enjoyed by ourselves alone, if they do not shine forth to the sight and approbation of others.

Montaigne, Essays, III, 9, Of Vanity

62 *Joan La Pucelle*. Glory is like a circle in the water,
Which never ceaseth to enlarge itself
Till by broad spreading it disperse to nought.

Shakespeare, I Henry VI, I, ii, 133

63 *Mowbray*. The purest treasure mortal times afford
Is spotless reputation: that away,
Men are but gilded loam or painted clay.

Shakespeare, Richard II, I, i, 177

64 *Prince of Arragon*. O, that estates, degrees, and offices
Were not derived corruptly, and that clear honour
Were purchased by the merit of the wearer!
How many then should cover that stand bare!
How many be commanded that command!
How much low peasantry would then be glean'd
From the true seed of honour! and how much honour
Pick'd from the chaff and ruin of the times
To be new-varnish'd!

Shakespeare, Merchant of Venice, II, ix, 41

65 *Falstaff*. I would to God thou and I knew where a
commodity of good names were to be bought.

Shakespeare, 7 Henry IV, I, ii, 91

66 *Hotspur*. By heaven, me thinks it were an easy leap,
To pluck bright Honour from the pale-faced moon,
Or dive into the bottom of the deep,
Where fathom-line could never touch the ground,
And pluck up drowned Honour by the locks;
So he that doth redeem her thence might wear
Without corrival all her dignities.

Shakespeare, 7 Henry IV, I, iii, 201

67 *Falstaff*. Honour pricks me on. Yea, but how if honour
prick me off when I come on? how then? Can honour set
to a leg? no: or an arm? no: or take away the grief of a
wound? no. Honour hath no skill in surgery, then? no.
What is honour? a word. What is in that word honour?
what is that honour? air. A trim reckoning! Who hath it?
he that died o' Wednesday. Doth he feel it? no. Doth he
hear it? no. 'Tis insensible, then? Yea, to the dead. But

will it not live with the living? no. Why? detraction will not suffer it. Therefore Til none of it Honour is a mere scutcheon: and so ends my catechism.

Shakespeare, I Henry IV, V, i, 130

68 *Hamlet*. Oft it chances in particular men,
That for some vicious mole of nature in them,
As, in their birth—wherein they are not guilty,
Since nature cannot choose his origin—
By the overgrowth of some complexion,
Oft breaking down the pales and forts of reason,
Or by some habit that too much o'er-leavens
The form of plausible manners, that these men.
Carrying, I say, the stamp of one defect.
Being nature's livery, or fortune's star—
Their virtues else—be they as pure as grace.
As infinite as man may undergo—
Shall in the general censure take corruption
From that particular fault: the dram of eale
Doth all the noble substance of a doubt
To his own scandal.

Shakespeare, Hamlet, I, iv, 23

69 *Hamlet*. Be thou as chaste as ice, as pure as snow, thou shall not escape calumny.

Shakespeare, Hamlet, III, i, 139

70 *Ulysses*. Time hath, my lord, a wallet at his back,
Wherein he puts alms for Oblivion,
A great-sized monster of ingrattitudes.
Those scraps are good deeds past; which are devour'd
As fast as they are made, forgot as soon

As done. Perseverance, dear my lord.
Keeps honour bright; to have done is to hang
Quite out of fashion, like a rusty mail
In monumental mockery. Take the instant way;
For honour travels in a strait so narrow,
Where one but goes abreast. Keep then the path;
For Emulation hath a thousand sons
That one by one pursue. If you give way.
Or hedge aside from the direct forthright.
Like to an enter'd tide, they all rush by
And leave you hindmost;
Or, like a gallant horse fall'n in first rank.
Lie there for pavement to the abject rear,
O'er-run and trampled on. Then what they do in present,
Though less than yours in past, must o'ertop yours;
For time is like a fashionable host
That slightly shakes his parting guest by the hand.
And with his arms outstretch'd, as he would fly.
Grasps in the comer. Welcome ever smiles,
And farewell goes out sighing. O, let not virtue seek
Remuneration for the thing it was;
For beauty, wit,
High birth, vigour of bone, desert in service.
Love, friendship, charity, are subjects all
To envious and calumniating Time.
One touch of nature makes the whole world kin.
That all with one consent praise new-born gawds,
Though they are made and moulded of things past.
And give to dust that is a little gilt
More laud than gilt o'er-dusted.
The present eye praises the present object.

Shakespeare, Troilus and Cressida, III, iii, 145

71 *Cassio*. Reputation, reputation, reputation! O, I have lost the immortal part of myself, and what remains is bestial. My reputation, Iago, my reputation!

Iago. As I am an honest man, I thought you had received some bodily wound; there is more sense in that than in reputation. Reputation is an idle and most false imposition; oft got without merit, and lost without deserving. You have lost no reputation at all, unless you repute yourself such a loser.

Shakespeare, Othello, II, iii, 262

72 *Iago*. Good name in man and woman, dear my lord, Is the immediate jewel of their souls. Who steals my purse steals trash; 'tis something, nothing; 'Twas mine, 'tis his, and has been slave to thousands; But he that filches from me my good name; Robs me of that which not enriches him; And makes me poor indeed.

Shakespeare, Othello, III, iii, 155

73 *Lady Macbeth*. Yet do I fear thy nature; It is too full o' the milk of human kindness To catch the nearest way. Thou wouldst be great; Art not without ambition, but without The illness should attend it. What thou wouldst highly. That wouldst thou holily; wouldst not play false. And yet wouldst wrongly win.

Shakespeare, Macbeth, I, v, 17

74 *Volumnia*. I pray you, daughter, sing; or express yourself in a more comfortable sort. If my son were my husband, I

should freelier rejoice in that absence wherein he won honour than in the embracements of his bed where he would show most love. When yet he was but tender-bodied and the only son of my womb, when youth with comeliness plucked all gaze his way, when for a day of kings' entreaties a mother should not sell him an hour from her beholding, I, considering how honour would become such a person, that it was no better than picture-like to hang by the wall, if renown made it not stir, was pleased to let him seek danger where he was like to find fame. To a cruel war I sent him; from whence he returned, his brow's bound with oak. I tell thee, daughter, I sprang not more in joy at first hearing he was a man-child than now in first seeing he had proved himself a man.

Shakespeare, Coriolanus, I, iii, 1

75 *Wolsey*. Let's dry our eyes; and thus far hear me,
Cromwell;
And, when I am forgotten, as I shall be,
And sleep in dull cold marble, where no mention
Of me more must be heard of, say, I taught thee,
Say, *Wolsey*, that once trod the ways of glory.
And sounded all the depths and shoals of honour,
Found thee a way, out of his wreck, to rise in;
A sure and safe one, though thy master miss'd it.
Mark but my fall, and that that ruin'd me.
Cromwell, I charge thee, fling away ambition.
By that sin fell the angels; how can man, then.
The image of his Maker, hope to win by it?
Love thyself last. Cherish those hearts that hate thee;
Corruption wins not more than honesty.
Still in thy right hand carry gentle peace.
To silence envious tongues. Be just, and fear not.

Let all the ends thou aim'st at be thy country's,
Thy God's, and truth's; then if thou fall'st, O Cromwell,
Thou fall'st a blessed martyr!

Shakespeare, Henry VIII, III, ii, 431

76 *Griffith*. Men's evil manners live in brass; their virtues
We write in water.

Shakespeare, Henry VIII, IV, ii, 46

77 I would have thee to know', that those Wounds that are given with the Instruments and Tools which a Man happens to have in his Hand, do not really disgrace the Person struck. We read it expresly in the Laws of Duels, That if a Shoemaker strikes another Man with his Last which he held in his Hand, tho' it be of Wood, as a Cudgel is, yet the Party who was struck with it shall not be said to have been cudgell'd. I tell thee this, that thou may'st not think we are in the least dishonour'd, tho' we have been horribly beaten in this Rencounter; for the Weapons which those Men us'd were but the Instruments of their Profession, and not one of 'em, as I very well remember, had either Tuck, or Sword, or Dagger. They gave me no Leisure, quoth Sancho, to examine things so narrowly; for I had no sooner laid my Hand on my Cutlass, but they cross'd my Shoulders with such a wooden Blessing, as settl'd me on the Ground without Sense or Motion, where you see me lie, and where I don't trouble my Head whether it be a Disgrace to be mawl'd with Cudgels or with Packstaves: Let 'em be what they will, I am only vex'd to feel them so heavy on my Shoulders, where I am afraid they are imprinted as deep as they are in my Mind. For all this, reply'd Don Quixote, I must inform thee,

Friend Sancho, that there is no Remembrance which Time will not deface, nor no Pain to which Death will not put a Period. Thank you for nothing, quoth Sancho! What worse can befall us, than to have only Death to trust to? Were our Affliction to be cur'd with a Plaister or two, a Man might have some Patience; but, for ought I see, all the Salves in an Hospital won't set us on our best Legs again. Come, no more of this, cry'd Don Quixote; take Courage, and make a Virtue of Necessity; for 'tis what I am resolv'd to do.

Cervantes, Don Quixote, I, 15

78 Don Quixote. I pray thee tell me now' what does the Town say of me? What do the Neighbours, what do the People think of me? What say the Gentry, and the better Sort? How' do the Knights discourse of my Valour, my high Feats of Arms, and my courteous Behaviour? What Thoughts do they entertain of my Design, to raise from the Grave of Oblivion the Order of Knight-Errantry, and restore it to the World? In short, tell me freely and sincerely whatever thou hast heard; neither enlarg'd with flattering Commendations, nor lessen'd by any Omission of my Dispraise; for 'tis the Duty of faithful Servants to lay Truth before their Masters in its honourable Nakedness.... Why then, quoth Sancho, first and foremost you are to know, that the common People take you for a downright Mad-man, and me for one that has not much Guts in his Brains.

Cervantes, Don Quixote, II, 2

79 *Don Quixote*. There are two Paths to Dignity and Wealth; Arts and Arms. Arms I have chosen, and the Influence of

the Planet Mars that presided at my Nativity, led me to that adventurous Road. So that all your Attempts to shake my Resolution are in vain: for in spite of all Mankind, I will pursue what Heaven has fated, Fortune ordain'd, what Reason requires, and (which is more) what my Inclination demands. I am sensible of the many Troubles and Dangers that attend the Prosecution of Knight-Errantry, but I also know what infinite Honours and Rewards are the Consequences of the Performance. The Path of Virtue is narrow, and the Way of Vice easy and open; but their Ends and Resting-places are very different. The latter is a broad Road indeed, and downhill all the way, but Death and Contempt are always met at the End of the Journey; whereas the former leads to Glory and Life, not a Life that soon must have an End, but an immortal Being,

Cervantes, Don Quixote, II, 6

80 *Don Quixote*. I tell thee, Sancho, this Desire of Honour is a strange bewitching thing. What dost thou think made Horatius, arm'd at all Points, plunge headlong from the Bridge into the rapid Tyber? What prompted Curtius to leap into the profound flaming Gulph? What made Mutius burn his Hand? What forc'd Caesar over the Rubicon, spite of all the Omens that dissuaded his Passage? And to instance a more modem Example, what made the undaunted Spaniards sink their Ships, when under the most courteous Cortez, but that scorning the stale Honour of this so often conquer'd World, they sought a Maiden Glory' in a new Scene of Victory'? These and a Multiplicity of other great Actions, are owing to the immediate Thirst and Desire of Fame, which Mortals expect as the proper Price and immortal Recompence of

their great Actions. But we that are Christian Catholick Knights-Errant must fix our Hopes upon a higher Reward, plac'd in the Eternal and Celestial Regions, where we may expect a permanent Honour and compleat Happiness; not like the Vanity of Fame, which at best is but the Shadow of great Actions, and must necessarily vanish, when destructive Time has cat away the Substance which it follow'd. So, my Sancho, since we expect a Christian Reward, we must suit our Actions to the Rules of Christianity. In Giants we must kill Pride and Arrogance: But our greatest Foes, and whom we must chiefly combat, are within. Envy we must overcome by Generosity and Nobleness of Soul; Anger, by a repos'd and easy' Mind; Riot and Drowsiness, by Vigilance and Temperance; Lasciviousness, by our inviolable Fidelity to those who are Mistresses of our Thoughts; and Sloth, by our indefatigable Peregrinations through the Universe, to seek Occasions of Military', as well as Christian Honours. This, Sancho, is the Road to lasting Fame, and a good and honourable Renown.

Cervantes, Don Quixote, II, 8

81 When he [the Gentleman in Green] look'd on Don Quixote, he thought he had never beheld before such a strange appearance of a Man. He could not but admire at the Lankness of his Horse; he consider'd then the Long-back'd, Rawbon'd Thing that bestrid him; His wan, meagre Face, his Air, his Gravity, his Arms and Equipage; such a Figure, as perhaps had not been seen in that Country' time our of mind. Don Quixote observed how intent the travelling Gentleman had been in surveying him, and reading his Desire in his Surprise, as he was the very Pink of Courtesy and fond of pleasing every one,

without staying till he should question him, he thought fit to prevent him. Sir, said he, that you are surpriz'd at this Figure of mine, which appears so new and exotick, I do not wonder in the least; but your Admiration will cease when I have inform'd you, that I am one of those Knights who go in quest of Adventures, I have left my Country, Mortgaged my Estate, quitted my Pleasures, and thrown myself into the Arms of Fortune. My design was to give a new Life to Knight-Errantry, that so long has been lost to the World; and thus, after infinite Toils and Hardships; sometimes stumbling, sometimes falling; casting myself headlong in one place, and rising again in another, I have compass'd a great part of my Desire, relieving Widow's, protecting Damsels, assisting Marry'd Women and Orphans, the proper and natural Office of Knights-Errant; and so by many Valorous and Christian-like Atchievements, I have merited the Honour of the Press in almost all the Nations of the World, Thirty thousand Volumes of my History have been printed already, and thirty thousand Millions more are like to be printed, if Heaven prevent not. In short, to sum up all in one Word, know', I am Don Quixote de la Mancha, otherwise call'd. The Knight of the Woful Figure; I own it lessens the value of Praise to be the Publisher of its own self; yet 'tis what I am sometimes forc'd to, when there is none present to do me Justice. And now, good Sir, no longer let this Steed, this Lance, this Shield, this Armour, nor this Squire, nor the Paleness of my Looks, nor my exhausted Body, move your Admiration, since you know who I am, and the Profession I follow.

Cervantes, Don Quixote, II, 16

82 Ambition is like choler; which is an humour that maketh men active, earnest, full of alacrity, and stirring, if it be not stopped. But if it be stopped, and cannot have his way, it becometh adust, and thereby malign and venomous. So ambitious men, if they find the way open for their rising, and still get forward, they are rather busy than dangerous; but if they be checked in their desires, they become secretly discontent, and look upon men and matters with an evil eye.

Bacon, Of Ambition

83 Certainly, great persons had need to borrow other men's opinions, to think themselves happy; for if they judge by their own feeling, they cannot find it: but if they think with themselves what other men think of them, and that other men would fain be as they are, then they are happy as it were by report, when perhaps they find the contrary within.

Bacon, Of Great Place

84 Honour is, or should be, the place of virtue; and as in nature things move violently to their place, and calmly in their place; so virtue in ambition is violent, in authority settled and calm. All rising to great place is by a winding stair; and if there be factions, it is good to side a man's self whilst he is in the rising, and to balance himself when he is placed.

Bacon, Of Great Place

85 Fame is like a river, that beareth up things light and swoln, and drowns things weighty and solid.

Bacon, Of Praise

86 A man is an ill husband of his honour, that entreth into any action, the failing wherein may disgrace him more than the carrying of it through can honour him.

Bacon, Of Honour and Reputation

87 Although I do not care immoderately for glory, or, if I dare say so, although I even hate it, inasmuch as I judge it to be antagonistic to the repose which I esteem above all other things, at the same time I never tried to conceal my actions as though they were crimes, nor have I used many precautions against being known, partly because I should have thought it damaging to myself, and partly because it would have given me a sort of disquietude which would again have militated against the perfect repose of spirit which I seek. And forasmuch as having in this way always held myself in a condition of indifference as regards whether I was known or was not known, I have not yet been able to prevent myself from acquiring some sort of reputation, I thought that I should do my best at least to prevent myself from acquiring an evil reputation,

Descartes, Discourse on Method, VI

88 Grief for the discovery of some defect of ability is shame, or the passion that discovereth itself in blushing, and consisteth in the apprehension of something dishonourable; and in young men is a sign of the love of good reputation, and commendable: in old men it is a sign of the same; but because it comes too late, not commendable.

Hobbes, Leviathan, I, 6

89 Let a man, as most men do, rate themselves at the highest value they can, yet their true value is no more than it is esteemed by others.

Hobbes, Leviathan, I, 10

90 The manifestation of the value we set on one another is that which is commonly called honouring and dishonouring. To value a man at a high rate is to honour him; at a low rate is to dishonour him. But high and low, in this case, is to be understood by comparison to the rate that each man setteth on himself.

Hobbes, Leviathan, I, 10

91 We do not content ourselves with the life we have in ourselves and in our own being; we desire to live an imaginary life in the mind of others, and for this purpose we endeavour to shine. We labour unceasingly to adorn and preserve this imaginary existence and neglect the real. And if we possess calmness, or generosity, or truthfulness, we are eager to make it known, so as to attach these virtues to that imaginary existence. We would rather separate them from ourselves to join them to it; and we would willingly be cowards in order to acquire the reputation of being brave.. , . We are so presumptuous that we would wish to be known by all the world, even by people who shall come after, when we shall be no more; and we are so vain that the esteem of five or six neighbours delights and contents us.

Pascal, Pensées, II, 147-148

92 Have you never seen people who, in order to complain of the little fuss you make about them, parade before you

the example of great men who esteem them? In answer I reply to them, "Show me the merit whereby you have charmed these persons, and I also will esteem you."

Pascal, Pensées, V, 333

93 Fame is the spur that the clear spirit doth raise
(That last infirmity of Noble mind)
To scorn delights, and live laborious dayes;
But the fair Guerdon when we hope to find,
And think to burst out into sudden blaze,
Comes the blind Fury with th'abhorred shears.
And slits the thin spun life. But not the praise,
Phoebus repli'd, and touch'd my trembling ears;
Fame is no plant that grows on mortal soil,
Nor in the glistening foil
Set off to th'world, nor in broad rumour lies,
But lives and spreads aloft by those pure eyes,
And perfet witnes of all judging Jove;
As he pronounces lastly on each deed,
Of so much fame in Heav'n expect thy meed,

Milton, Lycidas, 70

94 I might relate of thousands, and thir names
Eternize here on Earth; but those elect
Angels contented with thir fame in Heav'n
Seek not the praise of men; the other sort
In might though wondrous and in Acts of Warr,
Nor of Renown less eager, yet by doome
Cancel'd from Heav'n and sacred memorie,
Nameless in dark oblivion let them dwell.
For strength from Truth divided and from Just,
Illaudable, naught merits but dispraise

And ignominie, yet to glorie aspires
Vain glorious, and through infamie seeks fame;
Therefore Eternal silence be thir doome.

Milton, Paradise Lost, VI, 373

95 O Eve, in evil hour thou didst give eare
To that false Worm, of whomsoever taught
To counterfet Mans voice, true in our Fall,
False in our promis'd Rising; since our Eyes
Op'nd we find indeed, and find we know
Both Good and Evil, Good lost, and Evil got,
Bad Fruit of Knowledge, if this be to know,
Which leaves us naked thus, of Honour void,
Of Innocence, of Faith, of Puritie,
Our wonted Ornaments now soild and staine'd,
And in our Faces evident the signes
Of foul concupiscence; whence evil store;
Even shame, the last of evils; of the first
Be sure then. How shall I behold the face
Henceforth of God or Angel, earst with joy
And rapture so oft beheld? those heavenly shapes
Will dazle now this earthly, with thir blaze
Insufferable bright, O might I here
In solitude live savage, in some glade
Obscur'd, where highest Woods impenetrable
To Starr or Sun-light, spread thir umbrage broad.
And brown as Evening: Cover me ye Pines,
Ye Cedars, with innumerable boughs;
Hide me, where I may never see them more.
But let us now, as in bad plight, devise
What best may for the present serve to hide
The Parts of each from other, that seem most
To shame obnoxious, and unseemliest seen.

Some Tree whose broad smooth Leaves together sowl.
And girded on our loyns, may cover round
Those middle parts, that this new commer, Shame,
There sit not, and reproach us as unclean.
So counsel'd hee, and both together went
Into the thickest Wood, there soon they chose The
Figtree. - . .

Those
They gatherd, broad as Amazonian Targe,
And with what skill they had, together sowl.
To gird thir waste, vain Covering if to hide
Thir guilt and dreaded shame; O how unlike
To that first naked Glorie.

Milton, Paradise Lost, IX, 1067

96 What needs my Shakespear for his honour'd Bones,
The labour of an age in piled Stones,
Or that his hallow'd reliques should be hid
Under a Star-ypointing Pyramid?
Dear son of memory, great heir of Fame,
What need'st thou such weak witnes of thy name?
Thou in our wonder and astonishment
Hast built thy self a live-long Monument....
And so Sepulcher'd in such pomp dost lie.
That Kings for such a Tomb would wish to die.

Milton, On Shakespear

97 The more a man imagines that he is praised by other
men, the more is this joy strengthened; for the more a
man imagines that he is praised by others, the more does
he imagine that he affects others with joy accompanied
by the idea of himself as a cause, and therefore he is

affected with greater joy accompanied with the idea of himself.

Spinoza, Ethics, III, Prop. 53, Corol.

98 What is called vainglory is self-satisfaction, nourished by nothing but the good opinion of the multitude, so that when that is withdrawn, the satisfaction, that is to say, the chief good which every one loves, ceases. For this reason those who glory in the good opinion of the multitude anxiously and with daily care strive, labour, and struggle to preserve their fame. For the multitude is changeable and fickle, so that fame, if it be not preserved, soon passes away. As every one, moreover, is desirous to catch the praises of the people, one person will readily destroy the fame of another; and, consequently, as the object of contention is what is commonly thought to be the highest good, a great desire arises on the part of every one to keep down his fellows by every possible means, and he who at last comes off conqueror boasts more because he has injured another person than because he has profited himself. This glory of self-satisfaction, therefore, is indeed vain, for it is really no glory.

Spinoza, Ethics, IV, Prop. 58, Schol.

99 Shame, although it is not a virtue, is nevertheless good, in so far as it shows that a desire of living uprightly is present in the man who is possessed with shame, just as pain is called good in so far as it shows that the injured part has not yet putrefied. A man, therefore, who is ashamed of what he has done, although he is sorrowful, is

nevertheless more perfect than the shameless man who has no desire of living uprightly.

Spinoza, Ethics, IV, Prop. 58, Schol.

100 Since nothing can be more natural than to encourage with esteem and reputation that wherein every one finds his advantage, and to blame and discountenance the contrary; it is no wonder that esteem and discredit, virtue and vice, should, in a great measure, everywhere correspond with the unchangeable rule of right and wrong, which the law of God hath established; there being nothing that so directly and visibly secures and advances the general good of mankind in this world, as obedience to the laws he has set them, and nothing that breeds such mischiefs and confusion, as the neglect of them. And therefore men, without renouncing all sense and reason, and their own interest, which they are so constantly true to, could not generally mistake, in placing their commendation and blame on that side that really deserved it not. Nay, even those men whose practice was otherwise, failed not to give their approbation right, few being depraved to that degree as not to condemn, at least in others, the faults they themselves were guilty of.

Locke, Concerning Human Understanding, Bk. II, XXVIII,

11

101 Ambition often puts Men upon doing the meanest Offices; so Climbing is performed in the same Posture with Creeping.

Swift, Thoughts on Various Subjects

102 And now, having grasped his new-purchased sword in his hand, he [Tom Jones] was going to issue forth, when the thought of what he was about to undertake laid suddenly hold of him, and he began to reflect that in a few minutes he might possibly deprive a human being of life, or might lose his own. "Very well," said he, "and in what cause do I venture my life? Why, in that of my honour. And who is this human being? A rascal who hath injured and insulted me without provocation. But is not revenge forbidden by Heaven? Yes, but it is enjoined by the world. Well, but shall I obey the world in opposition to the express commands of Heaven? Shall I incur the Divine displeasure rather than be called— ha—coward—scoundrel?— I'll think no more; I am resolved, and must fight him."

Fielding, Tom Jones, VII, 14

103 Mrs. Fitzpatrick. I made no doubt that his [Mr. Fitzpatrick's] designs were strictly honourable, as the phrase is; that is, to rob a lady of her fortune by way of marriage.

Fielding, Tom Jones, XI, 4

104 Honour sets all the parts of the body politic in motion, and by its very action connects them; thus each individual advances the public good, while he only thinks of promoting his own interest.

True it is that, philosophically speaking, it is a false honour which moves all the parts of the government; but even this false honour is as useful to the public as true honour could possibly be to private persons.

Montesquieu, Spirit of Laws, III, 7

105 Honour... has its supreme laws, to which education is obliged to conform. The chief of these are that we are permitted to set a value upon our fortune, but are absolutely forbidden to set any upon our lives.

The second is that, when we are raised to a post or preferment, we should never do or permit anything which may seem to imply that we look upon ourselves as inferior to the rank we hold.

The third is that those things which honour forbids are more rigorously forbidden, when the laws do not concur in the prohibition; and those it commands are more strongly insisted upon, when they happen not to be commanded by law.

Montesquieu, Spirit of Laws, IV, 2

106 The savage lives within himself, while social man lives constantly outside himself, and only knows how to live in the opinion of others, so that he seems to receive the consciousness of his own existence merely from the judgment of others concerning him.

Rousseau, Origin of Inequality, II

107 Most men seem rather inclined to confess the want of virtue than of importance.

Johnson, Rambler No. 13

108 It is...of the utmost importance that those who have any intention of deviating from the beaten roads of life and acquiring a reputation superior to names hourly swept away by time among the refuse of fame should add to their reason and their spirit the power of persisting in their purposes, acquire the art of sapping what they

cannot batter, and the habit of vanquishing obstinate resistance by obstinate attacks.

Johnson, Rambler No. 43

109 That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those who, being able to add nothing to truth, hope for eminence from the heresies of paradox; or those who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard which is yet denied by envy will be at last bestowed by time.

Johnson, Preface to Shakespeare

110 Honour makes a great part of the reward of all honourable professions. In point of pecuniary gain, all things considered, they are generally under-recompensed.... Disgrace has the contrary effect. The trade of a butcher is a brutal and an odious business; but it is in most places more profitable than the greater part of common trades. The most detestable of all employments, that of public executioner, is, in proportion to the quantity of work done, better paid than any common trade whatever.

Adam Smith, Wealth of Nations, I, 10

111 As long as mankind shall continue to bestow more liberal applause on their destroyers than on their benefactors, the thirst of military glory will ever be the vice of the most exalted characters.

Gibbon, Decline and Fall of the Roman Empire, I

112 Our estimate of personal merit is relative to the common faculties of mankind. The aspiring efforts of genius or virtue, either in active or speculative life, are measured not so much by their real elevation as by the height to which they ascend above the level of their age or country; and the same stature which in a people of giants would pass unnoticed, must appear conspicuous in a race of pigmies.

Gibbon, Decline and Fall of the Roman Empire, XLII

113 The road to eminence and power, from obscure condition, ought not to be made too easy, nor a thing too much of course- If rare merit be the rarest of all rare things, it ought to pass through some sort of probation. The temple of honour ought to be seated on an eminence. If it be opened through virtue, let it be remembered too, that virtue is never tried but by some difficulty and some struggle.

Burke, Reflections on the Revolution in France

114 Well is it known that ambition can creep as well as soar. The pride of no person in a flourishing condition is more justly to be dreaded than that of him who is mean and cringing under a doubtful and unprosperous fortune.

Burke, Letters on a Regicide Peace, III

115 Respect applies always to persons only—not to things. The latter may arouse inclination, and if they are animals (for example, horses, dogs, etc.), even love or fear, like the sea, a volcano, a beast of prey; but never respect. Something that comes nearer to this feeling is

admiration, and this, as an affection, astonishment, can apply to things also, for example, lofty mountains, the magnitude, number, and distance of the heavenly bodies, the strength and swiftness of many animals, etc. But all this is not respect. A man also may be an object to me of love, fear, or admiration, even to astonishment, and yet not be an object of respect. His jocose humour, his courage and strength, his power from the rank he has amongst others, may inspire me with sentiments of this kind, but still inner respect for him is wanting. Fontenelle says, "I bow before a great man, but my mind does not bow." I would add, before an humble plain man, in whom I perceive uprightness of character in a higher degree than I am conscious of in myself, my mind bows whether I choose it or not, and though I bear my head never so high that he may not forget my superior rank. Why is this? Because his example exhibits to me a law that humbles my self-conceit when I compare it with my conduct.... Respect is a tribute which we cannot refuse to merit, whether we will or not; we may indeed outwardly withhold it, but we cannot help feeling it inwardly.

Kant, Critique of Practical Reason, Pt. I, I, 3

- 116 Men can never acquire respect by benevolence alone, though they may gain love, so that the greatest beneficence only procures them honour when it is regulated by worthiness.

Kant, Critique of Practical Reason, Pt. I, 11, 2

- 117 If people insist that honor is dearer than life itself, what they really mean is that existence and well-being are as nothing compared with other people's opinions. Of

course, this may be only an exaggerated way of stating the prosaic truth that reputation, that is, the opinion others have of us, is indispensable if we are to make any progress in the world.

Schopenhauer, Position, I

118 Nothing in life gives a man so much courage as the attainment or renewal of the conviction that other people regard him with favor; because it means that everyone joins to give him help and protection, which is an infinitely stronger bulwark against the ills of life than anything he can do himself.

Schopenhauer, Position, IV

119 The ultimate foundation of honor is the conviction that moral character is unalterable: a single bad action implies that future actions of the same kind will, under similar circumstances, also be bad.

Schopenhauer, Position, IV

120 Fame is something which must be won; honor, only something which must not be lost. The absence of fame is obscurity, which is only a negative; but loss of honor is shame, which is a positive quality.

Schopenhauer, Position, IV

121 Honor is concerned merely with such qualities as everyone may be expected to show under similar circumstances; fame only of those which cannot be required of any man. Honor is of qualities which everyone has a right to attribute to himself; fame only of those which should be left to others to attribute. Whilst our

honor extends as far as people have knowledge of us; fame runs in advance, and makes us known wherever it finds its way. Everyone can make a claim to honor; very few to fame, as being attainable only in virtue of extraordinary achievements.

Schopenhauer, Position, V

122 Examine the man who lives in misery because he does not shine above other men; who goes about producing himself, pruriently anxious about his gifts and claims; struggling to force everybody, as it were begging everybody for God's sake, to acknowledge him a great man, and set him over the heads of men! Such a creature is among the wretchedest sights seen under this sun. A great man? A poor morbid prurient empty man; fitter for the ward of a hospital, than for a throne among men. I advise you to keep-out of his way. He cannot walk on quiet paths; unless you will look at him, wonder at him, write paragraphs about him, he cannot live. It is the emptiness of the man, not his greatness. Because there is nothing in himself, he hungers and thirsts that you would find something in him. In good truth, I believe no great man, not so much as a genuine man who had health and real substance in him of whatever magnitude, was ever much tormented in this way.

Carlyle, The Hero as King

123 I trust a good deal to common fame, as we all must. If a man has good corn, or woods, or boards, or pigs to sell, or can make better chairs or knives, crucibles or church organs than anybody else, you will find a broad, hard-beaten road to his house, though it be in the woods.

Emerson, Journal (Feb, 1855)

124 The nature and strength of the feelings which we call regret, shame, repentance or remorse, depend apparently not only on the strength of the violated instinct, but partly on the strength of the temptation, and often still more on the judgment of our fellows. How far each man values the appreciation of others, depends on the strength of his innate or acquired feeling of sympathy; and on his own capacity for reasoning out the remote consequences of his acts. Another element is most important, although not necessary, the reverence or fear of the Gods, or Spirits believed in by each man: and this applies especially in cases of remorse.

Darwin, Descent of Man, I, 4

125 To do good unto others—to do unto others as ye would they should do unto you—is the foundation-stone of morality. It is, therefore, hardly possible to exaggerate the importance during rude times of the love of praise and the dread of blame. A man who was not impelled by any deep, instinctive feeling, to sacrifice his life for the good of others, yet was roused to such actions by a sense of glory, would by his example excite the same wish for glory in other men, and would strengthen by exercise the noble feeling of admiration.

Darwin, Descent of Man, I, 5

126 He [Mitya] felt unbearably awkward. All were clothed, while he was naked, and strange to say, when he was undressed he felt somehow guilty in their presence, and was almost ready to believe himself that he was inferior

to them, and that now they had a perfect right to despise him.

"When all are undressed, one is somehow not ashamed, but when one's the only one undressed and everybody is looking, it's degrading," he kept repeating to himself, again and again. "It's like a dream; I've sometimes dreamed of being in such degrading positions."

Dostoevsky, Brothers Karamazov, Pt. III, IX, 6

127 A man's Social Self is the recognition which he gets from his mates. We are not only gregarious animals, liking to be in sight of our fellows, but we have an innate propensity to get ourselves noticed, and noticed favorably, by our kind. No more fiendish punishment could be devised, were such a thing physically possible, than that one should be turned loose in society and remain absolutely unnoticed by all the members thereof. If no one turned round when we entered, answered when we spoke, or minded what we did, but if every person we met "cut us dead," and acted as if we were non-existing things, a kind of rage and impotent despair would ere long well up in us, from which the cruellest bodily tortures would be a relief; for these would make us feel that, however bad might be our plight, we had not sunk to such a depth as to be unworthy of attention at all.

William James, Psychology, X

128 Hardly any of us have ethical energy enough for more than one really inflexible point of honor.

Shaw, Doctor's Dilemma, Pref.

129 Tanner, We live in an atmosphere of shame. we are ashamed of everything that is real about us; ashamed of ourselves, of our relatives, of our incomes, of our accents, of our opinions, of our experience, just as we are ashamed of our naked skins.... We are ashamed to walk, ashamed to ride in an omnibus, ashamed to hire a hansom instead of keeping a carriage, ashamed of keeping one horse instead of two and a groom-gardener instead of a coachman and footman. The more things a man is ashamed of, the more respectable he is.

Shaw, Man and Superman, I

130 The highest form of vanity is love of fame. It is a passion easy to deride but hard to understand, and in men who live at all by imagination almost impossible to eradicate. The good opinion of posterity can have no possible effect on our fortunes, and the practical value which reputation may temporarily have is quite absent in posthumous fame. The direct object of this passion—that a name should survive in men's mouths to which no adequate idea of its original can be attached— seems a thin and fantastic satisfaction, especially when we consider how little we should probably sympathise with the creatures that are to remember us.... Yet, beneath this desire for nominal longevity, apparently so inane, there may lurk an ideal ambition of which the ancients cannot have been unconscious when they' set so high a value on fame. They often identified fame with immortality, a subject on which they had far more rational sentiments than have since prevailed.

Santayana, Life of Reason, II, 6

1.6 Human Greatness

THE HERO

There is necessarily some overlapping and there is certainly a connection between matters covered in the preceding section and in this one. Great men are usually men who have won fame and glory for themselves; heroes are usually men who have been honored as such. What distinguishes the subjects of the two sections is the fact that here we are concerned with the attributes or characteristics that elevate a man above the commonplace, that make him outstanding among men, whether or not he is renowned and honored for his greatness. That a man has genius remains the case even if no tribute is paid by others to his extraordinary gifts.

The passages on greatness in men and women fall into two groups: on the one hand, statements about what human greatness consists in; on the other, examples of human greatness. There would be many more of the latter were it not for the fact that many of the examples have been quoted elsewhere: examples of greatness in women in Section 1.7; examples of great poets in Section 16.3; examples of great military commanders in Section 14.2, and so on.

In addition, there are quotations that discuss the phenomenon of human genius and that describe heroes and heroic deeds or achievements. The ancients magnify the hero and the heroic more than modern writers do. The controversy about the role of the great man in history is characteristically a modern one; and on this issue the reader will find the affirmations of Carlyle and Emerson opposed by the denials of Tolstoy.

■ ■ ■

- 1 *Artabanus*. Seest thou how God with his lightning smites always the bigger animals, and will not suffer them to w'ax insolent, while those of a lesser bulk chafe him not? How likewise his bolts fall ever on the highest houses and the tallest trees? So plainly does He love to bring down everything that exalts itself. Thus ofttimes a mighty host is discomfited by a few men, when God in his jealousy sends fear or storm from heaven, and they perish in a way unworthy of them. For God allows no one to have high thoughts but Himself.

Herodotus, History, VII, 10

- 2 Now there arose [at Thermopylae] a fierce struggle between the Persians and the Lacedaemonians over the body of Leonidas, in which the Greeks four times drove back the enemy, and at last by their great bravery succeeded in bearing off the body. This combat was scarcely ended when the Persians with Ephialtes approached; and the Greeks, informed that they drew nigh, made a change in the manner of their fighting. Drawing back into the narrowest part of the pass, and retreating even behind the cross wall, they posted themselves upon a hillock, where they stood all drawn up together in one close body, except only the Thebans. The hillock whereof I speak is at the entrance of the straits, where the stone lion stands which was set up in honour of Leonidas. Here they defended themselves to the last, such as still had swords using them, and the others resisting with their hands and teeth; till the barbarians,

who in part had pulled down the wall and attacked them in front, in part had gone round and now encircled them upon every side, overwhelmed and buried the remnant which was left beneath showers of missile weapons,...

The slain were buried where they fell; and in their honour, nor less in honour of those who died before Leonidas sent the allies away, an inscription was set up, which said:—

*Here did four thousand men from Pelops' land
Against three hundred myriads bravely stand.*

This was in honour of all. Another was for the Spartans alone:—

*Go, stranger, and to Lacedaemon tell
That here, obeying her behests, we fell.*

Herodotus, History, VII, 225

- 3 *The Nurse*. Strange are the tempers of princes, and maybe because they seldom have to obey, and mostly lord it over others, change they their moods with difficulty. Tis better then to have been trained to live on equal terms. Be it mine to reach old age, not in proud pomp, but in security! ... Greatness that doth o'erreach itself, brings no blessing to mortal men; but pays a penalty of greater ruin whenever fortune is wroth with a family.

Euripides, Medea, 119

- 4 *Medea*. Whoso is wise in his generation ought never to have his children taught to be too clever; for besides the reputation they get for idleness, they purchase bitter odium from the citizens. For if thou shouldst import new learning amongst dullards., thou wilt be thought a useless trifler, void of knowledge; while if thy fame in the city

o'ertops that of the pretenders to cunning knowledge,
thou wilt win their dislike.

Euripides, Medea, 294

5 *Pericles*. So died these men as became Athenians. You, their survivors, must determine to have as unfaltering a resolution in the field, though you may pray that it may have a happier issue. And not contented with ideas derived only from words of the advantages which are bound up with the defence of your country', though these would furnish a valuable text to a speaker even before an audience so alive to them as the present, you must yourselves realize the power of Athens, and feed your eyes upon her from day to day, till love of her fills your hearts; and then, when all her greatness shall break upon you, you must reflect that it was by courage, sense of duty, and a keen feeling of honour in action that men were enabled to win all this, and that no personal failure in an enterprise could make them consent to deprive their country' of their valour, but they laid it at her feet as the most glorious contribution that they could offer. For this offering of their lives made in common by them all they each of them individually received that renown which never grows old, and for a sepulchre, not so much that in which their bones have been deposited, but that noblest of shrines wherein their glory is laid up to be eternally remembered upon every occasion on which deed or story' shall call for its commemoration. For heroes have the whole earth for their tomb; and in lands far from their own, where the column with its epitaph declares it, there is enshrined in every breast a record unwritten with no tablet to preserve it, except that of the heart.

These take as your model and, judging happiness to be the fruit of freedom and freedom of valour» never decline the dangers of war. For it is not the miserable that would most justly be unsparing of their lives; these have nothing to hope for: it is rather they to whom continued life may bring reverses as yet unknown, and to whom a fall, if it came, would be most tremendous in its consequences, And surely, to a man of spirit, the degradation of cowardice must be immeasurably more grievous than the unfelt death which strikes him in the midst of his strength and patriotism!

Thucydides, Peloponnesian War, II, 43

6 *Alcibiades*. Many are the marvels which I might narrate in praise of Socrates; most of his ways might perhaps be paralleled in another man, but his absolute unlikeness to any human being that is or ever has been is perfectly astonishing. You may imagine Brasidas and others to have been like Achilles; or you may imagine Nestor and Antenor to have been like Pericles; and the same may be said of other famous men, but of this strange being you will never be able to find any likeness, however remote, either among men who now are or who ever have been—other than that which I have already suggested of Silenus and the satyrs; and they represent in a figure not only himself, but his words. For, although I forgot to mention this to you before, his words are like the images of Silenus which open; they are ridiculous when you first hear them; he clothes himself in language that is like the skin of the wanton satyr—for his talk is of pack-asses and smiths and cobblers and curriers, and he is always repeating the same things in the same words, so that any ignorant or inexperienced person might feel disposed to

laugh at him; but he who opens the bust and sees what is within will find that they are the only words which have a meaning in them, and also the most divine, abounding in fair images of virtue, and of the widest comprehension, or rather extending to the whole duty of a good and honourable man.

Plato, Symposium, 221A

7 *Socrates*. When a man dies gloriously in war shall we not say, in the first place, that he is of the golden race?

Glaucón. To be sure.

Nay, have we not the authority of Hesiod for affirming that when they are dead

They are holy angels upon the earth, authors of good, averters of evil, the guardians of speech-gifted men?

Yes; and we accept his authority.

We must learn of the god how we are to order the sepulture of divine and heroic personages, and what is to be their special distinction; and we must do as he bids?

By all means.

And in ages to come we will reverence them and kneel before their sepulchres as at the graves of heroes. And not only they but any who are deemed pre-eminently good, whether they die from age, or in any other way, shall be admitted to the same honours.

Plato, Republic, V 468B

8 It is possible to fail in many ways... while to succeed is possible only in one way (for which reason also one is easy and the other difficult - to miss the mark easy, to hit it difficult).

Aristotle, Ethics, 1106b28

- 9 It is to be expected that a farmer will busy himself sowing trees, no fruit of which his eyes will ever see, and a great man will not likewise sow the seeds of laws, institutions, and public policy?

Cicero, Disputations, I, 14

- 10 The altogether courageous and great spirit has, above all, two characteristics. First, he is indifferent to outward circumstances. Such a person is convinced that nothing but moral goodness and propriety are worth admiring and striving for. He knows he ought not be subject to any person, passion, or accident of fortune. His second characteristic is that when his soul has been disciplined in this way, he should do things that are not only great and highly useful, but also deeds that are arduous, laborious and fraught with danger to life and to those things that make life worthwhile.

Cicero, De Officiis, I, 20

- 11 Success comes to the ordinary individual, even to ordinary ability. But triumph over the disasters and fears of mortal life is only granted to great men. Certainly to be always content and to pass through life without a qualm is to be ignorant of half of nature. You may be a great man, but if Fortune gives you no chance to demonstrate your merit, how am I to know your greatness? If a man is to know himself, he must be tested. No one knows what he can accomplish except by trying. Some men have given themselves over voluntarily to sluggish Fortune and have looked for some chance to proclaim abroad their merit when it was to sink into oblivion.

Seneca, On Providence, IV

- 12 *Aristotle*. No great genius has ever existed without some touch of madness.

Seneca, On Tranquility of Mind, XVII

- 13 For what is a man profited, if he shall gain the whole world, and lose his own soul?

Matthew 16:26

- 14 In his journey [to Spain] as he was crossing the Alps, and passing by a small village of the barbarians with but few inhabitants, and those wretchedly poor, his companions asked the question among themselves by way of mockery, if there were any canvassing for offices there, any contention which should be uppermost, or feuds of great men one against another. To which Caesar made answer seriously, "For my part, I had rather be the first man among these fellows, than the second man in Rome."

Plutarch, Caesar

- 15 Caesar was born to do great things, and had a passion after honour, and the many noble exploits he had done did not now serve as an inducement to him to sit still and reap the fruit of his past labours, but were incentives and encouragements to go on, and raised in him ideas of still greater actions, and a desire of new glory, as if the present were all spent. It was in fact a sort of emulous struggle with himself, as it had been with another, how he might outdo his past actions by his future.

Plutarch, Caesar

16 Caesar was not of so slight or weak a temper as to suffer himself to be carried away by the indignation of the moment, into a civil war with his country, upon the sight of Antony and Cassius seeking refuge in his camp meanly dressed and in a hired carriage, without ever having thought of it or taken any such resolution long before. This was to him, who wanted a pretence of declaring war, a fair and plausible occasion; but the true motive that led him was the same that formerly led Alexander and Cyrus against all mankind, the unquenchable thirst of empire, and the distracted ambition of being the greatest man in the world, which was impracticable for him, unless Pompey were put down.

Plutarch, Antony

17 Nothing great... is produced suddenly, since not even the grape or fig is. If you say to me now that you want a fig, I will answer to you that it requires time: let it flower first, then put forth fruit, and then ripen. Is, then, the fruit of a fig-tree not perfected suddenly and in one hour, and would you possess the fruit of man's mind in so short a time and so easily? Do not expect it, even if I tell you.

Epictetus, Discourses, I, 15

18 Many have... perished, even good men, despising slow and safe success and hurrying on even at the cost of ruin to premature greatness.

Tacitus, Annals, III, 66

19 A wise man ought always to follow the paths beaten by great men, and to imitate those who have been supreme, so that if his ability does not equal theirs, at least it will

savour of it. Let him act like the clever archers who, designing to hit the mark which yet appears too far distant, and knowing the limits to which the strength of their bow attains, take aim much higher than the mark, not to reach by their strength or arrow to so great a height, but to be able with the aid of so high an aim to hit the mark they wish to reach.

Machiavelli, Prince, VI

20 It was necessary ... to Moses that he should find the people of Israel in Eg>'pt enslaved and oppressed by the Egyptians, in order that they should be disposed to follow him so as to be delivered out of bondage. It was necessary' that Romulus should not remain in Alba, and that he should be abandoned at his birth, in order that he should become King of Rome and founder of the fatherland. It was necessary' titat Cyrus should find the Persians discontented with the government of the Medes, and the Medes soft and effeminate through their long peace. Theseus could not have shown his ability had he not found the Athenians dispersed. These opportunities, therefore, made those men fortunate, and their high ability enabled them to recognize the opportunity whereby their country was ennobled and made famous,

Machiavelli, Prince, VI

21 Without doubt princes become great when they overcome the difficulties and obstacles by which they are confronted, and therefore fortune, especially when she desires to make a new prince great, who has a greater necessity to earn renown than an hereditary one, causes enemies to arise and form designs against him, in order

that he may have the opportunity of overcoming them, and by them to mount higher, as by a ladder which his enemies have raised.

Machiavelli, Prince, XX

22 *Pantagruel*. As a torch or candle, as long as it hath life enough and is lighted, shines round about, disperses its light, delights those that are near it, yields them its service and dearness, and never causes any pain or displeasure; but as soon as it is extinguished, its smoke and evaporation infect the air, offend the by-standers, and are noisome to all: so, as long as those noble and renowned souls inhabit their bodies, peace, profit, pleasure, and honour never leave the places where they abide; but as soon as they leave them, both the continent and adjacent islands are annoyed with great commotions; in the air fogs, darkness, thunder, hail; tremblings, pulsations, agitations of the earth; storms and hurricanes at sea; together with sad complaints amongst the people, broaching of religions, changes in governments, and ruins of commonwealths.

Rabelais, Gargantua and Pantagruel, IV, 26

23 Popular opinion is wrong: it is much easier to go along the sides, where the outer edge serves as a limit and a guide, than by the middle way, wide and open, and to go by art than by nature; but it is also much less noble and less commendable. Greatness of soul is not so much pressing upward and forward as knowing how to set oneself in order and circumscribe oneself. It regards as great whatever is adequate, and shows its deviation by liking moderate things better than eminent ones. There is

nothing so beautiful and legitimate as to play the man well and properly, no knowledge so hard to acquire as the knowledge of how' to live this life well and naturally; and the most barbarous of our maladies is to despise our being.

Montaigne, Essays, III, 13, Of Experience

24 *Thomalin*. And he that strives to touch the starres
Oft stombles at a strawe.

Spenser, The Shepheardes Calender (July)

25 *Marullus*. O you hard hearts, you cruel men of Rome,
Knew you not Pompey? Many a time and oft
Have you climbed up to walls and battlements,
To towers and windows, yea, to chimney-tops,
Your infants in your arms, and there have sat
The live-long day, with patient expectation,
To see great Pompey pass the streets of Rome:
And when you saw his chariot but appear,
Have you not made an universal shout,
That Tiber trembled underneath her banks
To hear the replication of your sounds
Made in her concave shores?
And do you now put on your best attire?
And do you now cull out a holiday?
And do you now strew flowers in his way
That comes in triumph over Pompey's blood?
Be gone!
Run to your houses, fall upon your knees.
Pray to the gods to intermit the plague
That needs must light on this ingratitude.

Shakespeare, Julius Caesar, I, i, 41

26 *Cassius*. I, as Aeneas, our great ancestor,
Did from the flames of Troy upon his shoulder
The old Anchises bear, so from the waves of Tiber
Did I the tired Caesar. And this man
Is now become a god, and Cassius is
A wretched creature and must bend his body.
If Caesar carelessly but nod on him.

Shakespeare, Julius Caesar, I, ii, 112

27 *Cassius*. Why, man, he doth bestride the narrow world
Like a Colossus, and we petty men
Walk under his huge legs and peep about
To find ourselves dishonourable graves....
Brutus and Caesar: what should be in that "Caesar"?
Why should that name be sounded more than yours?
Write them together, yours is as fair a name;
Sound them, it doth become the mouth as well;
Weigh them, it is as heavy; conjure with 'em,
Brutus will start a spirit as soon as Caesar.
Now, in the names of all the gods at once,
Upon what meat doth this our Caesar feed
That he is grown so great? Age, thou art shamed!
Rome, thou hast lost the breed of noble bloods!
When went there by an age, since the great flood.
But it was famed with more than with one man?
When could they say till now, that talk'd of Rome,
That her wide walls encompass'd but one man?
Now is it Rome indeed and room enough,
When there is in it but one only man.

Shakespeare, Julius Caesar, I, ii, 135

28 *Brutus*. 'Tis a common proof

That lowliness is young ambition's ladder,
Whereto the climber-upward turns his face;
But when he once attains the upmost round,
He then unto the ladder turns his back.
Looks in the clouds, scorning the base degrees
By which he did ascend.

Shakespeare, Julius Caesar, II, i, 21

29 *Mark Antony*. The noble Brutus

Hath told you Caesar was ambitious:
If it were so, it was a grievous fault,
And grievously hath Caesar answer'd it.
Here, under leave of Brutus and the rest—
For Brutus is an honourable man;
So are they all, all honourable men—
Come I to speak in Caesar's funeral.
He was my friend, 'faithful and just to me:
But Brutus says he was ambitious;
And Brutus is an honourable man.
He hath brought many captives home to Rome,
Whose ransoms did the general coffers fill:
Did this in Caesar seem ambitious?
When that the poor have cried, Caesar hath wept:
Ambition should be made of sterner stuff:
Yet Brutus says he was ambitious;
And Brutus is an honourable man.
You all did see that on the Lupercal
I thrice presented him a kingly crown,
Which he did thrice refuse: was this ambition?
Yet Brutus says he was ambitious;
And, sure, he is an honourable man.

Shakespeare, Julius Caesar, III, ii, 82

- 30 *Mark Antony*. This was the noblest Roman of them all:
All the conspirators save only he
Did that they did in envy of great Caesar;
He only, in a general honest thought
And common good to all, made one of them.
His life was gentle, and the elements
So mix'd in him that Nature might stand up
And say to all the world, "This was a man!"

Shakespeare, Julius Caesar, V, v, 68

- 31 *Olivia*. Be not afraid of greatness; some are born great,
some achieve greatness, and some have greatness thrust
upon 'em.

Shakespeare, Twelfth Night, II, v, 156

- 32 *Hamlet*. Rightly to be great
Is not to stir without great argument,
But greatly to find quarrel in a straw
When honour's at the stake,

Shakespeare, Hamlet, IV, iv, 53

- 33 *Cleopatra*. I dream'd there was an Emperor Antony....
His legs bestrid the ocean; his rear'd arm
Crested the world; his voice was propertyed
As all the tuned spheres, and that to friends;
But when he meant to quail and shake the orb,
He was as rattling thunder. For his bounty,
There was no winter in 't; an autumn 'twas
That grew the more by reaping. His delights
Were dolphin-like; they show'd his back above
The element they lived in. In his lively

Walk'd crowns and crownets; realms and islands were
As plates dropp'd from his pocket.

Shakespeare, Antony and Cleopatra, V, ii, 75

34 *Wolsey*. I have touch'd the highest point of all my
greatness;
And, from that full meridian of my glory,
I haste now to my setting. I shall fall
Like a bright exhalation in the evening.
And no man see me more.

Shakespeare, Henry VIII, III, ii, 223

35 *Wolsey*. Farewell! a long farewell, to all my greatness!
This is the state of man: to-day he puts forth
The tender leaves of hopes; to-morrow blossoms,
And bears his blushing honours thick upon him;
The third day comes a frost, a killing frost.
And, when he thinks, good easy man, full surely
His greatness is a-ripening, nips his root,
And then he falls, as I do. I have ventured,
Like little wanton boys that swim on bladders.
This many summers in a sea of glory,
But far beyond my depth. My high-blown pride
At length broke under me and now has left me,
Weary and old with service, to the mercy
Of a rude stream that must for ever hide me.
Vain pomp and glory of this world, I hate ye.

Shakespeare, Henry VIII, III, ii, 352

36 It will, perhaps, be as well to distinguish three species
and degrees of ambition. First, that of men who are
anxious to enlarge their own power in their country,

which is a vulgar and degenerate kind; next, that of men who strive to enlarge the power and empire of their country over mankind, which is more dignified but not less covetous; but if one were to endeavor to renew and enlarge the power and empire of mankind in general over the universe, such ambition (if it may be so termed) is both more sound and more noble than the other two.

Bacon, Novum Organum, I, 129

- 37 Men in great places are thrice servants: servants of the sovereign or state; servants of fame; and servants of business. So as they have no freedom, neither in their persons, nor in their actions, nor in their times. It is a strange desire, to seek power and to lose liberty; or to seek power over others and to lose power over a man's self.

Bacon, Of Great Place

- 38 If a true survey be taken of counsellors and statesmen, there may be found (though rarely) those which can make a small state great, and yet cannot fiddle: as, on the other side, there will be found a great many that can fiddle very cunningly, but yet are so far from being able to make a small state great, as their gift lieth the other way; to bring a great and flourishing estate to ruin and decay.

Bacon, Of the True Greatness of Kingdoms and Estates

- 39 The greatest baseness of man is the pursuit of glory. But it is also the greatest mark of his excellence; for whatever possessions he may have on earth, whatever health and essential comfort, he is not satisfied if he has not the

esteem of men. He values human reason so highly that, whatever advantages he may have on earth, he is not content if he is not also ranked highly in the judgement of man. This is the finest position in the world. Nothing can turn him from that desire, which is the most indelible quality of man's heart.

And those who must despise men, and put them on a level with the brutes, yet wish to be admired and believed by men, and contradict themselves by their own feelings; their nature, which is stronger than all, convincing them of the greatness of man more forcibly than reason convinces them of their baseness.

Pascal, Pensées, VI, 404

40 All the glory of greatness has no lustre for people who are in search of understanding.

The greatness of clever men is invisible to kings, to the rich, to chiefs, and to all the worldly great.

The greatness of wisdom, which is nothing if not of God, is invisible to the carnal-minded and to the clever. These are three orders differing in kind.

Great geniuses have their power, their glory, their greatness, their victory their lustre, and have no need of worldly greatness, with which they are not in keeping. They are seen, not by the eye, but by the mind; this is sufficient.

The saints have their power, their glory, their victory, their lustre, and need no worldly or intellectual greatness, with which they have no affinity; for these neither add anything to them, nor take away anything from them. They are seen of God and the angels, and not of the body, nor of the curious mind. God is enough for them.

Archimedes, apart from his rank, would have the same veneration. He fought no battles for the eyes to feast upon; but he has given his discoveries to all men. Oh! how brilliant he was to the mind!

Pascal, Pensées, XII, 793

- 41 *Satan*. What matter where, if I be still the same,
And what I should be, all but less than hee
Whom Thunder hath made greater? Here at least
We shall be free; th' Almighty hath not built
Here for his envy, will not drive us hence:
Here we may reign secure, and in my choyce
To reign is worth ambition though in Hell:
Better to reign in Hell, then serve in Heav'n.

Milton, Paradise Lost, I, 256

- 42 One man, choosing a proper juncture, leaps into a gulf, thence proceeds a hero, and is called the saviour of his country: another achieves the same enterprise, but, unluckily timing it, has left the brand of madness fixed as a reproach upon his memory.

Swift, Tale of a Tub, IX

- 43 When a true Genius appears in the World, you may know him by this Sign, that the Dunces are all in confederacy against him.

Swift, Thoughts on Various Subjects

- 44 Who noble ends by noble means obtains,
Or failing, smiles in exile or in chains,
Like good Aurelius let him reign, or bleed
Like Socrates, that Man is great indeed.

Pope, Essay on Man, Epistle IV, 233

45 Through a fatality inseparable from human nature, moderation in great men is very rare; and as it is always much easier to push on force in the direction in which it moves than to stop its movement, so in the superior class of the people, it is less difficult, perhaps, to find men extremely virtuous, than extremely prudent.

Montesquieu, Spirit of Laws, XXVIII, 41

46 There have been men indeed splendidly wicked, whose endowments threw a brightness on their crimes, and whom scarce any villainy' made perfectly detestable, because they never could be wholly divested of their excellencies; but such have been in all ages the great corrupters of the world, and their resemblance ought no more to be preserved, than the art of murdering without pain.

Johnson, Rambler No. 4

47 The errors and follies of a great genius are seldom without some radiations of understanding, by which meaner minds may be enlightened.

Johnson, Rambler No. 29

48 The wit, the hero, the philosopher, whom their tempers or their fortunes have hindered from intimate relations, die without any other effect than that of adding a new topic to the conversation of the day.

Johnson, Rambler No. 78

49 I said, I considered distinction of rank to be of so much importance in civilized society, that if I were asked on the same day to dine with the first Duke in England, and with the first man in Britain for genius, I should hesitate which to prefer. Johnson. "To be sure, if you were to dine only once, and it were never to be known where you dined, you would choose rather to dine with the first man for genius; but to gain most respect, you should dine with the first Duke in England. For nine people in ten that you meet with, would have a higher opinion of you for having dined with a Duke; and the great genius himself would receive you better, because you had been with the great Duke."

Boswell, Life of Johnson (July 20, 1763)

50 True great genius is always accompanied with good sense.

Boswell, London Journal (Dec. 17, 1762)

51 Every British name is effaced by the illustrious name of Arthur, the hereditary prince of the Silures, in South Wales, and the elective king or general of the nation. According to the most rational account, he defeated, in twelve successive battles, the Angles of the North and the Saxons of the West; but the declining age of the hero was embittered by popular ingratitude and domestic misfortunes. The events of his life are less interesting than the singular revolutions of his fame.

Gibbon, Decline and Fall of the Roman Empire, XXXVIII

52 The appellation of great has been often bestowed, and sometimes deserved, but Charlemagne is the only prince

in whose favour the title has been indissolubly blended with the name.

Gibbon, Decline and Fall of the Roman Empire, XLIX

53 I want a hero: an uncommon want,
When every year and month sends forth a new one.
Till, after cloying the gazettes with cant,
the age discovers he is not the true one;
Of such as these I should not care to vaunt,
I'll therefore take our ancient friend Don Juan—
We all have seen him, in the pantomime,
Sent to the devil somewhat ere his time.

Byron, Don Juan, I, 1

54 Once the state has been founded, there can no longer be any heroes. They come on the scene only in uncivilized conditions. Their aim is right, necessary, and political, and this they pursue as their own affair. The heroes who founded states, introduced marriage and agriculture, did not do this as their recognized right, and their conduct still has the appearance of being their particular will. But as the higher right of the Idea against nature, this heroic coercion is a rightful coercion. Mere goodness can achieve little against the power of nature,

Hegel, Philosophy of Right, Additions, Par. 93

55 Caesar was contending for the maintenance of his position, honor, and safety; and, since the power of his opponents included the sovereignty over the provinces of the Roman Empire, his victory secured for him the conquest of that entire empire; and he thus became, though leaving the form of the constitution, the autocrat

of the state. That which secured for him the execution of a design, which in the first instance was of negative import, the autocracy of Rome, was, however, at the same time an independently necessary feature in the history of Rome and of the world. It was not, then, his private gain merely, but an unconscious impulse that occasioned the accomplishment of that for which the time was ripe. Such are all great historical men—whose own particular aims involve those large issues which are the will of the world-spirit. They may be called heroes, inasmuch as they have derived their purposes and their vocation, not from the calm, regular course of things, sanctioned by the existing order; but from a concealed fount—one which has not attained to phenomenal, present existence—from that inner spirit, still hidden beneath the surface, which, impinging on the outer world as on a shell, bursts it in pieces, because it is another kernel than that which belonged to the shell in question. They are men, therefore, who appear to draw the impulse of their life from themselves; and whose deeds have produced a condition of things and a complex of historical relations which appear to be only their interest, and their work.

Hegel, Philosophy of History, Introduction, 3

56 World-historical men, the heroes of an epoch, must ... be recognized as its clear-sighted ones; their deeds, their words are the best of that time. Great men have formed purposes to satisfy themselves, not others. Whatever prudent designs and counsels they might have learned from others would be the more limited and inconsistent features in their career; for it was they who best understood affairs; from whom others learned, and approved, or at least acquiesced in their policy. For that

spirit which had taken this fresh step in history is the inmost soul of all individuals; but in a state of unconsciousness which the great men in question aroused. Their fellows, therefore, follow these soul-leaders; for they feel the irresistible power of their own inner spirit thus embodied. If we go on to cast a look at the fate of these world-historical persons, whose vocation it was to be the agents of the world-spirit, we shall find it to have been no happy one. They attained no calm enjoyment; their whole life was labor and trouble; their whole nature was nought else but their master-passion. When their object is attained they fall off like empty hulls from the kernel. They die early, like Alexander; they are murdered, like Caesar; transported to St. Helena, like Napoleon. This fearful consolation—that historical men have not enjoyed what is called happiness, and of which only private life (and this may be passed under very various external circumstances) is capable—this consolation those may draw from history, who stand in need of it; and it is craved by envy—vexed at what is great and transcendent—striving, therefore, to depreciate it, and to find some flaw in it. Thus in modern times it has been demonstrated ad nauseam that princes are generally unhappy on their thrones; in consideration of which the possession of a throne is tolerated, and men acquiesce in the fact that not themselves but the personages in question are its occupants. The free man, we may observe, is not envious, but gladly recognizes what is great and exalted, and rejoices that it exists.

It is in the light of those common elements which constitute the interest and therefore the passions of individuals, that these historical men are to be regarded. They are great men, because they willed and

accomplished something great; not a mere fancy, a mere intention, but that which met the case and fell in with the needs of the age...

A world-historical individual is not so unwise as to indulge a variety of wishes to divide his regards. He is devoted to the one aim, regardless of all else. It is even possible that such men may treat other great, even sacred interests, inconsiderately; conduct which is indeed obnoxious to moral reprehension. But so mighty a form must trample down many an innocent flower, crush to pieces many an object in its path.

Hegel, Philosophy of History Introduction, 3

57 No difference of rank, position, or birth, is so great as the gulf that separates the countless millions who use their head only in the service of their belly, in other words, look upon it as an instrument of the will, and those very few and rare persons who have the courage to say; No! it is too good for that; my head shall be active only in its own service; it shall try to comprehend the wondrous and varied spectacle of this world, and then reproduce it in some form, whether as art or as literature, that may answer to my character as an individual.

Schopenhauer, Genius

58 Compared with the short span of time they live, men of great intellect are like huge buildings, standing on a small plot of ground. The size of the building cannot be seen by anyone, just in front of it; nor, for an analogous reason, can the greatness of a genius be estimated while he lives. But when a century has passed, the world recognizes it and wishes him back again.

Schopenhauer, Reputation

59 Every hero is a Samson. The strong man succumbs to the intrigues of the weak and the many; and if in the end he loses all patience he crushes both them and himself. Or he is like Gulliver at Liliput, overwhelmed by an enormous number of little men.

Schopenhauer, A Few Parables

60 It is natural for great minds—the true teachers of humanity—to care little about the constant company of others; just as little as the schoolmaster cares for joining in the gambols of the noisy crowd of boys which surround him. The mission of these great minds is to guide mankind over the sea of error to the haven of truth—to draw it forth from the dark abysses of a barbarous vulgarity up into the light of culture and refinement. Men of great intellect live in the world without really belonging to it; and so, from their earliest years, they feel that there is a perceptible difference between them and other people. But it is only gradually, with the lapse of years, that they come to a clear understanding of their position. Their intellectual isolation is then reinforced by actual seclusion in their manner of life; they let no one approach who is not in some degree emancipated from the prevailing vulgarity.

Schopenhauer, Our Relation to Ourselves

61 Faith is loyalty to some inspired Teacher, some spiritual Hero. And what therefore is loyalty proper, the life-breath of all society, but an effluence of Hero-worship, submissive admiration for the truly great? Society is founded on Hero-worship.

Carlyle, The Hero as Divinity

62 Show our critics a great man, a Luther for example, they begin to what they call 'account' for him; not to worship him, but take the dimensions of him,—and bring him out to be a little kind of man!

Carlyle, The Hero as Divinity

63 In all epochs of the world's history, we shall find the Great Man to have been the indispensable saviour of his epoch;—the lightning, without which the fuel never would have burnt. The History of the World... was the Biography of Great Men.

Carlyle, The Hero as Divinity

64 To me... 'Hero-worship' becomes a fact inexpressibly precious; the most solacing fact one sees in the world at present. There is an everlasting hope in it for the management of the world. Had all traditions, arrangements, creeds, societies that men ever instituted, sunk away, this would remain. The certainty of Heroes being sent us; our faculty, our necessity, to reverence Heroes when sent: it shines like a polestar through smoke-clouds, dust-clouds, and all manner of down-rushing and conflagration.

Carlyle, The Hero as King

65 Every true man is a cause, a country, and an age; requires infinite spaces and numbers and time fully to accomplish his design; and posterity seem to follow his steps as a train of clients. A man Caesar is born, and for ages after we have a Roman Empire. Christ is born, and millions of minds so grow and cleave to his genius that he

is confounded with virtue and the possible of man. An institution is the lengthened shadow of one man.

Emerson, Self-Reliance

66 The hero is a mind of such balance that no disturbances can shake his will, but pleasantly and as it were merrily he advances to his own music, alike in frightful alarms and in the tipsy mirth of universal dissoluteness. There is somewhat not philosophical in heroism; there is somewhat not holy in it; it seems not to know that other souls are of one texture with it; it has pride; it is the extreme of individual nature. Nevertheless we must profoundly revere it. There is somewhat in great actions which does not allow us to go behind them. Heroism feels and never reasons, and therefore is always right; and although a different breeding, different religion and greater intellectual activity would have modified or even reversed the particular action, yet for the hero that thing he does is the highest deed, and is not open to the censure of philosophers or divines. It is the avowal of the unschooled man that he finds a quality in him that is negligent of expense, of health, of life, of danger, of hatred, of reproach, and knows that his will is higher and more excellent than all actual and all possible antagonists.

Emerson, Heroism

67 We have seen many counterfeits, but we are born believers in great men.

Emerson, Character

68 Hitch your wagon to a star. Let us not fag in paltry works which serve our pot and bag alone.

Emerson, Civilization

69 It will never make any difference to a hero what the laws are. His greatness will shine and accomplish itself unto the end, whether they second him or not. If he have earned his bread by drudgery, and in the narrow and crooked ways which were all an evil law had left him, he will make it at least honorable by his expenditure. Of the past he will take no heed; for its wrongs he will not hold himself responsible: he will say, All the meanness of my progenitors shall not bereave me of the power to make this hour and company fair and fortunate. Whatsoever streams of power and commodity flow to me, shall of me acquire healing virtue, and become fountains of safety. Cannot I too descend a Redeemer into nature? Whosoever hereafter shall name my name, shall not record a malefactor but a benefactor in the earth.

Emerson, The Conservative

70 Be a man's intellectual superiority what it will, it can never assume the practical, available supremacy over other men, without the aid of some sort of external arts and entrenchments, always, in themselves, more or less paltry and base. This it is, that for ever keeps God's true princes of the Empire from the world's hustings; and leaves the highest honours that this air can give, to those men who become famous more through their infinite inferiority to the choice hidden handful of the Divine Inert, than through their undoubted superiority over the dead level of the mass.

Melville, Moby Dick, XXXIII

71 The initiation of all wise or noble things comes and must come from individuals; generally at first from some one individual. The honour and glory of the average man is that he is capable of following that initiative; that he can respond internally to wise and noble things, and be led to them with his eyes open. I am not countenancing the sort of "hero-worship" which applauds the strong man of genius for forcibly seizing on the government of the world and making it do his bidding in spite of itself. All he can claim is, freedom to point out the way. The power of compelling others into it is not only inconsistent with the freedom and development of all the rest, but corrupting to the strong man himself. It does seem, however, that when the opinions of masses of merely average men are everywhere become or becoming the dominant power, the counterpoise and corrective to that tendency would be the more and more pronounced individuality of those who stand on the higher eminences of thought. It is in these circumstances most especially, that exceptional individuals, instead of being deterred, should be encouraged in acting differently from the mass. In other times there was no advantage in their doing so, unless they acted not only differently but better. In this age, the mere example of non-conformity, the mere refusal to bend the knee to custom, is itself a service.

Mill, On Liberty, III

72 Great men are never the promoters of absolute and immutable truths. Each great man belongs to his time and can come only at his proper moment, in the sense that there is a necessary and ordered sequence in the

appearance of scientific discoveries, Great men may be compared to torches shining at long intervals, to guide the advance of science. They light up their time, either by discovering unexpected and fertile phenomena which open up new paths and reveal unknown horizons, or by generalizing acquired scientific facts and disclosing truths which their predecessors had not perceived. If each great man makes the science which he vitalizes take a long step forward, he never presumes to fix its final boundaries, and he is necessarily destined to be outdistanced and left behind by the progress of successive generations. Great men have been compared to giants upon whose shoulders pygmies have climbed, who nevertheless see further than they. This simply means that science makes progress subsequently to the appearance of great men, and precisely because of their influence. The result is that their successors know many more scientific facts than the great men themselves had in their day. But a great man is, none the less, still a great man, that is to say,—a giant.

Claude Bernard, Experimental Medicine, I, 2

73 Man's mind cannot grasp the causes of events in their completeness, but the desire to find those causes is implanted in man's soul. And without considering the multiplicity and complexity of the conditions any one of which taken separately may seem to be the cause, he snatches at the first approximation to a cause that seems to him intelligible and says: "This is the cause!" In historical events (where the actions of men are the subject of observation) the first and most primitive approximation to present itself was the will of the gods and, after that, the will of those who stood in the most

prominent position—the heroes of history. But we need only penetrate to the essence of any historic event—which lies in the activity of the general mass of men who take part in it—to be convinced that the will of the historic hero does not control the actions of the mass but is itself continually controlled.

Tolstoy, War and Peace, XIII, 1

74 When it is impossible to stretch the very elastic threads of historical ratiocination any farther, when actions are clearly contrary to all that humanity calls right or even just, the historians produce a saving conception of "greatness." "Greatness," it seems, excludes the standards of right and wrong. For the "great" man nothing is wrong, there is no atrocity for which a "great" man can be blamed.

"*C'est grand!*" say the historians, and there no longer exists either good or evil but only "grand" and "not grand" Grand is good, not grand is bad. Grand is the characteristic, in their conception, of some special animals called "heroes." And Napoleon, escaping home in a warm fur coat and leaving to perish those who were not merely his comrades but were (in his opinion) men he had brought there, feels *que c'est grand*, and his soul is tranquil.

"*Du sublime* (he saw something sublime in himself) *au ridicule il n'y a qu'un pas*," said he. And the whole world for fifty years has been repeating; "*Sublime! Grand! Napoleon le Grand!*" *Du sublime au ridicule il n'y a qu'un pas.*

And it occurs to no one that to admit a greatness not commensurable with the standard of right and wrong is

merely to admit one's own nothingness and immeasurable meanness.

For us with the standard of good and evil given us by Christ, no human actions are incommensurable. And there is no greatness where simplicity, goodness, and truth are absent.

Tolstoy, War and Peace, XIV, 18

75 To a lackey no man can be great, for a lackey has his own conception of greatness.

Tolstoy, War and Peace, XV, 5

76 I sought great human beings, I never found anything but the apes of their ideal.

Nietzsche, Twilight of the Idols: Maxims and Arrows

77 Great men, like great epochs, are explosive material in whom tremendous energy has been accumulated; their prerequisite has always been, historically and physiologically, that a protracted assembling, accumulating, economizing and preserving has preceded them—that there has been no explosion for a long time.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

78 Great human beings are necessary, the epoch in which they appear is accidental; that they almost always become master of their epoch is only because they are stronger, because they are older, because a longer assembling of force has preceded them.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

79 The genius—in his works, in his deeds—is necessarily a prodigal: his greatness lies in the fact that he expends himself

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

80 The huge world that girdles us about puts all sorts of questions to us, and tests us in all sorts of ways. Some of the tests we meet by actions that are easy, and some of the questions we answer in articulately formulated words. But the deepest question that is ever asked admits of no reply but the dumb turning of the will and tightening of our heart strings as we say, "Yes i will even have it so!" When a dreadful object is presented, or when life as a whole turns up its dark abysses to our view, then the worthless ones among us lose their hold on the situation altogether, and either escape from its difficulties by averting their attention, or if they cannot do that, collapse into yielding masses of plaintiveness and fear. The effort required for facing and consenting to such objects is beyond their power to make. But the heroic mind does differently. To it, too, the objects are sinister and dreadful, unwelcome, incompatible with wished-for things. But it can face them if necessary, without fear that losing its hold upon the rest of life. The world thus finds in the heroic man its worthy match and mate; and the effort which he is able to put forth to hold himself erect and keep his heart unshaken is the direct measure of his worth and function in the game of human life. He can stand this Universe. He can meet it and keep up his faith in it in presence of those same features which lay his weaker brethren low. He can still find a zest in it, not by 'ostrich-like forgetfulness' but by pure inward willingness

to face the world with those deterrent objects there. And hereby he makes himself one of the masters and the lords of life. He must be counted with henceforth; he forms a part of human destiny.

William James. Psychology, XXVI

81 In heroism, we feel, life's supreme mystery is hidden. We tolerate no one who has no capacity whatever for it in any direction. On the other hand, no matter what a man's frailties otherwise may be, if he be willing to risk death, and still more if he suffer it heroically, in the service he has chosen, the fact consecrates him forever. Inferior to ourselves in this or that way, if yet we cling to life, and he is able 'to fling it away like a flower' as caring nothing for it, we account him in the deepest way our born superior. Each of us in his own person feels that a high-hearted indifference to life would expiate all his shortcomings

William James, Varieties of Religious Experience, XIV-XV

82 It is not... easy for mental giants who neither hate nor intend to injure their fellows to realize that nevertheless their fellows hate mental giants and would like to destroy them, not only enviously because the juxtaposition of a superior wounds their vanity, but quite humbly and honestly because it frightens them. Fear will drive men to any extreme; and the fear inspired by a superior being is a mystery which cannot be reasoned away.

Shaw, Saint Joan, Pref.

83 Men do not always take their great thinkers seriously, even when they profess most to admire them.

Freud, Group Psychology and Analysis of the Ego, IV

84 The first epic poet... invented the heroic myth. Tire hero was a man who by himself had slain the father—the father who still appeared in the myth as a totemistic monster. Just as the father had been the boy's first ideal, so in the hero who aspires to the father's place the poet now created the first ego ideal.

Freud, roup Psychology and Analysis of the Ego, XII

85 It is indeed too sad that in life it should be as it is in chess, when one false move may lose us the game, but with the difference that we can have no second game, no return-march. In the realm of fiction we discover that plurality of lives for which we crave. We die in the person of a given hero, yet we survive him, and are ready to die again with the next hero just as safely.

Freud. Thoughts on War and Death, II

1.7 Woman and Man

Woman is the subject of this section: the quotations collected here are either statements about the characteristics of the female gender or statements about the relation of females to males. The reader, aware of the current movement for the liberation of women, must take cognizance of the fact that almost all the statements about women here quoted, including those that describe the extraordinary women of history and fiction, were written by men; and also the fact that almost all the statements that compare men and women are uncomplimentary to women or deprecatory of their endowments. What interpretation one puts upon these facts will depend on the position that the reader takes in the present controversy about the genders.

Among the ancient writers, two kinds of men (almost all of the authors being male) are represented. First, there are those who seem to have viewed women with more or less contempt, considering them as misbegotten males or as biological mistakes, or even relegating them to a quasi-human status, a little higher than the animals, perhaps, but not in the same class as men. Second, there are those who, not disputing the contention that women are essentially inferior to men, nevertheless give the impression of having tried harder to understand them, of having attempted to identify and evaluate the unique contributions of females to human society, Aeschylus, Sophocles, and Aristotle belong in the former group; Homer, Euripides, and Plato belong in the latter. Aristotle is practically unremitting in his

contemptuous attitude toward the "weaker" sex. Plato, on the other hand, is almost unique in the ancient world in his view that women should share the same educational opportunities as men and that they should share in the rule of an ideal commonwealth. But it is nevertheless a misreading of Plato to hold, as some commentators do, that he considered men and women to be equals. The quotations from his works that are here assembled make that abundantly clear.

Among the more recent writers, Montaigne may be aligned with those who are adamant in their belief in woman's inferiority, while Shakespeare clearly belongs with those who see and appreciate the richness and human variety of the life and character of women. But it is not until the reader comes to the passages quoted from John Stuart Mill in the latter half of the nineteenth century that he finds a clear advocate for the social, economic, and political equality of women and men. After Mill there are others, of course; but the older views nevertheless continue to be expressed by writers right up to our own time. It is only recently that the tide has turned.

The one-sidedness of the quotations is strictly in function of the ages in which they were written. If this book were to be revised and brought up to date a hundred years from now, this obvious defect would most certainly be remedied. It should be noted that women as mothers are treated in quotations appearing in Section 2.2 on Parents and Children.

■ ■ ■

1 And the Lord God said, It is not good that the man should be alone; I will make him an help meet for him.. . .

And the Lord God caused a deep sleep to fall upon Adam, and he slept: and he took one of his ribs, and dosed up the flesh instead thereof;

And the rib, which the Lord God had taken from man, made he a woman, and brought her unto the man.

And Adam said, This is now bone of my bones, and flesh of my flesh: she shall be called Woman, because she was taken out of Man.

Genesis 2:18-23

2 And she said unto him. How canst thou say, I love thee, when thine heart is not with me? thou hast mocked me these three times, and hast not told me wherein thy great strength lieth.

And it came to pass, when she pressed him daily with her words, and urged him, so that his soul was vexed unto death;

That he told her all his heart, and said unto her, There hath not come a razor upon mine head; for I have been a Nazarite unto God from my mother's womb: if I be shaven, then my strength will go from me, and I shall become weak, and be like any other man.

And when Delilah saw that he had told her all his heart, she sent and called for the lords of the Philistines, saying. Come up this once, for he hath shewed me all his heart. Then the lords of The Philistines came up unto her, and brought money in their hand.

And she made him sleep upon her knees; and she called for a man, and she caused him to shave off the seven locks of his head; and she began to afflict him, and his strength went from him.

And she said. The Philistines be upon thee, Samson. And he awoke out of his sleep, and said, I will go out as at other times before, and shake myself. And he wist not that The Lord was departed from him.

But the Philistines took him, and put out his eyes, and brought him down to Gaza, and bound him with fetters of brass; and he did grind in the prison house.

Judges 16:15-21

3 And when Jehu was come to Jezreel, Jezebel heard of it; and she painted her face, and tired her head, and looked out at a window.

And as Jehu entered in at the gate, she said, Had Zimri peace, who slew his master?

And he lifted up his face to the window, and said. Who is on my side? who? And there looked out to him two or three eunuchs.

And he said. Throw her down. So they threw her down: and some of her blood was sprinkled on the wall, and on the horses: and he trode her under foot.

And when he was come in, he did eat and drink, and said, Go, see now this cursed woman, and bury her: for she is a king's daughter.

And they went to bury her: but they found no more of her than the skull, and the feet, and the palms of her hands.

Wherefore they came again, and told him. And he said. This is the word of the Lord, which he spake by his servant Elijah the Tishbite, saying. In the portion of Jezreel shall dogs eat the flesh of Jezebel:

And the carcase of Jezebel shall be as dung upon the face of the field in the portion of Jezreel; so that they shall not say. This is Jezebel.

II Kings 9:30-37

4 It is better to dwell in a corner of the housetop, than with a brawling woman in a wide house.

Proverbs 21:9

5 Who can find a virtuous woman? for her price is far above rubies.

Proverbs 31:10

6 Ghost of Agamemnon. "There is no being more fell, more bestial than a wife in such an action, and what an action that one planned! The murder of her husband and her lord. Great god, I thought my children and my slaves at least would give me welcome. But that woman, plotting a thing so low, defiled herself and all her sex, all women yet to come, even those few who may be virtuous,"

He paused then, and I (Odysseus) answered:

"Foul and dreadful. That was the way that Zeus who views the wide world vented his hatred on the sons of Atreus— intrigues of women, even from the start.

Myriads

died by Helen's fault, and Klytaimnestra plotted against you half the world away."

And he at once said:

"Let it be a warning even to you. Indulge a woman never, and never tell her all you know. Some things a man may tell, some he should cover up."

Homer, Odyssey, XI, 425

7 Then said the Lady Kirke:

"So: all those trials are over.

Listen with care to this, now, and a god will arm your mind. Square in your ship's path are Seirenes, crying beauty to bewitch men coasting by; woe to the innocent who hears that sound! He will not see his lady nor his children in joy, crowding about him, home from sea; the Seirenes will sing his mind away on their sweet meadow lolling. There are bones of dead men rotting in a pile beside them and flayed skins shrivel around the spot.

Steer wide;
keep well to seaward; plug your oarsmen's ears with beeswax kneaded soft; none of the rest should hear that song.

But if you wish to listen, let the men tie you in the lugger, hand and foot, back to the mast, lashed to the mast, so you may hear those harpies' thrilling voices; shout as you will, begging to be untied, your crew' must only twist more line around you and keep their stroke up, till the singers fade."

Homer, Odyssey, XII, 36

8 *Penelope*. Do not rage at me, Odysseus!

No one ever matched your caution! Think what difficulty the gods gave: they denied us life together in our prime and flowering years, kept us from crossing into age together. Forgive me, don't be angry. I could not Welcome you with love on sight! I armed myself long ago against the frauds of men, impostors who might come—and all those many whose underhanded ways bring evil on! Helen of Argos, daughter of Zeus and Leda, would she have joined the stranger, lain with him, if she had known her destiny? known the Akhaians in arms would bring her back to her own country? Surely a goddess moved her to

adultery, her blood unchilled by war and evil coming, the years, the desolation; ours, too.

But here and now, what sign could be so clear as this of our own bed? No other man has ever laid eyes on it—only my own slave, Aktoris, that my father sent with me as a gift—she kept our door. You make my stiff heart know that I am yours.

Homer, Odyssey, XXIII, 208

9 *Chorus*. It is like a woman indeed to take the rapture before the fact has shown for true.

They believe too easily, are too quick to shift from ground to ground; and swift indeed the rumor voiced by a woman dies again.

Aeschylus, Agamemnon, 483

10 *Eteocles*. Neither in evils nor in fair good luck may I share a dwelling with the tribe of women! When she's triumphant, hers a confidence past converse with another, when afraid an evil greater both for home and city.

Aeschylus, Seven Against Thebes, 186

11 As for the carrying off of women, it is the deed, they say, of a rogue: but to make a stir about such as are carried off, argues a man a fool. Men of sense care nothing for such women, since it is plain that without their own consent they would never be forced away.

Herodotus, History, I, 4

12 The two camps were then joined in one, the Scythians living with the Amazons as their wives; and the men were

unable to learn the tongue of the women, but the women soon caught up the tongue of the men. When they could thus understand one another, The Scyths addressed the Amazons in these words — "We have parents, and properties, let us therefore give up this mode of life, and return to our nation, and live with them. You shall be our wives there no less than here, and we promise you to have no others." But the Amazons said — "We could not live with your women—our customs are quite different from theirs. To draw the bow, to hurl the javelin, to bestride the horse, these are our arts—of womanly employments we know nothing. Your women, on the contrary, do none of these things; but stay at home in their waggons, engaged in womanish tasks, and never go out to hunt, or to do anything. We should never agree together. But if you truly wish to keep us as your wives, and would conduct yourselves with strict justice towards us, go you home to your parents, bid them give you your inheritance, and then come back to us, and let us and you live together by ourselves."

The youths approved of the advice, and followed it.

Herodotus, IV, 114-115

13 *Tecmessa*. He [Ajax] answered briefly in a well-worn phrase,

"Woman, a woman's decency is silence."

Sophocles, Ajax, 292

14 *Deianira*.

The young thing grows in her own places; the heat of the sun-god does not confound her, nor does the rain, nor any wind.

Pleasurably she enjoys an untroubled life until the time she is no longer called a maiden but woman, and takes her share of worry in the night, fearful for her husband or for her children.

Sophocles, Women of Trachis, 144

15 *Medea*. Of all things that have life and sense we women are the most hapless creatures; first must we buy a husband at an exorbitant price, and o'er ourselves a tyrant set which is an evil worse than the first; and herein lies the most important issue, whether our choice be good or bad. For divorce is discreditable to women, nor can we disown our lords. Next must the wife, coming as she does to ways and customs new, since she hath not learnt the lesson in her home, have a diviner's eye to see how best to treat the partner of her life. If haply we perform these tasks with thoroughness and tact, and the husband live with us, without resenting the yoke, our life is a happy one; if not, 'twere best to die. But when a man is vexed with what he finds indoors, he goeth forth and rids his soul of its disgust, betaking him to some friend or comrade of like age; whilst we must needs regard his single self. And yet they say we live secure at home, while they are at the wars, with their sorry reasoning, for I would gladly take my stand in battle array three times o'er, than once give birth.

Euripides, Medea, 230

16 Though a woman be timorous enough in all else, and as regards courage, a coward at the mere sight of steel, yet in the moment she finds her honour wronged, no heart is filled with deadlier thoughts than hers.

Euripides, Medea, 263

- 17 We women, though by nature little apt for virtuous deeds, are most expert to fashion any mischief.

Euripides, Medea, 408

- 18 *Jason*. You women have such strange ideas, that you think all is well so long as your married life runs smooth; but if some mischance occur to ruffle your love, all that was good and lovely erst you reckon as your foes. Yea, men should have begotten children from some other source, no female race existing; thus would no evil ever have fallen on mankind.

Euripides, Medea, 569

- 19 *Hippolytus*. Women! This coin which men find counterfeit!

Why, why, Lord Zeus, did you put them in the world, in the light of the sun? If you were so determined to breed the race of man, the source of it should not have been women. Men might have dedicated in your own temples images of gold, silver, or weight of bronze, and thus have bought the seed of progeny, ... to each been given his worth in sons according to the assessment of his gift's value. So we might have lived in houses free of the taint of women's presence. But now, to bring this plague into our homes we drain the fortunes of our homes. In this we have a proof how great a curse is woman.

For the father who begets her, rears her up, must add a dowry gift to pack her off to another's house and thus be rid of the load. And he again that takes the cursed creature rejoices and enriches his heart's jewel with dear adornment, beauty heaped on vileness. With lovely

clothes the poor wretch tricks her out spending the wealth that underprops his house. That husband has the easiest life whose wife is a mere nothingness, a simple fool, uselessly sitting by the fireside.

I hate a clever woman—God forbid that I should ever have a wife at home with more than woman's wits! Lust breeds mischief in the clever ones. The limits of their minds deny the stupid lecherous delights.

We should not suffer servants to approach them, but give them as companions voiceless beasts, dumb,... but with teeth, that they might not converse, and hear another voice in answer,

Euripides, Hippolytus, 616

- 20 *Iphigenia*. A man's loss from his family is felt, while a woman's is of little moment.

Euripides, Iphigenia in Tauris, 1005

- 21 *Andromache*. Nature tempers The souls of women so they find a pleasure. In voicing their afflictions as they come.

Euripides, Andromache, 93

- 22 *Andromache*. They say one night of love suffices to dissolve a woman's aversion to share the bed of any man. I hate and loathe that woman who casts away the once beloved, and takes another in her arms of love. Even the young mare torn from her running mate and teamed with another will not easily wear the yoke.

Euripides, Trojan Women, 665

- 23 *Lysistrata*. I'll tell you now: 'tis meet ye all should know. O ladies! sisters! if we really mean

To make the men make Peace, there's but one way,
We must abstain—

Myrrhina. Well! tell us.

Ly. Will ye do it?

My. Do it? ay, surely, though it cost our lives.

Ly. We must abstain—each—from the joys of Love.

How! what! why turn away? where are ye going? What
makes you pout your lips, and shake your heads?

What brings this falling tear, that changing colour?

Will ye, or will ye not? What mean ye, eh?

My. I'll never do it. Let the war go on.

Aristophanes, Lysistrata, 118

24 *Lysistra.* For if we women will but sit at home. Powdered
and trimmed, clad in our daintiest lawn,

Employing all our charms, and all our arts To win
men's love, and when we've won it, then Repel them,
firmly, till they end the war.

We'll soon get Peace again, be sure of that.

Aristophanes, Lysistrata, 149

25 *Pericles.* If I must say anything on the subject of female
excellence to those of you who will now be in widowhood,
it will be all comprised in this brief exhortation. Great will
be your glory in not falling short of your natural
character; and greatest will be hers who is least talked of
among the men, whether for good or for bad.

Thucydides, Peloponnesian War, II, 45

26 You are quite right, he (Glaucón) replied, in maintaining
the general inferiority of the female sex: although many

women are in many things superior to many men, yet on the whole what you say is true.

And if so, my friend, I [Socrates] said, there is no special faculty of administration in a state which a woman has because she is a woman, or which a man has by virtue of his sex, but the gifts of nature are alike diffused in both; all the pursuits of men are the pursuits of women also, but in all of them a woman is inferior to a man.

Plato, Republic, V, 455B

27 You agree then, I [Socrates] said, that men and women are to have a common way of life such as we have described—common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to keep watch together, and to hunt together like dogs; and always and in all things, as far as they are able, women are to share with the men? And in so doing they will do what is best, and will not violate, but preserve the natural relation of the sexes.

Plato, Republic, V, 466B

28 Girls of this age [i.e., puberty) have much need of surveillance. For then in particular they feel a natural impulse to make usage of the sexual faculties that are developing in them; so that unless they guard against any further impulse beyond that inevitable one which their bodily development of itself supplies, even in the case of those who abstain altogether from passionate indulgence, they contract habits which are apt to continue into later life. For girls who give way to

wantonness grow more and more wanton; and the same is true of boys, unless they be safeguarded from one temptation and another.

Aristotle, History of Animals, 581a12

29 In all genera in which the distinction of male and female is found, Nature makes a similar differentiation in the mental characteristics of the two sexes. This differentiation is the most obvious in the case of human kind and in that of the larger animals and the viviparous quadrupeds. In the case of these latter the female is softer in character, is the sooner tamed, admits more readily of caressing, is more apt in the way of learning; as, for instance, in the Laconian breed of dogs the female is cleverer than the male....

In all cases, excepting those of the bear and leopard, the female is less spirited than the male; in regard to the two exceptional cases, the superiority in courage rests with the female. With all other animals the female is softer in disposition than the male, is more mischievous, less simple, more impulsive, and more attentive to the nurture of the young; the male, on the other hand, is more spirited than the female, more savage, more simple and less cunning. The traces of these differentiated characteristics are more or less visible everywhere, but they are especially visible where character is the more developed, and most of all in man.

The fact is, the nature of man is the most rounded off and complete, and consequently in man the qualities or capacities above referred to are found in their perfection. Hence woman is more compassionate than man, more easily moved to tears, at the same time is more jealous, more querulous, more apt to scold and to strike. She is,

furthermore, more prone to despondency and less hopeful than the man, more void of shame or self-respect, more false of speech, more deceptive, and of more retentive memory. She is also more wakeful, more shrinking, more difficult to rouse to action, and requires a smaller quantity of nutriment.

As was previously stated, the male is more courageous than the female, and more sympathetic in the way of standing by to help. Even in the case of molluscs, when the cuttle-fish is struck with the trident the male stands by to help the female; but when the male is struck the female runs away.

Aristotle, History of Animals, 608a22

30 As the first efficient or moving cause, to which belong the definition and the form, is better and more divine in its nature than the material on which it works, it is better that the superior principle should be separated from the inferior. Therefore, wherever it is possible and so far as it is possible, the male is separated from the female. For the first principle of the movement, or efficient cause, whereby that which comes into being is male, is better and more divine than the material whereby it is female. The male, however, comes together and mingles with the female for the work of generation, because this is common to both.

Aristotle, Generation of Animals, 732a3

31 The female is, as it were, a mutilated male.

Aristotle, Generation of Animals, 737a28

32 Females are weaker and colder in nature, and we must look upon the female character as being a sort of natural deficiency.

Aristotle, Generation of Animals, 775a15

33 What difference does it make whether women rule, or the rulers are ruled by women? The result is the same.

Aristotle, Politics, 1269b33

34 *Mercury*. Woman's a various and a changeful thing.

Virgil, Aeneid, IV

35 Resistless thro' the war Camilla rode,
In danger unappall'd, and pleas'd with blood.
One side was bare for her exerted breast;
One shoulder with her painted quiver press'd.
Now from afar her fatal jav'lines play;
Now with her ax's edge she hews her way:
Diana's arms upon her shoulder sound;
And when, too closely press'd, she quits the ground,
From her bent bow she sends a backward wound.
Her maids, in martial pomp, on either side,
Larina, Tulla, fierce Tarpeia, ride:
Italians all; in peace, their queen's delight;
In war, the bold companions of the fight.
So march'd the Tracian Amazons of old.
When Thermodon with bloody billows roll'd:
Such troops as these in shining arms were seen,
When Theseus met in fight their maiden queen:
Such to the field Penthisilca led,
From the fierce virgin when the Grecians fled;
With such, return'd triumphant from the war,

Her maids with cries attend the lofty car;
They clash with manly force their moony shields;
With female shouts resound the Phrygian fields.

Virgil, Aeneid, XI

36 The angel Gabriel was sent from God unto a city of Galilee, named Nazareth,

To a virgin espoused to a man whose name was Joseph, of the house of David; and the virgin's name was Mary.

And the angel came in unto her, and said, Hail, thou that art highly favoured, the Lord is with thee: blessed art thou among women.

And when she saw him, she was troubled at his saying, and cast in her mind what manner of salutation this should be.

And the angel said unto her, Fear not, Mary: for thou hast found favour with God.

And, behold, thou shalt conceive in thy womb, and bring forth a son, and shalt call his name Jesus.

He shall be great, and shall be called the Son of the Highest: and the Lord God shall give unto him the throne of his father David:

And he shall reign over the house of Jacob for ever; and of his kingdom there shall be no end.

Then said Mary unto the angel, How shall this be, seeing I know not a man?

And the angel answered and said unto her, The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God.

And, behold, thy cousin Elisabeth, she hath also conceived a son in her old age: and this is the sixth

month with her, who was called barren.

For with God nothing shall be impossible.

And Mary said, Behold the handmaid of the Lord; be it unto me according to thy word. And the angel departed from her.

Luke 1:26-38

37 And it came to pass, that, when Elisabeth heard the salutation of Mary, the babe leaped in her womb; and Elisabeth was filled with the Holy Ghost:

And she spake out with a loud voice, and said. Blessed art thou among women, and blessed is the fruit of thy womb.

And whence is this to me, that the mother of my Lord should come to me?

For, lo, as soon as the voice of thy salutation sounded in mine ears, the babe leaped in my womb for joy.

And blessed is she that believed: for there shall be a performance of those things which were told her from the Lord.

And Mary said, My soul doth magnify the Lord,
And my spirit hath rejoiced in God my Saviour.

For he hath regarded the low' estate of his handmaiden: for, behold, from henceforth all generations shall call me blessed.

Luke 1:41-48

38 Now it came to pass, as they went, that he entered into a certain village: and a certain woman named Martha received him into her house.

And she had a sister called Marys which also sat at Jesus' feet, and heard his word.

But Martha was cumbered about much serving, and came to him, and said, Lord, dost thou not care that my sister hath left me to serve alone? bid her therefore that she help me.

And Jesus answered and said unto her, Martha, Martha, thou art careful and troubled about many things;

But one thing is needful: and Mary hath chosen that good part, which shall not be taken away from her.

Luke 10:38-42

39 The first day of the week cometh Mary Magdalene early, when it was yet dark, unto the sepulchre, and seeth the stone taken away from the sepulchre....

But Mary' stood without at the sepulchre weeping: and as she wept, she stooped down, and looked into the sepulchre.

And seeth two angels in white sitting, the one at the head, and the other at the feet, where the body of Jesus had lain.

And they say unto her, Woman, why weepest thou? She saith unto them, Because they have taken away my Lord, and I know not where they have laid him.

And when she had thus said, she turned herself back, and saw Jesus standing, and knew not that it was Jesus.

Jesus saith unto her, Woman, why weepest thou? whom seekest thou? She, supposing him to be the gardener, saith unto him, Sir, if thou have borne him hence, tell me where thou hast laid him, and I will take him away.

Jesus saith unto her, Mary. She turned herself, and saith unto him, Rab-bo-ni; which is to say, Master.

John 20:1-16

40 For a man indeed ought not to cover his head, forasmuch as he is the image and glory of God: but the woman is the glory of the man.

For the man is not of the woman; but the woman of the man.

Neither was the man created for the woman; but the woman for the man.

I Corinthians 11:7-9

41 Doth not even nature itself teach you, that, if a man have long hair, it is a shame unto him?

But if a woman have long hair, it is a glory to her: for her hair is given her for a covering,

I Corinthians 11:14-15

42 Let your women keep silence in the churches: for it is not permitted unto them to speak; but they are commanded to be under obedience, as also saith the law.

And if they will learn anything, let them ask their husbands at home: for it is a shame for women to speak in the church.

I Corinthians 14:34-35

43 I will. . . that women adorn themselves in modest apparel, with shamefacedness and sobriety; not with broided hair, or gold, or pearls, or costly array;

But (which becometh women professing godliness) with good works.

Let the woman learn in silence with all subjection.

But I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence.

For Adam was first formed, then Eve.

And Adam was not deceived, but the woman being deceived was in the transgression.

I Timothy 2:8-14

44 Likewise, ye wives, be in subjection to your own husbands; that, if any obey not the word, they also may without the word be won by the conversation of the wives;

While they behold your chaste conversation coupled with fear.

Whose adorning let it not be that outward adorning of plaiting the hair, and of wearing of gold, or of putting on of apparel;

But let it be the hidden man of the heart, in that which is not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price.

For after this manner in the old time the holy women also, who trusted in God, adorned themselves, being in subjection unto their own husbands:

Even as Sara obeyed Abraham, calling him lord: whose daughters ye are, as long as ye do well, and are not afraid with any amazement.

Likewise, ye husbands, dwell with them according to knowledge, giving honour unto the wife, as unto the weaker vessel, and as being heirs together of the grace of life; that your prayers be not hindered.

I Peter 3:1-7

45 Women from fourteen years old are flattered by men with the title of mistresses. Therefore, perceiving that they are regarded only as qualified to give men pleasure, they begin to adorn themselves, and in that to place all their

hopes. It is worth while, therefore, to try that they may perceive themselves honored only so far as they appear beautiful in their demeanor and modestly virtuous,

Epictetus, Enchiridion, XL

46 During this debate Severus Caecina proposed that no magistrate who had obtained a province should be accompanied by his wife. He began by recounting at length how harmoniously he had lived with his wife, who had borne him six children, and how in his own home he had observed what he was proposing for the public, by having kept her in Italy, though he had himself served forty campaigns in various provinces. "With good reason," he said, "had it been formerly decided that women were not to be taken among our allies or into foreign countries. A train of women involves delays through luxury in peace and through panic in war, and converts a Roman army on the march into the likeness of a barbarian progress. Not only is the sex feeble and unequal to hardship, but, when it has liberty it is spiteful, intriguing and greedy of power. They show themselves off among the soldiers and have the centurions at their beck. Lately a woman had presided at the drill of the cohorts and the evolutions of the legions. You should yourselves bear in mind that, whenever men are accused of extortion, most of the charges are directed against the wives. It is to these that the vilest of the provincials instantly attach themselves; it is they who undertake and settle business; two persons receive homage when they appear; there are two centres of government, and the women's orders tire the more despotic and intemperate. Formerly they were restrained by the Oppian and other laws; now, loosed from every

bond, they rule our houses, our tribunals, even our armies."

Tacitus, Annals, III, 33

47 Just as in the human soul there is one element which takes thought and dominates, another which is subjected to obedience, so woman has been created corporeally for man: for though she has indeed a nature like that of man in her mind and rational intelligence, yet by her bodily sex she is subjected to the sex of her husband, much as appetite, which is the source of action, must be subjected to reason.

Augustine, Confessions, XIII, 32

48 From the words, "Till we all come to a perfect man, to the measure of the age of the fullness of Christ," and from the words, "Conformed to the image of the Son of God," some conclude that women shall not rise women, but that all shall be men, because God made man only of earth and woman of the man. For my part, they seem to be wiser who make no doubt that both sexes shall rise. For there shall be no lust, which is now the cause of confusion. For before they sinned, the man and the woman were naked and were not ashamed. From those bodies, then, vice shall be withdrawn, while nature shall be preserved, And the sex of woman is not a vice, but nature. It shall then indeed be superior to carnal intercourse and child-bearing; nevertheless the female members shall remain adapted not to the old uses, but to a new beauty, which, so far from provoking lust, now extinct, shall excite praise to the wisdom and clemency of God, who both made

what was not and delivered from corruption what He made.

Augustine, City of God, XXII, 17

49 It was necessary for woman to be made, as the Scripture says, as a helper to man; not, indeed, as a helpmate in other works, as some say, since man can be more efficiently helped by another man in other works, but as a helper in the work of generation.

Aquinas, Summa Theologica, I, 92, 1

50 As regards the particular nature, woman is defective and misbegotten, for the active force in the male seed tends to the production of a perfect likeness in the masculine sex, while the production of woman comes from defect in the active force or from some material indisposition, or even from some external change, such as that of a south wind, which is moist, as the Philosopher observes. On the other hand, in relation to the universal nature, woman is not misbegotten, but is included in nature's intention as ordered to the work of generation. Now the universal intention of nature depends on God, Who is the universal Author of nature. Therefore, in producing nature, God formed not only the male but also the female.

Aquinas, Summa Theologica, I, 92. 1

51 It was right for the woman to be made from a rib of man. First, to signify the social union of man and woman, for the woman should neither use authority over man, and so she was not made from his head; nor was it right for her to be subject to man's contempt as his slave, and so she was not made from his feet. Secondly, for the

sacramental signification; for from the side of Christ sleeping on the Cross the Sacraments flowed— namely, blood and water—on which the Church was established.

Aquinas, Summa Theologica, I. 92, 3

52 Already were mine eyes fixed on my Lady's countenance again, and my mind with them, from all other intent removed; and she smiled not, but: "Were I to smile," she [Beatrice] began, "thou wouldst be such as was Semele, when she turned to ashes; for my beauty, which, along the steps of the eternal palace kindleth more, as thou hast seen, the higher the ascent, were it not tempered, so doth glow as that thy mortal power, at its flash, would be like foliage that the thunder shattereth.

Dante, Paradiso, XXI, 1

53 Nine times now, since my birth, the heaven of light had turned almost to the same point in its own gyration, when the glorious Lady of my mind, who was called Beatrice by many who knew not what to call her, first appeared before my eyes. She had already been in this life so long that in its course the starry heaven had moved toward the region of the East one of the twelve parts of a degree; so that at about the beginning of her ninth year she appeared to me, and I near the end of my ninth year saw her. She appeared to me clothed in a most noble color, a modest and becoming crimson, and she was girt and adorned in such wise as befitted her very youthful age. At that instant, I say truly that the spirit of life, which dwells in the most secret chamber of the heart, began to tremble with such violence that it appeared fearfully in the least pulses, and, trembling, said these words: *Ecce*

deus fortior me, qui veniens dominabitur mihi [Behold a god stronger than I, who coming shall rule over me].

Dante, Vita Nuova, II

54 Ladies that have intelligence of Love,
I of my lady wish with you to speak;
Not that I can believe to end her praise,
But to discourse that I may case my mind.
I say that when I think upon her worth.
So sweet doth Love make himself feel to me.
That if I then should lose not hardihood.
Speaking, I should enamour all mankind.
And I wish not so loftily to speak
As to become, through fear of failure, vile;
But of her gentle nature I will treat
In manner light compared with her desert.

Dante, Vita Nuova, XIX

55 Within her eyes my lady beareth Love,
So that whom she regards is gentle made;
All toward her turn, where'er her steps are stayed,
And whom she greets, his heart doth trembling move;
So that with face cast down, all pale to view,
For every fault of his he then doth sigh;
Anger and pride away before her fly:—
Assist me, dames, to pay her honor due.

Dante, Vita Nuova, XXI

56 After this sonnet, a wonderful vision appeared to me, in which I saw things which made me resolve to speak no more of this blessed one, until I could more worthily treat of her. And to attain to this I study to the utmost of my

power, as she truly knows. So that, if it shall please Him through whom all things live, that my life be prolonged for some years, I hope to say of her what was never said of any woman [i.e., as it turned out. The Divine Comedy].

And then may it please Him who is the Lord of Grace, that my soul may go to behold the glory of its lady, namely, of that blessed Beatrice, who in glory looks upon the face of Him *qui est per omnia saecula benedictus* [who is blessed forever].

Dante, Vita Nuova, XLIII

57 We women have, if I am not to lie,
In this love matter, a quaint fantasy;
Look out a thing we may not lightly have.
And after that we'll cry all day and crave.
Forbid a thing, and that thing covet we;
Press hard upon us, then we turn and flee.
Sparingly offer we our goods, when fair;
Great crowds at market make for dearer ware,
And what's too common brings but little price;
All this knows every woman who is wise.

Chaucer, Canterbury Tales: Wife of Bath's Prologue

58 By God, if women had but written stories,
As have these clerks within their oratories,
They would have written of men more wickedness
Than all the race of Adam could redress.

Chaucer, Canterbury Tales: Wife of Bath's Prologue

59 Command was given for silence in the hall.
And that the knight should tell before them all
What thing all worldly women love the best.

This knight did not stand dumb, as does a beast,
But to this question presently answered
With manly voice, so that the whole court heard:
"My liege lady, generally," said he,
"Women desire to have the sovereignty
As well upon their husband as their love,
And to have mastery their man above;
This thing you most desire, though me you kill
Do as you please, I am here at your will."

In all the court there was no wife or maid
Or widow that denied the thing he said,
But all held, he was worthy to have life.

Chaucer, Canterbury Tales: Wife of Bath's Tale

60 *The Friar*. There is, indeed, no serpent so cruel,
When man treads on his tail, nor half so fell,
As woman is when she is filled with ire;
Vengeance is then the whole of her desire.

Chaucer, Canterbury Tales: Summoner's Tale

61 "Eh! By God's mercy!" cried our host. Said he:
"Now such a wife I pray God keep from me!
Behold what tricks, and lo, what subtleties
In women are. For always busy as bees
Are they, us simple men thus to deceive,
And from the truth they turn aside and leave."

Chaucer, Canterbury Tales: Merchant's Tale, Epilogue

62 *Merchants Wife*. And well you know that women naturally
Desire six things, and even so do I.
For women all would have their husbands be

Hardy, and wise, and rich, and therewith free.
Obedient to the wife, and fresh in bed.

Chaucer, Canterbury Tales: Shipman's Tale

63 *Chanticleer*. For there is truth in *In principio Mulier est hominis confusio*

(Madam, the meaning of this Latin is.
Woman is man's delight and all his bliss).

Chaucer, Canterbury Tales: Nun's Priest's Tale

64 But I'm a vulgar man, and thus say I,
There is no smallest difference, truly,
Between a wife who is of high degree,
If of her body she dishonest be,
And a poor unknown wench, other than this—
If it be true that both do what's amiss—
The gentlewoman, in her state above,
She shall be called his lady, in their love;
And since the other's but a poor woman,
She shall be called his wench or his leman.
And God knows very well, my own dear brother,
Men lay the one as low as lies the other.

Chaucer, Canterbury Tales: Manciple's Tale

65 Many good things may be perceived in a wife. First, there is the Lord's blessing, namely, offspring. Then there is community of property. These are some of the pre-eminently good things that can overwhelm a man. Imagine what it would be like without this sex. The home, cities, economic life, and government would virtually disappear. Men can't do without women. Even if it were

possible for men to beget and bear children, they still couldn't do without women.

Luther, Table Talk, 1658

66 A woman that is neither fair nor good, to what use serves she? To make a nun of, said Gargantua. Yea, said the monk, to make shirts and smocks.

Rabelais, Gargantua and Pantagruel, I, 52

67 *Panurge*. Where there is no woman, I mean, the mother of a family, and wife in the union of a lawful wedlock, the crazy and diseased are in danger of being ill used, and of having much brabbling and strife about them: as by dear experience hath been made apparent in the persons of popes, legates, cardinals, bishops, abbots, priors, priests, and monks: but there, assure yourself, you shall not find me.

Rabelais, Gargantua and Pantagruel, III, 9

68 *Panurge*. The greater part of women, whatever it be that they see, do always represent unto their fancies, think and imagine, that it hath some relation to the sugared entering of the goodly ithy-phallos, and grafting in the cleft of the overturned tree the quickset-imp of the pin of copulation. Whatever signs, shews, or gestures we shall make, or whatever our behaviour, carriage or demeanour shall happen to be in their view and presence, they will interpret the whole in reference to the act of androgynation, and the culbutizing exercise; by which means we shall be abusively disappointed of our designs, in regard that she will take all our signs for nothing else but tokens and representations of our desire to entice her

unto the lists of a Cyprian combat, or catsenconny skirmish. Do you remember what happened at Rome two hundred and three - score years after the foundation thereof? A young Roman gentleman encountering by chance at the foot of Mount Celion with a beautiful Latin lady named Verona, who from her very cradle upwards had alwap been deaf and dumb, very civilly asked her, not without a chironomatic Italianising of his demand, with various jeetigation of his fingers, and other gesticulations, as yet customary amongst the speakers of that country, What senators, in her descent from the top of the hill, she had met with going up thither. For you are to conceive, that he, knowing no more of her deafness than dumbness, was ignorant of both. She in the meantime, who neither heard nor understood so much as one word of what he said, straight imagined, by all that she could apprehend in the lively gesture of his manual signs, that what he then required of her was, what herself had a great mind to, even that which a young man doth naturally desire of a woman. Then was it, that by signs, which in all occurrences of venereal love are incomparably more attractive, valid and efficacious than words, she beckoned to him to come along with her to her house; which when he had done, she drew him aside to a privy room, and then made a most lively alluring sign unto him, to show that the game did please her. Whereupon, without any more advertisement, or so much as the uttering of one word on either side, they fell to, and bringuardised it lustily.

Rabelais, Gargantua and Pantagruel, III, 19

69 *Rondibilis*. The nature of women is set forth before our eyes, and represented to us by the moon in divers other

things as well as in this, that they squat, skulk, constrain their own inclinations, and, with all the cunning they can, dissemble and play the hypocrite in the sight and presence of their husbands; who come no sooner to be out of the way, but that forthwith they take their advantage, pass the time merrily, desist from all labour, frolic it, gad abroad, lay aside their counterfeit garb, and openly declare and manifest the interior of their dispositions, even as the moon, when she is in conjunction with the sun, is neither seen in the heavens, nor on the earth, but in her opposition, when remotest from him shineth in her greatest fulness, and wholly appeareth in her brightest splendour whilst it is night. Thus women are but women.

When I say womankind, I speak of a sex so frail, so variable, so changeable, so fickle, inconstant, and imperfect, that, in my opinion, Nature, under favour nevertheless, of the prime honour and reverence which is due unto her, did in a manner mistake the road which she had traced formerly, and stray exceedingly from that excellence of providential judgment, by the which she had created and formed all other things, when she built, framed, and made up the woman. And having thought upon it a hundred and five times, I know not what else to determine therein, save only that in the devising, hammering, forging, and composing of the woman, she hath had a much tenderer regard, and by a great deal more respectful, heed to the delightful consortship, and sociable delectation of the man, than to the perfection and accomplishment of the individual womanishness or muliebrity, The divine philosopher Plato was doubtful in what rank of living creatures to place and collocate them, whether amongst the rational animals, by elevating them

to an upper seal in the specifical classes of humanity; Of with the irrational, by degrading them to a lower bench on the opposite side, of a brutal kind, and mere bestiality. For nature hath posited in a privy, secret and intestine place of their bodies, a sort of member, by some not impertinently termed an animal, which is not to be found in men. Therein sometimes are engendered certain humours, so saltish, brackish, clammy, sharp, nipping, tearing, prickling, and most eagerly tickling, that by their stinging acrimony, rending nitrosity, figging itch, wriggling mordicancy, and smarting salsitude, (for the said member is altogether sinewy, and of a most quick and lively feeling,) their whole body is shaken and ebrangled their senses totally ravished and transported, the operations of their judgment and understanding utterly confounded, and all disordinate passions and perturbations of the mind throughly and absolutely allowed, admitted, and approved of; yea, in such sort, that if nature had not been so favourable unto them as to have sprinkled their forehead with a little tincture of bashfulness and modesty, you should see them in a so frantic mood run mad after lechery, and hie apace up and down with haste and lust, in quest of, and to fix some chamber-standard in their Paphian ground, that never did the Proetides, Mimallonides, nor Lyaeon Thyads deport themselves in the time of their Bacchanalian festivals more shamelessly, or with a so effronted and brazen-faced impudency; because this terrible animal is knit unto, and hath an union with all the chief and most principal parts of the body, as to anatomists is evident. Let it not here be thought strange that I should call it an animal, seeing therein I do no otherwise than follow and adhere to the doctrine of the academic and peripatetic

philosophers. For if a proper motion be a certain mark and infallible token of the life and animation of the mover, as Aristotle writeth, and that any such tiring as moveth of itself ought to be held animated, and of a living nature, then assuredly Plato with very good reason did give it the denomination of an animal, for that he perceived and observed in it the proper and self-stirring motions of suffocation, precipitation, corrugation, and of indignation, so extremely violent, that often-times by them is taken and removed from the woman all other sense and moving whatsoever, as if she were in a swoounding lipothymy, benumbing syncope, epileptic, apoplectic palsy, and true resemblance of a pale-faced death.

Rabelais, Gargantua and Pantagruel III, 32

70 What is the use of that art of virginal shame, that sedate coldness, that severe countenance, that profession of ignorance of things that they know better than we who instruct them in them, but to increase in us the desire to conquer, to overwhelm and subdue to our appetite all this ceremony and these obstacles? For there is not only pleasure but also glory in driving wild and seducing that soft sweetness and that childlike modesty, and in reducing a proud and commanding gravity to the mercy of our ardor.

Montaigne, Essays, 11, 15, That Our Desire

71 If the wellborn ladies will take my advice, they will content themselves -with displaying their own natural riches. They conceal and cover up their own beauties under foreign beauties. It is very simple-minded to put

out your own light so as to shine by a borrowed light. They are buried and entombed under art.... The reason is that they do not know themselves well enough. The world has nothing more beautiful; it is for them to do honor to the arts and to decorate decoration. What do they need but to live beloved and honored? They possess and know only too much for this; they need only arouse a little and rekindle the faculties that are in them. When I see them intent on rhetoric, astrology, logic, and similar drugs, so vain and useless for their needs, I begin to fear that the men who advise them to do this, do so as a means of gaining authority over them under this pretext. For what other excuse could I find for them? Enough that without our help they can adjust the charm of their eyes to gaiety, severity, or sweetness, season a "no" with harshness, uncertainty, or encouragement, and that they need no interpreter for the speeches we make in courting them. With this knowledge they hold the whip hand and master the schoolmasters and the school.

If, however, it vexes them to yield to us in any matter whatever, and if they want, out of curiosity, to have a share in book learning, poetry is an amusement suited to their needs; it is a wanton and subtle art, in fancy dress, wordy, all pleasure, all show, like themselves. They will also derive various benefits from history. In philosophy, from the part that is useful for life, they will take the lessons that will train them to judge our humors and characteristics, to defend themselves against our treacheries, to control the impetuosity of their own desires, to husband their freedom, to prolong the pleasures of life, and to bear humanly the inconstancy of a lover, the rudeness of a husband, and the annoyance of

years and wrinkles; and things of that sort. That is the most I should assign to them in the matter of learning.

Montaigne, Essays, III, 3, Three Kinds of Association

72 Women are not wrong at all when they reject the rules of life that have been introduced into the world, inasmuch as it is the men who have made these without them. There is naturally strife and wrangling between them and us: the closest communion we have with them is still tumultuous and tempestuous.

Montaigne, Essays, III, 5, On Some Verses of Virgil

73 The most useful and honorable science and occupation for a woman is the science of housekeeping. I know some that are miserly, very few that are good managers. This is her ruling quality, which a man should seek out before any other, as the sole dowry on which the ruin or salvation of our households depends.

Montaigne, Essays, III, 9, Of Vanity

74 *Demetrius*. She is a woman, therefore may be woo'd;
She is a woman, therefore may be won.

Shakespeare, Titus Andronicus, II, i, 82

75 *Julia*. Maids, in modesty, say "no" to that
Which they would have the profferer construe "ay."

Shakespeare, Two Gentlemen of Verona, I, ii, 55

76 *Romeo*. What lady is that, which doth enrich the hand
Of yonder knight?

Servingman. I know not, sir.

Rom. O, she doth teach the torches to burn bright!
It seems she hangs upon the cheek of night
Like a rich jewel in an Ethiope's ear;
Beauty too rich for use, for earth too dear!
So shows a snowy dove trooping with crows,
As yonder lady o'er her fellows show's.
The measure done, I'll watch her place of stand,
And, touching hers, make blessed my rude hand.
Did my heart love till now? forswear it, sight!
For I ne'er saw true beauty till this night.

Shakespeare, Romeo and Juliet, I, v, 43

77 *Portia.* You see me, Lord Bassanio, where I stand.
Such as I am: though for myself alone
I would not be ambitious in my wish.
To wish myself much better; yet, for you
I would be trebled twenty times myself;
A thousand times more fair, ten thousand times More
rich;
That only to stand high in your account.
I might in virtues, beauties, livings, friends,
Exceed account; but the full sum of me
Is sum of something, which, to term in gross.
Is an unlesson'd girl, unschool'd, unpractised;
Happy in this, she is not yet so old
But she may learn; happier than this,
She is not bred so dull but she can learn;
Happiest of all is that her gentle spirit
Commits itself to yours to be directed,
As from her lord, her governor, her king.

Shakespeare, Merchant of Venice, III, ii, 150

78 *Balthasar*. Sigh no more, ladies, sigh no more,
Men were deceivers ever,
One foot in sea and one on shore,
To one thing constant never:
Then sigh not so, but let them go,
And be you blithe and bonny,
Converting all your sounds of woe
Into Hey nonny, nonny,

Shakespeare, Much Ado About Nothing, II, iii, 64

79 *Portia*. I grant I am a woman; but withal
A woman that Lord Brutus took to wife:
I grant I am a woman; but withal
A woman well-reputed, Cato's daughter.
Think you I am no stronger than my sex.
Being so father'd and so husbanded?
Tell me your counsels, I will not disclose 'em:
I have made strong proof of my constancy.
Giving myself a voluntary wound
Here, in the thigh: can I bear that with patience.
And not my husband's secrets?

Brutus.

O ye gods, Render me worthy of this noble wife!

Shakespeare, Julius Caesar, II, i, 292

80 *Rosalind*. Do you not know I am a woman? when I think, I
must speak.

Shakespeare, As You Like It, III, ii, 263

81 It was a lover and his lass,
With a hey, and a ho, and a hey nonino,
That o'er the green corn-field did pass

In the spring time, the only pretty ring lime.
When birds do sing, hey ding a ding, ding:
Sweet lovers love the spring.

Shakespeare, As You Like It, V, iii, 17

82 *Duke*. Let still the woman take
An elder than herself; so wears she to him.
So sways she level in her husband's heart:
For, boy, however we do praise ourselves,
Our fancies are more giddy and unfirm,
More longing, wavering, sooner lost and worn.
Than women's arcs.

Viola. I think it well, my lord.

Duke. Then let thy love be younger than thyself.
Or thy affection cannot hold the bent;
For women are as roses, whose fair flower
Being once display'd, doth fall that very hour.

Shakespeare, Twelfth Night, II, iv, 30

83 *Duke*. There is no woman's sides
Can bide the beating of so strong a passion
As love doth give my heart; no woman's heart
So big, to hold so much; they lack retention.
Alas, their love may be call'd appetite,
No motion of the liver, but the palate,
That suffer surfeit, cloyment, and revolt;
But mine is all as hungry as the sea.
And can digest as much: make no compare
Between that love a woman can bear me
And that I owe Olivia.

Viola. Ay, but I know—

Duke. What dost thou know?

Vio. Too well what love women to men may owe.
In faith, they are as true of heart as we.
My father had a daughter loved a man.
As it might be, perhaps, were I a woman,
I should your lordship

Duke. And what's her history?

Vio. A blank, my lord. She never told her love,
But let concealment, like a worm i' the bud,
Feed on her damask cheek: she pined in thought,
And with a green and yellow melancholy
She sat like patience on a monument,
Smiling at grief. Was not this love indeed?

Shakespeare, Twelfth Night, II, iv, 96

84 *Hamlet.* Frailty, thy name is woman!

Shakespeare, Hamlet, I, ii, 146

85 *Hamlet.* If thou wilt needs marry, marry a fool; for wise
men know well enough what monsters you make of them.

Shakespeare, Hamlet, III, i, 141

86 *Iago.* Come on, come on; you are pictures out of doors.
Bells in your parlours, wild-cats in your kitchens,
Saints in your injuries, devils being offended,
Players in your housewifery, and housewives in your
beds.

Desdemona, O, fie upon thee, slanderer!

Shakespeare, Othello, II, i, 110

87 *Lear.* Behold yond simpering dame,
Whose face between her forks presages snow;
That minces virtue, and does shake the head

To hear of pleasure's name;
The fitchew, nor the soiled horse, goes to't
With a more riotous appetite.
Down from the waist they are Centaurs,
Though women all above;
But to the girdle do the gods inherit.
Beneath is all the fiends';
There's hell, there's darkness, there's the sulphurous pit,
 Burning, scalding, stench, consumption; fie, fie, fie!
pah, pah! Give me an ounce of civet, good apothecary, to
sweeten my imagination.

Shakespeare, Lear, IV, vi, 120

88 *Lear*. Cordelia, Cordelia! stay a little. Ha!
What is't thou say'st. Her voice was ever soft.
Gentle, and low, an excellent thing in woman.

Shakespeare, Lear, V, iii, 271

89 *Enobarbus*. When she first met Mark Antony, she pursed
up his heart, upon the river of Cydnus.

Agrippa. There she appeared indeed; or my reporter
devised well for her.

Eno. I will tell you.

The barge she sat in, like a burnish'd throne,
Burn'd on the water. The poop was beaten gold;
Purple the sails, and so perfumed that
The winds were love-sick with them; the oars were silver,
 Which to the tune of flutes kept stroke, and made
The water which they beat to follow faster,
 As amorous of their strokes. For her own person,
It beggar'd all description: she did lie
In her pavilion—cloth-of-gold of tissue—

O'er-picturing that Venus where we see
The fancy outwork nature. On each side her
Stood pretty dimpled boys, like smiling Cupids,
With divers-colour'd fans, whose wind did seem
To glow the delicate cheeks which they did cool.
And what they undid did.

Agr. O, rare for Antony!

Eno. Her gentlewomen, like the Nereides,
So many mermaids, tended her i' the eyes.
And made their bends adornings. At the helm
A seeming mermaid steers; the silken tackle
Swell with the touches of those flower-soft hands,
That yarely frame the office. From the barge
A strange invisible perfume hits the sense
Of the adjacent wharfs. The city cast
Her people out upon her; and Antony,
Enthroned i' the market-place, did sit alone,
Whistling to the air; which, but for vacancy,
Had gone to gaze on Cleopatra too
And made a gap in nature.

Agr. Rare Egyptian!

Eno. Upon her landing, Antony sent to her,
Invited her to supper. She replied.
It should be better he became her guest;
Which she entreated. Our courteous Antony,
Whom ne'er the word of "No" woman heard speak.
Being barber'd ten times o'er, goes to the feast.
And for his ordinary pays his heart
For what his eyes eat only.

Agr. Royal wench!

She made great Caesar lay his sword to bed.
He plough'd her and she cropp'd.

Eno. I saw her once
Hop forty paces through the public street;
And having lost her breath, she spoke, and panted,
That she did make defect perfection.
And, breathless, power breathe forth.

Mecaenas. Now Antony must leave her utterly.

Eno. Never; he will not.
Age cannot wither her, nor custom stale
Her infinite variety. Other women cloy
The appetites they feed, but she makes hungry
Where most she satisfies; for vilest things
Become themselves in her, that the holy priests
Bless her when she is riggish.

Shakespeare, Antony and Cleopatra, II, ii, 191

90 *Caesar.* Women are not
In their best fortunes strong; but want will perjure
The ne'er-touch'd vestal.

Shakespeare, Antony and Cleopatra, III, xii, 29

91 *Clown.* You must not think I am so simple but I know the
devil himself will not eat a woman. I know that a woman
is a dish for the gods, if the devil dress her not. But, truly,
these same whoreson devils do the gods great harm in
their women; for in every ten that they make, the devils
mar five.

Shakespeare, Antony and Cleopatra, V, ii, 273

92 *Posthumus.* Is there no way for men to be but women
Must be half-workers? We are all bastards;
And that most venerable man which I
Did call my father, was I know not where

When I was stamp'd; some coiner with his tools
Made me a counterfeit. Yet my mother seem'd
The Dian of that time; so doth my wife
The nonpareil of this. O, vengeance, vengeance!
Me of my lawful pleasure she restrain'd
And pray'd me oft forbearance; did it with
A pudency so rosy the sweet view on't
Might well have warm'd old Saturn; that I thought her
As chaste as unsunn'd snow. O, all the devils!
This yellow lachimo, in an hour—was't not?—
Or less—at first?—perchance he spoke not, but,
Like a full-acorn'd boar, a German one.
Cried "O!" and mounted; found no opposition
But what he look'd for should oppose and she
Should from encounter guard. Could I find out
The woman's part in me! For there's no motion
That tends to vice in man, but I affirm
It is the woman's part: be it lying, note it,
The woman's; flattering, hers; deceiving, hers;
Lust and rank thoughts, hers, hers; revenges, hers;
Ambitions, covetings, change of prides, disdain,
Nice longing, slanders, mutability.
All faults that may be named, nay, that hell knows,
Why, hers, in part or all; but rather, all;
For even to vice
They are not constant, but are changing still
One vice, but of a minute old, for one
Not half so old as that. I'll write against them.
Detest them, curse them. Yet 'tis greater skill
In a true hate, to pray they have their will;
The very devils cannot plague them better.

Shakespeare, Cymbeline, II, v, 1

93 *Anne*. By my troth and maidenhead,
I would not be a queen.

Old Lady. Beshrew me, I would,
And venture maidenhead for 't; and so would you.
For all this spice of your hypocrisy.
You, that have so fair parts of woman on you,
Have too a woman's heart; which ever yet
Affected eminence, wealth, sovereignty;
Which, to say sooth, are blessings; and which gifts,
Saving your mincing, the capacity
Of your soft cheveril conscience would receive,
If you might please to stretch it.

Shakespeare, Henry VIII, II, iii, 24

94 *Lothario*. You must remember, my Friend, that the Nature
of Women is, at best, but weak and imperfect; and for
that reason we should be so far from casting Rubs in its
way, that we ought, with all imaginable Care, to remove
every Appearance that might hinder its Course to that
Perfection it wants, which is Virtue.

If you believe the Naturalists, the Ermine is a very
white little Creature; when the Hunters have found its
Haunts, they surround it almost with Dirt and Mire,
towards which the Ermine being forc'd to fly, rather than
sully its native White with Dirt, it suffers itself to be
taken, preferring its Colour to its Liberty and Life. The
virtuous Woman is our Ermine, whose Chastity is whiter
than Snow; but to preserve its Colour unsully'd, you must
observe just the contrary Method: The Addresses and
Services of an importunate Lover, are the Mire into which
you should never drive a Woman; for 'tis ten to one she
will not be able to free herself and avoid it, being but too
apt to stumble into it; and therefore That should be

always remov'd, and only the Candour and Beauty of Virtue, and the Charms of a good Fame and Reputation plac'd before her. A good Woman is also not unlike a Mirrour of Crystal, which will infallibly be dimm'd and stain'd by breathing too much upon it: She must rather be us'd like the Reliques of Saints, ador'd but not touch'd; or like a Garden of curious tender Flowers, that may at a distance gratify the Eye, but are not permitted by the Master to be trampled on or touch'd by every Beholder.

Cervantes, Don Quixote, I, 33

95 Two of far nobler shape erect and tall,
Godlike erect, with native Honour clad
In naked Majestic seemd Lords of all.
And worthie seemd, for in thir looks Divine
The image of thir glorious Maker shon,
Truth, Wisdome, Sanctitude severe and pure.
Severe, but in true filial freedom plac't;
Whence true autoritie in men; though both
Not equal, as their sex not equal seemd;
For contemplation hee and valour formd,
For softness shee and sweet attractive Grace,
Hee for God only, shee for God in him:
His fair large Front and Eye sublime declar'd
Absolute rule; and Hyacinthin Locks
Round from his parted forelock manly hung
Clustering, but not beneath his shoulders broad:
Shee as a vail down to the slender waste
Her unadorned golden tresses wore
Dissheveld, but in wanton ringlets wav'd
As the Vine curies her tendrils, which impli'd
Subjection, but requir'd with gentle sway,

And by her yeilded, by him best receivd,
Yeilded with coy submission, modest pride,
And sweet reluctant amorous delay.

Milton, Paradise Lost, IV, 288

96 So hand in hand they passd, the lovliest pair
That ever since in loves imbraces met,
Adam the goodliest man of men since born
His Sons, the fairest of her Daughters Eve.

Milton, Paradise Lost, IV, 321

97 To whom [Adam] thus Eve with perfet beauty adorn'd.
My Author and Disposer, what thou bidst
Unargu'd I obey; so God ordains,
God is thy Law, thou mine: to know no more
Is womans happiest knowledge and her praise.
With thee conversing I forget all time,
All seasons and thir change, all please alike.

Milton, Paradise Lost, IV, 634

98 Who [God] stooping op'nd my left side, and took
From thence a Rib, with cordial spirits warme.
And Life-blood streaming fresh; wide was the wound.
But suddenly with flesh fill'd up & heal'd:
The Rib he form'd and fashond with his hands;
Under his forming hands a Creature grew,
Manlike, but different sex, so lovly faire,
That what seem'd fair in all the World, seem'd now
Mean, or in her summd up, in her contain'd
And in her looks, which from that time infus'd
Sweetness into my heart, unfelt before,

And into all things from her Aire inspir'd
The spirit of love and amorous delight.

Milton, Paradise Lost, VIII, 465

99 *Adam*. When I approach
Her loveliness, so absolute she seems
And in her self compleat, so well to know
Her own, that what she wills to do or say,
Seems wisest, vertuousest, discreetest, best;
All higher knowledge in her presence falls
Degraded, Wisdom in discourse with her
Looses discount'nanc't, and like folly shewes;
Authoritie and Reason on her waite,
As one intended first, not after made
Occasionally; and to consummate all,
Greatness of mind and nobleness thir seat
Build in her loveliest, and create an awe
About her, as a guard Angelic plac't.

Milton, Paradise Lost, VIII, 546

100 *Adam*. Thus it shall befall
Him who to worth in Women overtrusting
Lets her Will rule; restraint she will not brook,
And left to her self, if evil thence ensue,
Shee first his weak indulgence will accuse.

Milton, Paradise Lost, IX, 1182

101 Son of God. Was shee thy God, that her thou didst obey
Before his voice, or was shee made thy guide,
Superior, or but equal, that to her Thou did'st resigne thy
Manhood, and the Place
Wherein God set thee above her made of thee, And for

thee, whose perfection farr excell'd
Hers in all real dignitie: Adorn'd
She was indeed, and lovely to attract
Thy Love, not thy Subjection, and her Gifts
Were such as under Government well seem'd,
Unseemly to beare rule, which was thy part
And person, had'st thou known thy self aright.

Milton, Paradise Lost, X, 145

102 *Adam*. O why did God,
Creator wise, that peopl'd highest Heav'n
With Spirits Masculine, create at last
This noveltie on Earth, this fair defect
Of Nature, and not fill the World at once
With Men as Angels without Feminine,
Or find some other way to generate
Mankind? this mischief had not then befall'n,
And more that shall befall, innumerable
Disturbances on Earth through Femal snares,
And straight conjunction with this Sex.

Milton, Paradise Lost, X, 888

103 *Chorus of Danites*. Wisest Men
Have err'd, and by bad Women been deceiv'd;
And shall again.

Milton, Samson Agonistes, 210

104 *Dalila*. In argument with men a woman ever
Goes by the worse, whatever be her cause.

Milton, Samson Agonistes, 903

105 *Dorine*. A woman always has her revenge ready.

Moliere, Tartuffe, II, ii

106 *Mirabell*. A fellow that lives in a windmill has not a more whimsical dwelling than the heart of a man that is lodged in a woman. There is no point of the compass to which they cannot turn, and by which they are not turned; and by one as well as another, for motion, not method, is their occupation. To know this, and yet continue to be in love, is to be made wise from the dictates of reason, and yet persevere to play the fool by the force of instinct.

Congreve, Way of the World, II, vii

107 *Mrs. Marwood*. O, man, man! Woman, woman! The devil's an ass: If I were a painter, I would draw him like an idiot, a driveler with a bib and bells. Man should have his head and horns, and woman the rest of him. Poor simple fiend!

Congreve, Way of the World, III, vii

108 In the female nurseries, the young [Lilliputian] girls of quality are educated much like the males, only they are dressed by orderly servants of their own sex, but always in the presence of a professor or deputy, until they come to dress themselves, which is at five years old. And if it be found, that these nurses ever presume to entertain the girls with frightful or foolish stories, or the common follies practised by chamber-maids among us; they are publickly whipped thrice about the city, imprisoned for a year, and banished for life to the most desolate parts of the country. Thus, the young ladies there are as much ashamed of being cowards and fools, as the men.

Swift, Gulliver's Travels, I, 6

109 Men, some to Business, some to Pleasure take;
But every Woman is at heart a Rake:
Men, some to Quiet, some to public Strife;
But every Lady would be Queen for life.

Pope, Moral Essays, Epistle II, 215

110 "I pity your country ignorance from my heart," cries the lady [Mrs. Western],—"Do you?" answered Western; "and I pity your town learning; I had rather be anything than a courtier, and a Presbyterian, and a Hanoverian too, as some people, I believe, are."—"If you mean me," answered she, "you know I am a woman, brother; and it signifies nothing what I am. Besides—"—"I do know you are a woman," cries the squire, "and it's well for thee that art one; if hadst been a man, I promise thee I had lent thee a flick long ago."—"Ay, there," said she, "in that flick lies all your fancied superiority. Your bodies, and not your brains, are stronger than ours. Believe me, it is well for you that you are able to beat us; or, such is the superiority of our understanding, we should make all of you what the brave, and wise, and witty, and polite are already—our slaves."

Fielding, Tom Jones, VI, 2

111 *Mrs. Fitzpatrick.* What is the reason, my dear, that we, who have understandings equal to the wisest and greatest of the other sex, so often make choice of the silliest fellows for companions and favourites? it raises my indignation to the highest pitch, to reflect on the numbers of women of sense who have been undone by fools.

Fielding, Tom Jones, XI, 4

112 Of civil Laws contrary to the Law of Nature. . . .

The law passed . . . , which condemned every woman, who, having carried on a criminal commerce did not declare it to the king before she married him, violated the regard due to natural modesty. It is as unreasonable to oblige a woman to make this declaration, as to oblige a man not to attempt the defence of his own life.

Montesquieu, Spirit of Laws, XXVI, 3

113 There is nothing which I would recommend more earnestly to my female readers than the study of history as an occupation, of all others, the best suited both to their sex and education, much more instructive than their ordinary books of amusement, and more entertaining than those serious compositions which are usually to be found in their closets. Among other important truths which they may learn from history they may be informed of two particulars, the knowledge of which may contribute very much to their quiet and repose: that our sex, as well as theirs, are far from being such perfect creatures as they are apt to imagine, and that Love is not the only passion which governs the male world, but is often overcome by avarice, ambition, vanity, and a thousand other passions.

Hume, Of the Study of History

114 All womankind, continued Trim... from the highest to the lowest, an' please your honour, love jokes; the difficulty is to know how they choose to have them cut; and there is no knowing that, but by trying, as we do with our artillery in the field, by raising or letting down their breeches, till we hit the mark.

I like the comparison, said my uncle Toby, better than the thing itself—

—Because your honour, quoth the corporal, loves glory, more than pleasure.

Sterne, Tristram Shandy, IX, 8

115 From the beginning of the world women have complained of the fickleness that is imputed to them in favour of the first new object which presents itself, and whose novelty is often its only merit. Many ladies (it must be confessed, despite the infinite respect we have for them) have treated men as they complain they have themselves been treated; and the story of Gioconda is much older than Ariosto.

Voltaire, Philosophical Dictionary: New Novelties

116 I must not forget that precious half of the Republic, which makes the happiness of the other; and whose sweetness and prudence preserve its tranquillity and virtue. Amiable and virtuous daughters of Geneva, it will be always the lot of your sex to govern ours. Happy are we, so long as your chaste influence, solely exercised within the limits of conjugal union, is exerted only for the glory of the State and the happiness of the public. It was thus the female sex commanded at Sparta; and thus you deserve to command at Geneva. What man can be such a barbarian as to resist the voice of honour and reason, coming from the lips of an affectionate wife? Who would not despise the vanities of luxury, on beholding the simple and modest attire which, from the lustre it derives from you, seems the most favourable to beauty? It is your task to perpetuate, by your insinuating influence and

your innocent and amiable rule, a respect for the laws of the State, and harmony among the citizens. It is yours to reunite divided families by happy marriages; and, above all things, to correct, by the persuasive sweetness of your lessons and the modest graces of your conversation, those extravagancies which our young people pick up in other countries, whence, instead of many useful things by which they might profit, they bring home hardly anything, besides a puerile air and a ridiculous manner, acquired among loose women, but an admiration for I know not what so-called grandeur, and paltry recompenses for being slaves, which can never come near the real greatness of liberty. Continue, therefore, always to be what you are, the chaste guardians of our morals, and the sweet security for our peace, exerting on every occasion the privileges of the heart and of nature, in the interests of duty and virtue.

Rousseau, Origin of Inequality, Dedication

117 Next day, Sunday, July 31, I told him I had been that morning at a meeting of the people called Quakers, where I had heard a woman preach, Johnson. "Sir, a woman's preaching is like a dog's walking on his hinder legs. It is not done well; but you are surprized to find it done at all."

Boswell, Life of Johnson (July 31, 1763)

118 *Johnson*. Where there is no education, as in savage countries, men will have the upper hand of women. Bodily strength, no doubt, contributes to this; but it would be so, exclusive of that; for it is mind that always

governs. When it comes to dry understanding, man has the better.

Boswell, Life of Johnson (1776)

119 He {Johnson} observed once, at Sir Joshua Reynolds's, that a beggar in the street will more readily ask alms from a man, though there should be no marks of wealth in his appearance, than from even a well-dressed woman; which he accounted for from the greater degree of carefulness as to money that is to be found in women; saying farther upon it, that the opportunities in general that they possess of improving their condition are much fewer than men have; and adding, as he looked round the company, which consisted of men only,—there is not one of us who does not think he might be richer if he would use his endeavour.

Boswell, Life of Johnson (1780)

120 In every age and country, the wiser, or at least the stronger, of the two sexes, has usurped the powers of the state, and confined the other to the cares and pleasures of domestic life. In hereditary monarchies, however, and especially in those of modern Europe, the gallant spirit of chivalry, and the law of succession, have accustomed us to allow a singular exception; and a woman is often acknowledged the absolute sovereign of a great kingdom, in which she would be deemed incapable of exercising the smallest employment, civil or military.

Gibbon, Decline and Fall of the Roman Empire, VI

121 The Germans treated their women with esteem and confidence, consulted them on every occasion of

importance, and fondly believed that in their breasts resided a sanctity and wisdom more than human. Some of these interpreters of fate, such as Velleda, in the Batavian war, governed, in the name of the deity, the fiercest nations of Germany. The rest of the sex, without being adored as goddesses, were respected as the free and equal companions of soldiers; associated even by the marriage ceremony to a life of toil, of danger, and of glory. In their great invasions, the camps of the barbarians were filled with a multitude of women, who remained firm and undaunted amidst the sound of arms, the various forms of destruction, and the honourable wounds of their sons and husbands. Fainting armies of Germans have more than once been driven back upon the enemy by the generous despair of the women who dreaded death much less than servitude. If the day was irrecoverably lost, they well knew how to deliver themselves and their children, with their own hands, from an insulting victor. Heroines of such a cast may claim our admiration; but they were most assuredly neither lovely, nor very susceptible of love. Whilst they affected to emulate the stem virtues of man, they must have resigned that attractive softness in which principally consists the charm of woman. Conscious pride taught the German females to suppress every tender emotion that stood in competition with honour, and the first honour of the sex has ever been that of chastity. The sentiments and conduct of these high-spirited matrons may, at once, be considered as a cause, as an effect, and as a proof of the general character of the nation. Female courage, however it may be raised by fanaticism, or confirmed by habit, can be only a faint and imperfect imitation of the

manly valour that distinguishes the age or country in which it may be found.

Gibbon, Decline and Fall of the Roman Empire, IX

122 There's nought but care on every han',
In every hour that passes, O;
What signifies the life o' man,
An' 'twere na for the lasses, O?
Green grow the rashes, O!
Green grow the rashes, O!
The sweetest hours that e'er I spent.
Were spent among the lasses, O!

Bums, Green Grow the Rashes

123 With regard to the other sex, nature proposes to it simplicity of character as the supreme perfection to which it should reach. Accordingly, the love of pleasing in women strives after nothing so much as the appearance of simplicity; a sufficient proof, if it were the only one, that the greatest power of the sex reposes in this quality. But, as the principles that prevail in the education of women are perpetually struggling with this character, it is as difficult for them in the moral order to reconcile this magnificent gift of nature with the advantages of a good education as it is difficult for men to preserve them unchanged in the Intellectual order; and the woman who knows how to join a knowledge of the world to this sort of simplicity in manners is as deserving of respect as a scholar who joins to the strictness of scholastic rules the freedom and originality of thought.

Schiller, Simple and Sentimental Poetry

124 What is it men in women do require?

The lineaments of gratified desire.

What is it women do in men require?

The lineaments of gratified desire.

Blake, Gnostic Verses, XVII, 4

125 *Mephistopheles*. Girls have a great desire to know, it's true.

If one is sleek and pious, true to ancient isms.

They think: if there he knuckles, us he'll follow too.

Goethe, Faust I, 3525

126 Leader of the Chorus. Impetuous and foolish, perfect woman-type!

Dependent on the moment, sport of every breeze

Of good and evil fortune, neither this nor that

Can ye with calmness bear.

Goethe, Faust, 11, 3, 9127

127 In her first passion woman loves her lover.

In all the others all she loves is love,

Which grows a habit she can ne'er get over,

And fits her loosely—like an easy glove,

As you may find, whene'er you like to prove her:

One man alone at first her heart can move;

She then prefers him in the plural number.

Not finding that the additions much encumber.

Byron, Don Juan, III, 3

128 The roaring of the wind is my wife and the Stars through the window pane are my Children. The mighty abstract Idea I have of Beauty in all things stifles the more divided

and minute domestic happiness—an amiable wife and sweet Children I contemplate as a part of that Beauty, but I must have a thousand of those beautiful particles to fill up my heart. I feel more and more every day, as my imagination strengthens, that I do not live in this world alone but in a thousand worlds—No sooner am I alone than shapes of epic greatness are stationed around me, and serve my Spirit the office which is equivalent to a King's bodyguard—then 'Tragedy with sceptred pall comes sweeping by.' According to my state of mind I am with Achilles shouting in the Trenches, or with Theocritus in the Vales of Sicily. Or I throw my whole being into Troilus, and repeating those lines, 'I wander like a lost Soul upon the stygian Banks staying for waftage,' I melt into the air with a voluptuousness so delicate that I am content to be alone. These things, combined with the opinion I have of the generality of women—who appear to me as children to whom I would rather give a sugar Plum than my time, form a barrier against Matrimony which I rejoice in.

Keats, Letter to George and Georgiana Keats (e. Oct 25, 1818)

129 It must be noticed in connexion with sex-relations that a girl in surrendering her body loses her honour. With a man, however, the ease is otherwise, because he has a field for ethical activity outside the family. A girl is destined in essence for the marriage tie and for that only; it is therefore demanded of her that her love shall take the form of marriage and that the different moments in love shall attain their true rational relation to each other.

Hegel, Philosophy of Right, Additions, Par. 164

130 Women are capable of education, but they are not made for activities which demand a universal faculty such as the more advanced sciences, philosophy, and certain forms of artistic production. Women may have happy ideas, taste, and elegance, but they can not attain to the ideal. the difference between men and women is like that between animals and plants. Men correspond to animals, while women correspond to plants because their development is more placid and the principle that underlies it is the rather vague unity of feeling. When women hold the helm of government, the state is at once in jeopardy, because women regulate their actions not by the demands of universality but by arbitrary inclinations and opinions. Women are educated—who knows how?—as it were by breathing in ideas, by living rather than by acquiring knowledge. the status of manhood, on the other hand, is attained only by the stress of thought and much technical exertion.

Hegel, Philosophy of Right, Additions, Par. 166

131 Women are directly fitted for acting as the nurses and teachers of our early childhood by the fact that they are themselves childish, frivolous and short-sighted; in a word, they are big children all their life long — a kind of intermediate stage between the child and the full-grown man, who is man In the strict sense of the word.

Schopenhauer, Women

132 The fundamental fault of the female character is that it has no sense of justice. This is mainly due to the fact. . .that women are defective in the powers of reasoning and deliberation; but it is also traceable to the position which

Nature has assigned to them as the weaker sex. They are dependent, not upon strength, but upon craft; and hence their instinctive capacity for cunning, and their ineradicable tendency to say what is not true. For as Hons are provided with claws and teeth, and elephants and boars with tusks, bulls with horns, and cuttle fish with its clouds of inky fluid, so Nature has equipped woman, for her defense and protection, with the arts of dissimulation; and all the power which Nature has conferred upon man in the shape of physical strength and reason, has been bestowed upon women in this form. Hence, dissimulation is innate in woman, and almost as much a quality of the stupid as of the clever. It is as natural for them to make use of it on every occasion as it is for those animals to employ their means of defense when they are attacked; they have a feeling that in doing so they are only within their rights. Therefore a woman who is perfectly truthful and not given to dissimulation is perhaps an impossibility, and for this very reason they are so quick at seeing through dissimulation in others that it is not a wise thing to attempt it with them.

Schopenhauer, Women

133 The natural feeling between men is mere indifference, but between women it is actual enmity. The reason of this is that trade-jealousy —*odium figulinum*—which, in the case of men does not go beyond the confines of their own particular pursuit; but, with women, embraces the whole sex; since they have only one kind of business. Even when they meet in the street, women look at one another like Guelphs and Ghibellines.

Schopenhauer, Women

134 That woman is by nature meant to obey may be seen by the fact that every woman who is placed in the unnatural position of complete independence, immediately attaches herself to some man, by whom she allows herself to be guided and ruled. It is because she needs a lord and master. If she is young, it will be a lover; if she is old, a priest,

Schopenhauer, Women

135 As for myself, I do not hesitate to avow that although the women of the United States are confined within the narrow circle of domestic life, and their situation is in some respects one of extreme dependence, I have nowhere seen woman occupying a loftier position; and if I were asked, now that I am drawing to the close of this work, in which I have spoken of so many important things done by the Americans, to what the singular prosperity and growing strength of that people ought mainly to be attributed, I should reply: To the superiority of their women.

Tocqueville, Democracy in America, Vol. II, III, 12

136 *King*. Man is the hunter; woman is his game.
The sleek and shining creatures of the chase,
We hunt them for the beauty of their skins;
They love us for it, and we ride them down.

Tennyson, The Princess, V, 147

137 *King*. Man for the field and woman for the hearth;
Man for the sword, and for the needle she;
Man with the head, and woman with the heart;

Man to command, and woman to obey;
All else confusion.

Tennyson, The Princess, V, 437

138 It certainly at first appears a highly remarkable fact that the same female butterfly should have the power of producing at the same time three distinct female forms and a male; and that an hermaphrodite plant should produce from the same seed-capsule three distinct hermaphrodite forms, bearing three different kinds of females and three or even six different kinds of males. Nevertheless these cases are only exaggerations of the common fact that the female produces offspring of two sexes which sometimes differ from each other in a wonderful manner.

Darwin, Origin of Species, II

139 Man is more courageous, pugnacious and energetic than woman, and has a more inventive genius. His brain is absolutely larger, but whether or not proportionately to his larger body, has not, I believe, been fully ascertained. In woman the face is rounder; the Jaws and the base of the skull smaller; the outlines of the body rounder, in parts more prominent; and her pelvis is broader than in man; but this latter character may perhaps be considered rather as a primary than a secondary sexual character. She comes to maturity at an earlier age than man.

Darwin, Descent of Man, III, 19

140 The chief distinction in the intellectual powers of the two sexes is shewn by man's attaining to a higher eminence, in whatever he takes up, than can woman—

whether requiring deep thought, reason, or imagination, or merely the use of the senses and hands. If two lists were made of the most eminent men and women in poetry, painting, sculpture, music (inclusive both of composition and performance), history, science, and philosophy, with half-a-dozen names under each subject, the two lists would not bear comparison. We may also infer, from the law of the deviation from averages, so well illustrated by Mr. Gallon, in his work on Hereditary Genius, that if men are capable of a decided pre-eminence over women in many subjects, the average of mental power in man must be above that of woman.

Darwin, Descent of Man, III, 19

141 To avoid enemies or to attack them with success, to capture wild animals, and to fashion weapons, requires the aid of the higher mental faculties, namely, observation, reason, invention, or imagination, These various faculties will thus have been continually put to the test and selected during manhood; they will, moreover, have been strengthened by use during this same period of life. Consequently in accordance with the principle often alluded to, we might expect that they would at least tend to be transmitted chiefly to the male offspring.

Darwin, Descent of Man, III, 19

142 It is, indeed, fortunate that the law of the equal transmission of characters to both sexes prevails with mammals; otherwise, it is probable that man would have become as superior in mental endowment to woman, as the peacock is in ornamental plumage to the peahen.

143 With few insignificant exceptions, girls have been educated either to be drudges, or toys, beneath man; or a sort of angels above him; the highest ideal aimed at oscillating between Clarchen and Beatrice. The possibility that the ideal of womanhood lies neither in the fair saint, nor in the fair sinner; that the female type of character is neither better nor worse than the male, but only weaker; that women are meant neither to be men's guides nor their playthings, but their comrades, their fellows, and their equals, so far as Nature puts no bar to that equality, does not seem to have entered into the minds of those who have had the conduct of the education of girls.

If the present system of female education stands self-condemned, as inherently absurd; and if that which we have just indicated is the true position of woman, what is the first step towards a better state of things? We reply, emancipate girls. Recognise the fact that they share the senses, perceptions, feelings, reasoning powers, emotion, of boys, and that the mind of the average girl is less different from that of the average boy, than the mind of one boy is from that of another; so that whatever argument justifies a given education for all boys, justifies its application to girls as well. So far from imposing artificial restrictions upon the acquirement of knowledge by women, throw every facility in their way. . . . Let us have "sweet girl graduates" by all means. They will be none the less sweet for a little wisdom; and the "golden hair" will not curl less gracefully outside the head by reason of there being brains within. Nay, if obvious practical difficulties can be overcome, let those women who feel inclined to do so descend into the gladiatorial

arena of life. . . Let them, if they so please, become merchants, barristers, politicians. Let them have a fair field, but let them understand, as the necessary correlative, that they are to have no favour. Let Nature alone sit high above the lists, "rain influence and judge the prize."

T. H. Huxley, Emancipation—Black and White

144 Mankind have long since abandoned the only premises which will support the conclusion that women ought not to have votes. No one now holds that women should be in personal servitude; that they should have no thought, wish, or occupation, but to be the domestic drudges of husbands, fathers, or brothers. It is allowed to unmarried, and wants but little of being conceded to married women, to hold property, and have pecuniary and business interests, in the same manner as men. It is considered suitable and proper that women should think, and write, and be teachers. As soon as these things are admitted, the political disqualification has no principle to rest on. The whole mode of thought of the modern world is with increasing emphasis pronouncing against the claim of society to decide for individuals what they are and are not fit for, and what they shall and shall not be allowed to attempt. If the principles of modern politics and political economy are good for anything, it is for proving that these points can only be rightly judged of by the individuals themselves: and that, under complete freedom of choice, wherever there are real diversities of aptitude, the great number will apply themselves to the things for which they are on the average fittest, and the exceptional course will only be taken by the exceptions. Either the whole tendency of modern social

improvements has been wrong, or it ought to be carried out to the total abolition of all exclusions and disabilities which close any honest employment to a human being.

Mill, Representative Government, VIII

145 All causes, social and natural, combine to make it unlikely that women should be collectively rebellious to the power of men. They are so far in a position different from all other subject classes, that their masters require something more from them than actual service. Men do not want solely the obedience of women, they want their sentiments. All men, except the most brutish, desire to have, in the woman most nearly connected with them, not a forced slave but a willing one, not a slave merely, but a favourite.

Mill, Subjection of Women, I

146 One thing we may be certain of—that what is contrary to women's nature to do, they never will be made to do by simply giving their nature free play. The anxiety of mankind to interfere in behalf of nature, for fear lest nature should not succeed in effecting its purpose, is an altogether unnecessary solicitude. What women by nature cannot do, it is quite superfluous to forbid them from doing. What they can do, but not so well as the men who are their competitors, competition suffices to exclude them from; since nobody asks for protective duties and bounties in favour of women; it is only asked that the present bounties and protective duties in favour of men should be recalled. If women have a greater natural inclination for some things than for others, there is no need of laws or social inculcation to make the majority of

them do the former in preference to the latter. Whatever women's services are most wanted for, the free play of competition will hold out the strongest inducements to them to undertake. And, as the words imply, they are most wanted for the things for which they are most fit; by the apportionment of which to them, the collective faculties of the two sexes can be applied on the whole with the greatest sum of valuable result.

Mill, Subjection of Woman, I

147 The less fit a man is for the possession of power— the less likely to be allowed to exercise it over any person with that person's voluntary consent—the more does he hug himself in the consciousness of the power the law gives him, exact its legal rights to the utmost point which custom (the custom of men like himself) will tolerate, and take pleasure in using the power, merely to enliven the agreeable sense of possessing it. What is more; in the most naturally brutal and morally uneducated part of the lower classes, the legal slavery of the woman, and something in the merely physical subjection to their will as an instrument, causes them to feel a sort of disrespect and contempt towards their own wife which they do not feel towards any other woman, or any other human being, with whom they come in contact; and which makes her seem to them an appropriate subject for any kind of indignity. Let an acute observer of the signs of feeling, who has the requisite opportunities, judge for himself whether this is not the case: and if he finds that it is, let him not wonder at any amount of disgust and indignation that can be felt against institutions which lead naturally to this depraved state of the human mind.

Mill, Subjection of Women, II

148 The occupations of nine out of every ten men are special, those of nine out of every ten women general, embracing a multitude of details, each of which requires very little time. Women are in the constant practice of passing quickly from one manual, and still more from one mental operation to another, which therefore rarely costs them either effort or loss of time, while a man's occupation generally consists in working steadily for a long time at one thing, or one very limited class of things. But the situations are sometimes reversed, and with them the characters. Women are not found less efficient than men for the uniformity of factory work, or they would not so generally be employed for it; and a man who has cultivated the habit of turning his hand to many things, far from being the slothful and lazy person described by Adam Smith, is usually remarkably lively and active. It is true, however, that change of occupation may be too frequent even for the most versatile. Incessant variety is even more fatiguing than perpetual sameness.

Mill, Principles of Political Economy, Bk. I, VIII, 5

149 The same reasons which make it no longer necessary that the poor should depend on the rich, make it equally unnecessary that women should depend on men; and the least which justice requires is that law and custom should not enforce dependence (when the correlative protection has become superfluous) by ordaining that a woman, who does not happen to have a provision by inheritance, shall have scarcely any means open to her of gaining a livelihood, except as a wife and mother. Let women who prefer that occupation, adopt it; but that there should be

no option, no other *carriere* possible for the great majority of women, except in the humbler departments of life, is a flagrant social injustice. The ideas and institutions by which the accident of sex is made the groundwork of an inequality of legal rights, and a forced dissimilarity of social functions, must ere long be recognised as the greatest hindrance to moral, social, and even intellectual improvement.

Mill, Principles of Political Economy, Bk. IV, VII, 3

150 You may chisel a boy into shape, as you would a rock, or hammer him into it, if he be of a better kind, as you would a piece of bronze. But you cannot hammer a girl into anything. She grows as a flower does,—she will wither without sun; she will decay in her sheath, as a narcissus will, if you do not give her air enough; she may fall, and defile her head in dust, if you leave her without help at some moments of her life; but you cannot fetter her; she must take her own fair form and way, if she take any.

Ruskin, Sesame and Lilies, II, 78

151 The happiest women, like the happiest nations, have no history.

George Eliot, The Mill on the Floss, VI, 3

152 I should like to know what is the proper function of women, if it is not to make reasons for husbands to stay at home, and still stronger reasons for bachelors to go out.

George Eliot, The Mill on the Floss, VI, 6

153 She [Rosamond] spoke and wept with that gentleness which makes such words and tears omnipotent over a loving-hearted man. Lydgate drew his chair near to hers and pressed her delicate head against his cheek with his powerful tender hand. He only caressed her; he did not say anything; for what was there to say? He could not promise to shield her from the dreaded wretchedness, for he could see no sure means of doing so. When he left her to go out again, he told himself that it was ten times harder for her than for him: he had a life away from home, and constant appeals to his activity on behalf of others. He wished to excuse everything in her if he could - but it was inevitable that in that excusing mood he should think of her as if she were an animal of another and feebler species. Nevertheless she had mastered him.

George Eliot, Middlemarch, VII, 65

154 *Mitya*. Try acknowledging you are in fault to a woman. Say, 'I am sorry, forgive me,' and a shower of reproaches will follow! Nothing will make her forgive you simply and directly, she'll humble you to the dust, bring forward things that have never happened, recall everything, forget nothing, add something of her own, and only then forgive you. And even the best, the best of them do it. She'll scrape up all the scrapings and load them on your head. They are ready to flay you alive, I tell you, every one of them, all these angels without whom we cannot live!

Dostoevsky, Brothers Karamazov, Pt.IV, XI,4

155 Vronsky followed the guard to the carriage, and at the door of the compartment he stopped short to make room

for a lady who was getting out.

With the insight of a man of the world, from one glance at this lady's appearance Vronsky classified her as belonging to the best society. He begged pardon, and was getting into the carriage, but felt he must glance at her once more; not that she was very beautiful, not on account of the elegance and modest grace which were apparent in her whole figure, but because in the expression of her charming face, as she passed close by him, there was something peculiarly caressing and soft. As he looked round, she too turned her head. Her shining grey eyes, that looked dark from the thick lashes, rested with friendly attention on his face, as though she were recognising him, and then promptly turned away to the passing crowd, as though seeking someone. In that brief look Vronsky had time to notice the suppressed eagerness which played over her face, and flitted between the brilliant eyes and the faint smile that curved her red lips. It was as though her nature were so brimming over with something that against her will it showed itself now in the flash of her eyes, and now in her smile. Deliberately she shrouded the light in her eyes, but it shone against her will in the faintly perceptible smile.

Tolstoy, Anna Karenina, I, 18

156 We observe an identical difference between men as a whole and women as a whole. A young woman of twenty reacts with intuitive promptitude and security in all the usual circumstances in which she may be placed. Her likes and dislikes are formed; her opinions, to a great extent, the same that they will be through life. Her character is, in fact, finished in its essentials. How inferior to her is a boy of twenty in all these respects! His

character is still gelatinous, uncertain what shape to assume, "trying it on" in every direction. Feeling his power, yet ignorant of the manner in which he shall express it, he is, when compared with his sister, a being of no definite contour. But this absence of prompt tendency in his brain to set into particular modes is the very condition which insures that it shall ultimately become so much more efficient than the woman's. The very lack of preappointed trains of thought is the ground on which general principles and heads of classification grow up; and the masculine brain deals with new and complex matter indirectly by means of these, in manner which the feminine method of direct intuition, admirably and rapidly as it performs within its limits, can vainly hope to cope with.

William James, Psychology, XXII

157 *Pickering*. Excuse the straight question, Higgins. Are you a man of good character where women are concerned?

Higgins. [moodily] Have you ever met a man of good character where women are concerned?

Pick. Yes: very frequently

Hig. [dogmatically, lifting himself on his hands to the level of the piano, and sitting on it with a bounce] Well, I haven't. I find that the moment I let a woman make friends with me, she becomes jealous, exacting, suspicious, and a damned nuisance. I find that the moment I let myself make friends with a woman, I become selfish and tyrannical. Women upset over everything. When you let them into your life, you find that the woman is driving at one thing and you're driving at another.

Pick. At what, for example?

Hig. [coming off the piano restlessly] Oh, Lord knows! I suppose the woman wants to live her own life; and the man wants to live his; and each tries to drag the other on to the wrong track. One wants to go north and the other south; and the result is that both have to go east, though they both hate the east wind.

Shaw, Pygmalion, II

158 It is not necessary to wear trousers and smoke big cigars to live a man's life any more than it is necessary to wear petticoats to live a woman's. There are plenty of gowned and bodiced women in ordinary civil life who manage their own affairs and other people's, including those of their menfolk, and are entirely masculine in their tastes and pursuits. There always were such women... The exemption of women from military service is founded, not on any natural inaptitude that men do not share, but on the fact that communities cannot reproduce themselves without plenty of women. Men are more largely dispensable, and are sacrificed accordingly.

Shaw, Saint Joan, Pref.

159 Man is no longer, like Don Juan, victor in the duel of sex. Whether he has ever really been may be doubted: at all events the enormous superiority of Woman's natural position in this matter is telling with greater and greater force,

Shaw, Man and Superman, Epistle Dedicatory

160 In Shakespear's plays the woman always takes the initiative. In his problem plays and his popular plays alike the love interest is the interest of seeing the woman hunt

the man down. She may do it by charming him, like Rosalind, or by stratagem, like Mariana; but in every case the relation between the woman and the man is the same: she is the pursuer and contriver, he the pursued and disposed of. When she is baffled, like Ophelia, she goes mad and commits suicide; and the man goes straight from her funeral to a fencing match. No doubt Nature, with very young creatures, may save the woman the trouble of scheming: Prospero knows that he has only to throw Ferdinand and Miranda together and they will mate like a pair of doves.... But the mature cases all illustrate the Shakespearian law.

Shaw, Man and Superman, Epistle Dedicatory

161 We laugh at the haughty American nation because it makes the negro clean its boots and then proves the moral and physical inferiority of the negro by the fact that he is a shoeblack; but we ourselves throw the whole drudgery of creation on one sex, and then imply that no female of any womanliness or delicacy would initiate any effort in that direction. There are no limits to male hypocrisy in this matter.

Shaw, Man and Superman, Epistle Dedicatory

162 Home is the girl's prison and the woman's work-house.

Shaw, Man and Superman, Maxims for Revolutionists

163 Complete object-love ... is, properly speaking, characteristic of the man. It displays the marked sexual over-estimation which is doubtless derived from the original narcissism of the child, now transferred to the sexual object. This sexual over-estimation is the origin of

the peculiar state of being in love, a state suggestive of a neurotic compulsion, which is thus traceable to an impoverishment of the ego in respect of libido in favour of the love-object, A different course is followed in the type most frequently met with in women, which is probably the purest and truest feminine type. With the development of puberty, the maturing of the female sexual organs, which up till then have been in a condition of latency, seems to bring about an intensification of the original narcissism, and this is unfavourable to the development of a true object-love with its accompanying sexual over-estimation; there arises in the woman a certain self-sufficiency (especially when there is a ripening into beauty) which compensates her for the social restrictions upon her object-choice, Strictly speaking, such women love only themselves with an intensity comparable to that of the man's love for them. Nor does their need lie in the direction of loving, but of being loved; and that man finds favour with them who fulfils this condition. The importance of this type of woman for the erotic life of mankind must be recognized as very great. Such women have the greatest fascination for men, not only for aesthetic reasons, since as a rule they are the most beautiful, but also because of certain interesting psychological constellations.

Freud, On Narcissism, II

164 Throughout the ages, the problem of woman has puzzled people of every kind.

*Freud, New Introductory Lectures on Psycho_Analysis,
XXXI11*

165 Male or female is the first differentiation that you make when you meet another human being, and you are used to making that distinction with absolute certainty. Anatomical science shares your certainty in one point, but not much more.... It points out to you that parts of the male sexual apparatus are also to be found in the body of the female, although in a rudimentary condition, and vice versa. Science sees in this phenomenon an indication of bisexuality, as though the individual were neither man nor woman, but both at the same time, only rather more the one than the other. It then expects you to make yourselves familiar with the idea that the proportions in which the masculine and the feminine mingle in an individual are subject to quite extraordinary variations. And even though, apart from very rare cases, only one kind of sexual product—ova or seminal cells—is present in any one individual, you will go wrong if you take this factor as being of decisive importance, and you must conclude that what constitutes masculinity or femininity is an unknown element which it is beyond the power of anatomy to grasp.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIII*

166 We must not overlook one particularly constant relation between femininity and instinctual life. The repression of their aggressiveness, which is imposed upon women by their constitutions and by society, favours the development of strong masochistic impulses, which have the effect of binding erotically the destructive tendencies which have been turned inwards. Masochism is, then, as they say, truly feminine. But when, as so often happens, you meet with masochism in men, what else can you do

but say that these men display obvious feminine traits of character?

You are now prepared for the conclusion that psychology cannot solve the riddle of femininity. The solution must, I think, come from somewhere else, and it cannot come until we have learned in general how the differentiation of living creatures into two sexes came about. We know nothing whatever about the matter.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIII*

167 It must be admitted that women have but little sense of justice, and this is no doubt connected with the preponderance of envy in their mental life; for the demands of justice are a modification of envy; they lay down the conditions under which one is willing to part with it,

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIII*

168 Friends are generally of the same sex, for when men and women agree, it is only in their conclusions; their reasons are always different. So that while intellectual harmony between men and women is easily possible, its delightful and magic quality lies precisely in the fact that it does not arise from mutual understanding, but is a conspiracy of alien essences and a kissing, as it were, in the dark. As man's body differs from woman's in sex and strength, so his mind differs from hers in quality and function: they can co-operate but can never fuse. The human race, in its intellectual life, is organised like the bees: the masculine soul is a worker, sexually atrophied,

and essentially dedicated to impersonal and universal arts; the feminine is a queen, infinitely fertile, omnipresent in its brooding industry, but passive and abounding in intuitions without method and passions without justice. Friendship with a woman is therefore apt to be more or less than friendship: less, because there is no intellectual parity; more, because (even when the relation remains wholly dispassionate, as in respect to old ladies) there is something mysterious and oracular about a woman's mind which inspires a certain instinctive deference and puts it out of the question to judge what she says by masculine standards. She has a land of sibylline intuition and the right to be irrationally *a propos*. There is a gallantry of the mind which pervades all conversation with a lady, as there is a natural courtesy toward children and mystics; but such a habit of respectful concession, marking as it does an intellectual alienation as profound as that which separates us from the dumb animals, is radically incompatible with friendship.

Santayana, Life of Reason, 11, 6

169 I do not intend, for the mere sake of correcting an inappropriate word, to enter upon a comparative study of the two sexes. Suffice it to say that woman is as intelligent as man, but that she is less capable of emotion, and that if there is any faculty or power of the soul which seems to attain less development in woman than in man, it is not intelligence, but sensibility. I mean of course sensibility in the depths, not agitation at the surface.

Bergson, Two Sources of Morality and Religion, I

170 God of heaven theres nothing like nature the wild mountains then the sea and the waves rushing then the beautiful country with fields of oats and wheat and all kinds of things and all the fine cattle going about that would do your heart good to see rivers and lakes and flowers all sorts of shapes and smells and colours springing up even out of the ditches primroses and violets nature it is as for them saying theres no God I wouldn't give a snap of my two fingers for all their learning why dont they go and create something I often asked him atheists or whatever they call themselves go and wash the cobbles off themselves first and then go howling for the priest and they dying and why why because theyre afraid of hell on account of their bad conscience ah yes I know them well who was the first person in the universe before there was anybody that made it all who ah that they dont know neither do I so there you are they might as well try' to stop the sun from rising tomorrow the sun shines for you he said the day we were lying among the rhododendrons on Howth head in the grey tweed suit and his straw hat the day I got him to propose to me yes first I gave him the bit of seedcake out of my mouth and it was leapyear like now yes 16 years ago my God after that long kiss I near lost my breath yes he said I was a flower of the mountain yes so we are flowers all a womans body yes that was one true thing he said in his life and the sun shines for you today yes that was why I liked him because I saw he understood or felt what a woman is and I knew I could always get round him and I gave him all the pleasure I could leading him on till he asked me to say yes and I wouldnt answer first only looked out over the sea and the sky I was thinking of so many things he didnt know of Mulvey and Mr Stanhope

and Hester and father and old captain Groves and the
sailors playing all birds fly and I say stoop and washing
up dishes they called it on the pier and the sentry in front
of the governors house with the thing round his white
helmet poor devil half roasted and the Spanish girls
laughing in their shawls and their tall combs and the
auctions in the morning the Greeks and the jews and the
Arabs and the devil knows who else from all the ends of
Europe and Duke street and the fowl market all cluclndg
outside Larby Sharons and the poor donkeys slipping half
asleep and the vague fellows in the cloaks asleep in the
shade on the steps and the big wheels of the carts of the
bulls and the old castle thousands of years old yes and
those handsome Moors all in white and turbans like kings
asking you to sit down in their little bit of a shop and
Ronda with the old windows of the posadas glancing eyes
a lattice hid for her lover to kiss the iron and the
wineshops half open at night and the castanets and the
night we missed the boat at Algeciras the watchman
going about serene with his lamp and O that awful
deepdown torrent O and the sea and the sea crimson
sometimes like fire and the glorious sunsets and the
figtrees in the Alameda gardens yes and all the queer
little streets and pink and blue and yellow houses and the
rosegardens and the jessamine and geraniums and
cactuses and Gibraltar as a girl where I was a Flower of
the mountain yes when I put the rose in my hair like the
Andalusian girls used or shall I wear a red yes and how he
kissed me under the Moorish wall and I thought well as
well him as another and then I asked him with my eyes to
ask again yes and then he asked me would I yes to say
yes my mountain flower and first I put my arms around
him yes and drew him down to me so he could feel my

breasts all perfume yes and his heart was going like mad
and yes I said yes I will Yes.

Joyce, Ulysses

1.8 Life and Death

THE FEAR OF DEATH

It is often said that man alone among animals is conscious of the inevitability of dying, a fact that undoubtedly colors his attitude toward life, especially in advancing years. The passages assembled here revolve around that fundamental theme—the consciousness of death as inescapable, the attitudes of the living toward death, the fear of dying and the courage of those who, overcoming such fear, die well. Exemplifying the latter, there are quotations that describe famous death scenes in which the dying display admirable fortitude and calm. There are also passages that describe violent deaths—by murder or by catastrophe, such as plague or earthquake.

Another theme that runs through this chapter is man's contemplation of his mortality and his hopes for or visions of another life—a life after death. But serious discussion of the philosophical and theological problems of immortality—the survival of the soul after the death of the body, its reincarnation in another body, or the resurrection of its original body—involves subtleties and technicalities that preclude its being represented among the materials quoted here.

Still another theme is the one first enunciated by Socrates while awaiting his execution—that to study philosophy is to learn to die, or at least how to prepare for death. Montaigne affords us eloquent elaborations of this

theme, and he is accompanied by others who, in one way or another, develop the point.

■ ■ ■

- 1 In the sweat of thy face shalt thou eat bread, till thou return unto the ground; for out of it wast thou taken: for dust thou art, and unto dust shalt thou return.

Genesis 3:19

- 2 I have set before you life and death, blessing and cursing: therefore choose life, that both thou and thy seed may live.

Deuteronomy 30:19

- 3 Then said his servants unto him. What thing is this that thou hast done? thou didst fast and weep for the child, while it was alive; but when the child was dead, thou didst rise and eat bread.

And he said, While the child was yet alive, I fasted and wept: for I said, Who can tell whether God will be gracious to me, that the child may live?

But now he is dead, wherefore should I fast? can I bring him back again? I shall go to him, but he shall not return to me.

II Samuel 12:21-23

- 4 The Lord gave, and the Lord hath taken away; blessed be the name of the Lord.

Job 1:21

5 Then in turn the shining son of Hippolochos [Glaukos] answered:

‘High-hearted son of Tydeus, why ask of my generation?

As is the generation of leaves, so is that of humanity.

The wind scatters the leaves on the ground, but the live timber

burgeons with leaves again in the season of spring returning.

So one generation of men will grow while another dies.’

Homer, Iliad, VI, 144

6 *Achilleus*. Of possessions

cattle and fat sheep are things to be had for the lifting, and tripods can be won, and the tawny high heads of horses,

but a man’s life cannot come back again, it cannot be lifted

nor captured again by force, once it has crossed the teeth’s barrier.

Homer, Iliad, IX, 405

7 *Achilleus*. So, friend [Lykaon], you die also. Why all this clamour about it?

Patroklos also is dead, who was better by far than you are.

Do you not see what a man I am, how huge, how splendid

and born of a great father, and the mother who bore me immortal?

Yet even I have also my death and my strong destiny,

and there shall be a dawn or an afternoon or a
noontime
when some man in the fighting will take the life from
me also
either with a spearcast or an arrow flown from the
bowstring.

Homer, Iliad, XXI, 106

8 *Odysseus*. I bit my lip,
rising perplexed, with longing to embrace her [*Odysseus*
mother's ghost], and tried three times, putting my arms
around her,
but she went sifting through my hands, impalpable
as shadows are, and wavering like a dream.
Now this embittered all the pain I bore, and I cried in the
darkness:
 'O my mother,
will you not stay, be still, here in my arms, may we not, in
this place of Death, as well, hold one another, touch with
love, and taste salt tears' relief, the twinge of welling
tears?
Or is this all hallucination, sent against me by the iron
queen, *Persephone*, to make me groan again?'
My noble mother
answered quickly:
 'O my child—alas, most sorely tried of men—great
Zeus's daughter, *Persephone*, knits no illusion for you.
All mortals meet this judgment when they die. No flesh
and bone are here, none bound by sinew, since the
bright-hearted pyre consumed them down-
the white bones long exanimate — to ash; dreamlike the
soul flies, insubstantial.'

Homer, Odyssey, XI, 205

- 9 'But was there ever a man more blest by fortune than you, Akhilleus? Can there ever be?
We ranked you with immortals in your lifetime, we Argives did, and here your power is royal among the dead men's shades. Think, then,
Akhilleus:
you need not be so pained by death.'
To this
he answered swiftly:
'Let me hear no smooth talk of death from you, Odysseus, light of councils. Better, I say, to break sod as a farm hand for some poor country man, on iron rations, than lord it over all the exhausted dead.'

Homer, Odyssey, XI, 483

- 10 *Apollo*. Zeus could undo shackles, such hurt can be made good,
and there is every kind of way to get out. But once the dust has drained down all a man's blood, once the man has died, there is no raising of him up again. This is a thing for which my father never made curative spells. All other states, without effort of hard breath, he can completely rearrange.

Aeschylus, Eumenides, 645

- 11 *Orestes*. No wise man I count him, who, when death looms near, attempts to quell its terrors by piteous laments, nor yet the man who bewails the Death-god's arrival, when he has no hope of rescue; for he makes two evils out of one; he lets himself be called a fool and all the same he dies; he should let his fortune be.

Euripides, Iphigenia in Tauris, 484

- 12 *Hecuba*. You may go now, and hide the dead in his poor tomb;
he has those flowers that are the right of the underworld.
I think it makes small difference to the dead, if they
are buried in the tokens of luxury. All this is an empty
glorification left for those who live.

Euripides, Trojan Women, 1246

- 13 *Socrates*. Strange, indeed, would be my conduct, O men
of Athens, if I who, when I was ordered by the generals
whom you chose to command me at Potidaea and
Amphipolis and Delium, remained where they placed me,
like any other man, facing death—if now, when, as I
conceive and imagine, God orders me to fulfil the
philosopher's mission of searching into myself and other
men, I were to desert my post through fear of death, or
any other fear; that would indeed be strange, and I might
justly be arraigned in court for denying the existence of
the gods, if I disobeyed the oracle because I was afraid of
death, fancying that I was wise when I was not wise. For
the fear of death is indeed the pretence of wisdom, and
not real wisdom, being a pretence of knowing the
unknown; and no one knows whether death, which men
in their fear apprehend to be the greatest evil, may not
be the greatest good.

Plato, Apology, 28B

- 14 *Socrates*. The difficulty ... is not to avoid death, but to
avoid unrighteousness; for that runs faster than death.

Plato, Apology, 39A

15 *Socrates*. There is a change and migration of the soul from this world to another. Now if you suppose that there is no consciousness, but a sleep like the sleep of him who is undisturbed even by dreams, death will be an unspeakable gain. For if a person were to select the night in which his sleep was undisturbed even by dreams, and were to compare with this the other days and nights of his life, and then were to tell us how many days and nights he had passed in the course of his life better and more pleasantly than this one, I think that any man, I will not say a private man, but even the great king will not find many such days or nights, when compared with the others. Now if death be of such a nature, I say that to die is gain; for eternity is then only a single night. But if death is the Journey to another place, and there, as men say, all the dead abide, what good, O my friends and Judges, can be greater than this? If indeed when the pilgrim arrives in the world below, he is delivered from the professors of Justice in this world, and finds the true Judges who are said to give Judgment there, Minos and Rhadamanthus and Aecus and Triptolemus, and other Kins of God who were righteous in their own life, that pilgrimage will be worth making. What would not a man give if he might converse with Orpheus and Musaeus and Hesiod and Homer? Nay, if this be true, let me die again and again. I myself, too, shall have a wonderful interest in there meeting and conversing with Palamedes, and Ajax the son of Telamon, and any other ancient hero who has suffered death through an unjust Judgment; and there will be no small pleasure, as I think, in comparing my own sufferings with theirs. Above all, I shall then be able to continue my search into true and false knowledge; as in this world, so also in the next; and I shall find out who is

wise, and who pretends to be wise, and is not. What would not a man give, O Judges, to be able to examine the leader of the great Trojan expedition; or Odysseus or Sisyphus, or numberless others, men and women too! What infinite delight would there be in conversing with them and asking them questions! In another world they do not put a man to death for asking questions: assuredly not. For besides being happier than we are, they will be immortal, if what is said is true.

Wherefore, O Judges, be of good cheer about death, and know of a certainty, that no evil can happen to a good man, either in life or after death.

Plato, Apology, 40B

- 16 *Socrates*. The hour of departure has arrived, and we go our ways—I to die, and you to live. Which is better God only knows.

Plato, Apology, 42B

- 17 *Socrates*. It has been proved to us by experience that if we would have pure knowledge of anything we must be quit of the body—the soul in herself must behold things in themselves: and then we shall attain the wisdom which we desire, and of which we say that we are lovers; not while we live, but after death; for if while in company with the body, the soul cannot have pure knowledge, one of two things follows—either knowledge is not to be attained at all, or, if at all, after death. For then, and not till then, the soul will from the body and exist in herself alone. In this present life, I reckon that we make the nearest approach to knowledge when we have the least possible intercourse or communion with the body, and

are not surfeited with the bodily nature, but keep ourselves pure until the hour when God himself is pleased to release us. And thus having got rid of the foolishness of the body we shall be pure and hold converse with the pure and know of ourselves the clear light everywhere, which is no other than the light of truth. For the impure are not permitted to approach the pure. These are the sort of words, Simmias, which the true lovers of knowledge cannot help saying to one another, and thinking. You would agree would agree; would you not?

Simmias. Undoubtedly, Socrates

But, O my friend, if this be true, there is great reason to hope that, going whither I go, when I have come to the end of my journey I shall attain that which has been the pursuit of my life. And therefore I go on my way rejoicing, and not I only, but every other man who believes that his mind has been made ready and that he is in a manner purified.

Certainly, replied Simmias.

And what is purification but the separation of soul from the body, as I was saying before; the habit of the soul gathering and collecting herself into herself from all sides out of the body; the dwelling in her own place alone, as in another life, so also in this, as far as she can; -the release of the soul from the chains of the body?

Very true, he said.

And this separation and release of the soul from the body is termed death?

To be sure, he said.

And the true philosophers, and they only, are ever seeking to release the soul. Is not the separation and release of the soul from the body their especial study?

That is true.

And, as I was saying at first, there would be a ridiculous contradiction in men studying to live as nearly as they can in a state of death, and yet repining when it comes upon them.

Clearly.

And the true philosophers. Simmias, are always occupied in the practice of dying, wherefore also to them least of all men is death terrible.

Plato, Phaedo, 66B

18 Crito made a sign to the servant, who was standing by; and he went out, and having been absent for some time, returned with the jailer carrying the cup of poison. Socrates said. You, my good friend, who are experienced in these matters, shall give me directions how I am to proceed. The man answered: You have only to walk about until your legs are heavy, and then to lie down, and the poison will act. At the same time he handed the cup to Socrates, who in the easiest and gentlest manner, without the least fear or change of colour or feature, looking at the man with all his eyes, Echecrates, as his manner was, took the cup and said: What do you say about making a libation out of this cup to any god? May I, or not? The man answered: We only prepare, Socrates, just so much as we deem enough. I understand, he said: but I may and must ask the gods to prosper my journey from this to the other world—even so and so be it according to my prayer. Then raising the cup to his lips, quite readily and cheerfully he drank off the poison. And hitherto most of us had been able to control our sorrow; but now when we saw him drinking, and saw too that he had finished the draught, we could no longer forbear, and

in spite of myself my own tears were flowing fast; so that I covered my face and wept, not for him, but at the thought of my own calamity in having to part from such a friend. Nor was I the first; for Crito, when he found himself unable to restrain his tears, had got up, and I followed; and at that moment, Apollodorus, who had been weeping all the time, broke out in a loud and passionate cry which made cowards of us all. Socrates alone retained his calmness: What is this strange outcry? he said. I sent away the women mainly in order that they might not misbehave in this way, for I have been told that a man should die in peace. Be quiet then, and have patience. When we heard his words we were ashamed, and refrained our tears; and he walked about until, as he said, his legs began to fail, and then he lay on his back, according to the directions, and the man who gave him the poison now and then looked at his feet and legs; and after a while he pressed his foot hard, and asked him if he could feel; and he said, No; and then his leg, and so upwards and upwards, and showed us that he was cold and stiff. And he felt them himself, and said: When the poison reaches the heart, that will be the end. He was beginning to grow cold about the groin, when he uncovered his face, for he had covered himself up, and said—they were his last words—he said: Crito, I owe a cock to Asclepius; will you remember to pay the debt? The debt shall be paid, said Crito; is there anything else? There was no answer to this question; but in a minute or two a movement was heard, and the attendants uncovered him; his eyes were set, and Crito closed his eyes and mouth.

Such was the end, Echeocrates, of our friend; concerning whom I may truly say, that of all the men of

his time whom I have known, he was the wisest and justest and best.

Plato, Phaedo, 117A

- 19 *Cephalus*. When a man thinks himself to be near death, fears and cares enter into his mind which he never had before; the tales of a world below and the punishment which is exacted there of deeds done here were once a laughing matter to him, but now he is tormented with the thought that they may be true: either from the weakness of age, or because he is now drawing nearer to that other place, he has a clearer view of these things; suspicions and alarms crowd thickly upon him, and he begins to reflect and consider what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings. But to him who is conscious of no sin, sweet hope ... is the kind nurse of his age.

Plato, Republic, I, 350B

- 20 As for his [Socrates'] claim that he was forewarned by "the deity" what he ought to do and what not to do, some may think that it must have been a delusion because he was condemned to death. But they should remember two facts. First, he had already reached such an age that, had he not died then, death must have come to him soon after. Secondly, he escaped the most irksome stage of life and the inevitable diminution of mental powers, and instead won glory by the moral strength revealed in the wonderful honesty and frankness and probity of his

defence, and in the equanimity and manliness with which he bore the sentence of death.

Xenophon, Memorabilia, IV, 8

- 21 Now death is the most terrible of all things; for it is the end, and nothing is thought to be any longer either good or bad for the dead.

Aristotle, Ethics, 1115a27

- 22 Death and wounds will be painful to the brave man and against his will, but he will face them because it is noble to do so or because it is base not to do so. And the more he is possessed of virtue in its entirety and the happier he is, the more he will be pained at the thought of death; for life is best worth living for such a man, and he is knowingly losing the greatest goods, and this is painful.

Aristotle, Ethics, 1117b7

- 23 Now life is defined in the case of animals by the power of perception, in that of man by the power of perception or thought; and a power is defined by reference to the corresponding activity, which is the essential thing; therefore life seems to be essentially the act of perceiving or thinking. And life is among the things that are good and pleasant in themselves.

Aristotle, Ethics, 1170a16

- 24 Avarice... and blind lust of honours which constrain unhappy men to overstep the bounds of right and sometimes as partners and agents of crimes to strive night and day with surpassing effort to struggle up to the summit of power—these sores of life are in no small

measure fostered by the dread of death. For foul scorn and pinching want in every case are seen to be far removed from a life of pleasure and security and to be a loitering so to say before the gates of death. And while men driven on by an unreal dread wish to escape far away from these and keep them far from them, they amass wealth by civil bloodshed and greedily double their riches piling up murder on murder; cruelly triumph in the sad death of a brother and hate and fear the tables of kinsfolk. Often likewise from the same fear envy causes them to pine: they make moan that before their very eyes he is powerful, he attracts attention, who walks arrayed in gorgeous dignity, while they are wallowing in darkness and dirt. Some wear themselves to death for the sake of statues and a name. And often to such a degree through dread of death does hate of life and of the sight of daylight seize upon mortals, that they commit self-murder with a sorrowing heart, quite forgetting that this fear is the source of their cares, this fear which urges men to ev'ery sin, prompts this one to put all shame to rout, another to burst asunder the bonds of friendship, and in fine to overturn duty from its very base, since often ere now men have betrayed country and dear parents in seeking to shun the Acherusian quarters. For even as children are flurried and dread all things in the thick darkness, thus we in the daylight (ear at times things not a whit more to be dreaded than what children shudder at in the dark and fancy sure to be. This terror therefore and darkness of mind must be dispelled not by the rays of the sun and glittering shafts of day, but by the aspect and law of nature.

Lucretius, Nature of Things, III

25 When the body has died, we must admit that the soul has perished, wrenched away throughout the body. To link forsooth a mortal thing with an everlasting and suppose that they can have sense in common and can be reciprocally acted upon, is sheer folly; for what can be conceived more incongruous, more discordant and inconsistent with itself, than a thing which is mortal, linked with an immortal and everlasting thing, trying in such union to weather furious storms.

Lucretius, Nature of Things, III

26 "Now no more shall thy house admit thee with glad welcome, nor a most virtuous wife and sweet children run to be the first to snatch kisses and touch thy heart with a silent joy. No more mayst thou be prosperous in thy doings, a safeguard to thine own. One disastrous day has taken from thee luckless man in luckless wise all the many prizes of life." This do men say; but add not thereto "and now no longer does any craving for these things beset thee withal." For if they could rightly perceive this in thought and follow up the thought in words, they would release themselves from great distress and apprehension of mind. "Thou, even as now thou art, sunk in the sleep of death, shall continue so to be all time to come, freed from all distressful pains; but we with a sorrow that would not be sated wept for thee, when close by thou didst turn to an ashen hue on thy appalling funeral pile, and no length of days shall pluck from our hearts our ever-during grief." This question therefore should be asked of this .speaker, what there U in it so passing bitter, if it come in the end to sleep and rest, that any one should pine in never-ending sorrow.

Lucretius, Nature of Things, III

27 Once more what evil lust of life is this which constrains us with such force to be so mightily troubled in doubts and dangers? A sure term of life is fixed for mortals, and death cannot be shunned, but meet it we must. Moreover we are ever engaged, ever involved in the same pursuits, and no new pleasure is struck out by living on; but whilst what we crave is wanting, it seems to transcend all the rest; then, when it has been gotten, we crave something else, and c\'cr does the same thirst of life possess us, as we gape for it open-mouthed. Quite doubtful it is what fortune the future will carry with it or what chance will bring us or what end is at hand. Nor by prolonging life do we take one tittle from the lime past in death nor can we fret anything away, whereby we may haply be a less long time in the condition of the dead. Therefore you may complete as many generations as you please during your life; none the less however will that everlasting death await you; and for no less long a time will he be no more in being, who beginning with to-day has ended his life, than the man who has died many months and years ago.

Lucretius, Nature of III

28 The philosopher's whole life is a preparation for death.

Cicero, Disputations, I, 30

29 Let us get rid of such old wives' tales as the one that tells us it is tragic to die before one's lime. What "time" is that, I would like to know? Nature is the one who has granted us the loan of our lives, without setting any schedule for repayment. What has one to complain of if she calls in the loan when she will?

Cicero, Disputations, I, 39

30 What a poor dotard must he be who has not learnt in the course of so long a life that death is not a thing to be feared? Death, that is either to be totally disregarded, if it entirely extinguishes the soul, or is even to be desired, if it brings him where he is to exist forever. A third alternative, at any rate, cannot possibly be discovered. Why then should I be afraid if I am destined either not to be miserable after death or even to be happy? After all, who is such a fool as to feel certain—however young he may be—that he will *!>c* alive in the evening? Nay, that lime of life has many more chances of death than ours. Young men more easily contract diseases; their illnesses are more serious; their treatment has to be more severe. Accordingly, only a few arrive at old age. If that were not so, life would be conducted better and more wisely; for it is in old men that thought, reason, and prudence are to be found; and if there had been no old men, states would never have existed at all.

Cicero, Old Age, XIX

31 If I am wrong in thinking the human soul immortal. I am glad to be wrong; nor will I allow the mistake which gives me so much pleasure to be wrested from me as long as I live. But if when dead, as some insignificant philosophers think, I am to be without sensation, I am not afraid of dead philosophers deriding my errors. Again, if we are not to be immortal, it is nevertheless what a man must wish — to have his life end at its proper time. For nature puts a limit to living as to everything else. Now, old age is. as it were, the playing out of the drama, the full fatigue of

which we should slum, especially when we also feel that we have had more than enough of it.

Cicero, Old Age, XXIII

32 Happy the man, who, studying nature's laws,
Through known effects can trace the secret cause—
His mind possessing in a quiet state,
Fearless of Fortune, and resigned to Fate!

Virgil, Georges, II

33 In youth alone unhappy mortals live;
But all! the mighty bliss is fugitive:
Discoloured sickness, anxious labours, come.
And age. and death's inexorable doom.

Virgil, Georges, III

34 Ah! Postumus, Postumus, fast fly the years,
And prayers to wrinkles and impending age
Bring not delay; nor shall assuage
Death's stroke with pious tears;
No, not though on each day that comes to thee
With thrice a hundred bulls thou sought to gain
Grim Pluto's pity, all were vain!
Great Geryon he'll not free.
Or Tityos, from the gloomy stream, whose tide
Each child of earth must traverse shore to shore,
Whether a crown on earth we bore.
Or crofters lived and died.

Horace, Odes, 11, 14

35 While you pray for life, study death. Fatted bulls fall from
some slight wound, and creatures of great stamina are

downed by one blow from a man's hand. A tiny blade can sever the tendons of the neck; and when the head is severed the hulk of the body crumples in a heap. No secret comer of the body hides the soul. No knife can dig it out, nor any wound aimed at the vital parts; death is near at hand. For these death blows I have appointed no specific spot—anywhere you wish: the way is open. When breath departs the body, that moment we call dying is so brief we cannot be aware of it. Whether one is strangled or drowned, or the skull is fractured from a fall on the hard ground, or fire deprives us of air; whatever the case, the end comes quickly. are you blushing for shame? For so long a time you are in fear of what is over so quickly.

Seneca, On Providence, VI

- 36 What is death? Either a transition or an end. I am not afraid of coming to an end, this being the same as never having begun, nor of transition, for I shall never be in confinement quite so cramped anywhere else as I am here.

Seneca, Letters to Lucilius, 65

- 37 As it is with a play, so it is with life—what matters is not how long the acting lasts, but how good it is. It is not important at what point you stop. Stop wherever you will—only make sure that you round it off with a good ending.

Seneca, Letters to Lucilius, 77

- 38 Then said Martha unto Jesus, Lord, if thou hadst been here, my brother had not died.

But I know, that even now, whatsoever thou wilt ask of God, God will give it thee.

Jesus saith unto her, Thy brother shall rise again.

Martha saith unto him, I know that he shall rise again in the resurrection at the last day.

Jesus said unto her, I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live:

And whosoever liveth and believeth in me shall never die. Believest thou this?

She saith unto him. Yea, Lord: I believe that thou art the Christ, the Son of God, which should come into the world.

And when she had so said, she went her way, and called Mary her sister secretly, saying, The Master is come, and calleth for thee.

As soon as she heard that, she arose quickly, and came unto him.

Now Jesus was not yet come into the town, but was in that place where Martha met him.

The Jews then which were with her in the house, and comforted her, when they saw Mary, that she rose up hastily and went out, followed her, saying, She goeth unto the grave to weep there.

Then when Mary was come where Jesus was, and saw him, she fell down at his feet, saying unto him, Lord, if thou hadst been here, my brother had not died.

When Jesus therefore saw her weeping, and the Jews also weeping which came with her, he groaned in the spirit, and was troubled,

And said, Where have ye laid him? They said unto him, Lord, come and see.

Jesus wept.

Then said the Jews, Behold how he loved him!

And some of them said, Could not this man, which opened the eyes of the blind, have caused that even this man should not have died?

Jesus therefore again groaning in himself cometh to the grave. It was a cave, and a stone lay upon it.

Jesus said, Take ye away the stone. Martha, the sister of him that was dead, saith unto him. Lord, by this time he stinketh: for he hath been dead four days.

Jesus saith unto her, Said I not unto thee, that, if thou wouldest believe, thou shouldest see the glory of God?

Then they took away the stone from the place w'here the dead was laid. And Jesus lifted up his eyes, and said, Father, I thank thee that thou hast heard me.

And I knew that thou hearest me always: but because of the people which stand by I said it, that they may believe that thou hast sent me.

And when he thus had spoken, he cried with a loud voice, Lazarus, come forth.

And he that was dead came forth, bound hand and foot with graveclothes; and his face was bound about with a napkin. Jesus saith unto them. Loose him, and let him go.

John 11:21-44

39 Verily, verily, I say unto you, Except a corn of wheat fall into the ground and die, it abideth alone; but if it die, it bringeth forth much fruit.

He that loveth his life shall lose it; and he that hateth his life in this world shall keep it unto life eternal.

John 12:24-25

40 For since by man came death, by man came also the resurrection of the dead.

For as in Adam all die, even so in Christ shall all be made alive.

But every man in his own order: Christ the firstfruits; afterward they that are the Christ's at his coming.

Then cometh the end, when he shall have delivered up the kingdom to God, even the Father; when he shall have put down all rule and all authority and power.

For he must reign, till he hath put all enemies under his feet.

The last enemy that shall be destroyed is death.

1 Corinthians 15:21-26

41 All flesh is not the same flesh: but there is one kind of flesh of men, another flesh of beasts, another of fishes, and another of birds.

There are also celestial bodies, and bodies terrestrial: but the glory of the celestial is one, and the glory of the terrestrial is another.

There is one glory of the sun, and another glory of the moon, and another glory of the stars: for one star differeth from another star in glory.

So also is the resurrection of the dead. It is sown in corruption; it is raised in incorruption:

It is sown in dishonour; it is raised in glory: it is sown in weakness; it is raised in power:

It is sown a natural body; it is raised a spiritual body. There is a natural body, and there is a spiritual body....

Now this I say, brethren, that flesh and blood cannot inherit the kingdom of God; neither doth corruption inherit incorruption....

For this corruptible must put on incorruption, and this mortal must put on immortality.

So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written. Death is swallowed up in victory.

O death, where is thy sting? O grave, where is thy victory?

1 Corinthians 15:39-55

42 And I looked, and behold a pale horse: and his name that sat on him was Death, and Hell followed with him. And power was given unto them over the fourth part of the earth, to kill with sword, and with hunger, and with death, and with the beasts of the earth.

Remlation 6:8

43 The death of happy men is not... most grievous, but most blessed, since it secures their felicity, and puts it out of fortune's power. And that Spartan advised well, who, embracing Diagoras, that had himself been crowned in the Olympic Games, and saw his sons and grandchildren victors, said, "Die, Diagoras, for thou canst not be a god."

Plutarch, Pelopidas

44 One finds it also related by many that a soothsayer bade him prepare for some great danger on the Ides of March. When this day was come, Caesar, as he went to the senate, met this soothsayer, and said to him by way of raillery, "The Ides of March are come," who answered him calmly, "Yes, they are come, but they are not past." The day before his assassination he supped with Marcus

Lepidus; and as he was signing some letters according to his custom, as he reclined at table, there arose a question what sort of death was the best. At which he immediately, before any one could speak, said, "A sudden one."

Plutarch, Caesar

- 45 Throwing away then all things, hold to these only which are few; and besides bear in mind that every man lives only this present time, which is an indivisible point, and that all the rest of his life is either past or it is uncertain. Short then is the time which every man lives, and small the nook of the earth where he lives; and short too the longest posthumous fame, and even this only continued by a succession of poor human beings, who will very soon die, and who know not even themselves, much less him who died long ago.

Marcus Aurelius, Meditations, III, 10

- 46 Always observe how ephemeral and worthless human things are,... Pass then through this little space of time conformably to nature, and end thy journey in content, just as an olive falls off when it is ripe, blessing nature who produced it, and thanking the tree on which it grew.

Marcus Aurelius, Meditations, IV, 48

- 47 Soon, very soon, thou wilt be ashes, or a skeleton, and either a name or not even a name; but name is sound and echo. And the things which are much valued in life are empty and rotten and trifling, and like little dogs biting one another, and little children quarrelling, laughing, and then straightway weeping.

Marcus Aurelius, Meditations, V, 33

48 How can it be that the gods after having arranged all things well and benevolently for mankind, have overlooked this alone, that some men and very good men, and men who, as we may say, have had most communion with the divinity, and through pious acts and religious observances have been most intimate with the divinity, when they have once died should never exist again, but should be completely extinguished?

But if this is so, be assured that if it ought to have been otherwise, the gods would have done it. For if it were just, it would also be possible; and if it were according to nature, nature would have had it so. But because it is not so, if in fact it is not so, be thou convinced that it ought not to have been so.

Marcus Aurelius, Meditations, XII, 5

49 This devouring of Kind by Kind is necessary as the means to the transmutation of living things which could not keep form for ever even though no other killed them: what grievance is it that when they must go their despatch is so planned as to be serviceable to others?

Still more, what does it matter when they are devoured only to return in some new form? It comes to no more than the murder of one of the personages in a play; the actor alters his make-up and enters in a new role. The actor, of course, was not really killed; but if dying is but changing a body as the actor changes a costume, or even an exit from the body like the exit of the actor from the boards when he has no more to say or do, what is there so very dreadful in this transformation of living beings one into another?

Plotinus, Third Ennead, II, 15

50 Life in the Supreme is the native activity of Intellect; in virtue of that converse it brings forth gods, brings forth beauty, brings forth righteousness, brings forth all moral good; for of all these the soul is pregnant when it has been filled with God. This state is its first and its final, because from God it comes, its good lies There, and, once turned to God again, it is what it was. Life here, with the things of earth, is a sinking, a defeat, a failing of the wing.

Plotinus, Sixth Ennead, IX, 9

51 The soul in its nature loves God and longs to be at one with Him in the noble love of a daughter for a noble father; but coming to human birth and lured by the courtships of this sphere, she takes up with another love, a mortal, leaves her father and falls.

But one day coming to hate her shame, she puts away the evil of earth, once more seeks the father, and finds her peace.

Plotinus, Sixth Ennead, IX, 9

52 The soul lives by avoiding those things which if they are sought bring death. Refrain from the ugly savagery of pride, from the slothly pleasure of lust, from all that lyingly bears the name of science, that the wild beasts may be tamed, the cattle brought to subjection, and the serpents made harmless. For these animals are an allegory for the movements of the mind. The pomp of pride and the delight that is in lust and the poison of curiosity are the movements of a soul that is dead—not dead so that it has lost all movement, but dead by departing from the fountain of life so that it is taken up

by the world that passes away and conformed to it. But Your word, O God, is a fountain of life everlasting and does not pass away.

Augustine, Confessions, XIII, 21

53 All these last offices and ceremonies that concern the dead, the careful funeral arrangements, and the equipment of the tomb, and the pomp of obsequies, are rather the solace of the living than the comfort of the dead.

Augustine, City of God, I, 12

54 The death ... of the soul takes place when God forsakes it, as the death of the body when the soul forsakes it.

Augustine, City of God, XIII, 2

55 Of the first and bodily death, then, we may say that to the good it is good, and evil to the evil. But, doubtless, the second, as it happens to none of the good, so it can be good for none.

Augustine, City of God, XIII, 2

56 As regards bodily death, that is, the separation of the soul from the body, it is good unto none while it is being endured by those whom we say are in the article of death. For the very violence with which body and soul are wrenched asunder, which in the living had been conjoined and closely intertwined, brings with it a harsh experience, jarring horribly on nature so long as it continues, till there comes a total loss of sensation, which arose from the very interpenetration of spirit and flesh. And all this anguish is sometimes forestalled by one

stroke of the body or sudden flitting of the soul, the swiftness of which prevents it from being felt. But whatever that may be in the dying which with violently painful sensation robs of all sensation, yet, when it is piously and faithfully borne, it increases the merit of patience, but does not make the name of punishment inapplicable. Death, proceeding by ordinary generation from the first man, is the punishment of all who are born of him, yet, if it be endured for righteousness' sake, it becomes the glory of those who are born again; and though death be the award of sin, it sometimes secures that nothing be awarded to sin.

Augustine, City of God, XIII, 6

57 we enjoy some gratification when our good friends die; for though their death leaves us in sorrow, we have the consolatory assurance that they are beyond the ills by which in this life even the best of men are broken down or corrupted.

Augustine, City of God, XIX, 8

58 Now among all passions inflicted from without, death holds the first place, just as sexual concupiscences are chief among internal passions. Consequently, when a man conquers death and things directed to death, his is a most perfect victory.

Aquinas, Summa Theologica, III Suppl., 96, 6

59 Aegeus. "Just as there never died a man," quoth he,
"But he had lived on earth in some degree.
Just so there never lived a man," he said,
"In all this world, but must be sometime dead."

This world is but a thoroughfare of woe.
And we are pilgrims passing to and fro;
Death is the end of every worldly sore."

Chaucer, Canterbury Tales: Knight's Tale

60 I go to seek a great perhaps.

Rabelais, Last Words (ascribed to)

61 Man, that is born of a woman, hath but a short time to live, and is full of misery. He cometh up, and is cut down, like a flower; he fleeth as it were a shadow, and never continueth in one stay.

In the midst of life we are in death; of whom may we seek for succour, but of thee, O Lord, who for our sins art justly displeased?

Book of Common Prayer

62 In everything else there may be sham: the fine reasonings of philosophy may be a mere pose in us; or else our trials, by not testing us to the quick, give us a chance to keep our face always composed. But in the last scene, between death and ourselves, there is no more pretending; we must talk plain French, we must show what there is that is good and clean at the bottom of the pot.

Montaigne, Essays, I, 19, That Our Happiness

63 There are gallant and fortunate deaths. I have seen death bring a wonderfully brilliant career, and that in its flower, to such a splendid end that in my opinion the dead man's ambitions and courageous designs had nothing so lofty about them as their interruption. He arrived where he

aspired to without going there, more grandly and gloriously than he had desired or hoped. And by his fall he went beyond the power and the fame to which he had aspired by his career.

Montaigne, Essays, I, 19, That Our Happiness

64 It is uncertain where death awaits us; let us await it everywhere. Premeditation of death is premeditation of freedom. He who has learned how to die has unlearned how to be a slave. Knowing how to die frees us from all subjection and constraint. There is nothing evil in life for the man who has thoroughly grasped the fact that to be deprived of life is not an evil.

Montaigne, Essays, I, 20, That to Philosophize

65 What does it matter when it comes, since it is inevitable? To the man who told Socrates, "The thirty tyrants have condemned you to death," he replied: "And nature, them,"

Montaigne, Essays, I, 20, That to Philosophize

66 Nature forces us to it. Go out of this world, she says, as you entered it. The same passage that you made from death to life, without feeling or fright, make it again from life to death. Your death is a part of the order of the universe; it is a part of the life of the world.

Montaigne, Essays, I, 20, That to Philosophize

67 Now I have often pondered how it happens that in wars the face of death, whether we see it in ourselves or in others, seems to us incomparably less terrifying than in our houses—otherwise you would have an army of

doctors and snivelers — and, since death is always the same, why nevertheless there is much more assurance against it among villagers and humble folk than among others, I truly think it is those dreadful faces and trappings with which we surround it, that frighten us more than death itself: an entirely new way of living; the cries of mothers, wives, and children; the visits of people dazed and benumbed by grief; the presence of a number of pale and weeping servants; a darkened room; lighted candles; our bedside besieged by doctors and preachers; in short, everything horror and fright around us. There we are already shrouded and buried. Children fear even their friends when they see them masked, and so do we ours. We must strip the mask from things as well as from persons; when it is off, we shall find beneath only that same death which a valet or a mere chambermaid passed through not long ago without fear. Happy the death that leaves no leisure for preparing such ceremonies!

Montaigne, Essays, I, 20, That to Philosophize

68 It is not without reason that we are taught to study even our sleep for the resemblance it has with death. How easily we pass from waking to sleeping! With how little sense of loss we lose consciousness of the light and of ourselves! Perhaps the faculty of sleep, which deprives us of all action and all feeling, might seem useless and contrary to nature, were it not that thereby Nature teaches us that she has made us for dying and living alike, and from the start of life presents to us the eternal state that she reserves for us after we die, to accustom us to it and take away our fear of it.

Montaigne, Essays, II, 6, Of Practice

69 Life is full of fireworks; death, of love and courtesy.

Montaigne, Essays, II, 35, Of Three Good Women

70 *Gaunt* O, but they say the tongues of dying men
Enforce attention like deep harmony:
Where words are scarce, they are seldom spent in vain,
For they breathe truth that breathe their words in pain.
He that no more must say is listen'd more
Than they whom youth and ease have taught to glose;
More are men's ends mark'd than their lives before:
The setting sun, and music at the close.
As the last taste of sweets, is sweetest last.
Writ in remembrance more than things long past.

Shakespeare, Richard II, II, i, 5

71 *Prince of Wales*. When that this body did contain a spirit,
A kingdom for it was too small a bound;
But now two paces of the vilest earth
Is room enough

Shakespeare, I Henry IV, V, iv, 89

72 *Feeble*. By my troth, I care not; a man can die but once:
we owe God a death... and let it go which way it will, he
that dies this year is quit for the next,

Shakespeare, II Henry IV, III, ii, 250

73 *Caesar*. Of all the wonders that I yet have heard.
It seems to me most strange that men should fear;
Seeing that death, a necessary end,
Will come when it will come.

Shakespeare, Caesar, II, ii, 34

74 *Queen*. Good Hamlet, cast thy nighted colour off,
And let thine eye look like a friend on Denmark.
Do not for ever with thy vailed lids
Seek for thy noble father in the dust.
Thou know'st 'tis common; all that lives must die,
Passing through nature to eternity.

Hamlet. Ay, madam, it is common.

Queen. If it be,

Why seems it so particular with thee?

Ham. Seems, madam! nay, it is; I know not "seems."
'Tis not alone my inky cloak, good mother,
Nor customary suits of solemn black,
Nor windy suspiration of forced breath,
No, nor the fruitful river in the eye.
Nor the dejected 'haviour of the visage,
Together with all forms, moods, shapes of grief,
That can denote me truly: these indeed seem,
For they are actions that a man might play;
But I have that within which passeth show;
These but the trappings and the suits of woe.

Shakespeare, Hamlet, I, ii, 68

75 *King*. Now, Hamlet, where's Polonius?

Hamlet. At supper.

King. At supper! where?

Ham. Not where he eats, but where he is eaten. A
certain convocation of politic worms are e'en at him. Your
worm is your only emperor for diet. We fat all creatures
else to fat us, and we fat ourselves for maggots. Your fat
king and your lean beggar is but variable service, two
dishes, but to one table; that's the end.

King. Alas, alas!

Ham. A man may fish with the worm that hath eat of a king, and eat of the fish that hath fed of that worm.

King. What dost thou mean by this?

Ham. Nothing but to show you how a king may go a progress through the guts of a beggar.

King. Where is Polonius?

Ham. In heaven; send thither to see. If your messenger find him not there, seek him i' the other place yourself. But indeed, if you find him not within this month, you shall nose him as you go up the stairs into the lobby.

King. Go seek him there. [*To some Attendants.*]

Ham. He will stay till you come,

Shakespeare, Hamlet, IV, iii, 17

76 *Ophelia.* We must be patient; but I cannot choose but weep, to think they should lay him i' the cold ground.

Shakespeare, Hamlet, IV, v, 68

77 *Hamlet.* That skull had a tongue in it, and could sing once. How the knave jowls it to the ground, as if it were Cain's jaw-bone, that did the first murder! It might be the pate of a politician, which this ass now o'er-reaches; one that would circumvent God, might it not?

Horatio. It might, my lord.

Ham. Or of a courtier; which could say "Good morrow, sweet lord! How dost thou, good lord?" This might be my Lord Such-a-one, that praised my Lord Such-a-one's horse, when he meant to beg it; might it not?

Hor. Ay, my lord.

Ham. Why, e'en so; and now my Lady Worm's; chapicss, and knocked about the mazzard with a sexton's space. Here's fine revolution, an we had the trick to

sce't.... There's another. Why may not that be the skull of a lawyer? Where be his quiddities now, his quillets, his cases, his tenures, and his tricks? Why does he suffer this rude knave now to knock him about the sconce with a dirty shovel, and will not tell him of his action of battery? Hum! This fellow might be in's time a great buyer of land, with his statutes, his recognizances, his fines, his double vouchers, his recoveries. Is this the fine of his fines, and the recovery of his recoveries, to have his fine pate full of fine dirt? Will his vouchers vouch him no more of his purchases, and double ones too, than the length and breadth of a pair of indentures? The very conveyances of his lands will hardly lie in this box; and must the inheritor himself have no more, ha?

Hor. Not a jot more, my lord.

Shakespeare, Hamlet, V, i, 83

78 *Hamlet.* Alas, poor Yorick! I knew him, Horatio; a fellow of infinite jest, of most excellent fancy. He hath borne me on his back a thousand times; and now, how abhorred in my imagination it is! my gorge rises at it. Here hung those lips that I have kissed I know not how oft. Where be your gibes now? your gambols? your songs? your flashes of merriment, that were wont to set the table on a roar? Not one now, to mock your own grinning? quite chap-fallen? Now get you to my lady's chamber, and tell her, let her paint an inch thick, to this favour she must come; make her laugh at that.

Shakespeare, Hamlet, V, i, 202

79 *Hamlet.* To what base uses we may return, Horatio! Why may not imagination trace the noble dust of Alexander,

till he find it stopping a bung-hole?

Horatio. 'Twere to consider too curiously, to consider so.

Ham. No, faith, not a jot; but to follow him thither with modesty enough, and likelihood to lead it; as thus: Alexander died, Alexander was buried, Alexander returneth into dust; the dust is earth; of earth we make loam; and why of that loam, whereto he was converted, might they not stop a beer-barrel?

Shakespeare, Hamlet, V, i, 223

80 *Hamlet.* If it be now, 'tis not to come; if it be not to come, it will be now; if it be not now, yet it will come; the readiness is all. Since no man has aught of what he leaves, what is't to leave betimes?

Shakespeare, Hamlet, V, ii, 231

81 *Duke.* Be absolute for death; either death or life Shall thereby be the sweeter. Reason thus with life: If I do lose thee, I do lose a thing That none but fools would keep, A breath thou art, Servile to all the skyey influences, That dost this habitation, where thou keep'st. Hourly afflict. Merely, thou art Death's fool; For him thou labour'st by thy flight to shun And yet runn'st toward him still. Thou art not noble; For all the accommodations that thou bear'st Are nursed by baseness. Thou'rt by no means valiant; For thou dost fear the soft and tender fork Of a poor worm. Thy best of rest is sleep, And that thou oft provokest; yet grossly fear'st Thy death, which is no more. Thou art not thyself;

For thou exist'st on many a thousand grains
That issue out of dust. Happy thou art not;
For what thou hast not, still thou strivest to get,
And what thou hast, forget'st. Thou are not certain;
For thy complexion shifts to strange effects,
After the moon. If thou art rich, thou'rt poor;
For, like an ass whose back with ingots bows,
Thou bear'st thy heavy riches but a journey,
And death unloads thee. Friend hast thou none;
For thine own bowels, which do call thee sire,
The mere effusion of thy proper loins,
Do curse the gout, serpigo, and the rheum,
For ending thee no sooner. Thou hast nor youth nor age.
But, as it were, an after-dinner's sleep,
Dreaming on both; for all thy blessed youth
Becomes as aged, and doth beg the alms
Of palsied eld; and when thou art old and rich.
Thou hast neither heat, affection, limb, nor beauty.
To make thy riches pleasant. What's yet in this
That bears the name of life? Yet in this life
Lie hid moe thousand deaths; yet death we fear,
That makes these odds all even.

Shakespeare, Measure for Measure, III, i, 4

82 *Isabella*. The sense of death is most in apprehension;
And the poor beetle that we tread upon,
In corporal sufferance finds a pang as great
As when a giant dies.

Shakespeare, Measure for Measure, III, i, 78

83 *Claudio*. Death is a fearful thing.
Isabella. And shamed life a hateful.

Claud. Ay, but to die, and go we know not where;
To lie in cold obstruction and to rot;
This sensible warm motion to become
A kneaded clod; and the delighted spirit
To bathe in fiery floods, or to reside
In thrilling region of thick-ribbed ice;
To be imprison'd in the viewless winds.
And blown with restless violence round about The
pendent world; or to be worse than worst Of those that
lawless and incertain thought Imagine howling; 'tis too
horrible!
The weariest and most loathed wordly life
That age, ache, penury, and imprisonment
Can lay on nature is a paradise
To what we fear of death.

Isab. Alas, alas!

Shakespeare, Measure for Measure, III, i, 116

84 *Othello.* It is the cause, it is the cause, my soul—
Let me not name it to you, you chaste stars!—
It is the cause. Yet I'll not shed her blood;
Nor scar that whiter skin of hers than snow.
And smooth as monumental alabaster.
Yet she must die, else she'll betray more men.
Put out the light, and then put out the light.
If I quench thee, thou flaming minister,
I can again thy former light restore.
Should I repent me; but once put out thy light,
Thou cunning'st pattern of excelling nature,
I know not where is that Promethean heat
That can thy light relume. When I have pluck'd the rose,
I cannot give it vital growth again,
It must needs wither.

Shakespeare, Othello, V, ii, 1

85 *Edgar*. Men must endure
Their going hence, even as their coming hither;
Ripeness is all.

Shakespeare, Lear, V, ii, 10

86 *Macbeth*. If it were done when 'tis done, then 'twere well
It were done quickly. If the assassination
Could trammel up the consequence, and catch
With his surcease success; that but this blow
Might be the be-all and the end-all here,
But here, upon this bank and shoal of time,
We'd jump the life to come. But in these cases
We still have judgement here; that we but teach
Bloody instructions, which, being taught, return
To plague the inventor.

Shakespeare, Macbeth, I, vii, 1

87 *Macbeth*. There's one did laugh in's sleep, and one cried
"Murder!"
That they did wake each other. I stood and heard them;
But they did say their prayers, and address'd them
Again to sleep.

Lady Macbeth. There are two lodged together.

Macb. One cried "God bless us!" and "Amen" the other;
As they had seen me with these hangman's hands.
Listening their fear, I could not say "Amen,"
When they did say "God bless us!"

Lady M. Consider it not so deeply.

Macb. But wherefore could not I pronounce "Amen"?
I had most need of blessing, and "Amen"
Stuck in my throat

Lady M. These deeds must not be thought After these ways; so, it will make us mad.

Mach. Methought I heard a voice cry, "Sleep no more! Macbeth does murder sleep," the innocent sleep, Sleep that knits up the ravell'd sleeve of care. The death of each day's life, sore labour's bath, Balm of hurt minds, great nature's second course, Chief nourisher in life's feast—

Lady M. What do you mean?

Macb. Still it cried, "Sleep no more!" to all the house; "Glamis hath murder'd sleep, and therefore Cawdor Shall sleep no more; Macbeth shall sleep no more."

Shakespeare, Macbeth, II, ii, 23

88 *Lady Macbeth.* The sleeping and the dead
Are but as pictures; tis the eye of childhood
That fears a painted devil.

Shakespeare, Macbeth, II, ii, 53

89 *Macbeth.* Will all great Neptune's ocean wash this blood
Clean from my hand? No, this my hand will rather
The multitudinous seas incarnadine,
Making the green one red.

Re-enter Lady Macbeth.

Lady Macbeth. My hands are of your colour; but I
shame
To wear a heart so white. [*Knocking within.*] I hear a
knocking
At the south entry. Retire we to our chamber.
A little water clears us of this deed.

Shakespeare, Macbeth, II, ii, 60

90 *Macbeth*. Better be with the dead.

Whom we, to gain our peace, have sent to peace,
Than on the torture of the mind to lie
In restless ecstasy. Duncan is in his grave;
After life's fitful fever he sleeps well;
Treason has done his worst; nor steel, nor poison,
Malice domestic, foreign levy, nothing.
Can touch him further.

Shakespeare, Macbeth, III, ii, 19

91 *Cleopatra*. [Antony dies.]

The crown o' the earth doth melt. My lord!
O, wither'd is the garland of the war,
The soldier's pole is fall'n; young boys and girls
Are level now with men; the odds is gone,
And there is nothing left remarkable
Beneath the visiting moon.

Shakespeare, Antony and Cleopatra, IV, xv, 63

92 Guiderius, Fear no more the heat o' the sun.

Nor the furious winter's rages;
Thou thy worldly task hast done.
Home art gone, and ta'en thy wages.
Golden lads and girls all must,
As chimney-sweepers, come to dust.

Shakespeare, Cymbeline, IV, ii, 258

93 *Stephano*. He that dies pay's all debts.

Shakespeare, Tempest, III, ii, 140

94 No longer mourn for me when I am dead

Than you shall hear the surly sullen bell

Give warning to the world that I am fled
From this vile world, with vilest worms to dwell.

Shakespeare, Sonnet LXXI

95 Well! said Don Quixote, thou wilt never be silent till thy Mouth's full of Clay; when thou'rt dead, I hope I shall have some Rest. Faith and Troth norv Master, quoth Sancho, you did ill to talk of Death, Heaven bless us, 'tis no Child's Play; you've e'en spoil'd my Dinner; the very Thought of raw Bones and lanthorn Jaws makes me sick. Death eats up all Things, both the young Lamb and old Sheep; and I have heard our Parson say, Death values a Prince no more than a Clown; all's Fish that comes to his Net; he throw's at all, and sweeps Stakes; he's no Mower that takes a Nap at Noon-Day, but drives on, fair Weather or foul, and cuts down the green Grass as well as the ripe Corn: He's neither squeamish nor queesy-stomach'd, for he swallows without chewing, and crams down all things into his ungracious Maw; and tho' you can see no Belly he has, he has a confounded Dropsy, and thirsts after Men's Lives, which he guggles down like Mother's Milk. Hold, hold, cry'd the Knight, go no further, for thou art come to a very handsome Period; thou hast said as much of Death in thy home-spun Cant, as a good Preacher could have done: Thou hast got the Knack of Preaching, Man! I must get thee a Pulpit and Benefice, I think.

Cervantes, Don Quixote, II, 20

96 O eloquent, just, and mighty Death! whom none could advise, thou hast persuaded; what none hath dared, thou hast done; and whom all the world hath flattered, thou only hast cast out of the world and despised; thou hast

drawn together all the far-stretched greatness, all the pride, cruelty, and ambition of man, and covered it all over with these two narrow words, *Hic jacet!*

Sir Walter Raleigh, History of the World, Bk. V, VI, 12

97 Wee can dye by it, if not live by love.
And if unfit for tombes and hearse
Our legend bee, it will be fit for verse;
And if no peece of Chronicle wee prove,
We'll build in sonnets pretty roomes;
As well a well wrought urne becomes
The greatest ashes, as half-acre tombes.

Donne, The Canonization

98 Death be not proud, though some have called thee
Mighty and dreadfull, for, thou art not soe,
For, those, whom thou think'st, thou dost overthrow.
Die not, poore death, nor yet canst thou kill mee.
From rest and sleepe, which but thy pictures bee.
Much pleasure, then from thee, much more must flow,
And soonest our best men with thee doe goe,
Rest of their bones, and soules deliverie.
Thou art slave to Fate, Chance, kings, and desperate
men.
And dost with poyson, warre, and sicknesse dwell,
And poppie, or charmes can make us sleepe as well.
And better than thy stroake; why swell'st thou then?
One short sleepe past, wee wake eternally.
And death shall be no more; death, thou shalt die.

Donne, Holy Sonnet X

99 Wouldst thou hear what man can say
In a little? Reader, stay.
Underneath this stone doth lie
As much beauty as could die;
Which in life did harbor give
To more virtue than doth live.
If at all she had a fault.
Leave it buried in this vault.
One name was Elizabeth;
Th' other, let it sleep with death:
Fitter, where it died, to tell,
Than that it lived at all. Farewell!

Jonson, Epitaph on Elizabeth, L. H.

100 Men fear death as children fear to go in the dark; and as that natural fear in children is increased with tales, so is the other. Certainly, the contemplation of death, as the wages of sin and passage to another world, is holy and religious; but the fear of it, as a tribute due unto nature, is weak. Yet in religious meditations there is sometimes mixture of vanity and of superstition.. . . Groans and convulsions, and a discoloured face, and friends weeping, and blacks, and obsequies, and the like, show death terrible.

Bacon, Of Death

101 It is worthy the observing that there is no passion in the mind of man so weak but it mates and masters the fear of death; and therefore death is no such terrible enemy when a man hath so many attendants about him that can win the combat of him. Revenge triumphs over death;

love slights it; honour aspireth to it; grief flieth to it; fear pre-occupateth it.

Bacon, Of Death

102 There is neither the word nor the thing of purgatory, neither in this nor any other text; nor anything that can prove a necessity of a place for the soul without the body. . . . For God, that could give a life to a piece of clay, hath the same power to give life again to a dead man, and renew his inanimate and rotten carcass into a glorious, spiritual, and immortal body.

Hobbes, Leviathan, IV, 44

103 If the nearness of our last necessity brought a nearer conformity into it, there were a happiness in hoary hairs and no calamity in half senses. But the long habit of living indisposeth us for dying.

Sir Thomas Browne, Urn-Burial, V

104 To extend our memories by monuments whose death we daily pray for, and whose duration we cannot hope without injury to our expectations in the advent of the Last Day, were a contradiction to our beliefs. We whose generations are ordained in this setting part of time are providentially taken off from such imaginations, and, being necessitated to eye the remaining particle of futurity, are naturally constituted unto thoughts of the next world, and cannot excusably decline the consideration of that duration which maketh pyramids pillars of snow and all that's past a moment.

Sir Thomas Browne, Um-Burial, V

105 The number of the dead long exceedeth all that shall live. The night of time far surpasseth the day, and who knows when was the equinox? Every hour adds unto that current arithmetic, which scarce stands one moment. And since death must be the Lucina of life, and even pagans could doubt whether thus to live were to die; since our longest sun sets at right descensions and makes but winter arches, and therefore it cannot be long before we lie down in darkness and have our light in ashes; since the brother of death daily haunts us with dying mementos, and time, that grows old in itself, bids us hope no long duration, diuturnity is a dream and folly of expectation.

Sir Thomas Browne, Urn-Burial, V

106 To hold long subsistence seems but a scape in oblivion. But man is a noble animal, splendid in ashes and pompous in the grave, solemnizing nativities and deaths with equal lustre, nor omitting ceremonies of bravery in the infamy of his nature.

Sir Thomas Browne, Urn-Burial, V

107 To subsist in lasting monuments, to live in their productions, to exist in their names and predicament of chimaeras, was large satisfaction unto old expectations, and made one part of their Elysiums. But all this is nothing in the metaphysics of true belief. To live indeed is to be again ourselves, which being not only a hope, but an evidence, in noble believers, his all one to lie in St. Innocent's churchyard as in the sands of Egypt; ready to be anything, in the ecstasy of being ever, and as content with six foot as the moles of Adrianus.

Sir Thomas Browne, Urn Burial, V

108 As men are not able to fight against death, misery, ignorance, they have taken it into their heads, in order to be happy, not to think of them at all.

Despite these miseries, man wishes to be happy, and only wishes to be happy, and cannot wish not to be so. But how will he set about it? To be happy he would have to make himself immortal; but, not being able to do so, it has occurred to him to prevent himself from thinking of death.

Pascal, Pensées, II, 168-169

109 For it is not to be doubted that the duration of this life is but a moment; that the state of death is eternal, whatever may be its nature; and that thus all our actions and thoughts must take such different directions, according to the state of that eternity, that it is impossible to take one step with sense and judgement, unless we regulate our course by the truth of that point which ought to be our ultimate end.

There is nothing clearer than this; and thus, according to the principles of reason, the conduct of men is wholly unreasonable, if they do not take another course.

On this point, therefore, we condemn those who live without thought of the ultimate end of life, who let themselves be guided by their own inclinations and their own pleasures without reflection and without concern, and, as if they could annihilate eternity by turning away their thought from it, think only of making themselves happy for the moment.

Yet this eternity exists, and death, which must open into it and threatens them every hour, must in a little

time infallibly put them under the dreadful necessity of being either annihilated or unhappy for ever, without knowing which of these eternities is for ever prepared for them.

This is a doubt of terrible consequence. They are in peril of eternal woe and thereupon, as if the matter were not worth the trouble, they neglect to inquire whether this is one of those opinions which people receive with too credulous a facility, or one of those which, obscure in themselves, have a very firm, though hidden, foundation. Thus they know not whether there be truth or falsity in the matter, nor whether there be strength or weakness in the proofs. They have them before their eyes; they refuse to look at them; and in that ignorance they choose all that is necessary to fall into this misfortune if it exists, to await death to make trial of it, yet to be very content in this state, to make profession of it, and indeed to boast of it. Can we think seriously of the importance of this subject without being horrified at conduct so extravagant?

Pascal, Pensées, III, 195

110 We are fools to depend upon the society of our fellow-men. Wretched as we are, powerless as we are, they will not aid us; we shall die alone.

Pascal, Pensées, 111, 211

111 *Eve*. Dust I am, and shall to dust returne:
O welcom hour whenever! why delays
His hand to execute what his Decree
Fixd on this day? why do I overlive.
Why am I mockt with death, and length'nd out

To deathless pain? how gladly would I meet
Mortalitie my sentence, and be Earth
Insensible, how glad would lay me down
As in my Mothers lap? there I should rest
And sleep secure.

Milton, Paradise Lost, X, 770

112 *Adam*. Have I now seen Death? Is this the way
I must return to native dust? O sight
Of terrour, foul and ugly to behold,
Horrid to think, how horrible to feel!

Milton, Paradise Lost, XI, 462

113 *Michael*. Many shapes
Of Death, and many are the wayes that lead
To his grim Cave, all dismal; yet to sense
More terrible at th' entrance then within.
Some, as thou saw'st, by violent stroke shall die,
By Fire, Flood, Famin, by Intemperance more
In Meats and Drinks, which on the Earth shal bring
Diseases dire.

Milton, Paradise Lost, XI, 467

114 *Manoa*. Come, come, no time for lamentation now,
Nor much more cause, *Samson* hath quit
himself Like Samsonj and heroicly hath finish'd
A life Heroic, on his Enemies
Fully reveng'd, hath left them years of mourning,
And lamentation to the Sons of *Caphtor*
Through all *Philistian* bounds. To *Israel*
Honour hath left, and freedom, let but them
Find courage to lay hold on this occasion,

To himself and Fathers house eternal fame;
And which is best and happiest yet, all this
With God not parted from him, as was feared,
But favouring and assisting to the end.
Nothing is here for tears, nothing to wail
Or knock the breast, no weakness, no contempt.
Dispraise, or blame, nothing but well and fair.
And what may quiet us in a death so noble.

Milton, Samson Agonistes, 1708

115 Beneath those rugged elms, that yew-tree's shade.
Where heaves the turf in many a mouldering heap.
Each in his narrow cell for ever laid.
The rude Forefathers of the hamlet sleep.

The breezy call of incense-breathing Morn,
The swallow twittering from the straw-built shed,
The cock's shrill clarion, or the echoing horn,
No more shall rouse them from their lowly bed.

For them no more the blazing hearth shall burn,
Or busy housewife ply her evening care:
No children run to lisp their sire's return,
Or climb his knees the envied kiss to share.

Gray, Elegy Written in a Country Church-Yard

116 If we were immortal we should all be miserable; no
doubt it is hard to die, but it is sweet to think that we
shall not live for ever, and that a better life will put an
end to the sorrows of this world. If we had the offer of
immortality here below, who would accept the sorrowful
gift?

Rousseau, Emile, II

117 A frequent and attentive prospect of that moment which must put a period to all our schemes and deprive us of all our acquisitions, is indeed of the utmost efficacy to the just and rational regulation of our lives; nor would ever anything wicked, or often anything absurd, be undertaken or prosecuted by him who should begin every day with a serious reflection that he is born to die.

Johnson, Rambler No. 17

118 When we were alone, I introduced the subject of death, and endeavoured to maintain that the fear of it might be got over. I told him that David Hume said to me, he was no more uneasy to think he should not be after this life, than that he *had not been* before he began to exist.

Johnson. "Sir, if he really thinks so, his perceptions are disturbed; he is mad: if he does not think so, he lies. He may tell you, he holds his finger in the flame of a candle, without feeling pain; would you believe him? When he dies, he at least gives up all he has." *Boswell.* "Foote, Sir, told me, that when he was very ill he was not afraid to die." *Johnson.* "It is not true. Sir. Hold a pistol to Foote's breast, or to Hume's breast, and threaten to kill them, and you'll see how they behave." *Boswell.* "But may we not fortify our minds for the approach of death?" Here I am sensible I was in the wrong, to bring before his view what he ever looked upon with horror; for although when in a celestial frame, in his *Vanity of Human Wishes*, he has supposed death to be "kind Nature's signal for retreat," from this state of being to "a happier seat," his thoughts upon this awful change were in general full of dismal apprehensions. His mind resembled the vast amphitheatre, the Colisaeum at Rome. In the centre stood his judgement, which, like a mighty gladiator, combated

those apprehensions that, like the wild beasts of the *Arena*, were all around in cells, ready to be let out upon him. After a conflict, he drives them back into their dens; but not killing them, they were still assailing him. To my question, whether we might not fortify our minds for the approach of death, he answered, in a passion, "No, Sir, let it alone. It matters not how a man dies, but how he lives. The act of dying is not of importance, it lasts so short a time." He added, (with an earnest look,) "A man knows it must be so, and submits. It will do him no good to whine."

Boswell, Life of Johnson (Oct. 26, 1769)

119 It is plain that the *hope of a future life* arises from the feeling, which exists in the breast of every man, that the temporal is inadequate to meet and satisfy the demands of his nature.

Kant, Critique of Pure Reason, Pref. to 2nd Ed.

120 The average duration of human life will to a certain degree vary from healthy or unhealthy climates, from wholesome or unwholesome food, from virtuous or vicious manners, and other causes, but it may be fairly doubted whether there is really the smallest perceptible advance in the natural duration of human life since first we have had any authentic history of man.

Malthus, Population, IX

121 *Wagner.* Ah, God! how long is art!
And soon it is we die.
Oft when my critical pursuits I ply,
I truly grow uneasy both in head and heart.
How hard to gain the means whereby

A man mounts upward to the source!
And ere man's ended barely half the course.
Poor devil! I suppose he has to die.

Goethe, Faust, I, 558

122 *Mephistopheles*. "Past" — 'tis a stupid word.
Past—why?
Past and pure Naught, sheer Uniformity!
Of what avail's perpetual creation
If later swept off to annihilation?
"So it is past!" You see what that must mean?
It is the same as had it never been,
And yet whirls on as if it weren't destroyed,
I should prefer the Everlasting Void.

Goethe, Faust, II, 5, 11595

123 Peace, peace! he is not dead, he doth not sleep—
He hath awakened from the dream of life—
'Tis we, who, lost in stormy visions, keep
With phantoms an unprofitable strife,
And in mad trance strike with our spirit's knife
Invulnerable nothings. We decay
Like corpses in a charnel; fear and grief
Convulse us and consume us day by day,
And cold hopes swarm like worms within our living clay.
He has outsoared the shadow of our night;
Envy and calumny and hate and pain.
And that unrest which men miscall delight.
Can touch him not and torture not again;
From the contagion of the world's slow stain
He is secure, and now can never mourn
A heart grown cold, a head grown gray in vain;

Nor, when the spirit's self has ceased to bum,
With sparklcss ashes loan an unlamented urn.

Shelley, Adonais, XXXIX~XL

124 'Whom the gods love die young,' was said of yore,
And many deaths do they escape by this:
The death of friends, and that which slays even more—
The death of friendship, love, youth, all that is.
Except mere breath; and since the silent shore
Awaits at last even those who longest miss
The old archer's shafts, perhaps the early grave
Which men weep over may be meant to save.

Byron, Don Juan, IV, 12

125 Darkling I listen; and, for many a time
I have been half in love with easeful Death
, Call'd him soft names in many a mused rhyme,
To take into the air my quiet breath;
Now more than ever seems it rich to die,
To cease upon the midnight with no pain,
While thou art pouring forth thy soul abroad
In such an ecstasy!
Still wouldst thou sing, and I have ears in vain—
To thy high requiem become a sod.

Keats, Ode to a Nightingale

126 'Veil, gov'ner, ve must all come to it, one day or
another.'
'So we must, Sammy,' said Mr. Weller the elder.
'There's a Providence in it ail,' said Sam.
'O' course there is,' replied his father with a nod of grave

approval. 'Wot 'ud become of the undertakers vithout it, Sammy?'

Dickens, Pickwick Papers, LII

127 Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea.

But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.

Twilight and evening bell,
And after that the dark!
And may there be no sadness of farewell,
When I embark;

For tho' from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crost the bar.

Tennyson, Crossing the Bar

128 Methinks we have hugely mistaken this matter of Life
and Death. Methinks that what they call my shadow here
on earth is my true substance. Methinks that in looking at
things spiritual, we are too much like oysters observing
the sun through the water, and thinking that thick water
the thinnest of air. Methinks my body is but the lees of
my better being. In fact take my body who will, take it I

say, it is not m>'self. And therefore three cheers for Nantucket, and come a stove boat and stove body when they will, for stave my soul, who can do this?

Melville, Moby Dick, VII

129 The one visible quality in the aspect of the dead which most appals the gazer, is the marble pallor lingering there; as if indeed that pallor were much like the badge of consternation in the other world, as of mortal trepidation here. And from that pallor of the dead, we borrow the expressive hue of the shroud in which we wrap them.

Melville, Moby Dick, XLII

130 The life in us is like the water in the river. It may rise this year higher than man has ever known it, and flood the parched uplands; even this may be the eventful year, which will drown out all our muskrats. It was not always dry land where we dwell. I see far inland the banks which the stream anciently washed, before science began to record its freshets. Every one has heard the story which has gone the rounds of New England, of a strong and beautiful bug which came out of the dry leaf of an old table of apple-tree wood, which had stood in a farmer's kitchen for sixty years, first in Connecticut, and afterward in Massachusetts— from an egg deposited in the living tree many years earlier still, as appeared by counting the annual layers beyond it; which was heard gnawing out for several weeks, hatched perchance by the heat of an um. Who does not feel his faith in a resurrection and immortality strengthened by hearing of this? Wlio knows what beautiful and winged life, whose egg has been

buried for ages under many concentric layers of woodenness in the dead dry life of society, deposited at first in the alburnum of the green and living tree, which has been gradually converted into the semblance of its well-seasoned tomb—heard perchance gnawing out now for years by the astonished family of man, as they sat round the festive board—may unexpectedly come forth from amidst society's most trivia! and handselled furniture, to enjoy its perfect summer life at last!

I do not say that John or Jonathan will realize all this; but such is the character of that morrow which mere lapse of time can never make to dawn. The light which puts out our eyes is darkness to us. Only that day dawns to which we are awake. There is more day to dawn. The sun is but a morning star.

Thoreau, Walden, Conclusion

131 Come lovely and soothing death,
Undulate round the world, serenely arriving, arriving.
In the day, in the night, to all, to each,
Sooner or later delicate death
Prais'd be the fathomless universe.
For life and joy, and for objects and knowledge curious.
And for love, sweet love—but praise! praise! praise!
For the sure-enwinding arms of cool-enfolding death.

Whitman, When Lilacs Last in the Dooryard Bloom'd,
135

132 *Ippolit Kirillovitch*. I imagine that he [Mitya] felt something like what criminals feel when they are being taken to the scaffold. They have another long, long street to pass down and at walking pace, past thousands of

people. Then there will be a turning into another street and only at the end of that street the dread place of execution! I fancy that at the beginning of the journey the condemned man, sitting on his shameful cart, must feel that he has infinite life still before him. The houses recede, the cart moves on—oh, that's nothing. Us still far to the turning into the second street and he still looks boldly to right and to left at those thousands of callously curious people with their eyes fixed on him, and he still fancies that he is just such a man as they. But now the turning comes to the next street. Oh, that's nothing, nothing, there's still a whole street before him, and however many houses have been passed, he will still think there are many left And so to the very end, to the very scaffold.

Dostoevsky, Brothers Karamazov, Pt. IV, XII, 9

- 133 Whoever has lived long enough to find out what life is, knows how deep a debt of gratitude we owe to Adam, the first great benefactor of our race. He brought death into the world.

Mark Twain, Pudd'nhead Wilson's Calendar, III

- 134 Let us endeavour so to live that when we come to die even the undertaker will be sorry.

Mark Twain, Pudd'nhead Wilson's Calendar, VI

- 135 Why is it that we rejoice at a birth and grieve at a funeral? It is because we are not the person involved.

Mark Twain, Pudd'nhead Wilson's Calendar, IX

136 All say, 'How hard it is that we have to die'— a strange complaint to come from the mouths of people who have had to live.

Mark Twain, Pudd'nhead Wilson's Calendar, X

137 The reports of my death are greatly exaggerated.

*Mark Twain, Cable from London to the Associated Press
(1897)*

138 Our own death is indeed unimaginable, and whenever we make the attempt to imagine it we can perceive that we really survive as spectators. Hence the psychoanalytic school could venture on the assertion that at bottom no one believes in his own death, or to put the same thing in another way, in the unconscious every one of us is convinced of his own immortality.

Freud, Thoughts on War and Death, II

139 Life is impoverished, it loses in interest, when the highest stake in the game of living, life itself, may not be risked. It becomes as flat, as superficial, as one of those American flirtations in which it is from the first understood that nothing is to happen, contrasted with a Continental love-affair in which both partners must constantly bear in mind the serious consequences.

Freud, Thoughts on War and Death, II

140 To endure life remains, when all is said, the first duty of all living beings. Illusion can have no value if it makes this more difficult for us.

We remember the old saying: If you desire peace, prepare for war.

It would be timely thus to paraphrase it: If you would endure life, be prepared for death.

Freud, Thoughts on War and Death, II

141 We perceive duration as a stream against which we cannot go. It is the foundation of our being, and, as we feel, the very substance of the world in which we live.

Bergson, Creative Evolution, I

142 Death is not an event of life. Death is not lived through.

If by eternity is understood not endless temporal duration but timelessness, then he lives eternally who lives in the present.

Our life is endless in the way that our visual field is without limit.

The temporal immortality of the human soul, that is to say, its eternal survival after death, is not only in no way guaranteed, but this assumption in the first place will not do for us what we always tried to make it do. Is a riddle solved by the fact that I survive for ever? Is this eternal life not as enigmatic as our present one? The solution of the riddle of life in space and time lies outside space and time.

Wittgenstein, Tractatus Logico-Philosophicus, 6.4311-6.4312

143 That the end of life should be death may sound sad: yet what other end can anything have? The end of an evening party is to go to bed; but its use is to gather congenial people together, that they may pass the time pleasantly. An invitation to the dance is not rendered ironical because the dance cannot last for ever; the

youngest of us and the most vigorously wound up, after a few hours, has had enough of sinuous stepping and prancing. The transitoriness of things is essential to their physical being, and not at all sad in itself; it becomes sad by virtue of a sentimental illusion, which makes us imagine that they wish to endure, and that their end is always untimely; but in a healthy nature it is not so. what is truly sad is to have some impulse frustrated in the midst of its career, and robbed of its chosen object; and what is painful is to have an organ lacerated or destroyed when it is still vigorous, and not ready for its natural sleep and dissolution. We must not confuse the itch which our unsatisfied instincts continue to cause with the pleasure of satisfying and dismissing each of them in turn. Could they all be satisfied harmoniously we should be satisfied once for all and completely. Then doing and dying would coincide throughout and be a perfect pleasure.

Santayana, A Long Way Round to Nirvana

144 A few light taps upon the pane made him turn to the window. It had begun to snow again. He watched sleepily the flakes, silver and dark, falling obliquely against the lamplight- The time had come for him to set out on his journey westward. Yes, the newspapers were right; snow was general all over Ireland- It was falling on every part of the dark central plain, on the treeless hills, falling softly upon the Bog of Allen, and, farther westward, softly falling into the dark mutinous Shannon waves. It was falling, too, upon every part of the lonely churchyard on the hill where Michael Furey lay buried. It lay thickly drifted on the crooked crosses and headstones, on the spears of the little gate, on the barren thorns. His soul

swooned slowly as he heard the snow falling faintly through the universe and faintly falling, like the descent of their last end, upon all the living and the dead.

Joyce, The Dead

1.9 Suicide

Other animals, as for example the lemmings, may commit self-destruction *en masse*, and when they do so, they do so driven by instinct, but man alone deliberates about whether to take his own individual life, disputes the propriety or justification of such action, and actually commits the act with care and forethought.

The basic moral issue is one on which the pagan writers of antiquity, notably the Roman Stoics, and Christian theologians and philosophers take opposite sides. Suicide for the one is a dignified way out of life's insuperable difficulties; for the other, it is a grievous, mortal sin, resulting in eternal damnation. There is, in addition, a division of opinion among secular writers on whether deliberate suicide is an act of courage or cowardice or whether one has the right to take one's own life.

- 1 And the Philistines foilowed hard after Sauī, and after his sons; and the Philistines slew Jonathan, and A-bin-a-dab, and Mal-chi-shu-a, the sons of Saul.

And the battle went sore against Saul, and the archers hit him, and he was wounded of the archers.

Then said Saul to his armourbearer. Draw thy sword, and thrust me through therewith; lest these uncircumcised come and abuse me. But his armourbearer would not; for he was sore afraid. So Saul took a sword, and fell upon it.

And when his armourbearer saw that Saul was dead, he fell likewise on the sword, and died.

So Saul died, and his three sons, and all his house died together.

1 Chronicles 10:2-6

2 When I say, My bed shall comfort me, my couch shall ease my complaint;

Then thou scarest me with dreams, and terrifi-est me through visions:

So that my soul chooseth strangling, and death rather than my life.

I loathe it; I would not live alway: let me alone; for my days are vanity.

Job 7:13-16

3 *Socrates.* Any man who has the spirit of philosophy, will be willing to die; but he will not take his own life, for that is held to be unlawful.... The gods are our guardians, and... we men are a possession of theirs.... And if one of your own possessions, an ox or an ass, for example, took the liberty of putting himself out of the way when you had given no intimation of your wish that he should die, would you not be angry with him, and would you not punish him if you could?...

Then, if we look at the matter thus, there may be reason in saying that a man should wait, and not take his own life until God summons him.

Plato, Phaedo, 61B

- 4 Whether a man can treat himself unjustly or not, is evident from what has been said. For (a) one class of just acts are those acts in accordance with any virtue which are prescribed by the law; e.g. the law does not expressly permit suicide, and what it does not expressly permit it forbids. Again, when a man in violation of the law harms another (otherwise than in retaliation) voluntarily, he acts unjustly, and a voluntary agent is one who knows both the person he is affecting by his action and the instrument he is using; and he who through anger voluntarily stabs himself does this contrary to the right rule of life, and this the law does not allow; therefore he is acting unjustly. But towards whom? Surely towards the state, not towards himself. For he suffers voluntarily, but no one is voluntarily treated unjustly. This is also the reason why the state punishes; a certain loss of civil rights attaches to the man who destroys himself, on the ground that he is treating the state unjustly.

Aristotle, Ethics, 1138a4

- 5 Then Juno, grieving that she [Dido] should sustain
A death so ling'ring, and so full of pain,
Sent Iris down, to free her from the strife
Of lab'ring nature, and dissolve her life.
For since she died, not doom'd by Heav'n's decree.
Or her own crime, but human casualty,
And rage of love, that plung'd her in despair.

The Sisters had not cut the topmost hair,
Which Proserpine and they can only know;
Nor made her sacred to the shades below.
Downward the various goddess took her flight,
And drew a thousand colors from the light;
Then stood above the dying lover's head,
And said: "I thus devote thee to the dead.
This off'ring to th' infernal gods I bear."
Thus while she spoke, she cut the fatal hair:
The struggling soul was loos'd, and life dissolv'd in air.

Virgil, Aeneid, IV

- 6 'Rehearse death.' To say this is to tell a person to rehearse his freedom. A person who has learned how to die has unlearned how to be a slave. He is above, or at any rate beyond the reach of, all political powers. What are prisons, warders, bars to him? He has an open door. There is but one chain holding us in fetters, and that is our love of life. There is no need to cast this love out altogether, but it does need to be lessened somewhat so that, in the event of circumstances ever demanding this, nothing may stand in the way of our being prepared to do at once what we must do at some time or other.

Seneca, Letters to Lucilius, 26

- 7 Then Judas, which had betrayed him, when he saw that he was condemned, repented himself, and brought again the thirty pieces of silver to the chief priests and elders.

Saying, I have sinned in that I have betrayed the innocent blood. And they said, What is that to us? see thou to that.

And he cast down the pieces of silver in the temple, and departed, and went and hanged himself.

And the chief priests took the silver pieces, and said, It is not lawful for to put them into the treasury, because it is the price of blood.

And they took counsel, and bought with them the potter's field, to bury strangers in.

Wherefore that field was called, The field of blood, unto this day.

Matthew 27:3-8

8 [Lycurgus] was now about that age in which life was still tolerable, and yet might be quitted without regret. Everything, moreover, about him was in a sufficiently prosperous condition. He therefore made an end of himself by a total abstinence from food, thinking it a statesman's duty to make his very death, if possible, an act of service to the state, and even in the end of his life to give some example of virtue and effect some useful purpose. He would, on the one hand, crown and consummate his own happiness by a death suitable to so honourable a life, and on the other hand, would secure to his countrymen the enjoyment of the advantages he had spent his life in obtaining for them, since they had solemnly sworn the maintenance of his institutions until his return.

Plutarch, Lycurgus

9 Chiefly being ashamed to sully the glory of his former great actions, and of his many victories and trophies, he [Themistocles] determined to put a conclusion to his life, agreeable to its previous course. He sacrificed to the gods,

and invited his friends; and, having entertained them and shaken hands with them, drank bull's blood, as is the usual story; as others state, a poison producing instant death; and ended his days in the city of Magnesia, having lived sixty-five years, most of which he had spent in politics and in wars, in government and command. The king being informed of the cause and manner of his death, admired him more than ever, and continued to show kindness to his friends and relations.

Plutarch, Themistocles

- 10 Brutus, having to pass his army from Abydos to the continent on the other side, laid himself down one night, as he used to do, in his tent, and was not asleep, but thinking of his affairs, and what events he might expect. For he is related to have been the least inclined to sleep of all men who have commanded armies, and to have had the greatest natural capacity for continuing awake, and employing himself without need of rest. He thought he heard a noise at the door of his tent, and looking that way, by the light of his lamp, which was almost out, saw a terrible figure, like that of a man, but of unusual stature and severe countenance. He was somewhat frightened at first, but seeing it neither did nor spoke anything to him, only stood silently by his bedside, he asked who it was. The spectre answered him, "Thy evil genius, Brutus, and thou shalt see me at Philippi," Brutus answered courageously, "Well, I shall see you," and immediately the appearance vanished.

When the time was come, he drew up his army near Philippi against Antony and Caesar, and in the first battle won the day, routed the enemy, and plundered Caesar's camp. The night before the second battle, the same

phantom appeared to him again, but spoke not a word. He presently understood his destiny was at hand, and exposed himself to all the danger of the battle. Yet he did not die in the fight, but seeing his men defeated, got up to the top of a rock, and there presenting his sword to his naked breast, and assisted, as they say, by a friend, who helped him to give the thrust, met his death.

Plutarch, Caesar

11 Now the birds began to sing, and he again fell into a little slumber. At length Butas came back, and told him all was quiet in the port. Then Cato, laying himself down, as if he would sleep out the rest of the night, bade him shut the door after him. But as soon as Butas was gone out, he took his sword, and stabbed it into his breast; yet not being able to use his hand so well, on account of the swelling, he did not immediately die of the wound; but struggling, fell off the bed, and throwing down a little mathematical table that stood by, made such a noise that the servants, hearing it, cried out. And immediately his son and all his friends came into the chamber, where, seeing him lie weltering in his blood, a great part of his bowels out of his body, but himself still alive and able to look at them, they all stood in horror. The physician went to him, and would have put in his bowels, which were not pierced, and sewed up the wound; but Cato, recovering himself, and understanding the intention, thrust away the physician, plucked out his own bowels, and tearing open the wound, immediately expired.

In less time than one would think his own family could have known this accident, all the three hundred were at the door. And a little after, the people of Utica flocked thither, crying out with one voice he was their benefactor

and their saviour, the only free and only undefeated man.. . .

Caesar had been informed that Cato stayed at Utica, and did not seek to fly; that he had sent away the rest of the Romans, but himself, with his son and a few of his friends, continued there very unconcernedly, so that he could not imagine what might be his design. But having a great consideration for the man, he hastened thither with his army. When he heard of his death, it is related he said these words, "Cato, I grudge you your death, as you have grudged me the preservation of your life." And, indeed, if Cato would have suffered himself to owe his life to Caesar, he would not so much have impaired his own honour, as augmented the other's glory.

Plutarch, Cato the Younger

- 12 Cicero's death excites our pity; for an old man to be miserably carried up and down by his servants, flying and hiding himself from that death which was, in the course of nature, so near at hand; and yet at last to be murdered. Demosthenes, though he seemed at first a little to supplicate, yet, by his preparing and keeping the poison by him, demands our admiration; and still more admirable was his using it. When the temple of the god no longer afforded him a sanctuary, he took refuge, as it were, at a mightier altar, freeing himself from arms and soldiers, and laughing to scorn the cruelty of Antipater.

Plutarch, Demosthenes and Cicero Compared

- 13 When he understood she was alive, he eagerly gave order to the servants to take him up, and in their arms

was carried to the door of the building. Cleopatra would not open the door, but, looking from a sort of window, she let down ropes and cords, to which Antony was fastened; and she and her two women, the only persons she had allowed to enter the monument, drew him up. Those that were present say that nothing was ever more sad than this spectacle, to see Antony, covered all over with blood and just expiring, thus drawn up, still holding up his hands to her, and lifting up his body with the little force he had left. As, indeed, it was no easy task for the women; and Cleopatra, with all her force, clinging to the rope, and straining with her head to the ground, with difficulty pulled him up, while those below encouraged her with their cries, and joined in all her efforts and anxiety.

When she had got him up, she laid him on the bed, tearing all her clothes, which she spread upon him; and, beating her breast with her hands, lacerating herself, and disfiguring her own face with the blood from his wounds, she called him her lord, her husband, her emperor, and seemed to have pretty nearly forgotten all her own evils, she was so intent upon his misfortunes. Antony, stopping her lamentations as well as he could, called for wine to drink, either that he was thirsty, or that he imagined that it might put him the sooner out of pain. When he had drunk, he advised her to bring her own affairs, so far as might be honourably done, to a safe conclusion, and that, among all the friends of Caesar, she should rely on Proculeius; that she should not pity him in his last turn of fate, but rather rejoice for him in remembrance of his past happiness, who had been of all men the most illustrious and powerful, and in the end had fallen not ignobly, a Roman by a Roman overcome.

Plutarch, Antony

14 Having made these lamentations, crowning the tomb with garlands and kissing it, she gave orders to prepare her a bath, and, coming out of the bath, she lay down and made a sumptuous meal. And a country fellow brought her a little basket, which the guards intercepting and asking what it was, the fellow put the leaves which lay uppermost aside, and showed them it was full of figs; and on their admiring the largeness and beauty of the figs, he laughed, and invited them to take some, which they refused, and, suspecting nothing, bade him carry them in. After her repast, Cleopatra sent to Caesar a letter which she had written and sealed; and, putting everybody out of the monument but her two women, she shut the doors.

Caesar, opening her letter, and finding pathetic prayers and entreaties that she might be buried in the same tomb with Antony, soon guessed what was doing. At first he was going himself in all haste, but, changing his mind, he sent others to see. The thing had been quickly done. The messengers came at full speed, and found the guards apprehensive of nothing; but on opening the doors they saw her stone-dead, lying upon a bed of gold, set out in all her royal ornaments. Iras, one of her women, lay dying at her feet, and Charmion, just ready to fall, scarce able to hold up her head, was adjusting her mistress's diadem. And when one that came in said angrily, "Was this well done of your lady, Charmion," "Extremely well," she answered, "and as became the descendant of so many kings;" and as she said this, she fell down dead by the bedside.

Plutarch, Antony

15 Take care that there be not among us any young men of such a mind that, when they have recognized their kinship to God, and that we are fettered by these bonds, the body, I mean, and its possessions, and whatever else on account of them is necessary to us for the economy and commerce of life, they should intend to throw off these things as if they were burdens painful and intolerable, and to depart to their kinsmen.... This is the labour that your teacher and instructor ought to be employed upon, if he really were what he should be. You should come to him and say, "Epictetus, we can no longer endure being bound to this poor body, and feeding it and giving it drink, and rest, and cleaning it, and for the sake of the body complying with the wishes of these and of those. Are not these things indifferent and nothing to us, and is not death no evil? And are we not in a manner kinsmen of God, and did we not come from Him? Allow us to depart to the place from which we came; allow us to be released at last from these bonds by which we are bound and weighed down. Here there are robbers and thieves and courts of justice, and those who are named tyrants, and think that they have some power over us by means of the body and its possessions. Permit us to show them that they have no power over any man." And I on my part would say, "Friends, wait for God; when He shall give the signal and release you from this service, then go to Him; but for the present endure to dwell in this place where He has put you: short indeed is this time of your dwelling here, and easy to bear for those who are so disposed: for what tyrant or what thief, or what courts of justice, are formidable to those who have thus considered as things of no value the body and the possessions of the body? Wait then, do not depart without a reason."

Epictetus, Discourses, I, 9

16 When Claudius began to deliberate about the acquittal of Asiaticus, Vitellius, with tears in his eyes, spoke of his old friendship with the accused, and of their joint homage to the emperor's mother, Antonia. He then briefly reviewed the services of Asiaticus to the State, his recent campaign in the invasion of Britain, and everything else which seemed likely to win compassion, and suggested that he should be free to choose his death. Claudius's reply was in the same tone of mercy. Some friends urged on Asiaticus the quiet death of self-starvation, but he declined it with thanks. He took his usual exercise, then bathed and dined cheerfully, and saying that he had better have fallen by the craft of Tiberius or the fury of Caius Caesar than by the treachery of a woman and the shameless mouth of Vitellius, he opened his veins, but not till he had inspected his funeral pyre, and directed its removal to another spot, lest the smoke should hurt the thick foliage of the trees. So complete was his calmness even to the last.

Tacitus, Annals, XI, 3

17 Seneca, quite unmoved, asked for tablets on which to inscribe his will, and, on the centurion's refusal, turned to his friends, protesting that as he was forbidden to requite them, he bequeathed to them the only, but still the noblest possession yet remaining to him, the pattern of his life, which, if they remembered, they would win a name for moral worth and steadfast friendship. At the same time he called them back from their tears to manly resolution, now with friendly talk, and now with the sterner language of rebuke. "Where," he asked again and

again, "are your maxims of philosophy, or the preparation of so many years' study against evils to come? Who knew not Nero's cruelty? After a mother's and a brother's murder, nothing remains but to add the destruction of a guardian and a tutor."

Having spoken these and like words, meant, so to say, for all, he embraced his wife; then softening awhile from the stem resolution of the hour, he begged and implored her to spare herself the burden of perpetual sorrow, and, in the contemplation of a life virtuously spent, to endure a husband's loss with honourable consolations. She declared, in answer, that she too had decided to die, and claimed for herself the blow of the executioner.

Thereupon Seneca, not to thwart her noble ambition, from an affection too which would not leave behind him for insult one whom he dearly loved, replied: "I have shown you ways of smoothing life; you prefer the glory of dying. I will not grudge you such a noble example. Let the fortitude of so courageous an end be alike in both of us, but let there be more in your decease to win fame."

Then by one and the same stroke they sundered with a dagger the arteries of their arms.

Tacitus, Annals, XV, 62-63

- 18 It happened at the time that the emperor was on his way to Campania and that Petronius, after going as far as Cumae, was there detained. He bore no longer the suspense of fear or of hope. Yet he did not fling away life with precipitate haste, but having made an incision in his veins and then, according to his humour, bound them up, he again opened them, while he conversed with his friends, not in a serious strain or on topics that might win for him the glory of courage. And he listened to them as

they repeated, not thoughts on the immortality of the soul or on the theories of philosophers, but light poetry and playful verses. To some of his slaves he gave liberal presents, a flogging to others. He dined, indulged himself in sleep, that death, though forced on him, might have a natural appearance. Even in his will he did not, as did many in their last moments, flatter Nero or Tigellinus or any other of the men in power. On the contrary, he described fully the prince's shameful excesses, with the names of his male and female companions and their novelties in debauchery, and sent the account under seal to Nero. Then he broke his signet-ring, that it might not be subsequently available for imperilling others.

Tacitus, Annals, XVI, 19

- 19 When thou hast assumed these names, good, modest, true, rational, a man of equanimity, and magnanimous, take care that thou dost not change these names; and if thou shouldst lose them, quickly return to them.... But if thou shalt perceive that thouallest out of them and dost not maintain thy hold, go courageously into some nook where thou shalt maintain them, or even depart at once from life, not in passion, but with simplicity and freedom and modesty, after doing this one laudable thing at least in thy life, to have gone out of it thus.

Marcus Aurelius, Meditations, X, 8

- 20 In no passage of the holy canonical books there can be found either divine precept or permission to take away our own life, whether for the sake of entering on the enjoyment of immortality, or of shunning, or ridding ourselves of anything what-ever. Nay, the law, rightly

interpreted, even prohibits suicide, where it says, "Thou shalt not kill."

... There is no limitation added nor any exception made in favour of any one, and least of all in favour of him on whom the command is laid!... The commandment is, "Thou shalt not kill man"; therefore neither another nor yourself, for he who kills himself still kills nothing else than man.

Augustine, City of God, I, 20

21 But this we affirm, this we maintain, this we every way pronounce to be right, that no man ought to inflict on himself voluntary death, for this is to escape the ills of time by plunging into those of eternity; that no man ought to do so on account of another man's sins, for this were to escape a guilt which could not pollute him, by incurring great guilt of his own; that no man ought to do so on account of his own past sins, for he has all the more need of this life that these sins may be healed by repentance; that no man should put an end to this life to obtain that better life we look for after death, for those who die by their own hand have no better life after death.

Augustine, City of God, I, 26

22 Parricide is more wicked than homicide, but suicide is the most wicked of all.

Augustine, On Patience

23 Nessus had not yet reached the other side, when we moved into a wood, which by no path was marked.

Not green the foliage, but of colour dusky; not smooth the branches, but gnarled and warped; apples none were

there, but withered sticks with poison....

Already I heard wailings uttered on every side, and saw no one to make them: wherefore I, all bewildered, stood still.

I think he thought that I was thinking so many voices came, amongst those stumps, from people who hid themselves on our account.

Therefore the Master said: "If thou breakest off any little shoot from one of these plants, the thoughts, which thou hast, will all become defective."

Then I stretched my hand a little forward, and plucked a branchlet from a great thorn; and the trunk of it cried, "Why dost thou rend me?" And when it had grown dark with blood, it again began to cry: "Why dost thou tear me? hast thou no breath of pity?"

Men we were, and now are turned to trees: truly thy hand should be more merciful, had we been souls of serpents."

As a green brand, that is burning at one end, at the other drops, and hisses with the wind which is escaping:

so from that broken splint, words and blood came forth together: whereat I let fall the top, and stood like one who is afraid....

The Poet listened a while, and then said to me: "Since he is silent, lose not the hour; but speak, and ask him, if thou wouldst know more." Whereat I to him: "Do thou ask him farther, respecting what thou thinkest will satisfy me; for I could not, such pity is upon my heart."

He therefore resumed; "So may the man do freely for thee what thy words entreat him, O imprisoned spirit, please thee

tell us farther, how the soul gets bound up in these knots; and tell us, if thou mayest, whether any ever frees

itself from such members."

Then the trunk blew strongly, and soon that wind was changed into these words: "Briefly shall you be answered.

When the fierce spirit quits the body, from which it has torn itself, Minos sends it to the seventh gulf.

It falls into the wood, and no place is chosen for it; but wherever fortune flings it, there it sprouts, like grain of spelt; shoots up to a sapling, and to a savage plant; the Harpies, feeding then upon its leaves, give pain, and to the pain an outlet.

Like the others, we shall go for our spoils, [but not to the end that any may be] clothc[d] with them again: for it is not just that a man have what he takes from himself.

Hither shall we drag them, and through the mournful wood our bodies shall be suspended, each on the thorny tree of its tormented shade."

Dante, Inferno, XIII, 1

24 And death is not the remedy for just one malady, but the remedy for all ills. It is a very sure haven, which is never to be feared, and often to be sought. It all comes to the same thing whether man gives himself his death or suffers it, whether he runs to meet his day or awaits it; wherever it comes from, it is still his; wherever the thread breaks, it is all there, that's the end of the skein.

The most voluntary death is the fairest.

Life depends on the will of others; death, on our own.

Montaigne, Essays, 11, 3, Custom of Cea

25 Just as I do not violate the laws against thieves when I carry away my own money and cut my own purse, or those against firebugs when I burn my own wood, so I am

not bound by the laws against murderers for having taken my own life.

Montaigne, Essays, II, 3, Custom of Cea

26 *Cassius*. Therein, ye gods, you make the weak most strong;

Therein, ye gods, you tyrants do defeat:

Nor stony tower, nor walls of beaten brass.

Nor airless dungeon, nor strong links of iron.

Can be retentive to the strength of spirit;

But life, being weary of these worldly bars,

Never lacks power to dismiss itself.

Shakespeare, Caesar, I, iii, 91

27 *Hamlet*. To be, or not to be: that is the question.

Whether 'tis nobler in the mind to suffer

The slings and arrows of outrageous fortune,

Or to take arms against a sea of troubles,

And by opposing end them? To die; to sleep;

No more; and by a sleep to say we end

The heart-ache and the thousand natural shocks

That flesh is heir to, His a consummation

Devoutly to be wish'd. To die, to sleep;

To sleep? perchance to dream. Ay, there's the rub;

For in that sleep of death what dreams may come

When we have shuffled off this mortal coil,

Must give us pause. There's the respect

That makes calamity of so long life;

For who would bear the whips and scorns of time.

The oppressor's wrong, the proud man's contumely,

The pangs of despised love, the law's delay,

The insolence of office and the spurns

That patient merit of the unworthy takes,
When he himself might his quietus make
With a bare bodkin? who would fardels bear.
To grunt and sweat under a weary life.
But that the dread of something after death,
The undiscover'd country from whose bourn
No traveller returns, puzzles the will
And makes us rather bear those ills we have
Than fly to others that we know not of?
Thus conscience does make cowards of us all;
And thus the native hue of resolution
Is sicklied o'er with the pale cast of thought,
And enterprises of great pitch and moment
With this regard their currents turn awry,
And lose the name of action.

Shakespeare, Hamlet, III, i, 56

28 *Cleopatra*. Then is it sin
To rush into the secret house of death.
Ere death dare come to us? How do you, women?
What, what! good cheer! Why, how now, Charmian!
My noble girls! Ah, women, women, look,
Our Lamp is spent, it's out! Good sirs, take heart.
We'll bury him; and then, what's brave, what's noble.
Let's do it after the high Roman fashion,
And make death proud to take us. Come, away;
This case of that huge spirit now is cold.
Ah, women, women! come; we have no friend
But resolution and the briefest end.

Shakespeare, Antony and Cleopatra, IV, xv, 80

29 *Cleopatra*. Give me my robe, put on my crown; I have
Immortal longings in me. Now no more
The juice of Egypt's grape shall moist this lip.
Yare, yare, good Iras; quick. Methinks I hear
Antony call; I see him rouse himself
To praise my noble act; I hear him mock
The luck of Caesar, which the gods give men
To excuse their after wrath. Husband, I come:
Now to that name my courage prove my title!
I am fire and air; my other elements
I give to baser life. So; have you done?
Come then, and take the last warmth of my lips.
Farewell, kind Charmian; Iras, long farewell.

Kisses them. Iras falls and dies.

Have I the aspic in my lips? Dost fall?
If thou and nature can so gently part,
The stroke of death is as a lover's pinch.
Which hurts, and is desired. Dost thou lie still?
If thus thou vanishest, thou tell'st the world
It is not worth leave-taking.

Charmian. Dissolve, thick cloud, and rain; that I may
say,

The gods themselves do weep!

Cleo. This proves me base.

If she first meet the curled Antony,
He'll make demand of her, and spend that kiss
Which is my heaven to have. Come, thou mortal wretch,

To an asp, which she applies to her breast.

With thy sharp teeth this knot intricate
Of life at once untie. Poor venomous fool.
Be angry, and dispatch. O, couldst thou speak.
That I might hear thee call great Caesar ass
Unpolicied!

Char. O eastern star!

Cleo. Peace, peace!

Dost thou not see my baby at my breast,
That sucks the nurse asleep?

Char. O, break! O, break!

Cleo. As sweet as balm, as soft as air, as gentle—
O Antony!—Nay, I will take thee too.

Applying another asp to her arm.

What should I stay— [*Dies.*]

Char. In this vile world? So, fare thee well.
Now boast thee. Death, in thy possession lies
A lass unparrallel'd. Downy windows, close;
And golden Phaeëbus never be beheld
Of eyes again so royal! Your crown's awry;
I'll mend it, and then play.

Enter the Guard, rushing in.

1st Guard. Where is the Queen?

Char. Speak softly, wake her not.

1st Guard. Caesar hath sent—

Char. Too slow a messenger.

Applies an asp.

O, come apace, dispatch! I partly feel thee.

1st Guard. Approach, ho! All's not well; Caesar's
beguiled.

2nd Guard. There's Dolabella sent from Caesar; call
him.

1st Guard. What work is here! Charmian, is this well
done?

Char. It is well done, and fitting for a princess
Descended of so many royal kings.
Ah, soldier! [*Dies.*]

Shakespeare, Antony and Cleopatra, V, ii, 283

30 *1st Guard.* O Caesar,

This Charmian lived but now; she stood and spake.
I found her trimming up the diadem
On her dead mistress; tremblingly she stood
And on the sudden dropp'd.

Caesar. ' O noble weakness!
If they had swallow'd poison, 'twould appear
By external swelling; but she looks like sleep,
As she would catch another Antony
In her strong toil of grace.

Dolabella. Here, on her breast.
There is a vent of blood and something blown.
The like is on her arm.

1st Guard. This is an aspic's trail; and these figleaves
Have slime upon them, such as the aspic leaves
Upon the caves of Nile.

Caes. Most probable
That so she died; for her physician tells me
She hath pursued conclusions infinite
Of easy ways to die. Take up her bed;
And bear her women from the monument.
She shall be buried by her Antony.
No grave upon the earth shall clip in it
A pair so famous.

Shakespeare, Antony and Cleopatra, V, ii, 344

31 A man kills himself under compulsion by another when that other turns the right hand, with which the man had by chance laid hold of a sword, and compels him to direct the sword against his own heart; or the command of a tyrant may compel a man, as it did Seneca, to open his own veins, that is to say, he may desire to avoid a greater evil by a less. External and hidden causes also may so

dispose his imagination and may so affect his body as to cause it to put on another nature contrary to that which it had at first, and one whose idea cannot exist in the mind; but a very little reflection will show that it is as impossible that a man, from the necessity of his nature, should endeavour not to exist, or to be changed into some other form, as it is that something should be begotten from nothing.

Spinoza, Ethics, IV, Prop. 20, Schol.

- 32 We do not find in history that the Romans ever killed themselves without a cause; but the English are apt to commit suicide most unaccountably; they destroy themselves even in the bosom of happiness. This action among the Romans was the effect of education, being connected with their principles and customs; among the English it is the consequence of a distemper, being connected with the physical state of the machine, and independent of every other cause.

In all probability it is a defect of the filtration of the nervous juice: the machine, whose motive faculties are often unexerted, is weary of itself; the soul feels no pain, but a certain uneasiness in existing. Pain is a local sensation, which leads us to the desire of seeing an end of it; the burden of life, which prompts us to the desire of ceasing to exist, is an evil confined to no particular part.

Montesquieu, Spirit of Laws, XIV, 12

- 33 That Suicide may often be consistent with interest and with our duty to ourselves, no one can question, who allows that age, sickness, or misfortune, may render life a burden, and make it worse even than annihilation. I

believe that no man ever threw away life while it was worth keeping. For such is our natural horror of death, that small motives will never be able to reconcile us to it; and though perhaps the situation of man's health or fortune did not seem to require this remedy, we may at least be assured, that any one who, without apparent reason, has had recourse to it, was cursed with such an incurable depravity or gloominess of temper as must poison all enjoyment, and render him equally miserable as if he had been loaded with the most grievous misfortune. If Suicide be supposed a crime, it is only cowardice can impel us to it. If it be no crime, both prudence and courage should engage us to rid ourselves at once of existence when it becomes a burden. It is the only way that we can then be useful to society, by setting an example, which, if imitated, would preserve to every one his chance for happiness in life, and would effectually free him from all danger or misery.

Hume, On Suicide

- 34 There are said to be occasions when a wise man kills himself, but generally speaking it is not an excess of reason that makes people take their own lives.

Voltaire, Letter to James Marriott (Feb. 26, 1767)

- 35 We talked of the melancholy end of a gentleman who had destroyed himself. *Johnson*. "It was owing to imaginary difficulties in his affairs, which, had he talked with any friend, would soon have vanished." *Boswell*. "Do you think, Sir, that all who commit suicide are mad?" *Johnson*. "Sir, they are often not universally disordered in their intellects, but one passion presses so upon them, that

they yield to it, and commit suicide, as a passionate man will stab another." He added, "I have often thought, that after a man has taken the resolution to kill himself, it is not courage in him to do any thing, however desperate, because he has nothing to fear." *Goldsmith*. "I don't see that." *Johnson*. "Nay, but my dear Sir, why should not you see what every one else sees?" *Goldsmith*. "It is for fear of something that he has resolved to kill himself; and will not that timid disposition restrain him?" *Johnson*. "It does not signify that the fear of something made him resolve; it is upon the state of his mind, after the resolution is taken, that I argue. Suppose a man, either from fear, or pride, or conscience, or whatever motive, has resolved to kill himself; when once the resolution is taken, he has nothing to fear. He may then go and take the King of Prussia by the nose, at the head of his army. He cannot fear the rack, who is resolved to kill himself. When Eustace Budgel was walking down to the Thames, determined to drown himself, he might, if he pleased, without any apprehension of danger, have turned aside, and first set fire to St. James's palace."

Boswell, Life of Johnson (Apr. 2h 2773)

- 36 The powers of this world have indeed lost their dominion over him who is resolved on death, and his arm can only be restrained by the religious apprehension of a future state. Suicides are enumerated by Virgil among the unfortunate, rather than the guilty, and the poetical fables of the infernal shades could not seriously influence the faith or practice of mankind. But the precepts of the Gospel or the church have at length imposed a pious servitude on the minds of Christians, and condemn them

to expect, without a murmur, the last stroke of disease or the executioner.

Gibbon, Decline and Fall of the Roman Empire, XLIV

37 A man reduced to despair by a series of misfortunes feels wearied of life, but is still so far in possession of his reason that he can ask himself whether it would not be contrary to his duty to himself to take his own life. Now he inquires whether the maxim of his action could become a universal law' of nature. His maxim is: "From self-love I adopt it as a principle to shorten my life when its longer duration is likely to bring more evil than satisfaction." It is asked then simply whether this principle founded on self-love can become a universal law' of nature. Now we see at once that a system of nature of which it should be a law to destroy life by means of the very feeling whose special nature it is to impel to the improvement of life would contradict itself and, therefore, could not exist as a system of nature; hence that maxim cannot possibly exist as a universal law of nature and, consequently, would be wholly inconsistent with the supreme principle of all duty.

Kant, Fundamental Principles of the Metaphysic of Morals, II

38 He who contemplates suicide should ask himself whether his action can be consistent with the idea of humanity as an end in itself If he destroys himself in order to escape from painful circumstance, he uses a person merely as a mean to maintain a tolerable condition up to the end of life. But a man is not a thing, that is to say, something which can be used merely as means, but must in all his

actions be always considered as an end in himself. I cannot, therefore, dispose in any way of a man in my own person so as to mutilate him, to damage or kill him.

Kant, Fundamental Principles of the Metaphysic of Morals, II

39 Suicide is not abominable because God forbids it; God forbids it because it is abominable.

Kant, Lecture (1775)

40 Suicide may at a first glance be regarded as an act of courage, but only the false courage of tailors and servant girls. Or again it may be looked upon as a misfortune, since it is inward distraction which leads to it. But the fundamental question is: Have I a right to take my life? The answer will be that I, as this individual, am not master of my life, because life, as the comprehensive sum of my activity, is nothing external to personality, which itself is this immediate personality. Thus when a person is said to have a right over his life, the words are a contradiction, because they mean that a person has a right over himself. But he has no such right, since he does not stand over himself and he cannot pass judgement on himself. When Hercules destroyed himself by fire and when Brutus fell on his sword, this was the conduct of a hero against his personality. But as for an unqualified right to suicide, we must simply say that there is no such thing, even for heroes.

Hegel, Philosophy of Right, Additions, Par. 70

41 They tell us that suicide is The greatest piece of cowardice; that only a madman could be guilty of it; and

other insipidities of the same kind; or else they make the nonsensical remark that suicide is wrong; when it is quite obvious that there is nothing in the world to which every man has a more unassailable title than to his own life and person.

Schopenhauer, Suicide

- 42 Suicide may also be regarded as an experiment— a question which man puts to Nature, trying to force her to an answer. The question is this: What change will death produce in a man's existence and in his insight into the nature of things? It is a clumsy experiment to make; for it involves the destruction of the very consciousness which puts the question and awaits the answer.

Schopenhauer, Suicide

- 43 I knew a young lady of the last "romantic" generation Who after some years of an enigmatic passion for a gentleman, whom she might quite easily have married at any moment, invented insuperable obstacles to their union, and ended by throwing herself one stormy night into a rather deep and rapid river from a high bank, almost a precipice, and so perished, entirely to satisfy her own caprice, and to be like Shakespeare's Ophelia. Indeed, if this precipice, a chosen and favourite spot of hers, had been less picturesque, if there had been a prosaic flat bank in its place, most likely the suicide would never have taken place. This is a fact, and probably there have been not a few similar instances in the last two or three generations.

Dostoevsky, Brothers Karamazov, Pt. I, I, 1

44 And all at once she thought of the man crushed by the train the day she had first met Vronsky, and she knew what she had to do. With a rapid, light step she went down the steps that led from the tank to the rails and stopped quite near the approaching train.

She looked at the lower part of the carriages, at the screws and chains, and the tall cast-iron wheel of the first carriage slowing moving up, and trying to measure the middle between the front and back wheels, and the very minute when that middle point would be opposite her.

"There," she said to herself, looking into the shadow of the carriage, at the sand and coal-dust which covered the sleepers—"there, in the very middle, and I will punish him and escape from everyone and from myself."

She tried to fling herself below the wheels of the first carriage as it reached her; but the red bag which she tried to drop out of her hand delayed her, and she was too late; she missed the moment. She had to wait for the next carriage. A feeling such as she had known when about to take the first plunge in bathing came upon her, and she crossed herself. That familiar gesture brought back into her soul a whole series of girlish and childish memories, and suddenly the darkness that had covered everything for her was torn apart, and life rose up before her for an instant with all its bright past joys. But she did not take her eyes from the wheels of the second carriage. And exactly at the moment when the space between the wheels came opposite her, she dropped the red bag, and drawing her head back into her shoulders, fell on her hands under the carriage, and lightly, as though she would rise again at once, dropped on to her knees. And at the same instant she was terror-stricken at what she was doing. "Where am I? What am I doing? What for?" She

tried to get up, to drop backwards; but something huge and merciless struck her on the head and rolled her on her back. "Lord, forgive me all!" she said, feeling it impossible to struggle. A peasant muttering something was working at the iron above her. And the light by which she had read the book filled with troubles, falsehoods, sorrow, and evil, flared up more brightly than ever before, lighted up for her all that had been in darkness, flickered, began to grow dim, and was quenched for ever.

Tolstoy, Anna Karenina, VII, 31

45 The reasoning both of pessimist philosophy and of ordinary suicide is this: There is an animal self which is attracted to life, but the yearnings of this self can never be gratified. There is another self, a rational one, which has no longing for life, but merely critically contemplates all the false joy of life and the passions of the animal self and rejects them entirely.

If I yield to the first I see that my life is meaningless and that I am heading for misery, in which I am more and more involved. If I abandon myself to the second—the reasonable self—I no longer feel any attraction to life. I see that it is absurd and impossible to live for the one thing I want, that is, my personal happiness. It would be possible to live for reasonable consciousness, but it is not worth while and I do not want to. Serve that source from whence I came—God? Why? If God exists, he will find people to serve him without me. And why should I do it? One can contemplate this play of life as long as one does not find it dull, and when it is dull one can go away and kill oneself. And that is what I will do.

Tolstoy, On Life, XXII

46 The thought of suicide is a powerful comfort: it helps one through many a dreadful night.

Nietzsche, Beyond Good and Evil, IV, 157

47 The relatives of a suicide take it in ill part that he did not remain alive out of consideration for their reputation.

Nietzsche, Human, All-Too-Human, 322

48 All this about the impossibility of suicide is said on the supposition of positive motives. When possessed by the emotion of fear, however, we are in a negative state of mind; that is, our desire is limited to the mere banishing of something, without regard to what shall take its place. In this state of mind there can unquestionably be genuine thoughts, and genuine acts, of suicide, spiritual and social, as well as bodily. Anything, anything, at such times, so as to escape and not to be!

William James, Psychology, X

49 Fear of life in one form or other is the great thing to exorcise; but it isn't reason that will ever do it. Impulse without reason is enough, and reason without impulse is a poor makeshift. I take it that no man is educated who has never dallied with the thought of suicide.

William James, Letter to B. P. Blood (June 28, 1896)

Chapter 2

FAMILY

Chapter 2 is divided into three sections: 2.1 The Institution of the Family, 2.2 Parents and Children, and 2.3 Marriage.

Certain of the passages quoted in this chapter could have been placed in two of the three sections, and some, perhaps, in all three. The institution of the family is inseparable from the marriage rite and all that it entails; the relation of husband and wife results from marriage and is fundamental to the institution of the family; the parental care and direction of children, as well as filial respect and obedience, are aspects of domestic government that take different forms in different types of familial institutions.

All of these points of coincidence or overlapping being acknowledged, it is, nevertheless, the case that the matters considered in the three sections are sufficiently distinct to justify a division of the texts accordingly.

However, the reader whose interest is in all of the many related aspects of the human family would do well to explore the materials of this chapter as a whole and to trace for himself the intricate pattern of insights and observations that are woven together in the fabric of our understanding of the one human institution with which every human being has had intimate experience.

There is probably no other subject treated in this book about which everyone has an opinion or judgment, and feelings, sentiments, or emotional attitudes, as well as

wishes or desires, overt or covert, conscious or unconscious. There is probably no other subject on which there are comments from so wide a diversity of sources—from poets, novelists, dramatists, and historians; philosophers and theologians; moralists, economists, and political theorists; biologists, psychologists, and psychoanalysts.

...

2.1 The Institution of the Family

One important relationship constitutive of most, if not all, families is that of siblings— brother and brother, sister and sister, brother and sister. It is a relationship that, as generalized under the notion of fraternity or brotherhood, is often set up as a model for those who are not bound to one another by any ties of consanguinity. On the other hand, as we are reminded by the opening text from Genesis about Cain and Abel, animosity and jealousy also tear at the hearts of those who are tied to one another by bonds of blood. Blood may be thicker than water, but it also has a lower boiling point.

Passages dealing with siblings, and their benevolence or malevolence, are assembled in this section, and are thus separated from the other two basic familial relationships (husband and wife, parents and children), which are treated in Sections 3 and 2 respectively.

Another, perhaps even more basic, theme in this section is the type of government that is regulative of family life. Who rules in the family—the husband alone, or both

husband and wife; and who is ruled—the children alone or both wife and children? What power or authority is exercised in domestic government? What makes it legitimate? Is it absolute or limited and, if limited, what are its limits? Answers to questions of this sort usually involve comparisons of parental rule with despotic rule and constitutional government. Those interested in the passages that treat of such matters should, perhaps, look also at similar passages in Chapter 10 on Politics, especially Section 10.3 on Government: Its Nature, Necessity, and Forms, Section 10.4 on Government of and by the People: Republic and Democracy, and Section 10.6 on Despotism AND Tyranny. Doing so will help one to think about some of the most difficult problems of family life—the extent to which the domestic community can be organized as a democracy, and the safeguards that can be erected against tyrannical or despotic misrule.

■ ■ ■

1 And Adam knew Eve his wife; and she conceived, and bare Cain, and said, I have gotten a man from the Lord.

And she again bare his brother Abel. And Abel was a keeper of sheep, but Cain was a tiller of the ground.

And in process of time it came to pass, that Cain brought of the fruit of the ground an offering unto the Lord.

And Abel, he also brought of the firstlings of his flock and of the fat thereof. And the Lord had respect unto Abel and to his offering:

But unto Cain and to his offering he had not respect.
And Cain was very wroth, and his countenance fell.

And the Lord said unto Cain, Why art thou wroth? and why is thy countenance fallen?

If thou doest well, shalt thou not be accepted? and if thou doest not well, sin lieth at the door.

And unto thee shall be his desire, and thou shalt rule over him.

And Cain talked with Abel his brother: and it came to pass, when they were in the field, that Cain rose up against Abel his brother, and slew him.

And the Lord said unto Cain, Where is Abel thy brother? And he said, I know not: Am I my brother's keeper?

Genesis 4:1—9

2 And the boys grew: and Esau was a cunning hunter, a man of the field; and Jacob was a plain man, dwelling in tents.

And Isaac loved Esau, because he did eat of his venison: but Rebekah loved Jacob.

And Jacob sod pottage: and Esau came from the field, and was faint:

And Esau said to Jacob, Feed me, I pray thee, with that same red pottage; for I am faint: therefore was his name called Edom.

And Jacob said, Sell me this day thy birthright.

And Esau said, Behold, I am at the point to die: and what profit shall this birthright do to me?

And Jacob said. Swear to me this day; and he sware unto him: and he sold his birthright unto Jacob.

Then Jacob gave Esau bread and pottage of lentiles; and he did eat and drink, and rose up, and went his way: thus Esau despised his birthright.

Genesis 25:27-34

3 If a man have two wives, one beloved, and another hated, and they have born him children, both the beloved and the hated; and if the firstborn son be her's that was hated:

Then it shall be, when he maketh his sons to inherit that which he hath, that he may not make the son of the beloved firstborn before the son of the hated, which is indeed the firstborn:

But he shall acknowledge the son of the hated for the firstborn, by giving him a double portion of all that he hath: for he is the beginning of his strength; the right of the firstborn is his.

Deuteronomy 21:15-17

4 If brethren dwell together, and one of them die, and have no child, the wife of the dead shall not marry without unto a stranger: her husband's brother shall go in unto her, and take her to him to wife, and perform the duty of an husband's brother unto her.

And It shall be, that the firstborn which she beareth shall succeed in the name of his brother which is dead, that his name be not put out of Israel.

And if the man like not to take his brother's wife, then let his brother's wife go up to the gate unto the elders, and say, My husband's brother refuseth to raise up unto his brother a name in Israel, he will not perform the duty of my husband's brother.

Then the elders of his city shall call him, and speak unto him: and if he stand to it, and say, I like not to take her;

Then shall his brother's wife come unto him in the presence of the elders, and loose his shoe from off his foot, and spit in his face, and shall answer and say, So shall it be done unto that man that will not build up his brother's house.

Deuteronomy 24:5-9

- 5 *Odysseus*. And may the gods accomplish your desire:
a home, a husband, and harmonious converse with him—the best thing in the world being a strong house held in serenity where man and wife agree. Woe to their enemies, joy to their friends! But all this they know best.

Homer, Odyssey, VI, 179

- 6 *Odysseus*. Where shall a man find sweetness to surpass his own home and his parents? In far lands he shall not, though he find a house of gold.

Homer, Odyssey, IX, 34

- 7 *Teiresias*. I tell you, king, this man, this murderer (whom you have long declared you are in search of, indicting him in threatening proclamation as murderer of Laius)—he is here.
In name he is a stranger among citizens but soon he will be shown to be a citizen true native Theban, and he'll have no joy of the discovery: blindness for sight and beggary for riches his exchange, he shall go journeying to a foreign country tapping his way before him with a stick. He shall be proved father and brother both to his own children in his house; to her

that gave him birth, a son and husband both;
a fellow sower in his father's bed
with that same father that he murdered.
Go within, reckon that out, and if you find me
mistaken, say I have no skill in prophecy.

Sophocles, Oedipus the King, 448

8 *Antigone*. O tomb, O marriage-chamber, hollowed out
house that will watch forever, where I go.
To my own people, who are mostly there;
Persephone has taken them to her.
Last of them all, ill-fated past the rest,
shall I descend, before my course is run.
Still when I get there I may hope to find
I come as a dear friend to my dear father,
to you, my mother, and my brother too.
All three of you have known my hand in death.
I washed your bodies, dressed them for the grave,
poured out the last libation at the tomb.
Last, Polyneices knows the price I pay
for doing final service to his corpse.
And yet the wise will know my choice was right.
Had I had children or their father dead.
I'd let them moulder. I should not have chosen
in such a case to cross the state's decree.
What is the law that lies behind these words?
One husband gone, I might have found another,
or a child from a new man in first child's place,
but with my parents hid away in death,
no brother, ever, could spring up for me.
Such was the law by which I honored you.

Sophocles, Antigone, 891

9 *Socrates*. Here, then, is one difficulty in our law about women, which we may say that we have now escaped; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common; to the utility and also to the possibility of this arrangement the consistency of the argument with itself bears witness.

Glaucon. Yes, that was a mighty wave which you have escaped.

Yes, I said, but a greater is coming; you will not think much of this when you see the next.

Go on; let me see.

The law, I said, which is the sequel of this and of all that has preceded, is to the following effect—"that the wives of our guardians are to be common, and their children are to be common, and no parent is to know his own child, nor any child his parent."

Yes, he said, that is a much greater wave than the other; and the possibility as well as the utility of such a law are far more questionable.

I do not think, I said, that there can be any dispute about the very great utility of having wives and children in common; the possibility is quite another matter, and will be very much disputed.

I think that a good many doubts may be raised about both.

Plato, Republic, V, 457A

10 *Socrates*. How can marriages be made most beneficial?—that is a question which I put to you, because I see in your house dogs for hunting, and of the nobler sort of birds not a few. Now, I beseech you, do tell me, have you ever attended to their pairing and breeding?

Glaucon. In what particulars?

Why, in the first place, although they are all of a good sort, are not some better than others?

True.

And do you breed from them all indifferently, or do you take care to breed from the best only?

From the best.

And do you take the oldest or the youngest, or only those of ripe age?

I choose only those of ripe age.

And if care was not taken in the breeding, your dogs and birds would greatly deteriorate?

Certainly.

And the same of horses and animals in general?

Undoubtedly.

Good heavens! my dear friend, I said, what consummate skill will our rulers need if the same principle holds of the human species!

Certainly, the same principle holds.

Plato, Republic, V, 459A

- 11 Between man and wife friendship seems to exist by nature; for man is naturally inclined to form couples—even more than to form cities, inasmuch as the household is earlier and more necessary than the city, and reproduction is more common to man with the animals. With the other animals the union extends only to this point, but human beings live together not only for the sake of reproduction but also for the various purposes of life; for from the start the functions are divided, and those of man and woman are different; so they help each other by throwing their peculiar gifts into the common stock. It is for these reasons that both utility and pleasure

seem to be found in this kind of friendship. But this friendship may be based also on virtue, if the parties are good; for each has its own virtue and they will delight in the fact. And children seem to be a bond of union (which is the reason why childless people part more easily); for children are a good common to both and what is common holds them together.

Aristotle, Ethics, 1162a16

- 12 A husband and father... rules over wife and children, both free, but the rule differs, the rule over his children being a royal, over his wife a constitutional rule. For although there may be exceptions to the order of nature, the male is by nature fitter for command than the female.

Aristotle, Politics, 1259a39

- 13 The citizens might conceivably have wives and children and property in common, as Socrates proposes in the Republic of Plato, Which is better, our present condition, or the proposed new order of society?

There are many difficulties in the community of women. And the principle on which Socrates rests the necessity of such an institution evidently is not established by his arguments. Further, as a means to the end which he ascribes to the state, the scheme, taken literally, is impracticable, and how we are to interpret it is nowhere precisely stated.

Aristotle, Politics, 126a4

- 14 Next after they had got themselves huts and skins and fire, and the woman united with the man passed with him into one domicile and the duties of wedlock were learnt

by the two, and they saw an offspring born from them, then first mankind began to soften. For fire made their chilled bodies less able now to bear the frost beneath the canopy of heaven, and Venus impaired their strength and children with their caresses soon broke down the haughty' temper of parents. Then too neighbours began to join in a league of friendship mutually desiring neither to do nor suffer harm; and asked for indulgence to children and womankind, when with cries and gestures they declared in stammering speech that meet it is for all to have mercy on the weak. And though harmony could not be established without exception, yet a very large portion observed their agreements with good faith, or else the race of man would then have been wholly cut off, nor could breeding have continued their generations to this day.

Lucretius, Nature of Things, V

15 *Aeneas*. Arm'd once again, my glitt'ring sword I wield,
While th' other hand sustains my weighty shield.
And forth I rush to seek th' abandon'd field.
I went; but sad Creusa stopp'd my way,
And cross the threshold in my passage lay,
Embrac'd my knees, and, when I would have gone,
Shew'd me my feeble sire and tender son:
'If death be your design, at least,' said she,
'Take us along to share your destiny.
If any farther hopes in arms remain,
This place, these pledges of your love, maintain.
To whom do you expose your father's life.
Your son's, and mine, your now forgotten wife!'

Virgil, Aeneid, II

16 There came then his brethren and his mother, and, standing without, sent unto him, calling him.

And the multitude sat about him, and they said unto him, Behold, thy mother and thy brethren without seek for thee.

And he answered them, saying, Who is my mother, or my brethren?

And he looked round about on them which sat about him, and said. Behold my mother and my brethren!

For whosoever shall do the will of God, the same is my brother, and my sister, and mother,

Mark 3:31-35

17 Suppose ye that I am come to give peace on earth? I tell you. Nay; but rather division:

For from henceforth there shall be five in one house divided, three against two, and two against three.

The father shall be divided against the son, and the son against the father; the mother against the daughter, and the daughter against the mother; the mother in law against her daughter in law, and the daughter in law against her mother in law,

Luke 12:51-53

18 Lycurgus was of a persuasion that children were not so much The property of their parents as of the whole commonwealth, and, therefore, would not have his citizens begot by the first-comers, but by the best men that could be found; the laws of other nations seemed to him very absurd and inconsistent, where people would be so solicitous for their dogs and horses as to exert interest and to pay money to procure fine breeding, and yet kept

their wives shut up, to be made mothers only by themselves, tvho might be foolish, infirm, or diseased; as if it were not apparent that children of a bad breed would prove their bad qualities first upon those who kept and were rearing them, and well-born children, in like manner, their good qualities.

Plutarch, Lycurgus

- 19 We are inquiring about ordinary marriages and those which are free from distractions, and making this inquiry we do not find the affair of marriage in this state of the world a thing which is especially suited to the Cynic,
- "How, then, shall a man maintain the existence of society?" In the name of God, are those men greater benefactors to society who introduce into the world to occupy their own places two or three grunting children, or those who superintend as far as they can all mankind, and see what they do, how they live, what they attend to, what they neglect contrary to their duty? Did they who left little children to the Thebans do them more good than Epaminondas who died childless? And did Priamus, who begat fifty worthless sons, or Danaus or Aeolus contribute more to the community than Homer? then shall the duty of a general or the business of a writer exclude a man from marriage or the begetting of children, and such a man shall not be judged to have accepted the condition of childlessness for nothing; and shall not the royalty of a Cynic be considered an equivalent for the want of children? Do we not perceive his grandeur and do we not justly contemplate the character of Diogenes; and do we, instead of this, turn our eyes to the present Comics, w'ho are dogs that wait at tables and in no respect imitate the Cynics of old

except perchance in breaking wind, but in nothing else? For such matters would not have moved us at all nor should we have wondered if a Cynic should not marry or beget children. Man, the Cynic is the father of all men; the men are his sons, the women are his daughters: he so carefully visits all, so well does he care for all. Do you think that it is from idle impertinence that he rebukes those whom he meete? He does it as a father, as a brother, and as the minister of the father of all, the minister of Zeus.

Epictetus, Discourses, III, 22

20 They who care for the rest rule—the husband the wife, the parents the children, the masters the servants; and they who are cared for obey—the women their husbands, the children their parents, the servants their masters. But in the family of the just man who lives by faith... even those who rule serve those whom they seem to command; for they rule not from a love of power, but from a sense of the duty they owe to others—not because they are proud of authority', but because they love mercy.

Augustine, City of God, XIX, 14

21 Now the saints of ancient times were, under the form of an earthly kingdom, foreshadowing and foretelling the kingdom of heaven. And on account of the necessity for a numerous offspring, the custom of one man having several wives was at that time blameless: and for the same reason it was not proper for one woman to have several husbands, because a woman does not in that way become more fruitful, but, on the contrary, it is base

harlotry to seek either gain or offspring by promiscuous intercourse. In regard to matters of this sort, whatever the holy men of those times did without lust. Scripture passes over without blame, although they did things which could not be done at the present time, except through lust.

Augustine, Christian Doctrine, III, 12

- 22 In comparing love to love we should compare one union with another. Accordingly we must say that friendship among blood relations is based upon their connection by natural origin, the friendship of fellow-citizens on their civic fellowship, and the friendship of those who are fighting side by side on the comradeship of battle. Therefore in matters pertaining to nature we should love our kindred most, in matters concerning relations between citizens, we should prefer our fellow-citizens, and on the battlefield our fellow-soldiers....

If however we compare union with union, it is evident that the union arising from natural origin is prior to, and more stable than, all others, because it is something affecting the very substance, while other unions are something added above and may cease altogether. Therefore the friendship of kindred is more stable, while other friendships may be stronger in respect of that which is proper to each of them.

Aquinas, Summa Theologica, II-II, 26, 8

- 23 Although the father ranks above the mother, the mother has more to do with the offspring than the father has. Or we may say that woman was made chiefly in order to be man's helpmate in relation to the offspring, whereas the man was not made for this purpose. Wherefore the

mother has a closer relation to the nature of marriage than the father has.

Aquinas, Summa Theologica, III Suppl., 44, 2

24 Love hates people to be attached to each other except by himself, and takes a laggard part in relations that are set up and maintained under another title, as marriage is. Connections and means have, with reason, as much weight in it as graces and beauty, or more. We do not marry for ourselves, whatever we say; we marry just as much or more for our posterity, for our family. The practice and benefit of marriage concerns our race very far beyond us. Therefore I like this fashion of arranging it rather by a third hand than by our own, and by the sense of others rather than by our own. How opposite is all this to the conventions of love!

Montaigne, Essays, III, 5, On Some Verses of Virgil

25 I was late in taking up the management of a household. Those whom nature had sent into the world before me relieved me of that burden for a long time. I had already contracted a different bent, more suitable to my disposition. At all events, from what I have seen of it, it is an occupation more bothersome than difficult: whoever is capable of anything else will very easily be capable of this.

Montaigne, Essays, III, 9, Of Vanity

26 *Don Quixote*. Another Thing makes me more uneasy: Suppose we have found out a King and a Princess, and I have fill'd the World with the Fame of my unparallel'd Atchievements, yet cannot I tell how to find out that I am

of Royal Blood, though it were but second Cousin to an Emperor: For, 'tis not to be expected that the King will ever consent that I shall wed his Daughter 'till I have made this out by authentick Proofs, tho' my Service deserve it never so much; and thus for want of a Punctilio, I am in danger of losing what my Valour so justly merits, 'Tis true, indeed, I am a Gentleman, and of a noted ancient Family, and possess'd of an Estate of a hundred and twenty Crowns a Year; nay, perhaps the learned Historiographer who is to write the History of my Life, will so improve and beautify my Genealogy, that he will find me to be the fifth, or sixth at least, in Descent from a King; For, Sancho, there are two sorts of Originals in the World; some who sprung from mighty Kings and Princes, by little and little have been so lessen'd and obscur'd, that the Estates and Titles of the following Generations have dwindled to nothing, and ended in a Point like a Pyramid; others, who from mean and low Beginnings still rise and rise, till at last they are rais'd to the very Top of human Greatness: So vast the Difference is, that those who were Something are now Nothing, and those that were Nothing are now Something. And therefore who knows but that I may be one of those whose Original is so illustrious; which being handsomely made out, after due Examination, ought undoubtedly to satisfy the King, my Father-in-law. But even supposing he were still refractory, the Princess is to be so desperately in love with me, that she will marry me without his Consent, tho' I were a Son of the meanest Water-Carrier; and if her tender Honour scruples to bless me against her Father's Will, then it may not be amiss to put a pleasing Constraint upon her, by conveying her by Force out of the

Reach of her Father, to whose Persecutions either Time or Death will be sure to put a Period.

Cervantes, Don Quixote, I, 21

27 He that hath wife and children hath given hostages to fortune; for they are impediments to great enterprises, either of virtue or mischief.

Bacon, Of Marriage and Single Life

28 Private bodies regular and lawful are those that are constituted without letters, or other written authority, saving the laws common to all other subjects. And because they be united in one person representative, they are held for regular; such as are all families, in which the father or master ordereth the whole family. For he obligeth his children, and servants, as far as the law permitteth, though not further, because none of them are bound to obedience in those actions which the law hath forbidden to be done. In all other actions, during the time they are under domestic government, they are subject to their fathers and masters, as to their immediate sovereigns.

Hobbes, Leviathan, II, 22

29 God, having made man such a creature that, in His own judgment, it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination, to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children, to which, in time, that between master and servant came to

be added. And though all these might, and commonly did, meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family, each of these, or all together, came short of "political society," as we shall see if we consider the different ends, tics, and bounds of each of these.

Locke, II Civil Government, VII, 77

30 Paternal or parental power is nothing but that which parents have over their children to govern them, for the children's good, till they come to the use of reason, or a state of knowledge, wherein they may be supposed capable to understand that rule, whether it be the law of Nature or the municipal law of their country', they are to govern themselves by—capable, I say, to know it, as well as several others, who live as free men under that law. The affection and tenderness God hath planted in the breasts of parents towards their children makes it evident that this is not intended to be a severe arbitrary government, but only for the help, instruction, and preservation of their offspring. But happen as it will, there is, as I have proved, no reason why it should be thought to extend to life and death, at any time, over their children, more than over anybody else, or keep the child in subjection to the will of his parents when grown to a man and the perfect use of reason, any farther than as having received life and education from his parents obliges him to respect, honour, gratitude, assistance, and support, all his life, to both father and mother. And thus, it is true, the paternal is a natural government, but not at all extending itself to the ends and jurisdictions of that which is political. The power of the father doth not reach

at all to the property of the child, which is only in his own disposing.

Locke, II Civil Government, XV, 170

31 *Witwoud*. Odso, brother, is it you? Your servant, brother.

Sir Wilfull Your servant! Why, yours, sir. Your servant again—'sheart, and your friend and servant to that—and a— [*Puff.*] —and a flap-dragon for your service, sir: and a hare's foot, and a hare's scut for your service, sir; an you be so cold and so courtly!

Wit. No offense, I hope, brother.

Sir Wil. 'Sheart, sir, but there is, and much offense. A pox, is this your Inns o' Court breeding, not to know your friends and your relations, your ciders and your betters?

Wit. Why, Brother Wilfull of Salop, you may be as short as a Shrewsbury cake, if you please. But I tell you 'tis not modish to know relations in town. You think you're in the country, where great lubberly brothers slabber and kiss one another when they meet, like a call of sergeants. —'Tis not the fashion here; 'tis not inded, dear brother.

Sir Wil. The fashion's a fool; and you're a fop, dear brother.

Congreve, Way of the World, III, xv

32 The first expansions of the human heart were the effects of a novel situation, which united husbands and wives, fathers and children, under one roof. The habit of living together soon gave rise to the finest feelings known to humanity, conjugal love and paternal affection. Every family became a little society, the more united because liberty and reciprocal attachment were the only bonds of its union. The sexes, whose manner of life had been

hitherto the same, began now to adopt different ways of living. The women became more sedentary, and accustomed themselves to mind the hut and their children, while the men went abroad in search of their common subsistence. From living a softer life, both sexes also began to lose something of their strength and ferocity; but, if individuals became to some extent less able to encounter wild beasts separately, they found it, on the other hand, easier to assemble and resist in common.

Rousseau, Origin of Inequality, II

33 In the family, it is clear, for several reasons which lie in its very nature, that the father ought to command. In the first place, the authority ought not to be equally divided between father and mother; the government must be single, and in every division of opinion there must be one preponderant voice to decide. Secondly, however lightly we may regard the disadvantages peculiar to women, yet, as they necessarily occasion intervals of inaction, this is a sufficient reason for excluding them from this supreme authority: for when the balance is perfectly even, a straw is enough to turn the scale. Besides, the husband ought to be able to superintend his wife's conduct, because it is of importance for him to be assured that the children, whom he is obliged to acknowledge and maintain, belong to no one but himself. Thirdly, children should be obedient to their father, at first of necessity, and afterwards from gratitude: after having had their wants satisfied by him during one half of their lives, they ought to consecrate the other half to providing for his. Fourthly, servants owe him their services in exchange for the

provision he makes for them, though they may break off the bargain as soon as it ceases to suit them.

Rousseau, Political Economy

34 The most ancient of all societies, and the only one that is natural, is the family: and even so the children remain attached to the father only so long as they need him for their preservation. As soon as this need ceases, the natural bond is dissolved. The children, released from the obedience they owed to the father, and the father, released from the care he owed his children, return equally to independence. If they remain united, they continue so no longer naturally, but voluntarily; and the family itself is then maintained only by convention.

This common liberty results from the nature of man. His first law' is to provide for his own preservation, his first cares are those which he owes to himself; and, as soon as he reaches years of discretion, he is the sole judge of the proper means of preserving himself, and consequently becomes his own master.

The family then may be called the first model of political societies: the ruler corresponds to the father, and the people to the children; and all, being born free and equal, alienate their liberty only for their own advantage. The whole difference is that, in the family, the love of the father for his children repays him for the care he takes of them, while, in the State, the pleasure of commanding takes the place of the love which the chief cannot have for the peoples under him.

Rousseau, Social Contract, I, 2

35 I talked of the little attachment which subsisted between near relations in London. "Sir, (said Johnson,) in a country so commercial as ours, where every man can do for himself, there is not so much occasion for that attachment. No man is thought the worse of here, whose brother was hanged."

Boswell, Life of Johnson (Apr. 6, 1772)

36 Poverty, though it no doubt discourages, does not always prevent marriage. It seems even to be favourable to generation. A half-starved Highland woman frequently bears more than twenty children, while a pampered fine lady is often incapable of bearing any, and is generally exhausted by two or three. Barrenness, so frequent among women of fashion, is very rare among those of inferior station. Luxury in the fair sex, while it inflames perhaps the passion for enjoyment, seems always to weaken, and frequently to destroy altogether, the powers of generation.

But poverty, though it does not prevent the generation, is extremely unfavourable to the rearing of children. The tender plant is produced, but in so cold a soil and so severe a climate, soon withers and dies. It is not uncommon, I have been frequently told, in the Highlands of Scotland for a mother who has more than twenty children not to have two alive.

Adam Smith, Wealth of Nations, I, 8

37 Laws frequently continue in force long after the circumstances which first gave occasion to them, and which could alone render them reasonable, are no more. In the present state of Europe, the proprietor of a single

acre of land is as perfectly secure of his possession as the proprietor of a hundred thousand. The right of primogeniture, however, still continues to be respected, and as of all institutions it is the fittest to support the pride of family distinctions, it is still likely to endure for many centuries. In every other respect, nothing can be more contrary to the real interest of a numerous family than a right which, in order to enrich one, beggars all the rest of the children,

Adam Smith, Wealth of Nations, III, 2

38 Personal right of a real kind is the right to the *possession* of an external object as a thing, and to the use of it as a person. mine and thine embraced under this right relate specially to the family and household; and the relations involved are those of free beings in reciprocal real interaction with each other. Through their relations and influence as persons upon one another, in accordance with the principle of external freedom as the cause of it, they form a society composed as a whole of members standing in community with each other as persons; and this constitutes the household. n»c mode in which this social status is acquired by individuals, and the functions which prevail within it, proceed neither by arbitrary individual action (*facto*), nor by mere contract (*pacto*), but by law (*lege*). And this law as being not only a right, but also as constituting possession in reference to a person, is a right rising above all mere real and personal right. It must, in fact, form the right of humanity in our own person; and, as such, it has as its consequence a natural permissive law. by the favour of which such acquisition becomes possible to us.

The acquisition that is founded upon this law is, as regards its objects, threefold. The man acquires a wife; the husband and wife acquire children, constituting a family; and the family acquire domestics. All these objects, while acquirable, are inalienable; and the right of possession in these objects is the most strictly personal of all rights.

Kant, Science of Right, 22-23

39 He heard it, but he heeded not—his eyes
Were with his heart and that was far away;
He reck'd not of the life he lost nor prize,
But where his rude hut by the Danube lay,
There were his young barbarians all at play,.
There was their Dacian mother — he, their sire,
Butcher'd to make a Roman holiday.

Byron, Childe Harold's Pilgrimage, IV, 141

40 The family, as the immediate substantiality of mind, is specifically characterized by love, which is mind's feeling of its own unity. Hence in a family, one's frame of mind is to have self-consciousness of one's individuality within this unity as the absolute essence of oneself, with the result that one is in it not as an independent person but as a member.

Hegel, Philosophy of Right, 158

41 The ethical dissolution of the family consists in this, that once the children have been educated to freedom of personality, and have come of age, they become recognized as persons in the eyes of the law and as capable of holding free property of their own and

founding families of their own, the sons as heads of new families, the daughters as wives. They now have their substantive destiny in the new family; the old family on the other hand falls into the background as merely their ultimate basis and origin, while a *fortiori* the clan is an abstraction, devoid of rights.

Hegel, Philosophy of Right, 177

- 42 The piety of the family relation should be respected in the highest degree by the state; by its means the state obtains as its members individuals who are already moral (for as mere persons they are not) and who in uniting to form a state bring with them that sound basis of a political edifice— the capacity of feeling one with a whole.

Hegel, Philosophy of History, Introduction, 3

- 43 Looking far enough back in the stream of time, and judging from the social habits of man as he now exists, the most probable view is that he aboriginally lived in small communities, each with a single wife, or if powerful with several, whom he jealously guarded against all other men. Or he may not have been a social animal, and yet have lived with several wives, like the gorilla; for all the natives "agree that but one adult male is seen in a band; when the young male grows up, a contest takes place for mastery, and the strongest, by killing and driving out the others, establishes himself as the head of the community." The younger males, being thus expelled and wandering about, would, when at last successful in finding a partner, prevent too close interbreeding within the limits of the same family.

Darwin, Descent of Man. III, 20

44 However terrible and disgusting under the capitalist system the dissolution of the old family ties may appear, nevertheless, modern industry, by assigning as it does an important part in the process of production, outside the domestic sphere, to women, to young persons, and to children of both sexes, creates a new economic foundation for a higher form of the family and of the relations between the sexes. It is, of course, just as absurd to hold the Teutonic-Christian form of the family to be absolute and final as it would be to apply that character to the ancient Roman, the ancient Greek, or the Eastern forms which, moreover, taken together, form a series in historic development. Moreover, it is obvious that the fact of the collective working group being composed of individuals of both sexes and all ages, must necessarily, under suitable conditions, become a source of humane development; although in its spontaneously developed, brutal, capitalistic form, where the labourer exists for the process of production, and not the process of production for the labourer, that fact is a pestiferous source of corruption and slavery.

Marx, Capital, Vol. I, IV, 15

45 Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But the state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the e,x-ploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate, by the intervention of society, direct or indirect, by means of schools, etc.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention and to rescue education from the influence of the ruling class.

The bourgeois claptrap about the family and education, about the hallowed co-relation of parent and child, becomes all the more disgusting, the more, by the action of modern industry, all family ties among the proletarians are torn asunder and their children transformed into simple articles of commerce and instruments of labour.

Marx and Engels, Communist Manifesto, 11

- 46 The duties of parents to their children are those which are indissolubly attached to the fact of causing the existence of a human being. The parent owes to society to endeavour to make the child a good and valuable member of it, and owes to the children to provide, so far as depends on him, such education, and such appliances and means, as will enable them to start with a fair chance of achieving by their own exertions a successful life. To

this every child has a claim; and I cannot admit, that as a child he has a claim to more.

Mill, Principles of Political Economy, Bk. II, 11, 3

47 The family, justly constituted, would be the real school of the virtues of freedom. It is sure to be a sufficient one of everything else. It will always be a school of obedience for the children, of command for the parents. What is needed is, that it should be a school of sympathy in equality, of living together in love, without power on one side or obedience on the other. This it ought to be between the parents. It would then be an exercise of those virtues which each requires to fit them for all other association, and a model to the children of the feelings and conduct which their temporary training by means of obedience is designed to render habitual, and therefore natural, to them. The moral training of mankind will never be adapted to the conditions of the life for which all other human progress is a preparation, until they practise in the family the same moral rule which is adapted to the moral constitution of human society. Any sentiment of freedom which can exist in a man whose nearest and dearest intimacies are with those of whom he is absolute master, is not the genuine or Christian love of freedom, but, what the love of freedom generally was in the ancients and in the middle ages—an intense feeling of the dignity and importance of his own personality; making him disdain a yoke for himself, of which he has no abhorrence whatever in the abstract, but which he is abundantly ready to impose on others for his own interest or glorification.

Mill, Subjection of Women, II

48 The pleasure married people get from one another...is only the beginnings of marriage and not its whole significance, which lies in the family.

Tolstoy, War and Peace, I Epilogue, X

49 Happy families are all alike; every unhappy family is unhappy in its own way.

Tolstoy, Anna Karenina, I, 1

50 In order to carry through any undertaking in family life, there must necessarily be either complete division between the husband and wife, or loving agreement. When the relations of a couple are vacillating and neither one thing nor the other, no sort of enterprise can be undertaken.

Many families remain for years in the same place, though both husband and wife are sick of it, simply because there is neither complete division nor agreement between them.

Tolstoy, Anna Karenina, VII, 23

51 Our immediate family is a part of ourselves. Our father and mother, our wife and babes, are bone of our bone and flesh of our flesh. When they die, a part of our very selves is gone. If they do anything wrong, it is our shame. If they are insulted, our anger flashes forth as readily as if we stood in their place. Our home comes next. Its scenes are part of our life; its aspects awaken the tenderest feelings of affection; and we do not easily forgive the stranger who, in visiting it, finds fault with its arrangements or treats it with contempt. All these different things are the objects of instinctive preferences

coupled with the most important practical interests of life. We all have a blind impulse to watch over our body, to deck it with clothing of an ornamental sort, to cherish parents, wife and babes, and to find for ourselves a home of our own which we may live in and "improve."

William James, Psychology, X

- 52 We are told that sexual attraction is diverted from the members of the opposite sex in one family owing to their living together from early childhood; or that a biological tendency against in-breeding has a mental equivalent in the horror of incest! Whereby it is entirely overlooked that no such rigorous prohibitions in law and custom would be required if any trustworthy natural barriers against the temptation to incest existed. The opposite is the truth. The first choice of object in mankind is regularly an incestuous one, directed to the mother and sister of men, and the most stringent prohibitions are required to prevent this sustained infantile tendency from being carried into effect.

Freud, General Introduction to Psycho-Analysis, XXI

- 53 The indestructible strength of the family as a natural group formation rests upon the fact that this necessary presupposition of the father's equal love can have a real application in the family.

Freud, Group Psychology and Analysis of the Ego, X

- 54 The conditions of object-choice in women are often enough made unrecognizable by social considerations. Where that choice is allowed to manifest itself freely, it often occurs according to the narcissistic ideal of the man

whom the girl would have liked to be. If the girl has remained attached to her father, if, that is to say, she has remained in the Oedipus-complex, then she chooses according to a father-type. Since, when she turned from her mother to her father, the antagonistic part of her ambivalent feelings remained directed on to her mother, such a choice should ensure a happy marriage. But very often a factor emerges which in general imperils such solutions of the ambivalence-conflict. The antagonism which has been left behind may follow in the wake of the positive attachment, and extend to the new object. The husband, who had in the first instance inherited his position from the father, comes in the course of time to inherit the position of the mother as well. In this way it may easily occur that the second part of a woman's life is taken up with a struggle against her husband, just as the shorter earlier part was occupied with rebellion against her mother. After this reaction has been lived out, a second marriage may easily turn out far more satisfactorily.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIII*

55 Love is but a prelude to life, an overture in which the theme of the impending work is exquisitely hinted at, but which remains nevertheless only a symbol and a promise. What is to follow, if all goes well, begins presently to appear. Passion settles down into possession, courtship into partnership, pleasure into habit. A child, half mystery and half plaything, comes to show us what we have done and to make its consequences perpetual. We see that by indulging our inclinations we have woven about us a net from which we cannot escape: our choices, bearing fruit,

begin to manifest our destiny. That life which once seemed to spread out infinitely before us is narrowed to one mortal career. We learn that in morals the infinite is a chimera, and that in accomplishing anything definite a man renounces everything else. He sails henceforth for one point of the compass.

Santayana, Life of Reason, 11, 2

2.2 Parents and Children

Some of the matters covered in Section 2.1 unavoidably spill over into this one, such as the authority of parents and the respect or obedience owed to them by their offspring. But there are, in addition, many new points of interest here, such as observations about the joys and pains of parenthood and of childhood, and insights into the complexities of the parent-child relationship. If every facet of the subject is not covered, or not covered with equal adequacy, it is at least possible to claim that this assemblage of passages represents a fair sampling of the wide diversity of opinions and attitudes across the centuries. Yet it is only recently—in the last hundred years or less—that our understanding of this human relationship has grown highly sophisticated and involves insights that represent probing in depth, as the reader will discover for himself by comparing the observations of such moderns as Dostoevsky, Tolstoy, and Freud with the remarks of their predecessors.

Many of the passages quoted are not statements about the relation of parents and children, but rather examples or manifestations of that relationship. Like the catalogue of the ships in Homer's *Iliad*, the mere recital of the names of famous pairs or trios recorded in these passages has the effect of awakening our interest: David and Absalom, Thetis and Achilles, Priam and Hector, Odysseus and Telemachus, Clytemnestra and Orestes, Medea and her children, Hector and Astyanax, Socrates and his sons, Anchises and Aeneas, Gertrude and Hamlet, Lear and Cordelia, Goneril, and Regan,

Squire Western and Sophia, Rousseau and his father, Mill and his, Freud and his, Stephen Daedalus (i.e., James Joyce) and his.

■ ■ ■

1 Unto the woman he said, I will greatly multiply thy sorrow and thy conception; in sorrow thou shalt bring forth children.

Geneses 3:16

2 And Jephthah vowed a vow unto the Lord, and said. If thou shalt without fail deliver the children of Ammon into mine hands,

Then it shall be, that whatsoever cometh forth of the doors of my house to meet me, when I return in peace from the children of Ammon, shall surely be the Lord's, and I will offer it up for a burnt offering.

So Jephthah passed over unto the children of Ammon to fight against them; and the Lord delivered them into his hands....

And Jephthah came to Mirpeh unto his house, and, behold, his daughter came out to meet him with timbrels and with dances: and she was his only child; beside her he had neither son nor daughter.

And it came to pass, when he saw her, that he rent his clothes, and said, Alas, my daughter! thou hast brought me very low, and thou art one of them that trouble me: for I have opened my mouth unto the Lord, and I cannot go back.

And she said unto him, My father, if thou hast opened thy mouth unto the Lord, do to me according to that which hath proceeded out of thy mouth; forasmuch as the Lord hath taken vengeance for thee of thine enemies, even of the children of Ammon.

And she said unto her father, Let this thing be done for me: let me alone two months, that I may go up and down upon the mountains, and bewail my virginity, I and my fellows.

And he said, Go. And he sent her away for two months: and she went with her companions, and bewailed her virginity upon the mountains.

And it came to pass at the end of two months, that she returned unto her father, who did with her according to his vow which he had vowed: and she knew no man.

Judges 11:30-39

- 3 And the king was much moved, and went up to the chamber over the gate, and wept: and as he went, thus he said, O my son Ab-sa-lom, my son, my son Ab-sa-lom! Would God I had died for thee, O Ab-sa-lom, my son, my son!

II Samuel 18:33

- 4 Then came there two women, that were harlots, unto the king, and stood before him.

Am! the one woman said, O my lord, I and this woman dwell in one house; and I was delivered of a child with her in the house.

And it came to pass the third day after that I was delivered, that this woman was delivered also: and we

were together; there was no stranger with us in the house, save we two in the house.

And this woman's child died in the night; because she overlaid it.

And she arose at midnight, and took my son from beside me, while thine handmaid slept, and laid it in her bosom, and laid her dead child in my bosom.

And when I rose in the morning to give my child suck, behold, it was dead: but when I had considered it in the morning, behold, it was not my son, which I did bear.

And the other woman said, Nay; but the living is my son, and the dead is thy son. And this said, No; but the dead is thy son, and the living is my son. Thus they spake before the king.

Then said the king, The one saith, This is my son that liveth, and thy son is the dead: and the other saith, Nay; but thy son is the dead, and my son is the living.

And the king said. Bring me a sword. And they brought a sword before the king.

And the king said, Divide the living child in two, and give half to the one, and half to the other,

Then spake the woman whose the living child was unto the king, for her bowels yearned upon her son, and she said, O my lord, give her the living child, and in no wise slay it. But the other said, Let it be neither mine nor thine, but divide it.

Then the king answered and said, Give her the living child, and in no wise slay it: she is the mother thereof.

1 Kings 3:16-27

5 He that spareth his rod hateth his son: but he that loveth him chasteneth him betimes.

Proverbs 13:24

6 Train up a child in the way he should go: and when he is old, he will not depart from it.

Proverbs 22:6

7 But when the twelfth dawn after this day appeared, the gods who

live forever came back to Olympos all in a body and Zeus led them; nor did Thetis forget the entreaties of her son, but she emerged from the sea's waves early

in the morning and went up to the tall sky and Olympos.

She found Kronos' broad-browed son apart from the others

sitting upon the highest peak of rugged Olympos.

She came and sat beside him with her left hand embracing

his knees, but took him underneath the chin with her right hand

and spoke in supplication to lord Zeus son of Kronos:

'Father Zeus, if ever before in word or action

I did you favour among the immortals, now grant what I ask for.

Now give honour to my son short-lived beyond all other

mortals. Since even now the lord of men Agamemnon dishonours him, who has taken away his prize and keeps it.

Zeus of the counsels, lord of Olympos, now do him honour.

So long put strength into the Trojans, until the
Achaians
give my son his rights, and his honour is increased
among them.'

Homer, Iliad, I, 493

8 Then tall Hektor of the shining helm answered her....

'I know this thing well in my heart, and my mind
knows it:
there will come a day when sacred Ilion shall perish,
and Priam, and the people of Priam of the strong ash
spear.

But it is not so much the pain to come of the Trojans
that troubles me, not even of Priam the king nor
Hekabe,

not the thought of my brothers who in their numbers
and valour

shall drop in the dust under the hands of men who
hate them,

as troubles me the thought of you, when some bronze-
armoured

Achaian leads you off, taking away your day of liberty,
in tears; and in Argos you must work at the loom of
another,

and carry water from the spring Messeis or Hypercia,
all unwilling, but strong will be the necessity upon
you;

and some day seeing you shedding tears a man will
say of you:

"This is the wife of Hektor, who was ever the bravest
fighter

of the Trojans, breakers of horses, in the days when
they fought about Ilion."

So will one speak of you; and for you it will be yet a fresh grief,

to be widowed of such a man who could fight off the day of your slavery.

But may I be dead and the piled earth hide me under before I

hear you crying and know by this that they drag you captive.'

So speaking glorious Hektor held out his arms to his baby,

who shrank back to his fair-girdled nurse's bosom screaming, and frightened at the aspect of his own father,

terrified as he saw the bronze and the crest with its horse-hair,

nodding dreadfully, as he thought, from the peak of the helmet.

Then his beloved father laughed out, and his honoured mother,

and at once glorious Hektor lifted from his head the helmet

and laid it in all its shining upon the ground. Then taking up his dear son he tossed him about in his arms, and kissed him,

and lifted his voice in prayer to Zeus and the other immortals:

'Zeus, and you other immortals, grant that this boy, who is my son,

may be as I am, pre-eminent among the Trojans, great in strength, as am I, and rule strongly over Ilion;

and some day let them say of him: "He is better by far than his father",

as he comes in from the fighting; and let him kill his enemy

and bring home the blooded spoils, and delight the heart of his mother.'

So speaking he set his child again in the arms of his beloved wife, who took him back again to her fragrant bosom smiling in her tears.

Homer, Iliad, VI, 440

9 *Andromache*. The day of bereavement leaves a child with no agemates to befriend him.

He bows his head before everyman, his cheeks are bewept, he

goes, needy, a boy among his father's companions, and tugs at this man by the mantle, that man by the tunic,

and they pity him, and one gives him a tiny drink from a goblet,

enough to moisten his lips, not enough to moisten his palate.

But one whose parents are living beats him out of the banquet

hitting him with his fists and in words also abuses him: "Get out, you! Your father is not dining among us."

Homer, Iliad, XXII, 489

10 *Athena*. "But tell me this now, make it clear to me: You must be, by your looks, Odysseus' boy? The way your head is shaped, the fine eyes—yes, how like him! We took meals like this together many a time, before he sailed for Troy with all the lords of Argos in the ships. I have not seen him since, nor has he seen me."

And thoughtfully Telemakhos replied:

"Friend, let me put it in the plainest way. My mother says I am his son; I know not surely. Who has known his own engendering? I wish at least I had some happy man as father, growing old in his house— but unknown death and silence are the fate of him that, since you ask, they call my father."

Homer, Odyssey, I, 213

- 11 *Cilissa*. A baby is like a beast, it does not think but you have to nurse it, do you not, the way it wants.

For the child still in swaddling clothes can not tell us if he is hungry or thirsty, if he needs to make water. Children's young insides are a law to themselves.

Aeschylus, Libation Bearers, 753

- 12 *Chorus*. Amongst mortals I do assert that they who are wholly without experience and have never had children far surpass in happiness those who are parents. The childless, because they have never proved whether children grow up to be a blessing or curse to men are removed from all share in many troubles; whilst those who have a sweet race of children growing up in their houses do wear away, as I perceive, their whole life through; first with the thought how they may train them up in virtue, next how they shall leave their sons the means to live; and after all this 'tis far from clear whether on good or bad children they bestow their toil. But one last crowning woe for every mortal man I now will name; suppose that they have found sufficient means to live, and seen their children grow to man's estate and walk in virtue's path, still if fortune so befall, comes Death and

bears the children's bodies off to Hades. Can it be any profit to the gods to heap upon us mortal men beside our other woes this further grief for children lost, a grief surpassing all?

Euripides, Medea, 1090

- 13 *Medea*. My friends, I am resolved upon the deed; at once will I slay my children and then leave this land, without delaying long enough to hand them over to some more savage hand to butcher. Needs must they die in any case; and since they must, I will slay them—I, the mother that bare them. O heart of mine, steel thyself! Why do I hesitate to do the awful deed that must be done? Come, take the sword, thou wretched hand of mine! Take it, and advance to the post whence starts the life of sorrow! Away with cowardice! Give not one thought to thy babes, how dear they are or how thou art their mother. This one brief day forget thy children dear, and after that lament; for though thou wilt slay them yet they were thy darlings still.

Euripides, Medea, 1236

- 14 *Andromache*. O darling child I loved too well for happiness, your enemies will kill you and leave your mother forlorn.

Your own father's nobility, where others found protection, means your murder now. The memory of his valor comes ill-timed for you. O bridal bed, O marriage rites that brought me home to Hector's house a bride, you were unhappy in the end. I lived never thinking the baby I had was born for butchery by Greeks, but for lordship over all Asia's pride of earth.

Poor child, are you crying too? Do you know what they will do to you? Your fingers clutch my dress. What use, to nestle like a young bird under the mother's wing?

Hector cannot come back, not burst from underground to save you, that spear of glory caught in the quick hand, nor Hector's kin, nor any strength of Phrygian arms.

Yours the sick leap head downward from the height, the fall where none have pity, and the spirit smashed out in death.

O last and loveliest embrace of all, O child's sweet fragrant body. Vanity in the end. I nursed for nothing the swaddled baby at this mother's breast in vain the wrack of the labor pains and the long sickness.

Now once again, and never after this, come close to your mother, lean against my breast and wind your arms around my neck, and put your lips against my lips.

Euripides, Trojan Women, 740

- 15 *Iphis*. In grief I ask: Why cannot mortals be
Twice young, then reach old age a second time?
If anything goes wrong at home, we right it
By afterthoughts; but not so with a life.
If youth and age came twice, a double life
Would be our lot, and we could set things right
No matter what mistakes were made. When I saw others
With families, I became an adorer of children
And sorely longed for some to call my own.
If I had come to this experience
With children, and known what it is for a father to lose
them,
Never would I have reached the point of woe
Where now I stand; to have started into life
A noble youth, and then be robbed of him.

And now, in my wretchedness, what shall I do?
Return to my house, to see the emptiness
Of many rooms, and a hopeless round of living?
Or shall I go where Capaneus once dwelt?
What a delight that was, when I had this child!
But now she is no more—she who would draw
My cheek to her lips and clasp my head in her hands.
To an old father, nothing is more sweet
Than a daughter. Boys are more spirited, but their ways
Are not so tender.

Euripides, Suppliant Women, 1080

- 16 *Orestes*. I had two duties, two clear choices, both of them conflicting.

My father begot me, my mother gave me birth. She was the furrow in which his seed was sown. But without the father, there is no birth. That being so, I thought, I ought to stand by him, the true agent of my birth and being, rather than with her who merely brought me up.

Euripides, Orestes, 552

- 17 *Orestes*. Tell me, what would happen if our women decided to adopt my mother's example, killed their husbands and then came rushing home to their children, exposing their breasts for pity? Why, they could murder a man for any trifle, on any pretext. But my "crime," as you call it, has stopped that practice for good or kept it from spreading.

I had every right to kill her. I hated her, and I had every reason in the world to hate.

Gods, my poor father away from home, a soldier fighting in war in his country's service, and what did she

do? She took a lover and betrayed his bed!

And when she was caught, did she do the proper thing and put herself to death?

Not my mother. No, she murdered him to save herself.

I should not invoke the gods when defending myself on a charge of murder, but in *god's name, in the name of heaven*, what was I supposed to do?

Shout hurrah by keeping still?

Euripides, Orestes, 566

- 18 *Socrates*. When my sons are grown up, I would ask you, O my friends, to punish them; and I would have you trouble them, as I have troubled you, if they seem to care about riches, or anything, more than about virtue; or if they pretend to be something when they are really nothing,—then reprove them, as I have reproved you, for not caring about that for which they ought to care, and thinking that they are something when they are really nothing. And if you do this, both I and my sons will have received justice at your hands.

Plato, Apology, 41B

- 19 *Athenian Stranger*. All which a man has belongs to those who gave him birth and brought him up, and that he must do all that he can to minister to them, first, in his property, secondly, in his person, and thirdly, in his soul, in return for the endless care and travail which they bestowed upon him of old, in the days of his infancy, and which he is now to pay back to them when they are old and in the extremity of their need. And all his life long he ought never to utter, or to have uttered, an unbecoming word to them; for of light and fleeting words the penalty

is most severe; Nemesis, the messenger of justice, is appointed to watch over all such matters. When they are angry' and want to satisfy their feelings in word or deed, he should give way to them; for a father who thinks that he has been wronged by his son may be reasonably expected to be very angry. At their death, the most moderate funeral is best, neither exceeding the customary expense, nor yet falling short of the honour which has been usually shown by the former generation to their parents. And let a man not forget to pay the yearly tribute of respect to the dead, honouring them chiefly by omitting nothing that conduces to a perpetual remembrance of them, and giving a reasonable portion of his fortune to the dead. Doing this, and living after this manner, we shall receive our reward from the Gods and those who are above us [that is, the demons]; and we shall spend our day's for the most part in good hope.

Plato, Laws, IV, 717A

20 *Athenian Stranger*. Of all animals the boy is the most unmanageable, inasmuch as he has the fountain of reason in him not yet regulated; he is the most insidious, sharp-witted, and insubordinate of animals. Wherefore he must be bound with many bridles; in the first place, when he gets away from mothers and nurses, he must be under the management of tutors on account of his childishness and foolishness; then, again, being a freeman, he must be controlled by teachers, no matter what they teach, and by studies; but he is also a slave, and in that regard any freeman who comes in his way may punish him and his tutor and his instructor, if any of them does anything wrong; and he who comes across him and does not inflict

upon him the punishment which he deserves, shall incur the greatest disgrace.

Plato, Laws, VII, 808B

- 21 In the matter of food we should help our parents before all others, since we owe our own nourishment to them, and it is more honourable to help in this respect the authors of our being even before ourselves; and honour too one should give to one's parents as one does to the gods, but not any and every honour; for that matter one should not give the same honour to one's father and one's mother.

Aristotle, Ethics, 1165a21

- 22 Those are wrong who in their laws attempt to check the loud crying and screaming of children, for these contribute towards their growth, and, in a manner, exercise their bodies. Straining the voice has a strengthening effect similar to that produced by the retention of the breath in violent exertions.

Aristotle, Politics, 1336a34

- 23 Begin, auspicious boy! to cast about
Thy infant eyes, and, with a smile, thy mother single out.
Thy mother well deserves that short delight.
The nauseous qualms of ten long months and travail to requite.
Then smile! the frowning infant's doom is read.
No god shall croum the board, nor goddess bless the bed.

Virgil, Eclogues, IV

24 Coroebus. Behold! Polites, one of Priam's sons,
Pursued by Pyrrhus, there for safety runs.
Thro' swords and foes, amaz'd and hurt, he flies
Thro' empty courts and open galleries.
Him Pyrrhus, urging with his lance, pursues,
And often reaches, and his thrusts renews.
The youth, transfix'd, with lamentable cries.
Expires before his wretched parent's eyes:
Whom gasping at his feet when Priam saw,
The fear of death gave place to nature's law;
And, shaking more with anger than with age,
'The gods,' said he, 'requite thy brutal rage!
As sure they will, barbarian, sure they must,
If there be gods in heav'n, and gods be just—
Who tak'st in wrongs an insolent delight;
With a son's death t' infect a father's sight.

Virgil, Aeneid, 11

25 Aeneas. Scarce had he said, when, on our left, we hear
A peal of rattling thunder roll in air:
There shot a streaming lamp along the sky.
Which on the winged lightning seem'd to fly;
From o'er the roof the blaze began to move.
And, trailing, vanish'd in th' Idaean grove.
It swept a path in heav'n, and shone a guide,
Then in a steaming stench of sulphur died.
"The good old man with suppliant hands implor'd
The gods' protection, and their star ador'd.
'Now, now,' said he, my son, no more delay!
I yield, I follow where Heav'n shews the way....
'Haste, my dear father, ('tis no time to wait,)
And load my shoulders with a willing freight.
Whate'er befalls, your life shall be my care;

One death, or one deliv'rance, we will share.
My hand shall lead our little son; and you,
My faithful consort, shall our steps pursue."

Virgil, Aeneid, 11

26 And lo a voice from heaven, saying, This is my beloved
Son, in whom I am well pleased.

Matthew 3:17

27 Now his parents went to Jerusalem every year at the feast
of the passover.

And when he was twelve years old, they went up to
Jerusalem after the custom of the feast.

And when they had fulfilled the days, as they
returned, the child Jesus tarried behind in Jerusalem; and
Joseph and his mother knew not of it.

But they, supposing him to have been in the company,
went a day's journey; and they sought him among their
kinsfolk and acquaintance.

And when they found him not, they turned back again
to Jerusalem, seeking him.

And it came to pass, that after three days they found
him in the temple, sitting in the midst of the doctors,
both hearing them, and asking them questions.

And all that heard him were astonished at his
understanding and answers.

And when they saw him, they were amazed: and his
mother said unto him. Son, why hast thou thus dealt with
us? behold, thy father and I have sought thee sorrowing.

And he said unto them. How is it that ye sought me?
wist ye not that I must be about my Father's business?

And they understood not the saying which he spake unto them.

And he went down with them, and came to Nazareth, and was subject unto them: but his mother kept all these sayings in her heart.

Luke 2:41-51

28 And he said, A certain man had two sons:

And the younger of them said to his father. Father, give me the portion of goods that falleth to me. And he divided unto them his living.

And not many days after the younger son gathered all together, and took his journey into a far country, and there wasted his substance with riotous living.

And when he had spent all, there arose a mighty famine in that land; and he began to be in want.

And he went and joined himself to a citizen of that country; and he sent him into his fields to feed swine.

And he would fain have filled his belly with the husks that the swine did eat: and no man gave unto him.

And when he came to himself, he said. How many hired servants of my father's have bread enough and to spare, and I perish with hunger!

I will arise and go to my father, and will say unto him, Father, I have sinned against heaven, and before thee,

And am no more worthy to be called thy son: make me as one of thy hired servants.

And he arose, and came to his father. But when he was yet a great way off, his father saw him, and had compassion, and ran, and fell on his neck, and kissed him.

And the son said unto him. Father, I have sinned against heaven, and in thy sight, and am no more worthy

to be called thy son.

But the father said to his servants, Bring forth the best robe, and put it on him; and put a ring on his hand, and shoes on his feet:

And bring hither the fatted calf, and kill it; and let us eat, and be merry:

For this my son was dead, and is alive again; he was lost, and is found. And they began to be merry.

Now his elder son was in the field: and as he came and drew nigh to the house, he heard mu-sick and dancing.

And he called one of the servants, and asked what these things meant.

And he said unto him. Thy brother is come; and thy father hath killed the fatted calf, because he hath received him safe and sound.

And he was angry, and would not go in: therefore came his father out, and intreated him.

And he answering said to his father, Lo, these many years do I serve thee, neither transgressed I at any time thy commandment: and yet thou never gavest me a kid, that I might make merry with my friends:

But as soon as this thy son was come, which hath devoured thy living with harlots, thou hast killed for him the fatted calf.

And he said unto him, Son, thou art ever with me, and all that I have is thine.

It was meet that we should make merry, and be glad: for this thy brother was dead, and is alive again; and was lost, and is found.

Luke 15:11-32

29 The sayings of Themistocles, who, when his son was making many demands of him by means of his mother,

said, "O woman, the Athenians govern the Greeks; I govern the Athenians, but you govern me, and your son governs you; so let him use his power sparingly, since, simple as he is, he can do more than all the Greeks together."

Plutarch, Marcus Cato

30 As soon as he [Cato] had a son born, though he had never such urgent business upon his hands, unless it were some public matter, he would be by when his wife washed it and dressed it in its swaddling clothes. For she herself suckled it; nay, she often, too, gave her breast to her servants' children, to produce, by suckling the same milk, a kind of natural love in them to her son. When he began to come to years of discretion, Cato himself would teach him to read, although he had a servant, a very good grammarian, called Chilo, who taught many others; but he thought not fit, as he himself said, to have his son reprimanded by a slave, or pulled, it may be, by the ears when found tardy in his lesson: nor would he have him owe to a servant the obligation of so great a thing as his learning; he himself, therefore (as we were saying), taught him his grammar, law, and his gymnastic exercises. Nor did he only show him, too, how to throw a dart, to fight in armour, and to ride, but to box also and to endure both heat and cold, and to swim over the most rapid and rough rivers. He says, likewise, that he wrote histories, in large characters, with his own hand, that so his son, without stirring out of the house, might learn to know' about his countrymen and forefathers; nor did he less abstain from speaking anything obscene before his son, than if it had been in the presence of the sacred virgins, called vestals.

Plutarch, Marcus Cato

31 After the birth of our four sons you yearned for a daughter, and I seized the opportunity of giving her your dear name: I know that she was precious to you. Peculiar poignancy attaches to tenderness for children when their presence is altogether welcome and completely untainted by ill will and reproach. The child herself possessed a marvelous cheeriness of temper and gentleness, and her responsiveness to love and eagerness to please evoked not only pleasure but an appreciation of human goodness. She would invite her nurse to offer her breast not only to other infants but even to furnishings and toys in which she took delight. It was as if, out of humane sensibilities, she invited them to her own table, to share in the good things she had; what was most delightful to her she wished all who pleased her to enjoy.

I cannot see, my dear wife, why these and similar qualities which delighted us when she was alive should now distress and confound us when we bring them to mind. Rather do I fear lest we lose those memories along with our grief, ... In general, nature avoids everything that causes distress. But in the case of our child, in the degree that she proved to us a thing most lovable to fondle and look at and hear, so the memory of her must abide with us and become part of us, and it will bring us a greater quantity and variety of joy than of sorrow.

Plutarch, Consolation to His Wife

32 So, shun damnable deeds. For this there's at least one good reason—

Lest our children repeat the crimes we have taught
them. We all
Are easily led, too prone to imitate wicked behavior....
To a child is due the greatest respect: in whatever
Nastiness you prepare, don't despise the years of your
children,
But let your infant son dissuade you from being a
sinner.
For if, in days to come, he earns the wrath of the
censor,
Being a man like you not only in body and features.
But also the son of your ways, a walker in all of your
footsteps,
Treading deeper in vice, you will—oh, of course!—be
indignant.
Rail with bitter noise, and make a new will. That will
teach him.
Yet what makes you assume the father's frown, and
the father's
Freedom of speech and act, when you behave worse,
as an old man,
Than he ever did, and the windy cupping-glass
searches
Vainly around your head for brains that it cannot
discover?

Juvenal, Satire XIV

33 Once a child is born, it is no longer in our power not to
love it nor care about it.

Epictetus, Discourses, I, 23

34 Throw between yourself and your son a little estate, and you will know how soon he will wish to bury you and how soon you wish your son to die.

Epictetus, Discourses, II, 22

35 My mother (St. Monica) would not be satisfied but urged him [the bishop] with repeated entreaties and floods of tears to see me and discuss with me. He, losing patience, said: "Go your way; as sure as you live, it is impossible that the son of these tears should perish." In the conversations we had afterwards, she often said that she had accepted this answer as if it had sounded from heaven.

Augustine, Confessions, III, 12

36 What a gulf there is between the restraint of the marriage-covenant entered into for the sake of children and the mere bargain of a lustful love, where if children come they come unwanted— though when they are born, they compel our love.

Augustine, Confessions, IV, 2

37 Why I left the one country and went to the other, You Knew, O God, but You did not tell either me or my mother. She indeed was in dreadful grief at my going and followed me right to the seacoast. There she clung to me passionately, determined that I should either go back home with her or take her to Rome with me, but I deceived her with the pretence that I had a friend whom I did not want to leave until he had sailed off with a fair wind. Thus I lied to my mother, and such a mother.

Augustine, Confessions, V, 8

38 When the day was approaching on which she [St. Monica] was to depart this life—a day that You knew though we did not—it came about, as I believe by Your secret arrangement, that she and I stood alone leaning in a window, which looked inwards to the garden within the house where we were staying, at Ostia on the Tiber; for there we were away from everybody, resting for the sea-voyage from the weariness of our long journey by land. There we talked together, she and I alone, in deep joy; and *forgetting the things that were behind and looking forward to those that were before*, we were discussing in the presence of Truth, which You are, what the eternal life of the saints could be like, *which eye has not seen nor ear heard, nor has it entered into the heart of man*. But with the mouth of our heart we panted for the high waters of Your fountain, the fountain of the life which is with You: that being sprinkled from that fountain according to our capacity, we might in some sense meditate upon so great a matter.

And our conversation had brought us to this point, that any pleasure whatsoever of the bodily senses, in any brightness whatsoever of corporeal light, seemed to us not worth of comparison with the pleasure of that eternal Light, not worthy even of mention. Rising as our love flamed upward towards that Selfsame, we passed in review the various levels of bodily things, up to the heavens themselves, whence sun and moon and stars shine upon this earth. And higher still we soared, thinking in our minds and speaking and marvelling at Your works: and so we came to our own souls, and went beyond them to come at last to that region of richness unending, where You feed Israel forever with the food of truth.

Augustine, Confessions, IX, 10

39 When her [St. Monica's] illness was close to its end, meeting with expressions of endearment such services as I rendered, she called me a dutiful loving son, and said in the great affection of her love that she had never heard from my mouth any harsh or reproachful word addressed to herself. But what possible comparison was there, O my God who made us, between the honour I showed her and the service she had rendered me?

Augustine, Confessions, IX, 12

40 A man's children are more lovable to him than his father. . . . First, because parents love their children as being part of themselves; but the father is not part of his son, so that the love of a father for his children, is more like a man's love for himself. Secondly, because parents know better that so and so is their child than vice versa. Thirdly, because children are nearer to their parents, as being part of them than their parents are to them to whom they stand in the relation of a principle. Fourthly, because parents have loved longer, for the father begins to love his child at once, while the child begins to love his father after a lapse of time; and the longer love lasts, the stronger it is.

Aquinas, Summa Theologica, II-II, 26, 9

41 Strictly speaking, . . . the father should be loved more than the mother. For father and mother are loved as principles of our natural origin. Now the father is principle in a more excellent way than the mother, because he is the active principle, while the mother is a passive and

material principle. Consequently, strictly speaking, the father is to be loved more.

Aquinas, Summa Theologiae, II-II, 26, 10

42 You fathers and you mothers fond, also.
If you have children, be it one or two,
Yours is the burden of their wise guidance
The while they are within your governance.
Beware that not from your own lax living,
Or by your negligence in chastening
They fall and perish; for I dare well say.
If that should chance you'll dearly have to pay.
Under a shepherd soft and negligent
Full many a sheep and lamb by wolf is rent.

Chaucer, Canterbury Tales: Physician's Tale

43 May not these fathers and mothers, think you, be
sorrowful and heavy-hearted, when they see an unknown
fellow, a vagabond stranger, a barbarous lout, a rude cur,
rotten, fleshless, putrified, scraggy, boily, botchy, poor, a
forlorn caitiff, and miserable sneak, by an open rapt,
snatch away before their own eyes their so fair, delicate,
neat, well-behavioured, richly provided for and healthful
daughters, on whose breeding and education they had
spared no cost nor charges, by bringing them up in an
honest discipline to all the honourable and virtuous
employments becoming one of their sex, descended of a
noble parentage, hoping by those commendable and
industrious means in an opportune and convenient time
to bestow them on the worthy sons of their well-
deserving neighbours and ancient friends, who had
nourished, entertained, taught, instructed, and schooled

their children with the same care and solicitude, to make them matches fit to attain to the felicity of a so happy marriage, that from them might issue an offspring and progeny no less heirs to the laudable endowments and exquisite qualifications of their parents, whom they every way resemble, than to their personal and real estates, moveables and inheritances? How doleful, trist, and plangorous would such a sight and pageantry prove unto them?

Rabelais, Gargantua and Pantagruel, III, 48

44 If there is any truly natural law, that is to say, any instinct that is seen universally and permanently imprinted in both the animals and ourselves (which is not beyond dispute), I may say that in my opinion, after the care every animal has for its own preservation and the avoidance of what is harmful, the affection that the begetter has for his begotten ranks second. And because Nature seems to have recommended it to us with a view to extending and advancing the successive parts of this machine of hers, it is no wonder if, turning backward, the affection of children for their fathers is not so great.

Montaigne, Essays, II, 8, Affection of Fathers

45 A true and well-regulated affection should be born and increase with the knowledge children give us of themselves; and then, if they are worthy of it, the natural propensity going along with reason, we should cherish them with a truly paternal love; and we should likewise pass judgment on them if they are otherwise, always submitting to reason, notwithstanding the force of nature. It is very often the reverse; and most commonly we feel

more excited over the stamping, the games, and the infantile tricks of our children than we do later over their grown-up actions, as if we had loved them for our pastime, like monkeys, not like men. And some supply toys very liberally for their childhood, who tighten up at the slightest expenditure they need when they are of age. Indeed it seems that the jealousy we feel at seeing them appear in the world and enjoy it when we are about to leave it makes us more stingy and tight with them; it vexes us that they are treading on our heels, as if to solicit us to leave. And if we had that to fear, then since in the nature of things they cannot in truth either be or live except at the expense of our being and our life, we should not have meddled with being fathers.

As for me, I think it is cruelty and injustice not to receive them into a share and association in our goods, and as companions in the understanding of our domestic affairs, when they are capable of it, and not to cut down and restrict our own comforts in order to provide for theirs, since we have begotten them to that end. It is an injustice that an old, broken, half-dead father should enjoy alone, in a corner of his hearth, possessions that would suffice for the advancement and maintenance of many children, and let them meanwhile, for lack of means, lose their best years without making progress in public service and the knowledge of men.

Montaigne, Essays, II, 8, Affection of Fathers

- 46 It is... wrong and foolish to prohibit children who have come of age from being familiar with their fathers, and to prefer to maintain an austere and disdainful gravity toward them, hoping thereby to keep them in fear and obedience. For that is a very futile farce, which makes

fathers annoying to their children and, what is worse, ridiculous. They have in their hands youth and vigor, and consequently the u-ind and favor of the world behind them; and they receive with mockery these fierce and tyrannical looks from men who have no blood left in either heart or veins—real scarecrows in a hemp field. Even if I could make myself feared, I would much rather make myself loved.

Montaigne, Essays, II, 8, Affection of Fathers

47 My father loved to build up Montaigne, where he was born; and in all this administration of domestic affairs, I love to follow his example and his rules, and shall bind my successors to them as much as I can. If I could do better for him, I would. I glory in the fact that his will still operates and acts through me. God forbid that I should allow to fail in my hands any semblance of life that I could restore to so good a father. Whenever I have taken a hand in completing some old bit of wall and repairing some badly constructed building, it has certainly been out of regard more to his intentions than to my own satisfaction. And I blame my indolence that I have not gone further toward completing the things he began so handsomely in his house; all the more because I have a good chance of being the last of my race to possess it, and the last to put a hand to it.

Montaigne, Essays, III, 9, Of Vanity

48 *Launcelot*. It is a wise father that knows his own child.

Shakespeare, Merchant of Venice, II, ii, 80

49 *Ghost*. List, list, O, list!

If thou didst ever thy dear father love—

Hamlet. O God!

Ghost. Revenge his foul and most unnatural murder.

Ham. Murder!

Ghost. Murder most foul, as in the best it is;

But this most foul, strange, and unnatural.

Ham. Haste me to know't, that I, with wings as swift

As meditation or the thoughts of love,

May sweep to my revenge.

Ghost. I find thee apt;

And duller shouldst thou be than the fat weed

That roots itself in ease on Lethe wharf,

Wouldst thou not stir in this.

Shakespeare, Hamlet, I, v, 22

50 *Hamlet*. Now, mother, what's the matter?

Queen. Hamlet, thou hast thy father much offended.

Ham. Mother, you have my father much offended.

Queen. Come, come, you answer with an idle tongue.

Ham. Go, go, you question with a wicked tongue.

Queen. Why, how now, Hamlet!

Ham. What's the matter now?

Have you forgot me?

Ham. No, by the rood, not so:

You are the Queen, your husband's brother's wife;

And— Would it were not so!—you are my mother.

Shakespeare, Hamlet, III, iv, 8

51 *Lear*. Give me the map there. Know that we have divided

In three our kingdom; and 'tis our fast intent

To shake all cares and business from our age;

Conferring them on younger strengths, while we
Unburthen'd cravv'l toward death. Our son of Cornwall,
And you, our no less loving son of Albany,
We have this hour a constant will to publish
Our daughters' several dowers, that future strife
May be prevented now. The Princes, France and
Burgundy,
Great rivals in our youngest daughter's love,
Long in our court have made their amorous so-journ,
And here are to be answer'd. Tell me, my daughters'—
Since now we will divest us, both of rule.
Interest of territory, cares of state—
Which of you shall we say doth love us most?

Shakespeare, Lear, 1, i, 38

52 *Cordelia*. Unhappy that I am, I cannot heave
My heart into my mouth. I love your Majesty
According to my bond; nor more nor less.

Lear. How, how, Cordelia! mend your speech a little.
Lest it may mar your fortunes.

Cor. Good my lord,
You have begot me, bred me, loved me, I
Return those duties back as are right fit,
Obey you, love you, and most honour you.
Why have my sisters husbands, if they say
They love you all? Haply, when I shall wed,
That lord whose hand must take my plight shall carry
Half my love with him, half my care and duty.
Sure, I shall never marry like my sisters,
To love my father all.

Lear. But goes thy heart with this?

Cor. Ay, good my lord.

Lear. So young, and so untender?

Cor. So young, my lord, and true.

Lear. Let it be so; thy truth, then, be thy dower.

Shakespeare, Lear, I, i, 93

53 *Lear.* Hear, Nature, hear; dear goddess, hear!

Suspend thy purpose, if thou didst intend

To make this creature fruitful!

Into her womb convey sterility!

Dry up in her the organs of increase;

And from her derogate body never spring

A babe to honour her! If she must teem,

Create her child of spleen; that it may live,

And be a thwart disnatured torment to her!

Let it stamp wrinkles in her brow of youth;

With cadent tears fret channels in her cheeks;

Turn all her mother's pains and benefits

To laughter and contempt; that she may feel

How sharper than a serpent's tooth it is

To have a thankless child! Away, away!

Shakespeare, Lear, I, iv, 297

54 *Doctor.* Please you, draw near. Louder the music there!

Cordelia. O my dear father! Restoration hang

Thy medicine on my lips; and let this kiss

Repair those violent harms that my two sisters

Have in thy reverence made!

Kent. Kind and dear Princess!

Cor. Had you not been their father, these white flakes

Had challenged pity of them. Was this a face

To be opposed against the warring winds?

To stand against the deep dread-bolted thunder?

In the most terrible and nimble stroke

Of quick, cross lightning? to watch—poor perdu!—
With this thin helm? Mine enemy's dog.
Though he had bit me, should have stood that night
Against my fire; and wast thou fain, poor father,
To hovel thee with swine and rogues forlorn
In short and musty straw? Alack, alack!
'Tis wonder that thy life and wits at once
Had not concluded all. He wakes; speak to him.

Doct. Madam, do you; 'tis fittest.

Cor. How does my royal lord? How fares your Majesty?

Lear. You do me wrong to take me out o' the grave.

Thou art a soul in bliss; but I am bound
Upon a wheel of fire, that mine own tears
Do scald like molten lead.

Cor. Sir, do you know me?

Lear. You are a spirit, I know. When did you die?

Cor. Still, still, far wide!

Doct. He's scarce awake. Let him alone awhile.

Lear. Where have I been? Where am I? Pair daylight?
I am mightily abused. I should e'en die with pity,
To see another thus. I know not what to say.
I will not swear these are my hands. Let's see;
I feel this pin prick. Would I were assured
Of my condition!

Cor. O, look upon me, sir,
And hold your hands in benediction o'er me.
No, sir. you must not kneel.

Lear. Pray, do not mock me.
I am a very foolish fond old man.
Fourscore and upward, not an hour more nor less;
And, to deal plainly,
I fear I am not in my perfect mind.
Methinks I should know you, and know this man;

Yet I am doubtful; for I am mainly ignorant
What place this is; and all the skill I have
Remembers not these garments; nor I know not
Where I did lodge last night. Do not laugh at me;
For, as I am a man, I think this lady
To be my child Cordelia.

Cor. And so I am, I am.

Lear. Be your tears wet? yes, 'faith. I pray, weep not.
If you have poison for me, I will drink it.
I know you do not love me; for your sisters
Have, as I do remember, done me wrong.
You have some cause, they have not.

Cor. No cause, no cause.

Shakespeare, Lear, IV, vii, 25

55 *Pericles.* A terrible childbed hast thou had, my dear;
No light, no fire; the unfriendly elements
Forgot thee utterly; nor have I time
To give thee hallow'd to thy grave, but straight
Must cast thee, scarcely coffin'd, in the ooze,
Where, for a monument upon thy bones.
And e'er-remaining lamps, the belching whale
And humming water must o'erwhelm thy corpse,
Lying with simple shells. O Lychorida,
Bid Nestor bring me spices, ink, and paper,
My casket and my jewels; and bid Nicander
Bring me the satin coffer. Lay the babe
Upon the pillow. Hie thee, whiles I say
A priestly farewell to her.

Shakespeare, Pericles, III, i, 57

56 *Leontes*. Looking on the lines
Of my boy's face, methoughts I did recoil
Twenty-three years, and saw myself unbreech'd,
In my green velvet coat, my dagger muzzled.
Lest it should bite its master, and so prove,
As ornaments oft do, too dangerous.
How like, methought, I then was to this kernel,
This squash, this gentleman.

Shakespeare, Winters Tale, I, ii, 153

57 Sir, reply'd Don Quixote, Children are Flesh and Blood of their Parents, and, whether good or bad, are to be cherish'd as part of ourselves. 'Tic the Duty of a Father to train 'em up from their tenderest Years in the Paths of Vertue, in good Discipline and Christian Principles, that when they advance in Years they may become the Staff and Support of their Parents Age, and the Glory of their Posterity. But as for forcing them to this or that Study, 'tis a thing I don't so well approve. Persuasion is all, I think, that is proper in such a case; especially when they are so Fortunate as to be above studying for Bread, as having Parents that can provide for their future Subsistence, they ought in my Opinion to be indulged in the Pursuit of that Science to which their own Genius gives them the most Inclination.

Cervantes, Don Quixote, II, 16

58 Farewell, thou child of my right hand, and joy;
My sin was too much hope of thee, loved boy:
Seven years thou wert lent to me, and I thee pay,
Exacted by thy fate, on the just day.
O could I lose all father now! for why

Will man lament the state he should envy,
To have so soon 'scaped world's and flesh's rage,
And, if no other misery, yet age?
Rest in soft peace, and asked, say, "Here doth lie
Ben Jonson his best piece of poetry."

Jonson, On My First Son

59 The joys of parents are secret; and so are their griefs and fears. They cannot utter the one; nor they will not utter the other. Children sweeten labours; but they make misfortunes more bitter. They increase the cares of life; but they mitigate the remembrance of death. The perpetuity by generation is common to beasts; but memory, merit, and noble works are proper to men. And surely a man shall see the noblest works and foundations have proceeded from childless men; which have sought to express the images of their minds, where those of their bodies have failed. So the care of posterity is most in them that have no posterity. They that are the first raisers of their houses are most indulgent towards their children; beholding them as the continuance not only of their kind but of their work; and so both children and creatures.

Bacon, Of Parents and Children

60 There is also no need to distinguish as many kinds of love as there are diverse objects which we may love; for, to take an example, although the passions which an ambitious man has for glory, a miser for money, a drunkard for wine, a brutal man for a woman whom he desires to violate, a man of honour for his friend or mistress, and a good father for his children, may be very different, still, inasmuch as they participate in love, they

are similar. But the four first only have love for the possession of the objects to which their passion relates, and do not have any for the objects themselves, for which they only have desire mingled with other particular passions. But the love which a good father has for his children is so pure that he desires to have nothing from them, and does not wish to possess them otherwise than he does, nor to be united with them more closely than he already is. For, considering them as replicas of himself, he seeks their good as his own, or even with greater care, because, in setting before himself that he or they form a whole of which he is not the best part, he often prefers their interests to his, and does not fear losing himself in order to save them.

Descartes, Passions of the Soul, LXXXII

- 61 Dominion is acquired two ways: by generation and by conquest. The right of dominion by generation is that which the parent hath over his children, and is called *paternal*. And is not so derived from the generation, as if therefore the parent had dominion over his child because he begat him, but from the child's consent, either express or by other sufficient arguments declared. For as to the generation, God hath ordained to man a helper, and there be always two that are equally parents: the dominion therefore over the child should belong equally to both, and he be equally subject to both, which is impossible; for no man can obey two masters. And whereas some have attributed the dominion to the man only, as being of the more excellent sex, they misreckon in it. For there is not always that difference of strength or prudence between the man and the woman as that the right can be determined without war. In Commonwealths

this controversy is decided by the civil law: and for the most part, but not always, the sentence is in favour of the father, because for the most part Commonwealths have been erected by the fathers, not by the mothers of families. But the question lieth now in the state of mere nature where there are supposed no laws of matrimony, no laws for the education of children, but the law of nature and the natural inclination of the sexes, one to another, and to their children...

If there be no contract, the dominion is in the mother. For in the condition of mere nature where there are no matrimonial laws, it cannot be known who is the father unless it be declared by the mother; and therefore the right of dominion over the child dependeth on her will, and is consequently hers. Again, seeing the infant is first in the power of the mother, so as she may either nourish or expose it; if She nourish it, it oweth its life to the motherland is therefore obliged to obey her rather than any other; and by consequence the dominion over it is hers. But if she expose it, and another find and nourish it, the dominion is in him that nourished it. For it ought to obey him by whom it is preserved, because preservation of life being the end for which one man becomes subject to another, every man is supposed to promise obedience to him in whose power it is to save or destroy him.

Hobbes, Leviathan, II, 20

62 And because the first instruction of children dependeth on the care of their parents, it is necessary that they should be obedient to them whilst they are under their tuition; and not only so, but that also afterwards, as gratitude requireth, they acknowledge the benefit of their education by external signs of honour. To which end they

are to be taught that originally the father of every man was also his sovereign lord, with power over him of life and death; and that the fathers of families, when by instituting a Commonwealth they resigned that absolute power, yet it was never intended they should lose the honour due unto them for their education. For to relinquish such right was not necessary to the institution of sovereign power; nor would there be any reason why any man should desire to have children, or take the care to nourish and instruct them, if they were afterwards to have no other benefit from them than from other men. And this accordeth with the fifth Commandment.

Hobbes, Leviathan, II, 30

63 *Manoa*. His ransom, if my whole inheritance
May compass it, shall willingly be paid
And numberd down: much rather I shall chuse
To live the poorest in my Tribe, then richest.
And he in that calamitous prison left.
No, I am fixt not to part hence without him.
For his redemption all my Patrimony,
If need be, I am ready to forgo
And quit; not wanting him, I shall want nothing.

Chorus. Fathers are wont to lay up for thir Sons,
Thou for thy Son art bent to lay out all;
Sons wont to nurse thir Parents in old age,
Thou in old age car'st how to nurse thy Son,
Made older then thy age through eye-sight lost.

Man. It shall be my delight to tend his eyes.

Milton, Samson Agonistes, 1476

64 If parents carry it lovingly towards their children, mixing their mercies with loving rebukes, and their loving rebukes with fatherly and motherly compassions, they are more likely to save their children than by being churlish and severe towards them.

Bunyan, Life and Death of Mr. Badman

65 The power, then, that parents have over their children arises from that duty which is incumbent on them, to take care of their offspring during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant nonage, till reason shall take its place and ease them of that trouble, is what the children want, and the parents are bound to. For God having given man an understanding to direct his actions, has allowed him a freedom of will and liberty of acting, as properly belonging thereunto within the bounds of that law he is under. But whilst he is in an estate wherein he has no understanding of his own to direct his will, he is not to have any 'Mil of his own to follow. He that understands for him must will for him too; he must prescribe to his will, and regulate his actions, but when he comes to the estate that made his father a free man, the son is a free man too.

Locke, II Civil Government, VI, 58

66 But though there be a time when a child comes to be as free from subjection to the will and command of his father as he himself is free from subjection to the will of anybody else, and they are both under no other restraint but that which is common to them both, whether it be the law of Nature or municipal law of their country, yet this

freedom exempts not a son from that honour which he ought, by the law of God and Nature, to pay his parents, God having made the parents instruments in His great design of continuing the race of mankind and the occasions of life to their children. As He hath laid on them an obligation to nourish, preserve, and bring up their offspring, so He has laid on the children a perpetual obligation of honouring their parents, which, containing in it an inward esteem and reverence to be shown by all outward expressions, ties up the child from anything that may ever injure or affront, disturb or endanger the happiness or life of those from whom he received his, and engages him in all actions of defence, relief, assistance, and comfort of those by whose means he entered into being and has been made capable of any enjoyments of life. From this obligation no state, no freedom, can absolve children.

Locke, II Civil Government, VI, 66

67 Those... that intend ever to govern their children should begin it whilst they are very little, and look that they perfectly comply with the will of their parents. Would you have your son obedient to you when past a child, be sure then to establish the authority of a father as soon as he is capable of submission, and can understand in whose power he is. If you would have him stand in awe of you, imprint it in his infancy; and as he approaches more to a man, admit him nearer to your familiarity; so shall you have him your obedient subject (as is fit) whilst he is a child, and your affectionate friend when he is a man. For methinks they mightily misplace the treatment due to their children, who are indulgent and familiar when they are little, but severe to them, and keep them at a

distance when they are grown up: for liberty and indulgence can do no good to children; their want of judgment makes them stand in need of restraint and discipline; and on the contrary, imperiousness and severity is but an ill way of treating men who have reason of their own to guide them; unless you have a mind to make your children, when grown up, weary of you, and secretly to say within themselves, "When will you die, Father?"

Locke, Some Thoughts Concerning Education, 40

68 Their notions [the Lilliputians] relating to the duties of parents and children differ extremely from ours. For, since the conjunction of male and female is founded upon the great law of nature, in order to propagate and continue the species; the Lilliputians will needs have it, that men and women are joined together like other animals, by the motives of concupiscence; and that their tenderness towards their young, proceedeth from the like natural principle: for which reason they will never allow, that a child is under any obligation to his father for begetting him, or to his mother for bringing him into the world; which, considering the miseries of human life, was neither a benefit in itself, nor intended so by his parents, whose thoughts in their love-encounters were otherwise employed.

Swift, Gulliver's Travels, I, 6

69 "Pray, brother, have you not observed something very extraordinary in my niece lately?"—"No, not I," answered Western: "is anything the matter with the girl?"—"I think there is," replied she; "and something of much

consequence too."— "Why, she doth not complain of anything," cries Western; "and she hath had the small-pox." — "Brother," returned she, "girls are liable to other distempers besides the small-pox, and sometimes possibly to much worse." Here Western interrupted her with much earnestness, and begged her, if anything ailed his daughter, to acquaint him immediately; adding, "she knew he loved her more than his own soul, and that he would send to the world's end for the best physician to her." "Nay, nay," answered she, smiling, "the distemper is not so terrible: but I believe, brother, you are convinced I know the world, and I promise you I was never more deceived in my life, if my niece be not most desperately in love."—"How! in love!" cries Western, in a passion; "in love, without acquainting me! I'll disinherit her; I'll turn her out of doors, stark naked, without a farthing. Is all my kindness vor 'ur, and vondness o'ur come to this, to fall in love without asking me leave?"— "But you will not," answered Mrs. Western, "turn this daughter, whom you love better than your own soul, out of doors, before you know whether you shall approve her choice. Suppose she should have fixed on the very person whom you yourself would wish, I hope you would not be angry then?" — "No, no," cries Western, "that would make a difference. If she marries the man I would ha' her, she may love whom she pleases, I shan't trouble my head about that."

Fielding, Tom Jones, VI, 2

70 We now return to take leave of Mr. Jones and Sophia, who, within two days after their marriage, attended Mr. Western and Mr. Allworthy into the country. Western hath resigned his family seat, and the greater part of his estate, to his son-in-law, and hath retired to a lesser

house of his in another part of the country, which is better for hunting. Indeed, he is often as a visitant with Mr. Jones, who, as well as his daughter, hath an infinite delight in doing everything in their power to please him. And this desire of theirs is attended with such success, that the old gentleman declares he was never happy in his life till now. He hath here a parlor and ante-chamber to himself, where he gets drunk with whom he pleases: and his daughter is still as ready as formerly to play to him whenever he desires it; for Jones hath assured her that, as, next to pleasing her, one of his highest satisfactions is to contribute to the happiness of the old man; so, the great duty which she expresses and performs to her father, renders her almost equally dear to him with the love which she bestows on himself.

Sophia hath already produced him two fine children, a boy and a girl, of whom the old gentleman is so fond, that he spends much of his time in the nursery, where he declares the tattling of his little grand-daughter, who is above a year and a half old, is sweeter music than the finest cry of dogs in England.

Fielding, Tom Jones, XVIII, 13

71 Illicit conjunctions contribute but little to the propagation of the species. The father, who is under a natural obligation to nourish and educate his children, is not then fixed; and the mother, with whom the obligation remains, finds a thousand obstacles from shame, remorse, the constraint of her sex, and the rigour of laws; and besides, she generally wants the means.

Women who have submitted to public prostitution cannot have the convenience of educating their children: the trouble of education is incompatible with their

station; and they are so corrupt that they can have no protection from the law.

It follows from all this that public continence is naturally connected with the propagation of the species.

Montesquieu, Spirit of Laws, XXIII, 2

72 I wish either my father or my mother, or indeed both of them, as they were in duty both equally bound to it, had minded what they were about when they begot me; had they duly considered how much depended upon what they were then doing; —that not only the production of a rational Being was concerned in it, but that possibly the happy formation and temperature of his body, perhaps his genius and the very cast of his mind;—and, for aught t!icy knew to the contrary', even the fortunes of his whole house might take their turn from the humours and dispositions which were then uppermost;— Had they duly weighed and considered all this, and proceeded accordingly,—I am verily persuaded I should have made a quite different figure in the world, from that in which the reader is likely to see me.

Sterne, Tristram Shandy, I, 1

73 Alack-o-day, replied the Corporal, brightening up his face —your honour knows I have neither wife or child—I can have no sorrows in this world.

Sterne, Tristram Shandy, IV, 4

74 I cannot recall to mind, without the sweetest emotions, the memory of that virtuous citizen, to whom I owe my being, and by whom I was often instructed, in my infancy, in the respect which is due to you. I see him still, living by

the work of his hands, and feeding his soul on the sublimest truths. I see the works of Tacitus, Plutarch, and Grotius lying before him in the midst of the tools of his trade. At his side stands his dear son, receiving, alas with too little profit, the tender instructions of the best of fathers. But, if the follies of youth made me for a while forget his wise lessons, I have at length the happiness to be conscious that, whatever propensity one may have to vice, it is not easy for an education, with which love has mingled, to be entirely thrown away.

Rousseau, Origin of Inequality, Dedication

75 But is it not a thousand times more common and more dangerous for paternal rights openly to offend against humanity? How many talents have not been thrown away, and inclinations forced, by the unwise constraint of fathers? How many men, who would have distinguished themselves in a fitting estate, have died dishonoured and wretched in another for which they had no taste! How many happy, but unequal, marriages have been broken or disturbed, and how many chaste wives have been dishonoured, by an order of things continually in contradiction with that of nature! How many good and virtuous husbands and wives are reciprocally punished for having been ill-assorted! How many young and unhappy victims of their parents' avarice plunge into vice, or pass their melancholy days in tears, groaning in the indissoluble bonds which their hearts repudiate and gold alone has formed! Fortunate sometimes are those whose courage and virtue remove them from life before inhuman violence makes them spend it in crime or in despair. Forgive me, father and mother, whom I shall ever regret: my complaint embitters your griefs; but would

they might be an eternal and terrible example to every one who dares, in the name of nature, to violate her most sacred right.

Rousseau, Origin of Inequality, Appendix

76 I stated to him this case:—"Suppose a man has a daughter who he knows has been seduced, but her misfortune is concealed from the world? should he keep her in his house? Would he not, by doing so, be accessory to imposition? And, perhaps, a worthy, unsuspecting man might come and marry this woman, unless the father inform him of the truth." *Johnson*. "Sir, he is accessory to no imposition. His daughter is in his house; and if a man courts her, he takes his chance. If a friend, or, indeed, if any man asks his opinion whether he should marry her, he ought to advise him against it, without telling why, because his real opinion is then required. Or. if he has other daughters who know of her frailty, he ought not to keep her in his house. You are to consider the slate of life is this; we are to judge of one another's characters as well as we can; and a man is not bound, in honesty or honour, to tell us the faults of his daughter or of himself. A man who has debauched his friend's daughter is not obliged to say to every body— 'Take care of me; don't let me into your houses without suspicion. I once debauched a friend's daughter. I may debauch yours.' "

Boswell, Life of Johnson (Apr. 5, 1776)

77 I said, I disliked the custom which some people had of bringing their children into company, because it in a manner forced us to pay foolish compliments to please their parents." You are right, Sir. We may be excused for

not caring much about other people's children, for there are many who care very little about their own children. It may be observed, that men, who from being engaged in business, or from their course in life in whatever way, seldom see their children, do not care much about them. I myself should not have had much fondness for a child of my own." *Mrs. Thrale*. "Nay, Sir, how can you talk Johnson "At least, I never wished to have a child."

Boswell, Life of Johnson (Apr 10, 1776)

78 I hesitate, from the apprehension of ridicule, when I approach the delicate subject of my early love. By this word I do not mean the polite attention, the gallantry, without hope or design, which has originated in the spirit of chivalry, and is interwoven with the texture of French manners. I understand by this passion the union of desire, friendship, and tenderness, which is inflamed by a single female, which prefers her to the rest of her sex, and which seeks her possession as the supreme or the sole happiness of our being. I need not blush at recollecting the object of my choice; and though my love was disappointed of success, I am rather proud that I was once capable of feeling such a pure and exalted sentiment. The personal attractions of Mademoiselle Susan Curchod were embellished by the virtues and talents of the mind. Her fortune was humble, but her family was respectable. Her mother, a native of France, had preferred her religion to her country. The profession of her father did not extinguish the moderation and philosophy of his temper, and he lived content with a small salary and laborious duty in the obscure lot of minister of Grassy, in the mountains that separate the Pays de Vaud from the county of Burgundy. In the

solitude of a sequestered village he bestowed a liberal, and even learned, education on his only daughter. She surpassed his hopes by her proficiency in the sciences and languages; and in her short visits to some relations at Lausanne, the wit, the beauty, and erudition of Mademoiselle Curchod were the theme of universal applause. The report of such a prodigy awakened my curiosity; I saw and loved. ... At Crassy and Lausanne I indulged my dream of felicity: but on my return to England, I soon discovered that my father would not hear of this strange alliance, and that, without his consent, I was myself destitute and helpless. After a painful struggle I yielded to my fate; I sighed as a lover, I obeyed as a son; my wound was insensibly healed by time, absence, and the habits of a new life.

Gibbon, Autobiography

79 From the duty of man towards himself—that is, towards the humanity in his own person—there thus arises a personal right on the part of the members of the opposite sexes, as persons, to acquire one another really and reciprocally by marriage. In like manner, from the fact of *procreation* in the union thus constituted, there follows the duty of preserving and rearing *children* as the products of this union. Accordingly, children, as persons, have, at the same time, an original congenital right—distinguished from mere hereditary right—to be reared by the care of their parents till they are capable of maintaining themselves; and this provision becomes immediately theirs by law, without any particular juridical act being required to determine it.

For what is thus produced is a person, and it is impossible to think of a being endowed with personal

freedom as produced merely by a physical process. And hence, *in the practical relation*, it is quite a correct and even a necessary idea to regard the act of generation as a process by which a person is brought without his consent into the world and placed in it by the responsible free will of others. This act, therefore, attaches an obligation to the parents to make their children—as far as their power goes—contented with the condition thus acquired. Hence parents cannot regard their child as, in a manner, a thing *of their own making*; for a being endowed with freedom cannot be so regarded. Nor, consequently, have they a right to destroy it as if it were their own property, or even to leave it to chance; because they have brought a being into the world who becomes in fact a citizen of the world, and they have placed that being in a state which they cannot be left to treat with indifference, even according to the natural conceptions of right.

Kant, Science of Right, 28

80 *Mr. Bennet*. An unhappy alternative is before you, Elizabeth. From this day you must be a stranger to one of your parents. Your mother will never see you again if you do not marry Mr. Collins, and I will never see you again if you do.

Jane Austen, Pride and Prejudice, XX

81 Children have the right to maintenance and education at the expense of the family's common capital. The right of the parents to the service as service of their children is based upon and is restricted by the common task of looking after the family generally. Similarly, the right of

the parents over the wishes of their children is determined by the object in view—discipline and education. The punishment of children does not aim at justice as such; the aim is more subjective and moral in character, i.e. to deter them from exercising a freedom still in the toils of nature and to lift the universal into their consciousness and will.

Children are potentially free and their life directly embodies nothing save potential freedom. Consequently they are not things and cannot be the property either of their parents or others. In respect of his relation to the family, the child's education has the positive aim of instilling ethical principles into him in the form of an immediate feeling for which differences are not yet explicit, so that thus equipped with the foundation of an ethical life, his heart may live its early years in love, trust, and obedience. In respect of the same relation, this education has the negative aim of raising children out of the instinctive, physical, level on which they are originally, to self-subsistence and freedom of personality and so to the level on which they have power to leave the natural unity of the family.

Hegel, Philosophy of Right, 174-175

- 82 The relation of love between husband and wife is in itself not objective, because even if their feeling is their substantial unity, still this unity has no objectivity. Such an objectivity parents first acquire in their children, in whom they can see objectified the entirety of their union. In the child, a mother loves its father and he its mother. Both have their love objectified for them in the child. While in their goods their unity is embodied only in an external thing, in their children it is embodied in a

spiritual one in which the parents are loved and which they love.

Hegel, Philosophy of Right, Additions, Par. 173

83 As a child, man must have lived with his parents encircled by their love and trust, and rationality must appear in him as his very own subjectivity. In the early years it is education by the mother especially which is important, since ethical principles must be implanted in the child in the form of feeling. It is noteworthy that on the whole children love their parents less than their parents love them. The reason for this is that they' are gradually increasing in strength, and are learning to stand on their own feet, and so are leaving their parents behind them. The parents, on the other hand, possess in their children the objective embodiment of their union.

Hegel, Philosophy of Right, Additions, Par. 175

84 When men live more for the remembrance of what has been than for the care of what is, and when they are more given to attend to what their ancestors thought than to think themselves, the father is the natural and necessary tie between the past and the present, the link by which the ends of these two chains are connected. In aristocracies, then, the father is not only the civil head of the family, but the organ of its traditions, the expounder of its customs, the arbiter of its manners. He is listened to with deference, he is addressed with respect, and the love that is felt for him is always tempered with fear.

When the condition of society becomes democratic and men adopt as their general principle that it is good and lawful to judge of all things for oneself, using former

points of belief not as a rule of faith, but simply as a means of information, the power which the opinions of a father exercise over those of his sons diminishes as well as his legal power.

Perhaps the subdivision of estates that democracy brings about contributes more than anything else to change the relations existing between a father and his children. When the property of the father of a family is scanty, his son and himself constantly live in the same place and share the same occupations; habit and necessity bring them together and force them to hold constant communication. The inevitable consequence is a sort of familiar intimacy, which renders authority less absolute and which can ill be reconciled with the external forms of respect.

Now, in democratic countries the class of those who are possessed of small fortunes is precisely that which gives strength to the notions and a particular direction to the manners of the community. That class makes its opinions preponderate as universally as its will, and even those who are most inclined to resist its commands are carried away in the end by its example. I have known eager opponents of democracy who allowed their children to address them with perfect colloquial equality.

Thus at the same time that the power of aristocracy' is declining, the austere, the conventional, and the legal part of parental authority vanishes and a species of equality prevails around the domestic hearth. I do not know, on the whole, whether society' loses by the change, but I am inclined to believe that man individually is a gainer by it.

Tocqueville, Democracy in America, Vol. II, III, 8

85 The eager fate which carried thee
Took the largest part of me:
For this losing is true dying;
This is lordly man's down-lying,
This his slow but sure reclining.
Star by star his world resigning.
O child of paradise,
Boy who made dear his father's home,
In whose deep eyes
Men read the welfare of the times to come,
I am too much bereft.

Emerson, Threnody

86 *Grieve not so, dear mother,* (the just-grown daughter
speaks through her sobs.
The little sisters huddle around speechless and
dismay'd,)
*See, dearest mother, the letter says Pete will soon be
better.*
Alas poor boy, he will never be better, (not maybe
needs to be better, that brave and simple soul,)
While they stand at home at the door he is dead already,
The only son is dead.
But the mother needs to be better.
She with thin form presently drest in black.
By day her meals untouch'd, then at night fitfully
sleeping, often waking,
In the midnight waking, weeping, longing with one deep
longing,
O that she might withdraw unnoticed, silent from life
escape and withdraw,
To follow, to seek, to be with her dear dead son.

Whitman, Come Up From the Fields Father

87 My father, in all his teaching, demanded of me not only the utmost that I could do, but much that I could by no possibility' have done. What he was himself willing to undergo for the sake of my instruction, may be judged from the fact, that I went through the whole process of preparing my Greek lessons in the same room and at the same table at which he was writing: and as in those day's Greek and English lexicons were not, and I could make no more use of a Greek and Latin lexicon than could be made without having yet begun to learn Latin, I was forced to have recourse to him for the meaning of every word which I did not know. This incessant interruption, he, one of the most impatient of men, submitted to, and wrote under that interruption several volumes of his History and all else that he had to write during those years.

Mill, Autobiography, I

88 I remember the very place in Hyde Park where, in my fourteenth year, on the eve of leaving my father's house for a long absence, he told me that I should find, as I got acquainted with new people, that I had been taught many things which youths of my age did not commonly know; and that many persons would be disposed to talk to me of this, and to compliment me upon it. What other things he said on this topic I remember very imperfectly; but he wound up by saying, that whatever I knew more than others, could not be ascribed to any merit in me, but to the very unusual advantage which had fallen to my lot, of having a father who was able to teach me, and willing to give the necessary trouble and time; that it was no

matter of praise to me, if I knew more than those who had not had a similar advantage, but the deepest disgrace to me if I did not.

Mill, Autobiography, I

89 I was sure you would be touched by the death of my poor little boy, to whom you have so often showed kindness. I imagine every one here thought he could not get through the winter, though they could give no special name to his complaint except to call it, with the doctors, "failure in vital power" following upon the slight shock given to him by his fall from a pony in Westmorland. But his mother and I had watched him through so many ebblings and flowings of his scanty stock of vital power that we had always hopes for him, and till I went into his room last Monday morning an hour before the end I did not really think he would die. The astonishing self-control which he had acquired in suffering was never shown more than in the last words he said to me, when his breath grew shorter and shorter, and from this, and the grieved face of the doctor as he entered the room, he knew, I am sure, that the end was come; and he turned to me, and—his mamma, who was always with him, and whom he adored, having gone into The next room for a moment—he whispered to me, in his poor labouring voice, "Don't let mamma come in." At his age that seems to me heroic self-control; and it was this patience and fortitude in him, joined to his great fragility and his exquisite turn for music, which interested so many people in him, and which brings us a sort of comfort now in all the kind and tender things that are said to us of him. But to Mrs. Arnold the loss of the occupation of her life—for so the

care of him really was—will for some time to come be terrible.

Arnold, Letter to Lady de Rothschild (Nov. 30, 1868)

90 *Ivan*. "Who doesn't desire his father's death?"...

He turned suddenly to the audience. "My father has been murdered and they pretend they are horrified," he snarled, with furious contempt. "They keep up the sham with one another. Liars! They all desire the death of their fathers."

Dostoevsky, Brothers Karamazov, Pt, IV, XII, 5

91 "Well, madam," he [Prince Bolkonsky) began, stooping over the book close to his daughter and placing an arm on the back of the chair on which she sat, so that she felt herself surrounded on all sides by the acrid scent of old age and tobacco, which she had known so long. "Now, madam, these triangles are equal; please note that the angle ABC ..."

The princess looked in a scared way at her father's eyes glittering close to her; the red patches on her face came and went, and it was plain that she understood nothing and was so frightened that her fear would prevent her understanding any of her father's further explanations, however clear they might be. Whether it was the teacher's fault or the pupil's, this same thing happened every day: the princess' eyes grew dim, she could not see and could not hear anything, but was only conscious of her stern father's withered face close to her, of his breath and the smell of him, and could think only of how to get away quickly to her own room to make out the problem in peace. The old man was beside himself:

moved the chair on which he was sitting noisily backward and forward, made efforts to control himself and not become vehement, but almost always did become vehement, scolded, and sometimes flung the exercise book away.

The princess gave a wrong answer.

"Well now, isn't she a fool!" shouted the prince, pushing the book aside and turning sharply away; but rising immediately, he paced up and down, lightly touched his daughter's hair and sat down again.

He drew up his chair and continued to explain.

"This won't do, Princess; it won't do," said he, when Princess Mary, having taken and closed the exercise book with the next day's lesson, was about to leave:

"Mathematics are most important, madam! I don't want to have you like our silly ladies. Get used to it and you'll like it," and he patted her cheek. "It will drive all the nonsense out of your head."

Tolstoy, War and Peace, I, 25

92 Nicholas' letter was read over hundreds of times, and those who were considered worthy to hear it had to come to the countess, for she did not let it out of her hands. The tutors came, and the nurses, and Dmitri, and several acquaintances, and the countess reread the letter each time with fresh pleasure and each time discovered in it fresh proofs of Nikolenka's virtues. How strange, how extraordinary, how joyful it seemed, that her son, the scarcely perceptible motion of whose tiny limbs she had felt twenty years ago within her, that son about whom she used to have quarrels with the too-indulgent count, that son who had first learned to say "pear" and then "granny," that this son should now be away in a foreign

land amid strange surroundings, a manly warrior doing some kind of man's work of his own, without help or guidance. The universal experience of ages, showing that children do grow imperceptibly from the cradle to manhood, did not exist for the countess. Her son's growth toward manhood, at each of its stages, had seemed as extra-ordinary to her as if there had never existed the millions of human beings who grew up in the same way. As twenty years before, it seemed impossible that the little creature who lived somewhere under her heart would ever cry, suck her breast, and begin to speak, so now she could not believe that that little creature could be this strong, brave man, this model son and officer that, judging by this letter, he now was.

Tolstoy, War and Peace, III, 6

93 Princess Mary, alarmed by her father's feverish and sleepless activity after his previous apathy, could not bring herself to leave him alone and for the first time in her life ventured to disobey him. She refused to go away and her father's fury broke over her in a terrible storm. He repeated every injustice he had ever inflicted on her. Trying to convict her, he told her she had worn him out, had caused his quarrel with his son, had harbored nasty suspicions of him, making it the object of her life to poison his existence, and he drove her from his study telling her that if she did not go away it was all the same to him. He declared that he did not wish to remember her existence and warned her not to dare to let him see her. The fact that he did not, as she had feared, order her to be carried away by force but only told her not to let him see her cheered Princess Mary. She knew it was a proof

that in the depth of his soul he was glad she was remaining at home and had not gone away.

Tolstoy, War and Peace, X, 8

- 94 The passionate devotion of a mother—ill herself, perhaps—to a sick or dying child is perhaps the most simply beautiful moral spectacle that human life affords. Contemning every danger, triumphing over every difficulty, outlasting all fatigue, woman's love is here invincibly superior to anything that man can show.

William James, Psychology, XXIV

- 95 It is unavoidable and quite normal that the child should make his parents the objects of his first object-choice. But his *libido* must not remain fixed on these first chosen objects, but must take them merely as a prototype and transfer from these to other persons in the time of definite object-choice. The breaking loose of the child from his parents is thus a problem impossible to escape if the social virtue of the young individual is not to be impaired. During the time that the repressive activity is making its choice among the partial sexual impulses and later, when the influence of the parents, which in the most essential way has furnished the material for these repressions, is lessened, great problems fall to the work of education, which at present certainly does not always solve them in the most intelligent and economic way.

Freud, Origin and Development of Psycho-Analysis, IV

- 96 For me... this book has an additional subjective significance, which I did not understand until after its completion. It reveals itself to me as a piece of my self-

analysis, as my reaction to the death of my father, that is, to the most important event, the most poignant loss in a man's life.

Freud, Interpretation of Dreams, Pref. to 2nd (German) Ed.

97 If we look at the attitude of fond parents towards their children, we cannot but perceive it as a revival and reproduction of their own, long since abandoned narcissism. Their feeling, as is well known, is characterized by over-estimation, that sure indication of - a narcissistic feature in object-choice which we have already appreciated. Thus they are impelled to ascribe to the child all manner of perfections which sober observation would not confirm, to gloss over and forget all his shortcomings—a tendency with which, indeed, the denial of childish sexuality is connected. Moreover, they are inclined to suspend in the child's favour the operation of all those cultural acquirements which their own narcissism has been forced to respect, and to renew in his person the claims for privileges which were long ago given up by themselves. The child shall have things better than his parents; he shall not be subject to the necessities which they have recognized as dominating life. Illness, death, renunciation of enjoyment, restrictions on his own will, are not to touch him; the laws of nature, like those of society, are to be abrogated in his favour; he is really to be the centre and heart of creation, "His Majesty the Baby," as once we fancied ourselves to be. He is to fulfil those dreams and wishes of his parents which they never carried out, to become a great man and a hero in his father's stead, or to marry a prince as a tardy compensation to the mother. At the weakest point of all in

the narcissistic position, the immortality of the ego, which is so relentlessly assailed by reality, security is achieved by fleeing to the child. Parental love, which is so touching and at bottom so childish, is nothing but parental narcissism born again and, transformed though it be into object-love, it reveals its former character infallibly.

Freud, On Narcissism, II

98 We find it far more offensive for love to be lacking between parents and children than between brothers and sisters. We have, so to speak, sanctified the former love while allowing the latter to remain profane. Yet everyday observation may show us how frequently the sentiments entertained towards each other by parents and grownup children fall short of the ideal set up by society, and how much hostility lies smouldering, ready to burst into flame if it were not stifled by considerations of filial or parental duty and by other, tender impulses. The motives for this hostility are well known, and we recognize a tendency for those of the same sex to become alienated, daughter from mother and father from son. The daughter sees in her mother the authority which imposes limits to her will, whose task it is to bring her to that renunciation of sexual freedom which society demands; in certain cases, too, the mother is still a rival, who objects to being set aside. The same thing is repeated still more blatantly between father and son. To the son the father is the embodiment of the social compulsion to which he so unwillingly submits, the person who stands in the way of his following his own will, of his early sexual pleasures and, when there is family property, of his enjoyment of it. When a throne is involved, this impatience for the death of the father may approach tragic intensity. The relation

between father and daughter or mother and son would seem less liable to disaster; the latter relation furnishes the purest examples of unchanging tenderness, undisturbed by any egoistic consideration....

The son, when quite a little child, already begins to develop a peculiar tenderness towards his mother, whom he looks upon as his own property, regarding his father in the light of a rival who disputes this sole possession of his; similarly the little daughter sees in her mother someone who disturbs her tender relation to her father and occupies a place which she feels she herself could very well fill. Observation shows us how far back these sentiments date, sentiments which we describe by the term Oedipus complex, because in the Oedipus myth the two extreme forms of the wishes arising from the situation of the son—the wish to kill the father and to marry the mother—are realized in an only slightly modified form. I do not assert that the Oedipus complex exhausts all the possible relations which may exist between parents and children; these relations may well be a great deal more complicated. Again, this complex may be more or less strongly developed, or it may even become inverted, but it is a regular and very important factor in the mental life of the child; we are more in danger of underestimating than of overestimating its influence and that of the developments which may follow from it. Moreover, the parents themselves frequently stimulate the children to react with an Oedipus complex, for parents are often guided in their preferences by the difference in sex of their children, so that the father favours the daughter and the mother the son; or else, where conjugal love has grown cold, the child may be

taken as a substitute for the love-object which has ceased to attract.

It cannot be said that the world has shown great gratitude to psycho-analytic research for the discovery of the Oedipus complex; on the contrary, the idea has excited the most violent opposition in grown-up people; and those who omitted to join in denying the existence of sentiments so universally reprehended and tabooed have later made up for this by proffering interpretations so wide of the mark as to rob the complex of its value. My own unchanged conviction is that there is nothing in it to deny or to gloss over. We ought to reconcile ourselves to facts in which the Greek myth itself saw the hand of inexorable destiny.

Freud, General Introduction to Psycho-Analysis, XIII

99 I have... described the relationship of a boy to his father and mother; things proceed in just the same way, with the necessary reversal, in little girls. The loving devotion to the father, the need to do away with the superfluous mother and to take her place, the early display of coquetry and the arts of later womanhood, make up a particularly charming picture in a little girl, and may cause us to forget its seriousness and the grave consequences which may later result from this situation.

Freud, General Introduction to Psycho-Analysis, XXI

100 From the time of puberty onward the human individual must devote himself to the great task of freeing himself from the parents; and only after this detachment is accomplished can he cease to be a child and so become a member of the social community. For a son, the

task, consists in releasing his libidinal desires from his mother, in order to employ them in the quest of an external love-object in reality; and in reconciling himself with his father if he has remained antagonistic to him, or in freeing himself from his domination if, in the reaction to the infantile revolt, he has lapsed into subservience to him. These tasks are laid down for every man; it is noteworthy how seldom they are carried through ideally, that is, how seldom they are solved in a manner psychologically as well as socially satisfactory. In neurotics, however, this detachment from the parents is not accomplished at all; the son remains all his life in subjection to his father, and incapable of transferring his libido to a new sexual object. In the reversed relationship the daughter's fate may be the same. In this sense the Oedipus complex is justifiably regarded as the kernel of the neuroses.

Freud, General Introduction to Psycho-Analysis, XXI

101 The only thing that brings a mother undiluted satisfaction is her relation to a son; it is quite the most complete relationship between human beings, and the one that is the most free from ambivalence. The mother can transfer to her son all the ambition which she has had to suppress in herself, and she can hope to get from him the satisfaction of all that has remained to her of her masculinity complex. Even a marriage is not firmly assured until the woman has succeeded in making her husband into her child and in acting the part of a mother towards him.

Freud, New Introductory Lectures on Psycho-Analysis, XXXIII

102 A father, Stephen said, battling against hopelessness, is a necessary evil.... Fatherhood, in the sense of conscious begetting, is unknown to man. It is a mystical estate, an apostolic succession, from only begetter to only begotten. On that mystery and not on the madonna which the cunning Italian intellect flung to the mob of Europe the church is founded and founded irremovably because founded, like the world, macro- and microcosm, upon the void. Upon incertitude, upon unlikelihood. *Amor matris*, subjective and objective genitive, may be the only true thing in life. Paternity may be a legal fiction. Who is the father of any son that any son should love him or he any son?...

They are sundered by a bodily shame so steadfast that the criminal annals of the world, stained with all other incests and bestialities hardly record its breach. Sons with mothers, sires with daughters, lesbic sisters, loves that dare not speak their name, nephews with grandmothers, jailbirds with keyholes, queens with prize bulls. The son unborn mars beauty: born, he brings pain, divides affection, increases care. He is a male: his growth is his father's decline, his youth his father's envy, his friend his father's enemy.

Joyce, Ulysses

2.3 Marriage

This section, like its predecessor, contains many passages that reflect or manifest the relation of husband and wife rather than theorize or comment about it. Here, too, we can recite a moving list of famous pairs that the reader will recognize in passages quoted: Jacob and Rachel, Odysseus and Penelope, Oedipus and Jocasta, Alcibiades and Hipparete, Caesar and Pompeia, the Wife of Bath and all her husbands, Petruchio and Katherine, Benedick and Beatrice, Othello and Desdemona, Leontes and Hermione, Adam and Eve (in *Paradise Lost* as well as in *Genesis*), Mirabell and Millamant (in Congreve's *Way of the World*), Dr. and Mrs. Samuel Johnson, J. S. Mill and Harriet Taylor, Pierre and Natasha (in *War and Peace*).

In addition to passages of the type just mentioned, there are, of course, many others that look at marriage from every point of view and express every variety of attitude toward it. The general impression one can hardly avoid getting is that of a great, blooming confusion, which may be the only one that an open-eyed appraisal affords. The reader who carefully explores the whole range of materials here assembled, and who compares later with earlier points of view, may also come away with the impression that our ancestors were more light-hearted about, or at least less plagued by, the inherent difficulties of the marriage bond than later generations for whom the bond is more easily dissolved by divorce.

The consideration of marriage cannot help touching on a number of related matters—not only divorce, but also conjugal love, or sex in marriage, and in incest, adultery, and cuckoldry. Relevant texts dealing with conjugal love, marital sex, and adultery will, also be found in Chapter 3 on Love, especially in Section 3.3 on Sexual Love.

■ ■ ■

- 1 Therefore shall a man leave his father and his mother, and shall cleave unto his wife: and they shall be one flesh.

Genesis 2:24

- 2 And Laban said unto Jacob, Because thou art my brother, shouldest thou therefore serve me for nought? tell me, what shall thy wages be?

And Laban had two daughters: the name of the elder was Leah, and the name of the younger was Rachel.

Leah was tender eyed; but Rachel was beautiful and well favoured.

And Jacob loved Rachel; and said, I will serve thee seven years for Rachel thy younger daughter.

And Laban said. It is better that I give her to thee, than that I should give her to another man: abide with me.

And Jacob served seven years for Rachel; and they seemed unto him but a few days, for the love he had to her.

Genesis 29:15-20

3 And Judah said unto Onan, Go in unto thy brother's wife, and marry her, and raise up seed to thy brother.

And Onan knew that the seed should not be his; and it came to pass, when he went in unto his brother's wife, that he spilled it on the ground, lest that he should give seed to his brother.

And the thing which he did displeased the Lord: wherefore he slew him also.

Genesis 38:8-10

4 The eye also of the adulterer waiteth for the twilight, saying. No eye shall see me: and disguiseth his face.

In the dark they dig through houses, which they had marked for themselves in the daytime: they know not the light.

For the morning is to them even as the shadow of death: if one know them, they are in the terrors of the shadow of death.

Job 24:15-17

5 A virtuous woman is a crown to her husband: but she that maketh ashamed is as rottenness in his bones.

Proverbs 12:4

6 House and riches are the inheritance of fathers: and a prudent wife is from the Lord.

Proverbs 19:14

7 Such is the way of an adulterous woman; she eateth, and wipeth her mouth, and saith, I have done no wickedness.

Proverbs 30:20

8 *Calypso*. "Son of Laertes, versatile Odysseus,
after these years with me, you still desire
your old home? Even so, I wish you well.
If you could see it all, before you go—
all the adversity you face at sea—
you would stay here, and guard this house, and be
immortal—though you wanted her forever,
that bride for whom you pine each day.
Can I be less desirable than she is?
Less interesting? Less beautiful? Can mortals
compare with goddesses in grace and form?"

To this the strategist Odysseus answered:

"My lady goddess, here is no cause for anger.
My quiet Penelope—how well I know—
would seem a shade before your majesty,
death and old age being unknown to you,
while she must die. Yet, it is true, each day
I long for home, long for the sight of home."

Homer, Odyssey, V, 203

9 *Penelope*. "Do not rage at me, Odysseus!
No one ever matched your caution! Think
what difficulty the gods gave: they denied us
life together in our prime and flowering years,
kept us from crossing into age together.
Forgive me, don't be angry. I could not
welcome you with love on sight! I armed myself
long ago against the frauds of men,
impostors who might come—and all those many
whose underhanded ways bring evil on!
Helen of Argos, daughter of Zeus and Leda,
would she have joined the stranger, lain with him,
if she had known her destiny? known the Akhaians

in arms would bring her back to her own country?
Surely a goddess moved her to adultery,
her blood unchilled by war and evil coming,
the years, the desolation; ours, too.
But here and now, what sign could be so clear
as this of our own bed?
No other man has ever laid eyes on it—
only my own slave, Aktoris, that my father
sent with me as a gift—she kept our door.
You make my stiff heart know that I am yours."

Now from his [Odysseus'] breast into his eyes the ache
of longing mounted, and he wept at last,
his dear wife, clear and faithful, in his arms, longed for
as the sunwarmed earth is longed for by a swimmer
spent in rough water where his ship went down
under Poseidon's blows, gale winds and tons of sea.
Few men can keep alive through a big surf
to crawl, clotted with brine, on kindly beaches
in joy, in Joy, knowing the abyss behind:
and so she too rejoiced, her gaze upon her husband,
her white arms round him pressed as though forever.
The rose Dawn might have found them weeping still
had not grey-eyed Athena slowed the night
when night was most profound, and held the Dawn
under the Ocean of the East. That glossy team,
Firebright and Daybright, the Dawn's horses
that draw her heavenward for men—Athena
stayed their harnessing.

Homer, Odyssey, XXIII, 208

10 So they [Odysseus and Penelope] came
into that bed so steadfast, loved of old,
opening glad arms to one another.

Telemakhos by now had hushed the dancing,
hushed the women. In the darkened hall
he and the cowherd and the swineherd slept.

The royal pair mingled in love again
and afterward lay revelling in stories;
hers of the siege her beauty stood at home
from arrogant suitors, crowding on her sight,
and how they fed their courtship on his cattle,
oxen and fat sheep, and drank up rivers
of wine out of the vats.

Odysseus told
of what hard blows he had dealt out to others
and of what blows he had taken—all that story.
She could not close her eyes till all was told.

Homer, Odyssey, XXIII, 295

- 11 Their [the Lycians'] customs are partly Cretan, partly Carian. They have, however, one singular custom in which they differ from every other nation in the world. They take the mother's and not the father's name. Ask a Lycian who he is, and he answers by giving his own name, that of his mother, and so on in the female line. Moreover, if a free woman marry a man who is a slave, their children are full citizens; but if a free man marry a foreign woman, or live with a concubine, even though he be the first person in the State, the children forfeit all the rights of citizenship.

Herodotus, History, I, 173

- 12 Once a year in each village the maidens of age to marry were collected all together into one place; while the men stood round them in a circle. Then a herald called up the

damsels one by one, and offered them for sale. He began with the most beautiful. When she was sold for no small sum of money, he offered for sale the one who came next to her in beauty. All of them were sold to be wives. The richest of the Babylonians who wished to wed bid against each other for the loveliest maidens, while the humbler wife-seekers, who were indifferent about beauty, took the more homely damsels with marriage-portions. For the custom was that when the herald had gone through the whole number of the beautiful damsels, he should then call up the ugliest—a cripple, if there chanced to be one—and offer her to the men, asking who would agree to take her with the smallest marriage-portion. And the man who offered to take the smallest sum had her assigned to him. The marriage-portions were furnished by the money paid for the beautiful damsels, and thus the fairer maidens portioned out the uglier. No one was allowed to give his daughter in marriage to the man of his choice, nor might any one carry away the damsel whom he had purchased without finding bail really and truly to make her his wife; if, however, it turned out that they did not agree, the money might be paid back.

Herodotus, History, I, 196

- 13 Their marriage-law [of the Amazons] lays it down that no girl shall wed till she has killed a man in battle. Sometimes it happens that a woman dies unmarried at an advanced age, having never been able in her whole lifetime to fulfil the condition.

Herodotus, History, IV, 117

14 The Thracians who live above the Crestonaeans observe the following customs. Each man among them has several wives; and no sooner does a man die than a sharp contest ensues among the wives upon the question which of them all the husband loved most tenderly; the friends of each eagerly plead on her behalf, and she to whom the honour is adjudged, after receiving the praises both of men and women, is slain over the grave by the hand of her next of kin, and then buried with her husband. The others are sorely grieved, for nothing is considered such a disgrace.

Herodotus, History, V, 5

15 *Messenger.* When she came raging into the house she went
straight to her marriage bed, tearing her hair
with both her hands, and crying upon Laius
long dead—Do you remember, Laius,
that night long past which bred a child for us
to send you to your death and leave
a mother making children with her son?
And then she groaned and cursed the bed in which
she brought forth husband by her husband, children
by her own child, an infamous double bond.
How after that she died I do not know,—
for Oedipus distracted us from seeing.
He burst upon us shouting and we looked
to him as he paced frantically around,
begging us always: Give me a sword, I say,
to find this wife no wife, this mother's womb,
this field of double sowing whence I sprang
and where I sowed my children! As he raved
some god showed him the way—none of us there.

Bellowing terribly and led by some invisible guide he
rushed on the two doors,—
wrenching the hollow bolts out of their sockets,
he charged inside. There, there, we saw his wife
hanging, the twisted rope around her neck.
When he saw her, he cried out fearfully
and cut the dangling noose. Then, as she lay,
poor woman, on the ground, what happened after,
was terrible to see. He tore the brooches—
the gold chased brooches fastening her robe—
away from her and lifting them up high
dashed them on his own eyeballs, shrieking out
such things as: they will never see the crime
I have committed or had done upon me!

Sophocles, Oedipus the King, 1241

- 16 *Athenian Stranger*. We will say to him who is born of good parents—O my son, you ought to make such a marriage as wise men would approve. Now they would advise you neither to avoid a poor marriage, nor specially to desire a rich one; but if other things are equal, always to honour inferiors, and with them to form connections;—this will be for the benefit of the city and of the families which are united; for the equable and symmetrical tends infinitely more to virtue than the unmixed. And he who is conscious of being too headstrong, and carried away more than is fitting in all his actions, ought to desire to become the relation of orderly parents; and he who is of the opposite temper ought to seek the opposite alliance. Let there be one word concerning all marriages:—Every man shall follow, not after the marriage which is most pleasing to himself, but after that which is most beneficial to the state. For somehow every one is by

nature prone to that which is likest to himself, and in this way the whole city becomes unequal in property and in disposition; and hence there arise in most states the very results which we least desire to happen. Now, to add to the law an express provision, not only that the rich man shall not marry into the rich family, nor the powerful into the family of the powerful, but that the slower natures shall be compelled to enter into marriage with the quicker, and the quicker with the slower, may awaken anger as well as laughter in the minds of many; for there is a difficulty in perceiving that the city ought to be well mingled like a cup, in which the maddening wine is hot and fiery, but when chastened by a soberer God, receives a fair associate and becomes an excellent and temperate drink.

Plato, Laws, VI, 773A

- 17 *Athenian Stranger*. Drunkenness is always improper, except at the festivals of the God who gave wine; and peculiarly dangerous, when a man is engaged in the business of marriage; at such a crisis of their lives a bride and bridegroom ought to have all their wits about them.

Plato, Laws, VI, 775A

- 18 *Athenian Stranger*. The bride and bridegroom should consider that they are to produce for the state the best and fairest specimens of children which they can. Now all men who are associated in any action always succeed when they attend and give their mind to what they' are doing, but when they do not give their mind or have no mind, they fail; wherefore let the bridegroom give his mind to the bride and to the begetting of children, and

the bride in like manner give her mind to the bridegroom, and particularly at the time when their children are not yet born.

Plato, Laws, VI, 783B

- 19 The association of man and wife seems to be aristocratic; for the man rules in accordance with his worth, and in those matters in which a man should rule, but the matters that befit a woman he hands over to her. If the man rules in everything the relation passes over into oligarchy; for in doing so he is not acting in accordance with their respective worth, and not ruling in virtue of his superiority.

Aristotle, Ethics, 1160a33

- 20 Women should marry when they are about eighteen years of age, and men at seven and thirty; then they are in the prime of life, and the decline in the power of both will coincide. Further, the children, if their birth takes place soon, as may reasonably be expected, will succeed in the beginning of their prime, when the fathers are already in the decline of life, and have nearly reached their term of three-score years and ten.

Aristotle, Politics, 1335a28

- 21 Ye have heard that it was said by them of old time, Thou shalt not commit adultery:

But I say unto you, That whosoever looketh on a woman to lust after her hath committed adultery with her already in his heart.

And if thy right eye offend thee, pluck it out, and cast it from thee: for it is profitable for thee that one of thy

members should perish, and not that thy whole body should be cast into hell.

And if thy right hand offend thee, cut it off, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell.

It hath been said, Whosoever shall put away his wife, let him give her a writing of divorcement:

But I say unto you, That whosoever shall put away his wife, saving for the cause of fornication, causeth her to commit adultery: and whosoever shall marry her that is divorced committeth adultery.

Matthew 5:27-32

22 The Pharisees also came unto him, tempting him, and saying unto him, Is it lawful for a man to put away his wife for every cause?

And he answered and said unto them, Have ye not read, that he which made them at the beginning made them male and female,

And said, For this cause shall a man leave father and mother, and shall cleave to his wife: and they twain shall be one flesh?

Wherefore they are no more twain, but one flesh. What therefore God hath joined together, let not man put asunder.

They say unto him, Why did Moses then command to give a writing of divorcement, and to put her away?

He saith unto them, Moses because of the hardness of your hearts suffered you to put away your wives: but from the beginning it was not so.

And I say unto you. Whosoever shall put away his wife, except it be for fornication, and shall marry another,

committeth adultery: and whoso marrieth her which is put away doth commit adultery.

His disciples say unto him, If the case of the man be so with his wife, it is not good to marry.

But he said unto them. All men cannot receive this saying, save they to whom it is given.

For there are some eunuchs, which were so born from their mother's womb: and there are some eunuchs, which were made eunuchs of men: and there be eunuchs, which have made themselves eunuchs for the kingdom of heaven's sake. He that is able to receive it, let him receive it.

Matthew 19:3-12

23 Now concerning the things whereof ye wrote unto me: It is good for a man not to touch a woman.

Nevertheless, to avoid fornication, let every man have his own wife, and let every woman have her own husband.

Let the husband render unto the wife due benevolence: and likewise also the wife unto her husband.

The wife hath not power of her own body, but the husband: and likewise also the husband hath not power of his own body, but the wife.

Defraud ye not one the other, except it be with consent for a time, that ye may give yourselves to fasting and prayer; and come together again, that Satan tempt you not for your incontinency.

But I speak this by permission, and not of commandment.

For I would that all men were even as I myself. But every man hath his proper gift of God, one after this

manner, and another after that.

I say therefore to the unmarried and widows, It is good for them if they abide even as I.

But if they cannot contain, let them marry: for it is better to marry than to burn.

I Corinthians 7:1-9

24 Likewise, ye husbands, dwell with them according to knowledge, giving honour unto the wife, as unto the weaker vessel, and as being heirs together of the grace of life.

I Peter 3:7

25 With respect to wives and children, and that community which both, with a sound policy, appointed, to prevent all jealousy, their methods, however, were different. For when a Roman thought himself to have a sufficient number of children, in case his neighbour who had none should come and request his wife of him, he had a lawful power to give her up to him who desired her, either for a certain time, or for good. The Lacedaemonian husband, on the other hand, might allow the use of his wife to any other that desired to have children by her, and yet still keep her in his house, the original marriage obligation still subsisting as at first. Nay, many husbands, as we have said, would invite men whom they thought likely to procure them fine and good-looking children into their houses. What is the difference, then, between the two customs? Shall we say that the Lacedaemonian system is one of an extreme and entire unconcern about their wives, and would cause most people endless disquiet and annoyance with pangs and jealousies; the Roman course

wears an air of a more delicate acquiescence, draws the veil of a new contract over the change, and concedes the general insupportableness of mere community?

Plutarch, Lycurgus and Numa Compared

26 Hipparete was a virtuous and dutiful wife, but, at last, growing impatient of the outrages done to her by her husband's continual entertaining of courtesans, as well strangers as Athenians, she departed from him and retired to her brother's house. Alcibiades seemed not at all concerned at this, and lived on still in the same luxury; but the law requiring that she should deliver to archon in person and not by proxy, the instrument by which she claimed a divorce, when, in obedience to the law, she presented herself before him to perform this, Alcibiades came in, caught her up, and carried her home through the marketplace, no one daring to oppose him nor to take her from him. She continued with him till her death which happened not long after, when Alcibiades had gone to Ephesus. Nor is this violence to be thought so very enormous or unmanly. For the law, in making her who desires to be divorced appear in public, seems to design to give her husband an opportunity of treating with her, and endeavouring to retain her.

Plutarch, Alcibiades

27 His first wife was Papiria, the daughter of Maso, who had formerly been consul. With her he lived a considerable time in wedlock, and then divorced her, though she had made him the father of noble children, being mother of the renowned Scipio and Fabius Maximus. The reason of this separation has not come to our knowledge; but there

seems to be a truth conveyed in the account of another Roman's being divorced from his wife, which may be applicable here. This person being highly blamed by his friends, who demanded, "Was she not chaste? was she not fair? was she not fruitful?" holding out his shoe, asked them, whether it was not new and well made. "Yet," added he, "none of you can tell where it pinches me."

Plutarch, Aemilius Paulus

28 Caesar at once dismissed Pompeia, but being summoned as a witness against Clodius, said he had nothing to charge him with. This looking like a paradox, the accuser asked him why he parted with his wife. Caesar replied, "I wished my wife to be not so much as suspected." Some say that Caesar spoke this as his real thought; others, that he did it to gratify the people, who were very earnest to save Clodius.

Plutarch, Caesar

29 When Philip was trying to force a woman against her will she said to him, "Let me go. All women are alike when the light is out." This is an excellent answer to adulterers and licentious men, but a married woman ought not be like any chance female when the light is out. It is when her body is invisible that her virtue and her sole devotion and affection for her husband should be evident.

Plutarch, Marriage Counsel

30 She who sleeps third in a big wide bed is certain to prosper

Marry, and shut your mouth; the wages of silence and jewels

After all this, do you think our sex deserves a verdict of Guilty?

That's like pardoning crows and laying all blame on the pigeons.

Juvenal, Satire II

- 31 A woman must not resist a husband in anger, by deed or even by word... From the day they [hear] the matrimonial contract read to them to them they should regard it as an instrument by which they became servants; and from that time they should be mindful of their condition and not set themselves up against their masters.

Augustine, Confessions, IX, 9

- 32 A woman's sole purpose in marrying should be motherhood.

Augustine, Contra Faustum, XIX, 26

- 33 Adultery belongs not only to the sin of lust, but also to the sin of injustice, and in this respect may be brought under the head of covetousness . . .so that adultery is so much the more grievous than theft as a man loves his wife more than his chattels.

Aquinas, Summa Theologica, I—II, 73, 5

- 34 Matrimony did indeed exist under the Old Law, as a function of nature, but not as the sacrament of the union of Christ with the Church, for that union was not as yet brought about. Hence under the Old Law it was allowable to give a bill of divorce, which is contrary to the nature of a sacrament.

Aquinas, Summa Theologica, I—II, 102, 5

35 The marriage union is effected in the same way as the bond in material contracts. And since material contracts are not feasible unless the contracting parties express their will to one another in words, it follows that the consent which makes a marriage must also be expressed in words, so that the expression of words is to marriage what the outward washing is to Baptism.

Aquinas, Summa Theologica, III Suppl., 45,

36 In marriage there is a contract whereby one is bound to pay the other the marital debt: wherefore just as in other contracts, the bond is unfitting if a person bind himself to what he cannot give or do, so the marriage contract is unfitting, if it be made by one who cannot pay the marital debt. This impediment is called by the general name of impotence as regards coition, and can arise either from an intrinsic and natural cause, or from an extrinsic and accidental cause, for instance spell.

If it be due to a natural cause, this may happen in two ways. For either it is temporary, and can be remedied by medicine, or by the course of time and then it does not void a marriage: or it is perpetual and then it voids marriage, so that the party who labors under this impediment remains for ever without hope of marriage, while the other may marry to whom she will... in the Lord.

Aquinas, Summa Theologica, III Suppl., 58, 1

37 Our Lord permitted a man to put away his wife on account of fornication, in punishment of the unfaithful party and in favor of the faithful party, so that the latter is not bound to marital intercourse with the unfaithful one. There are however seven cases to be excepted in

which it is not lawful to put away a wife who has committed fornication, when either the wife is not to be blamed, or both parties are equally blameworthy. The first is if the husband also has committed fornication; the second is if he has prostituted his wife; the third is if the wife, believing her husband dead on account of his long absence, has married again; the fourth is if another man has fraudulently impersonated her husband in the marriage-bed; the fifth is if she be overcome by force; the sixth is if he has been reconciled to her by having carnal intercourse with her after she has committed adultery; the seventh is if both having been married in the state of unbelief, the husband has given his wife a bill of divorce and she has married again; for then if both be converted the husband is bound to receive her back again.

Aquinas, Summa Theologica, III Suppl., 62, 1

- 38 The [marriage] debt may be demanded in two ways. First, explicitly, as when they ask one another by words; secondly, implicitly, when namely the husband knows by certain signs that the wife would wish him to pay the debt, but is silent through shame. And so even though she does not ask for the debt explicitly in words, the husband is bound to pay it, whenever his wife shows signs of wishing him to do so.

Aquinas, Summa Theologica, III Suppl., 64, 2

- 39 Since the wife has power of her husband's body, and *vice versa*, with regard to the act of procreation, the one is bound to pay the [marriage] debt to the other, at any season or hour, with due regard to the decorum required in such matters, for this must not be done at once openly.

40 "For then, the apostle says that I am free
To wed, in God's name, where it pleases me.
He says that to be wedded is no sin;
Better to marry than to burn within.
What care I though folk speak reproachfully
Of wicked Lamech and his bigamy?
I know well Abraham was holy man,
And Jacob, too, as far as know I can;
And each of them had spouses more than two;
And many another holy man also.
Or can you say that you have ever heard
That God has ever by His express word
Marriage forbidden? Pray you, now, tell me;
Or where commanded He virginity?
I read as well as you no doubt have read
The apostle when he speaks of maidenhead;
He said, commandment of the Lord he'd none.
Men may advise a woman to be one,
But such advice is not commandment, no;
He left the thing to our own judgment so.
For had Lord God commanded maidenhood,
He'd have condemned all marriage as not good;
And certainly, if there were no seed sown.
Virginity—where then should it be grown?
Paul dared not to forbid us, at the least,
A thing whereof his Master'd no behest.
The dart is set up for virginity;
Catch it who can; who runs best let us see.
"But this word is not meant for every wight,
But where God wills to give it, of His might.
I know well that the apostle was a maid;

Nevertheless, and though he wrote and said
He would that everyone were such as he,
All is not counsel to virginity;
And so to be a wife he gave me leave
Out of permission; there's no shame should grieve
In marrying me, if that my mate should die.
Without exception, too, of bigamy.
And though 'twere good no woman's flesh to touch,
He meant, in his own bed or on his couch;
For peril 'tis fire and tow to assemble;
You know what this example may resemble.
This is the sum: he held virginity
Nearer perfection than marriage for frailty.
And frailty's all, I say, save he and she
Would lead their lives throughout in chastity.

"I grant this well, I have no great envy
Though maidenhood's preferred to bigamy;
Let those who will be clean, body and ghost,
Of my condition I will make no boast.
For well you know, a lord in his household,
He has not every vessel all of gold;
Some are of wood and serve well all their days.
God calls folk unto Him in sundry ways,
And each one has from God a proper gift,
Some this, some that, as pleases Him to shift.

"Virginity is great perfection known,
And continence e'en with devotion shown.
But Christ, Who of perfection is the well.
Bade not each separate man he should go sell
All that he had and give it to the poor
And follow Him in such wise going before.
He spoke to those that would live perfectly;
And, masters, by your leave, such am not I.

I will devote the flower of all my age
To all the acts and harvests of marriage.

"Tell me also, to what purpose or end
The genitals were made, that I defend,
And for what benefit was man first wrought?
Trust you right well, they were not made for naught
Explain who will and argue up and down
That they were made for passing out, as known
Of urine, and our two belongings small
Were just to tell a female from a male,
And for no other cause—ah, say you no?
Experience knows well it is not so;
And, so the clerics be not with me wroth,
I say now that they have been made for both
That is to say, for duty and for ease
In getting, when we do not God displease.
Why should men otherwise in their books set
That man shall pay unto his wife his debt?
Now wherewith should he ever make payment,
Except he used his blessed instrument?
Then on a creature were devised these things
For urination and engenderings.

"But I say not that every one is bound,
Who's fitted out and furnished as I've found,
To go and use it to beget an heir;
Then men would have for chastity no care.
Christ was a maid, and yet shaped like a man,
And many a saint, since this old world began,
Yet has lived ever in perfect chastity.
I bear no malice to virginity;
Let such be bread of purest white wheat-seed,
And let us wives be called but barley bread;
And yet with barley bread (if Mark you scan)

Jesus Our Lord refreshed full many a man.
In such condition as God places us
I'll persevere, I'm not fastidious.
In wifehood I will use my instrument
As freely as my Maker has it sent.
If I be niggardly, God give me sorrow!
My husband he shall have it, eve and morrow,
When he's pleased to come forth and pay his debt.
I'll not delay, a husband I will get
Who shall be both my debtor and my thrall
And have his tribulations therewithal
Upon his flesh, the while I am his wife.
I have the power during all my life
Over his own good body, and not he.
For thus the apostle told it unto me;
And bade our husbands that they love us well.
And all this pleases me wherof I tell."

Chaucer, Canterbury Tales: Wife of Bath's Prologue

41 "Choose, now," said she, "one of these two things, aye,
To have me foul and old until I die,
And be to you a true and humble wife,
And never anger you in all my life;
Or else to have me young and very fair
And take your chance with those who will repair
Unto your house, and all because of me,
Or in some other place, as well may be.
Now choose which you like better and reply.

Chaucer, Canterbury Tales: Wife of Bath's Tale

42 A merchant, dwelling once, at Saint-Denis,
Was rich, for which men held him wise, and he

Had got a wife of excellent beauty,
And very sociable and gay was she,
Which is a thing that causes more expense
Than all the good cheer and the deference
That men observe at festivals and dances;
Such salutations and masked countenances
Pass by as does a shadow on the wall;
But woe to him that must pay for it all.

Chaucer, Canterbury Tales: Shipman's Tale

- 43 A good wife, who is clean in deed and thought,
Should not be kept a prisoner, that's plain;
And certainly the labour is in vain
That guards a slut, for, sirs, it just won't be.
This hold I for an utter idiocy,
That men should lose their labour guarding wives;
So say these wise old writers in their lives.

Chaucer, Canterbury Tales: Manciple's Tale

- 44 In the choice of wives they carefully follow a custom which seemed to us foolish and absurd. Before marriage some responsible and honorable woman, either a virgin or a widow, presents the woman naked to her suitor and after that some upright man presents the suitor naked to the woman. We laughed at this and condemned it as foolish. On the contrary they wonder at the stupidity of other people, who are exceedingly cautious in matters involving only a little money. For example, men will refuse to buy a colt, unless they take off its saddle and harness, which might conceal a sore. But in the choice of a mate, on which one's happiness depends for the rest of one's life, they act carelessly. They leave all but a hand's-

breadth of the woman's face covered with clothing and judge her by it, so that in marrying a couple runs a great risk of mutual dislike if later anything in either's body should offend the other. Not all men are so wise that they consider only a woman's behavior. And even wise men think that physical beauty in wives adds not a little to the virtues of the mind. Certainly some deformity may lurk underneath clothing which will alienate a man from his wife when it is too late to be separated from her. If such a deformity is discovered after marriage, a man must bear his lot, so the Utopians think care ought to be taken by law at no one be deceived.

Thomas More, Utopia, II, 12

- 45 A preacher of the gospel, being regularly called, ought, above all things, first, to purify himself before he teaches others. Is he able, with a good conscience, to remain unmarried? let him remain; but if he cannot abstain living chastely, let him take a wife; God has made that plaster for that sore.

Luther, Table Talk, H715

- 46 The preachers of Varennes, saith Panurge, detest and abhor the second marriages, as altogether foolish and dishonest. Foolish and dishonest? quoth Pantagruel, A plague take such preachers! Yea, but, quoth Panurge, the like mischief also befell the Friar Charmer, who in a full auditory making a sermon at Pareilly, and therein abominating the reiteration of marriage, and the entering again the bonds of a nuptial tie, did swear and heartily give himself to the swiftest devil in hell, if he had not rather choose, and would much more willingly undertake,

the unmaidening or depucelating of a hundred virgins,
than the simple drudgery of one widow.

Rabelais, Gargantua and Pantagruel, III, 6

47 *Panurge*. I will never be in the danger of being made a cuckold, for the defect hereof is *Causa sine qua non*; yea, the sole cause, as many think, of making husbands cuckolds. What makes poor scoundrel rogues to beg, I pray you? Is it not because they have not enough at home wherewith to fill their bellies and their pokes? What is it makes the wolves to leave the woods? Is it not the want of flesh meat? What maketh women whores? You understand me well enough.

Rabelais, Gargantua and Pantagruel, III, 14

48 I N. take thee N. to my wedded Wife [Husband], to have and to hold from this day forward, for better for worse, for richer for poorer, in sickness and in health, to love and to cherish, till death us do part, according to God's holy ordinance; and thereto I plight [give] thee my troth.

Book of Common Prayer

49 We have thought to tie the knot of our marriages more firmly by taking away all means of dissolving them; but the knot of will and affection has become loosened and undone as much as that of constraint has tightened. And on the contrary, what kept marriages in Rome so long in honor and security was everyone's freedom to break them off at will. They loved their wives the better because they might lose them; and, with full liberty of divorce, five hundred years and more passed before anyone took advantage of it.

Montaigne, Essays, II, 15, That Our Desire

50 A good marriage, if such there be, rejects the company and conditions of love. It tries to reproduce those of friendship. It is a sweet association in life, full of constancy, trust, and an infinite number of useful and solid services and mutual obligations. No woman who savors the taste of it... would want to have the place of a mistress or paramour to her husband. If she is lodged in his affection as a wife, she is lodged there much more honorably and securely. When he dances ardent and eager attention elsewhere, still let anyone ask him then on whom he would rather have some shame fall, on his wife or his mistress; whose misfortune would afflict him more; for whom he wishes more honor. These questions admit of no doubt in a sound marriage.

Montaigne, Essays, III, 5, On Some Verses of Virgil

51 Love and marriage are two intentions that go by separate and distinct roads. A woman may give herself to a man whom she would not at all want to have married; I do not mean because of the state of his fortune, but because of his personal qualities. Few men have married their mistresses who have not repented it.

Montaigne, Essays, III, 5, On Some Verses of Virgil

52 That man knew what it was all about, it seems to me, who said that a good marriage was one made between a blind wife and a deaf husband.

Montaigne, Essays, III, 5, On Some Verses of Virgil

53 *Katharina*. Fie, fie! unknit that threatening unkind brow,
And dart not scornful glances from those eyes,

To wound thy lord, thy king, thy governor:
It blots thy beauty as frosts do bite the meads,
Confounds thy fame as whirlwinds shake fair buds.
And in no sense is meet or amiable.
A woman moved is like a fountain troubled.
Muddy, ill-seeming, thick, bereft of beauty;
And while it is so, none so dry or thirsty
Will deign to sip or touch one drop of it.
Thy husband is thy lord, thy life, thy keeper.
Thy head, thy sovereign; one that cares for thee.
And for thy maintenance commits his body
To painful labour both by sea and land,
To watch the night in storms, the day in cold,
Whilst thou liest warm at home, secure and safe;
And craves no other tribute at thy hands
But love, fair looks, and true obedience;
Too little payment for so great a debt.
Such duty as the subject owes the prince
Even such a woman oweth to her husband;
And when she is froward, peevish, sullen, sour.
And not obedient to his honest will,
What is she but a foul contending rebel
And graceless traitor to her loving lord?
I am ashamed that women are so simple
To offer war where they should kneel for peace,
Or seek for rule, supremacy and sway,
When they are bound to serve, love, and obey.
Why are our bodies soft and weak and smooth,
Unapt to toil and trouble in the world,
But that our soft conditions and our hearts
Should well agree with our external parts?
Come, come, you froward and unable worms!
My mind hath been as big as one of yours.

My heart as great, my reason haply more,
To bandy word for word and frown for frown;
But now I see our lances are but straws,
Our strength as weak, our weakness past compare,
That seeming to be most which we indeed least are.
Then vail your stomachs, for it is no boot,
And place your hands below your husband's foot;
In token of which duty, if he please,
My hand is ready; may it do him ease.

Shakespeare, Taming of the Shrew V, ii, 136

54 *Leonato*. Well, niece, I hope to see you one day fitted with a husband.

Beatrice. Not till God make men of some other metal than earth. Would it not grieve a woman to be overmastered with a piece of valiant dust? to make an account of her life to a clod of wayward marl? No, uncle, I'll none: Adam's sons are my brethren; and, truly, I hold it a sin to match in my kindred.

Leon. Daughter, remember what I told you: if the Prince do solicit you in that kind, you know your answer,

Beat. The fault will be in the music, cousin, if you be not wooed in good time: if the Prince be too important, tell him there is measure in everything and so dance out the answer. For, hear me, Hero: wooing, wedding, and repenting, is as a Scotch jig, a measure, and a cinque pace: the first suit is hot and hasty, like a Scotch jig, and full as fantastical; the wedding, mannerly-modest, as a measure, full of state and ancientry; and then comes repentance and, with his bad legs, falls into the cinque pace faster and faster, till he sink into his grave,

Leon. Cousin, you apprehend passing shrewdly.

Beat. I have a good eye, uncle; I can see a church by daylight.

Shakespeare, Much Ado About Nothing, II, i, 61

55 *Benedick.* The world must be peopled. When I said I would die a bachelor, I did not think I should live till I were married.

Shakespeare, Much Ado About Nothing, II, iii, 251

56 *Jacques.* Will you be married, motley?

Touchstone. As the ox hath his plow, sir, the horse his curb, and the falcon her bells, so man hath his desires; and as pigeons bill, so wedlock would be nibbling.

Shakespeare, As You Like It, III, iii, 79

57 *Rosalind.* Men are April when they woo, December when they wed: maids are May when they are maids, but the sky changes when they are wives.

Shakespeare, As You Like It, IV, i, 147

58 *Touchstone.* God 'ild you, sir; I desire you of the like. I press in here, sir, amongst the rest of the country copulatives, to swear and to forswear; according as marriage binds and blood breaks: a poor virgin, sir, an ill-favoured thing, sir, but mine own; a poor humour of mine, sir, to take that that no man else will: rich honesty dwells like a miser, sir, in a poor house; as your pearl in your foul oyster.

Shakespeare, As You Like It, V, iv, 56

59 *Slender.* I will marry her, sir, at your request; but if there be no great love in the beginning, yet heaven may

decrease it upon letter acquaintance, when we are married and have more occasion to know one. another. I hope, upon familiarity will crow more contempt. But if you say, "Marry' her," I will marry her; that I am freely dissolved, and dissolutely.

Shakespeare, Merry Wives of Windsor, I, i, 253

60 *Mistress Page* Wives may be merry, and yet honest too.

Shakespeare, Merry Wives of Windsor, IV, ii, 108

61 *Clown* He that ears my land spares my team and gives me leave to in the crop; if I be his cuckold, he's my drudge. He that comforts my wife is the cherisher of my flesh and blood; he that cherishes my flesh and blood loves my flesh and blood; he that loves my flash and blood is my friend; ergo, he that kisses my wife is my friend.

Shakespeare, All's Well That Ends Well, I, iii, 47

62 *Othello*. O curse of marriage,
That we can call these delicate creatures ours
And not their appetites! I had rather be a toad,
And live upon the vapour of a dungeon,
Than keep a corner in the thing I love
For other's uses.

Shakespeare, Othello, III, iii, 268

63 *Desdemona*. I have heard it said so. O, these men, these men!
Dost thou in conscience think—tell me, Emilia—
That there be women do abuse their husbands
In such gross kind?

Emilia. There be some such, no question.

Des. Wouldst thou do such a deed for all the world?

Emil. Why, would not you?

Des. No, by this heavenly light!

Emil. Nor I neither by this heavenly light;

I might do't as well i' the dark.

Des. Wouldst thou do such a deed for all the world?

Emil. The world's a huge thing; it is a great price.

For a small vice.

Des. In troth, I think thou wouldst not.

Emil. In troth, I think I should; and undo't when I had done. Marry, I would not do such a thing for a joint-ring, nor for measures of lawn, nor for gowns, petticoats, nor caps, nor any petty exhibition; but, for the whole world—why, who would not make her husband a cuckold to make him a monarch? I should venture purgatory for't.

Des. Beshrew me, if I would do such a wrong For the whole world.

Emil. Why, the wrong is but a wrong i' the world; and having the world for your labour, 'tis a wrong in your own world, and you might quickly make it right.

Des. I do not think there is any such woman.

Emil. Yes, a dozen; and as many to the vantage as would store the world they played for.
But I do think it is their husbands' faults
If wives do fall. Say that they slack their duties,
And pour our treasures into foreign laps.
Or else break out in peevish jealousies,
Throwing restraint upon us; or say they strike us.
Or scant our former having in despite;
Why, we have galls, and though we have some grace,
Yet have we some revenge. Let husbands know
Their wives have sense like them; they see and smell

And have their palates both for sweet and sour,
As husbands have. What is it that they do
When they change us for others? Is it sport?
I think it is. And doth affection breed it?
I think it doth. Is't frailty that thus errs?
It is so too. And have not we affections,
Desires for sport, and frailty, as men have?
Then let them use us well; else let them know,
The ills we do, their ills instruct us so.

Shakespeare, Othello, IV, iii, 60

64 Leontes. There have been.

Or I am much deceived, cuckolds ere now;
And many a man there is, even at this present,
Now while I speak this, holds his wife by the arm,
That little thinks she has been sluiced in's absence
And his pond fish'd by his next neighbour, by
Sir Smile, his neighbour. Nay, there's comfort in't
Whiles other men have gates and those gates open'd,
As mine, against their will. Should all despair
That have revolted wives, the tenth of mankind
Would hang themselves. Physic for 't there is none;
It is a bawdy planet, that will strike
Where 'tis predominant; and 'tis powerful, think it,
From east, west, north and south. Be it concluded.
No barricade for a belly; know't;
It will let in and out the enemy
With bag and baggage. Many thousand on's
Have the disease, and feel't not.

Shakespeare, Winter's Tale, I, ii, 190

65 *Prospero*. Then, as my gift and thine own acquisition
Worthily purchased, take my daughter; but
If thou dost break her virgin-knot before
All sanctimonious ceremonies may
With full and holy rite be minister'd,
No sweet aspersion shall the heavens let fall
To make this contract grow; but barren hate,
Sour-eyed disdain, and discord shall bestrew
The union of your bed with weeds so loathly
That you shall hate it both. Therefore take heed,
As Hymen's lamps shall light you.

Ferdinand. As I hope
For quiet days, fair issue, and long life,
With such love as 'tis now, the murkiest den,
The most opportune place, the strong'st suggestion;
Our worser genius can, shall never melt
Mine honour into lust, to take away
The edge of that day's celebration
When I shall think, or Phoebus' steeds are founder'd.
Or Night kept chain'd below.

Shakespeare, Tempest, IV, i, 13

66 Well, quoth *Sancho*, who had been silent, and list'ning all
the while, my Wife us'd to tell me, she would have every
one marry with their Match. Like to like, quoth the Devil
to the Collier, and every Sow to her own Trough, as t'other
Saying is. ... A Murrain seize those that will spoil a good
Match between those that love one another! Nay, said
Don *Quixote*, if Marriage should be always the
Consequence of mutual Love, what would become of the
Prerogative of Parents, and their Authority over their
Children? If young Girls might always chuse their own
Husbands, we should have the best Families intermarry

with Coachmen and Grooms; and your Heiresses would throw themselves away upon the first wild young Fellows, whose promising Out-sides and Assurance makes 'em set up for Fortunes, though all their Stock consists in Impudence. For the Understanding which alone should distinguish and chuse in these Cases as in all others, is apt to be blinded or bias'd by Love and Affection; and Matrimony is so nice and critical a Point, that it requires not only our own cautious Management, but even the Direction of a superior Power to chuse right. Whoever undertakes a long Journey, if he be wise, makes it his Business to find out an agreeable Companion. How cautious then should He be, who is to take a Journey for Life, whose Fellow-Traveller must not part with him but at the Grave; his Companion at Bed and Board and Sharer of all the Pleasures and Fatigues of his Journey; as the Wife must be to the Husband! She is no such Sort of Ware, that a Man can be rid of when he pleases: When once that's purchas'd, no Exchange, no Sale, no Alienation can be made; She is an inseparable Accident to Man: Marriage is a Noose, which, fasten'd about the Neck, runs the closer, and fits more uneasy by our struggling to get loose: 'Tis a *Gordian* Knot which none can unty, and being twisted with our Thread of Life, nothing but the Scythe of Death can cut it.

Cervantes, Don Quixote, II, 19

- 67 The Honourable Poor Man, said he [Don Quixote), if the Poor can deserve that Epithet, when he has a Beautiful Wife, is bless'd with a Jewel: He that deprives him of her, robs him of his Honour, and may be said to deprive him of his Life. The Woman that is Beautiful, and keeps her Honesty when her Husband is Poor, deserves to be

Crown'd with Laurel, as the Conquerors were of Old.
Beauty is a tempting Bait, that attracts the Eyes of all
Beholders, and the Princely Eagles, and the most high-
flown Birds stood to its pleasing Lure. But when they find
it in Necessity, then Kites and Crows, and other ravenous
Birds will all be grappling with the alluring Prey. She that
can withstand these dangerous Attacks, well deserves to
be the Crown of her Husband. However, Sir, take this
along with you, as the Opinion of a Wise Man, whose
Name I have forgot; he said, there was but one good
Woman in the World, and his Advice was, that every
Married Man should think his own Wife was she, as being
the only way to live contented. For my own part, I need
not make the Application to myself, for I am not Married,
nor have I as yet any Thoughts that way; but if I had,
'twould not be a Woman's Fortune, but her Character
should recommend her; for publick Reputation is the Life
of a Lady's Vertue, and the outward Appearance of
Modesty is in one sense as good as the Reality; since a
private Sin is not so prejudicial in this World, as a publick
Indecency. If you bring a Woman honest to your Bosom,
'tis easy keeping her so, and perhaps you may improve
her Vertues. If you take an unchaste Partner to your Bed,
'tis hard mending her; for the Extremes of Vice and Venue
are so great in a Woman, and their Points so far asunder,
that 'tis very improbable, I won't say impossible, they
should ever be reconcil'd.

Cervantes, Don Quixote, II, 22

68 Grave natures, led by custom, and therefore constant. are
commonly loving husbands; as was said of Ulysses,
vetulam suam praetulit immortalitati [he preferred his
aged wife to immortality). Chaste women are often proud

and forward, as presuming upon the merit of their chastity. It is one of the best bonds both of chastity and obedience in the wife if she think her husband wise; which she will never do if she find him jealous. Wives are young men's mistresses; companions for middle age; and old men's nurses. So as a man may have a quarrel to marry when he will. But yet he was reputed one of the wise men that made answer to the question, when a man should marry?—"A young man not yet, an elder man not at all." It is often seen that bad husbands have very good wives; whether it be that it raiseth the price of their husband's kindness when it comes; or that the wives take a pride in their patience. But this never fails if the bad husbands were of their own choosing, against their friends' consent; for then they will be sure to make good their own folly.

Bacon, Of Marriage and Single Life

69 This said unanimous, and other Rites
Observing none, but adoration pure
Which God likes best, into thir inmost bower
Handed they went; and eas'd the putting off
These troublesom disguises which wee wear.
Strait side by side were laid, nor turned I weene
Adam from his fair Spouse, nor *Eve* the Rites
Mysterious of connubial Love refus'd:
Whatever Hypocrites austerely talk
Of puritie and place and innocence.
Defaming as impure what God declares
Pure, and commands to som, leaves free to all.
Our Maker bids increase, who bids abstain
But our Destroyer, foe to God and Man?
Haile wedded Love, mysterious Law, true sourse

Of human ofspring, sole proprietie.
In Paradise of all things common else.
By thee adulterous lust was driv'n from men
Among the bestial herds to raunge, by thee
Founded in Reason, Loyal, Just, and Pure,
Relations dear, and all the Charities
Of Father, Son, and Brother first were known.

Milton, Paradise Lost, IV, 736

70 *Adam.* I now see
Bone of my Bone, Flesh of my Flesh, my Self
Before me; Woman is her Name, of Man
Extracted; for this cause he shall forgoe
Father and Mother, and to his Wife adhere;
And they shall be one Flesh, one Heart, one Soule.

Milton, Paradise Lost, VIII, 494

71 They looking back, all th' Eastern side beheld
Of Paradise, so late thir happie seat,
Wav'd over by that flaming Brand, the Gate
With dreadful Faces throng'd and fierie Armes:
Som natural tears they drop'd, but wip'd them soon;
The World was all before them, where to choose
Thir place of rest, and Providence thir guide:
They hand in hand with wandring steps and slow,
Through Eden took thir solitarie way.

Milton, Paradise Lost. XII, 641

72 If unchastity in a woman, whom St. Paul terms the glory
of man, be such a scandal and dishonour, then certainly
in a man, who is both the image and glory' of God, it
must, though commonly not so thought, be much more

deflouring and dishonourable; in that he sins both against his own body, which is the perfecter sex, and his own glory, which is in the woman; and, that which is worst, against the image and glory of God, which is in himself.

Milton, Apology for Smectymnuus

73 What thing more instituted to the solace and delight of man than marriage? And yet the misinterpreting of some scripture, directed mainly against the abusers of the law for divorce given by Moses, hath changed the blessing of matrimony not seldom into a familiar and coinhabiting mischief, at least into a drooping and disconsolate household captivity, without refuge or redemption—so ungoverned and so wild a race doth superstition run us from one extreme of abused liberty into the other of unmerciful restraint. For although God in the first ordaining of marriage taught us to what end he did it, in words expressly implying the apt and cheerful conversation of man with woman, to comfort and refresh him against the evil of solitary' life, not mentioning the purpose of generation till afterwards, as being but a secondary end in dignity, though not in necessity: yet now, if any two be but once handed in the church, and have tasted in any sort the nuptial bed, let them find themselves never so mistaken in their dispositions through any error, concealment, or misadventure, that through their different tempers, thoughts and constitutions, they can neither be to one another a remedy against loneliness nor live in any union or contentment all their days; yet they shall, so they be but found suitably weaponed to the least possibility' of sensual enjoyment, be made, spite of antipathy, to fadge

together and combine as they may to their unspeakable wearisomeness and despair of all sociable delight in the ordinance which God established to that very end.

Milton, Doctrine and Discipline of Divorce, I, Pref.

- 74 With regard to marriage, it is plain that it is in accordance with reason, if the desire of connection is engendered not merely by external form, but by a love of begetting children and wisely educating them; and if, in addition, the love both of the husband and wife has for its cause not external form merely, but chiefly liberty of mind.

Spinoza, Ethics, IV, Appendix XX

- 75 The husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too. It therefore being necessary that the last determination (that is, the rule) should be placed somewhere, it naturally falls to the man's share as the abler and the stronger. But this, reaching but to the things of their common interest and property, leaves the wife in the full and true possession of what by contract is her peculiar right, and at least gives the husband no more power over her than she has over his life; the power of the husband being so far from that of an absolute monarch that the wife has, in many cases, a liberty to separate from him where natural right or their contract allows it, whether that contract be made by themselves in the state of Nature or by the customs or laws of the country they live in, and the children, upon such separation, fall to the father or mother's lot as such contract does determine.

Locke, II Civil Government, VII, 82

76 *Sharper*. Thus grief still treads upon the heels of
pleasure;
Married in haste, we may repent at leisure.

Congreve, The Old Bachelor, V, iii

77 *Millamant*. Ah! I'll never marry', unless I am first made
sure of my will and pleasure.

Mirabell. Would you have 'em both before marriage?
Or will you be contented with the first now, and stay for
the other till after grace?

Milla. Ah, don't be impertinent,—My dear liberty, shall
I leave thee? My faithful solitude, my darling
contemplation, must I bid you then adieu? Ay-h adieu—
My morning thoughts, agreeable wakings, indolent
slumbers, all ye douceurs, ye *sommeils du matin*, adieu.
—I can't do't, 'tis more than impossible.—Positively,
Mirabell, I'll lie abed in a morning as long as I please.

Mira. Then I'll get up in a morning as early as I please.

Milla. Ah, idle creature, get up when you will.—and
d'ye hear? I won't be called names alter I'm married;
positively I won't be called names.

Mira. Names!

Milla. Aye, as wife, spouse, my dear, joy, jewel, love,
sweetheart, and the rest of that nauseous cant, in which
men and their wives are so fulsomely familiar—I shall
never bear that,—Good Mirabell, don't let us be familiar
or fond, nor kiss before folks, like my Lady Fadler and Sir
Francis; nor go to Hyde Park together the first Sunday in
a new chariot, to provoke eyes and whispers; and then
never be seen there together again, as if we were proud
of one another the first week, and ashamed of one
another ever after. Let us never visit together, nor go to a
play together, but let us be very strange and well bred;

let us be as strange as if we had been married a great while; and as well bred as if we were not married at all.

Mira. Have you any more conditions to offer? Hitherto your demands are pretty reasonable.

Milla. Trifles—as liberty to pay and receive visits to and from whom I please; to write and receive letters, without interrogatories or wry faces on your part; to wear what I please; and choose conversation with regard only to my own taste; to have no obligation upon me to converse with wits that I don't like, because they are your acquaintance; or to be intimate with fools, because they may be your relations. Come to dinner when I please, dine in my dressing room when I'm out of humor, without giving a reason. To have my closet inviolate; to be sole empress of my tea table, which you must never presume to approach without first asking leave. And lastly, wherever I am, you shall always knock at the door before you come in. These articles subscribed, if I continue to endure you a little longer, I may by degrees dwindle into a wife.

Mira. Your bill of fare is something advanced in this latter account. Well, have I liberty to offer conditions—that when you are dwindled into a wife, I may not be beyond measure enlarged into a husband?

Milla. You have free leave, propose your utmost, speak and spare not.

Mira. I thank you. *Imprimis* then, I covenant that your acquaintance be general; that you admit no sworn confidante or intimate of your own sex; no she-friend to screen her affairs under your countenance and tempt you to make trial of a mutual secrecy. No decoy duck to wheedle you a fop—scrambling to the play in a mask—then bring you home in a pretended fright, when you

think you shall be found out—and rail at me for missing the play, and disappointing the frolic which you had to pick me up and prove my constancy.

Milla. Detestable *imprimis*! I go to the play in a mask!

Mira. *Item*, I article, that you continue to like your own face as long as I shall; and while it passes current with me, that you endeavor not to new coin it. To which end, together with all vizards for the day, I prohibit all masks for the night, made of oiled-skins and I know not what—hog's bones, hare's gall, pig water, and the marrow of a roasted cat. In short, I forbid all commerce with the gentlewoman in what-d'ye-call-it court. *Item*, I shut my doors against all bawds with baskets, and pennyworths of muslin, china, fans, atlases, etc. *Item*, when you shall be breeding—

Milla. Ah! Name it not.

Mira. Which may be presumed, with a blessing on our endeavors—

Milla. Odious endeavors!

Mira. I denounce against all strait lacing, squeezing for a shape, till you mold my boy's head like a sugar loaf; and instead of a man-child, make me father to a crooked billet. Lastly, to the dominion of the tea table I submit.—But with proviso that you exceed not in your province; but restrain yourself to native and simple tea-table drinks, as tea, chocolate, and coffee. As likewise to genuine and authorized tea-table talk—such as mending of fashions, spoiling reputations, railing at absent friends, and so forth—but that on no account YOU encroach upon the men's prerogative, and presume to drink healths, or toast fellows; for prevention of which, I banish all foreign forces, all auxiliaries to the tea table, as orange brandy, all aniseed, cinnamon, citron and Barbados waters,

together with ratafia and the most noble spirit of clary.—
But for cowslip-wine, poppy water, and all dormitives,
those I allow. These provisos admitted, in other things I
may prove a tractable and complying husband.

Milla. O, horrid provisos! filthy strong waters! I toast
fellows, odious men! I hate your odious provisos.

Mira. Then we're agreed. Shall I kiss your hand upon
the contract?

Congreve, Way of the World, IV, v

- 78 Their [the Lilliputians'] maxim is, that among people of
quality, a wife should be always a reasonable and
agreeable companion, because she cannot always be
young.

Swift, Gulliver's Travels, I, 6

- 79 This gentleman [Mr. Allworthy] had in his youth married a
very' worthy and beautiful woman, of whom he had been
extremely fond: by her he had three children, all of whom
died in their infancy'. He had likewise had the misfortune
of burying this beloved wife herself, about five years
before the time in which this history' chuses to set out.
This loss, however great, he bore like a man of sense and
constancy, though it must be confest he would often talk
a little whimsically on this head; for he sometimes said he
looked on himself as still married, and considered his wife
as only gone a little before him, a journey which he
should most certainly, sooner or later, take after her; and
that he had not the least doubt of meeting her again in a
place where he should never part with her more—
sentiments for which his sense was arraigned by one part

of his neighbours, his religion by a second, and his sincerity by a third.

Fielding, Tom Jones, I, 2

80 The squire, to whom that poor woman had been a faithful upper-servant all the time of their marriage, had returned that behaviour by making what the world calls a good husband. He very seldom swore at her (perhaps not above once a Aveek) and never beat her: she had not the least occasion for jealousy, and was perfect mistress of her time; for she was never interrupted by her husband, who was engaged all the morning in his field exercises, and all the evening with bottle companions. She scarce indeed ever saw him but at meals; where she had the pleasure of carving those dishes which she had before attended at the dressing. From these meals she retired about five minutes after the other servants, having only stayed to drink "the king over the water." Such were, it seems, Mr. Western's orders; for it was a maxim with him, that women should come in with the first dish, and go out after the first glass. Obedience to these orders was perhaps no difficult task; for the conversation (if it may be called so) was seldom such as could entertain a lady. It consisted chiefly of hallowing, singing, relations of sporting adventures, b—d—y, and abuse of women, and of the government.

Fielding, Tom Jones, VII, 4

81 "O my dear Sophy, you are a woman of sense; if you marry a man, as is most probable you will, of less capacity than yourself, make frequent trials of his temper before marriage, and see whether he can bear to submit

to such a superiority.—Promise me, Sophy, you will take this advice; for you will hereafter find its importance." "It is very likely I shall never marry at all," answered Sophia; "I think, at least, I shall never marry a man in whose understanding I see any defects before marriage; and I promise you I would rather give up my own than see any such afterwards." "Give up your understanding!" replied Mrs. Fitzpatrick; "oh, fie, child! I will not believe so meanly of you. Everything else I might myself be brought to give up; but never this. Nature would not have allotted this superiority to the wife in so many instances, if she had intended we should all of us have surrendered it to the husband. This, indeed, men of sense never expect of us."

Fielding, Tom Jones, XI, 7

82 Young women who are conducted by marriage alone to liberty and pleasure, who have a mind which dares not think, a heart which dares not feel, eyes which dare not see, ears which dare not hear, who appear only to show themselves silly, condemned without intermission to trifles and precepts, have sufficient inducements to lead them on to marriage: it is the young men that want to be encouraged.

Montesquieu, Spirit of Laws, XXIII, 9

83 Of all the riddles of a married life, said my father, crossing the landing in order to set his back against the wall, whilst he propounded it to my uncle Toby—of all the puzzling riddles, said he, in a marriage state,—of which you may trust me, brother Toby, there are more asses' loads than all Job's stock of asses could have carried—

there is not one that has more intricacies in it than this—that from the very moment the mistress of the house is brought to bed, every female in it, from my lady's gentlewoman down to the cinder-wench, becomes an inch taller for it; and give themselves more airs upon that single inch, than all the other inches put together.

I think rather, replied my uncle Toby, that 'tis we who sink an inch lower. If I meet but a woman with child—I do it.

Sterne, Tristram Shandy, IV, 12

84 A senior magistrate of a French town had the misfortune to have a wife who was debauched by a priest before her marriage, and who since covered herself with disgrace by public scandals: he was so moderate as to leave her without noise. This man, about forty years old, vigorous and of agreeable appearance, needs a woman; he is too scrupulous to seek to seduce another man's wife, he fears intercourse with a public woman or with a widow who would serve him as concubine. In this disquieting and sad state, he addresses to his Church a plea of which the following is a precis:

My wife is criminal, and it is I who am punished. Another woman is necessary as a comfort to my life, to my virtue even; and the sect of which I am a member refuses her to me; it forbids me to marry an honest girl. The civil laws of to-day, unfortunately founded on canon law, deprive me of the rights of humanity. The Church reduces me to seeking either the pleasures it reproveth, or the shameful compensations it condemns; it tries to force me to be criminal.

I cast my eyes over all the peoples of the earth; there is not a single one except the Roman Catholic people

among whom divorce and a new marriage are not natural rights.

What upheaval of the rule has therefore made among the Catholics a virtue of undergoing adultery, and a duty of lacking a wife when one has been infamously outraged by one's own?...

That our priests, that our monks renounce wives, to that I consent; it, is an outrage against population, it is a misfortune for them, but they merit this misfortune which they have made for themselves. They have been the victims of the popes who wanted to have in them slaves', soldiers without families and without fatherland, living solely for the Church: but I, magistrate, who serve the state all day, I need a wife in the evening; and the Church has not the right to deprive me of a benefit which God accords me. The apostles were married, Joseph was married, and I want to be. If I, Alsacian, am dependent on a priest who dwells at Rome, if this priest has the barbarous power to rob me of a wife, let him make a eunuch of me for the singing of *Misereres* in his chapel.

Voltaire, Philosophical Dictionary: Adultery

85 Johnson told me, with an amiable fondness, a little pleasing circumstance relative to this work. Mrs. Johnson, in whose judgement and taste he had great confidence, said to him, after a few numbers of *The Rambler* had come out, "I thought very well of you before; but I did not imagine you could have written any thing equal to this." Distant praise, from whatever quarter, is not so delightful as that of a wife whom a man loves and esteems.

Boswell, Life of Johnson (1750)

86 He [Johnson] talked of the heinousness of the crime of adultery, by which the peace of families was destroyed. He said, "Confusion of progeny constitutes the essence of the crime; and therefore a woman who breaks her marriage vows is much more criminal than a man who does it. A man, to be sure, is criminal in the sight of God: but he does not do his wife a very material injury', if he does not insult her; if, for instance, from mere wantonness of appetite, he steals privately to her chambermaid. Sir, a wife ought not greatly to resent this. I would not receive home a daughter who had run away from her husband on that account. A wife should study to reclaim her husband by more attention to please him. Sir, a man will not, once in a hundred instances, leave his wife and go to a harlot, if his wife has not been negligent of pleasing."

Boswell, Life of Johnson (1768)

87 A gentleman who had been very unhappy in marriage, married immediately after his wife died: Johnson said, it was the triumph of hope over experience.

Boswell, Life of Johnson (1770)

88 A question was started, whether the state of marriage was natural to man. *Johnson*. "Sir, it is so far from being natural for a man and woman to live in a state of marriage, that we find all the motives which they have for remaining in that connection, and the restraints which civilized society imposes to prevent separation, are hardly sufficient to keep them together."

Boswell, Life of Johnson (Mar, 31, 1772)

89 On Friday, May 7, I breakfasted with him at Mr. Thrale's in the Borough. While we were alone, I endeavoured as well as I could to apologise for a lady who had been divorced from her husband by act of Parliament. I said, that he had used her very ill, had behaved brutally to her, and that she could not continue to live with him without having her delicacy contaminated; that all affection for him was thus destroyed; that the essence of conjugal union being gone, there remained only a cold form, a mere civil obligation; that she was in the prime of life, with qualities to produce happiness; that these ought not to be lost; and, that the gentleman on whose account she was divorced had gained her heart while thus unhappily situated. Seduced, perhaps, by the charms of the lady in question, I thus attempted to palliate what I was sensible could not be justified; for when I had finished my harangue, my venerable friend gave me a proper check; "My dear Sir, never accustom your mind to mingle virtue and vice. The woman's a whore, and there's an end on't."

Boswell, Life of Johnson (May 7, 1773)

90 *Boswell*, "Pray, Sir, do you not suppose that there are fifty women in the world, with any one of whom a man may be as happy, as with any one woman in particular?" *Johnson*. "Ay, Sir, fifty thousand." *Boswell* "Then, Sir, you are not of opinion with some who imagine that certain men and certain women are made for each other; and that they cannot be happy if they miss their counterparts?" *Johnson*. "To be sure not, Sir. I believe marriages would in general be as happy, and often more so, if they were all made by the Lord Chancellor, upon a due consideration of characters and circumstances, without the parties having any choice in the matter,"

Boswell, Life of Johnson (Mar. 22, 1776)

- 91 We then talked of marrying women of fortune; and I mentioned a common remark, that a man may be, upon the whole, richer by marrying a woman with a very small portion, because a woman of fortune will be proportionally expensive; whereas a woman who brings none will be very moderate in expenses, *Johnson*. "Depend upon it, Sir, this is not true. A woman of fortune being used to the handling of money, spends it judiciously: but a woman who gets the command of money for the first time upon her marriage, has such a gust in spending it, that she throws it away with great profusion."

Boswell, Life of Johnson (Mar. 28, 1776)

- 92 *Johnson*. "Between a man and his wife, a husband's infidelity is nothing. They are connected by children, by fortune, by serious considerations of community. Wise married women don't trouble themselves about the infidelity in their husbands." *Boswell* "To be sure there is a great difference between the offence of infidelity in a man and that of his wife." *Johnson*. "The difference is boundless. The man imposes no bastards upon his wife."

Boswell, Life of Johnson (Oct. 10, 1779)

- 93 The domestic relations are founded on marriage, and marriage is founded upon the natural reciprocity or intercommunity ... of the sexes. This natural union of the sexes proceeds according to the mere animal nature... , or according to the law. The latter is marriage... , which is the union of two persons of different sex for life-long reciprocal possession of their sexual faculties. The end of

producing and educating children may be regarded as always the end of nature in implanting mutual desire and inclination in the sexes; but it is not necessary for the rightfulness of marriage that those who marry should set this before themselves as the end of their union, otherwise the marriage would be dissolved of itself when the production of children ceased.

Kant, Science of Right, 24

94 The relation of the married persons to each other is a relation of equality as regards the mutual possession of their persons, as well as of their goods.

Consequently marriage is only truly realized in monogamy; for in the relation of polygamy the person who is given away on the one side, gains only a part of the one to whom that person is given up, and therefore becomes a mere res. But in respect of their goods, they have severally the right to renounce the use of any part of them, although only by a special contract.... Hence the question may be raised as to whether it is not contrary to the equality of married persons when the law says in any way of the husband in relation to the wife, "he shall be thy master," so that he is represented as the one who commands, and she is the one who obeys. This, however, cannot be regarded as contrary to the natural equality of a human pair, if such legal supremacy is based only upon the natural superiority of the faculties of the husband compared with the wife, in the effectuation of the common interest of the household, and if the right to command is based merely upon this fact. For this right may thus be deduced from the very duty of unity and equality in relation to the *end* involved.

Kant, Science of Right, 26

- 95 It is a truth universally acknowledged, that a single man in possession of a good fortune, must be in want of a wife.

Jane Austen, Pride and Prejudice, I

- 96 'Tis pity learned virgins ever wed
With persons of no sort of education,
Or gentlemen, who, though well born and bred,
Grow tired of scientific conversation:
I don't choose to say much upon this head.
I'm a plain man, and in a single station.
But—Oh! ye lords of ladies intellectual,
Inform us truly, have they not hen-peck'd you all?

Byron, Don Juan, I, 22

- 97 Think you, if Laura had been Petrarch's wife.
He would have written sonnets all his life?

Byron, Don Juan, III, 8

- 98 Marriage results from the free surrender by both sexes of their personality—a personality in every possible way unique in each of the parties. Consequently, it ought not to be entered by two people identical in stock who are already acquainted and perfectly known to one another; for individuals in the same circle of relationship have no special personality of their own in contrast with that of others in the same circle. On the contrary, the parties should be drawn from separate families and their personalities should be different in origin. Since the very conception of marriage is that it is a freely undertaken ethical transaction, not a tie directly grounded in the physical organism and its desires, it follows that the

marriage of blood-relations runs counter to this conception and so also to genuine natural feeling.

Hegel, Philosophy of Right, 168

99 Familiarity, close acquaintance, the habit of common pursuits, should not precede marriage; they should come about for the first time within it. And their development has all the more value, the richer it is and the more facets it has.

Hegel, Philosophy of Right, Additions, Par. 168

100 It is a much greater shock to modesty to go to bed with a man whom one has only seen twice, after half a dozen words mumbled in Latin by a priest, than to yield in spite of one's self to a man whom one has adored for two years.

Stendhal, On Love, I, 21

101 Among aristocratic nations birth and fortune frequently make two such different beings of man and woman that they can never be united to each other. Their passions draw them together, but the condition of society and the notions suggested by it prevent them from contracting a permanent and ostensible tie. The necessary consequence is a great number of transient and clandestine connections. Nature secretly avenges herself for the constraint imposed upon her by the law's of man.

This is not so much the case when the equality of conditions has swept away all the imaginary or the real barriers that separated man from woman. No girl then believes that she cannot become the wife of the man who loves her, and this renders all breaches of morality before marriage very uncommon; for, whatever be the credulity

of the passions, a woman will hardly be able to persuade herself that she is beloved when her lover is perfectly free to marry her and does not.

Tocqueville, Democracy in America, Vol. II, III, II

102 *Mr. Weller.* Wen you're a married man, Samivel, you'll understand a good many things as you don't understand now'; but vether it's worth while goin' through so much, to learn so little, as the charity-boy said ven he got to the end of the alphabet, is a matter o' taste.

Dickens, Pickwick Papers, XXVII

103 *Mr. Micawber.* Accidents will occur in the best-regulated families; and in families not regulated by that pervading influence which sanctifies while it enhances the —a—I would say, in short, by the influence of Woman, in the lofty character of Wife, they may be expected w-ith confidence, and must be borne with philosophy.

Dickens, David Copperfield, XXVIII

104 Civilised men are largely attracted by the mental charms of women, by their wealth, and especially by their social position; for men rarely marry into a much lower rank. The men who succeed in obtaining the more beautiful women will not have a better chance of leaving a long line of descendants than other men with plainer wives, save the few who bequeath their fortunes according to primogeniture. With respect to the opposite form of selection, namely, of the more attractive men by the women, although in civilised nations women have free or almost free choice, whicli is not the ease with barbarous races, yet their choice is largely influenced by

the social position and wealth of the men; and the success of the latter in life depends much on their intellectual powers and energy, or on the fruits of these same powers in their forefathers.

Darwin, Descent of Man, III, 20

105 Man scans with scrupulous care the character and pedigree of his horses, cattle, and dogs before he matches them; but when he comes to his own marriage he rarely, or never, takes any such care. He is impelled by nearly the same motives as the lower animals, when they are left to their own free choice, though he is in so far superior to them that he highly values mental charms and virtues. On the other hand he is strongly attracted by mere wealth or rank. Yet he might by selection do something not only for the bodily constitution and frame of his offspring, but for their intellectual and moral qualities. Both sexes ought to refrain from marriage if they are in any marked degree inferior in body or mind; but such hopes are Utopian and will never be even partially realised until the laws of inheritance are thoroughly known. Everyone does good service, who aids towards this end.

Darwin, Descent of Man, III, 21

106 But you Communists would introduce community of women, screams the whole bourgeoisie in chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point aimed at is to do away with the status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no not to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the greatest pleasure in seducing each other's wives.

Bourgeois marriage is in reality a system of wives in common and thus at the most what the Communists might possibly be reproached with is that they desire to introduce, in substitution for a hypocritically concealed, an openly legalized, community of women.

Marx and Engels, Communist Manifesto, 11

107 What marriage may be in the ease of two persons of cultivated faculties, identical in opinions and purposes, between whom there exists that best kind of equality, similarity of powers and capacities with reciprocal superiority in them—so that each can enjoy the luxury of looking up to the other, and can have alternately the pleasure of leading and of being led in the path of development—I will not attempt to describe. To those who can conceive it, there is no need; to those who cannot, it would appear the dream of an enthusiast. But I maintain, with the profoundest conviction, that this, and this only, is the ideal of marriage; and that all opinions, customs, and institutions which favour any other notion of it, or

turn the conceptions and aspirations connected with it into any other direction, by whatever pretences they may be coloured, are relics of primitive barbarism. The moral regeneration of mankind will only really commence, when the most fundamental of the social relations is placed under the rule of equal justice, and when human beings learn to cultivate their strongest sympathy with an equal in rights and in cultivation.

Mill, Subjection of Women, IV

108 Natasha did not follow the golden rule advocated by clever folk, especially by the French, which says that a girl should not let herself go when she marries, should not neglect her accomplishments, should be even more careful of her appearance than when she was unmarried, and should fascinate her husband as much as she did before he became her husband. Natasha on the contrary had at once abandoned all her witchery, of which her singing had been an unusually powerful part. She gave it up just because it was so powerfully seductive. She took no pains with her manners or with delicacy of speech, or with her toilet, or to show herself to her husband in her most becoming attitudes, or to avoid inconveniencing him by being too exacting. She acted in contradiction to all those rules. She felt that the allurements instinct had formerly taught her to use would now be merely ridiculous in the eyes of her husband, to whom she had from the first moment given herself up entirely—that is, with her whole soul, leaving no corner of it hidden from him. She felt that her unity with her husband was not maintained by the poetic feelings that had attracted him to her, but by something else—indefinite but firm as the bond between her own body and soul.

Tolstoy, War and Peace, I Epilogue, X

109 If the purpose of dinner is to nourish the body a man who eats two dinners at once may perhaps get more enjoyment but will not attain his purpose, for his stomach will not digest the two dinners.

If the purpose of marriage is the family, the person who wishes to have many wives or husbands may perhaps obtain much pleasure, but in that case will not have a family.

If the purpose of food is nourishment and the purpose of marriage is the family, the whole question resolves itself into not eating more than one can digest, and not having more wives or husbands than are needed for the family—that is, one wife or one husband. Natasha needed a husband. A husband was given her and he gave her a family. And she not only saw no need of any other or better husband, but as all the powers of her soul were intent on serving that husband and family, she could not imagine and saw no interest in imagining how it would be if things were different.

Tolstoy, War and Peace, I Epilogue, X

110 Natasha and Pierre, left alone, also began to talk as only a husband and wife can talk, that is, with extraordinary' dearness and rapidity, understanding and expressing each other's thoughts in ways contrary to all rules of logic, without premises, deductions, or conclusions, and in a quite peculiar way. Natasha was so used to this kind of talk with her husband that for her it was the surest sign of something being wrong between them if Pierre followed a line of logical reasoning. When he began proving an>'thing, or talking argumentatively and calmly

and she, led on by his example, began to do the same, she knew' that they were on the verge of a quarrel.

Tolstoy, War and Peace, I Epilogue, XVI

111 Natasha would have had no doubt as to the greatness of Pierre's idea, but one thing disconcerted her. "Can a man so important and necessary' to society be also my husband? How did this happen?" She wished to express this doubt to him. "Now who could decide whether he is really cleverer than all the others?" she asked herself, and passed in review all those whom Pierre most respected. Judging by what he had said there was no one he had respected so highly as Platon Karataev.

"Do you know' what I am thinking about?" she asked. "About Platon Karataev. Would he have approved of you now, do you think?"

Pierre was not at all surprised at this question. He understood his wife's line of thought.

"Platon Karataev?" he repeated, and pondered, evidently sincerely trying to imagine Karataev's opinion on the subject. "He would not have understood... yet perhaps he would."

"I love you awfully!" Natasha suddenly said. "Awfully, awfully!"

"No, he would not have approved," said Pierre, after reflection. "What he would have approved of is our family life. He was always so anxious to find seemliness, happiness, and peace in everything, and I should have been proud to let him see us. There now—you talk of my absence, but you wouldn't believe what a special feeling I have for you after a separation. . .

"Yes, I should think..." Natasha began.

"No, it's not that. I never leave off loving you. And one couldn't love more, but this is something special.... Yes, of course—" he did not finish because their eyes meeting said the rest.

"What nonsense it is," Natasha suddenly exclaimed, "about honeymoons, and that the greatest happiness is at first! On the contrary, now is the best of all."

Tolstoy, War and Peace, I Epilogue, XVI

112 Even concubinage has been corrupted—by marriage.

Nietzsche, Beyond Good and Evil, IV, 123

113 Marriage is popular because it combines the maximum of temptation with the maximum of opportunity.

Shaw, Man and Superman, Maxims for Revolutionists

114 When two people are under the influence of the most violent, most insane, most delusive, and most transient of passions, they are required to swear that they will remain in that excited, abnormal, and exhausting condition continuously until death do them part.

Shaw, Getting Married, Pref.

115 *Liza*. There's lots of women has to make their husbands drunk to make them fit to live with. You see, it's like this. If a man has a bit of a conscience, it always takes him when he's sober; and then it makes him low-spirited. A drop of booze just takes that off and makes him happy.

Shaw, Pygmalion, III

116 Owing to the subjection of women there has in most civilized communities been no genuine companionship

between husbands and wives; their relation has been one of condescension on the one side and duty on the other. All the man's serious thoughts and purposes he has kept to himself, since robust thought might lead his wife to betray him. In most civilized communities women have been denied almost all experience of the world and of affairs. They have been kept artificially stupid and therefore uninteresting.

Russell, Marriage and Morals, III

117 It is... possible for a civilized man and woman to be happy in marriage, although if this is to be the ease a number of conditions must be fulfilled. There must be a feeling of complete equality on both sides; there must be no interference with mutual freedom; there must be the most complete physical and mental intimacy; and there must be a certain similarity in regard to standards of values. (It is fatal, for example, if one values only money while the other values only good work.) Given all these conditions. I believe marriage to be the best and most important relation that can exist between two human beings. If it has not often been realized hitherto, that is chiefly because husband and wife have regarded themselves as each other's policeman. If marriage is to achieve its possibilities, husbands and wives must learn to understand that whatever the law may say, in their private lives they must be free.

Russell, Marriage and Morals, IX

118 We know the very widespread custom of breaking a vessel or a plate on the occasion of a rothal; everyone present possesses himself of a fragment in symbolic

acceptance of the fact that he may no longer put forward any claim to the bride, presumably a custom which arose with monogamy.

Freud, General Introduction to Psycho-Analysts, XVI1

Chapter 3

LOVE

This chapter is divided into six sections: 3.1 The Nature, Kinds, and Power of Love, 3.2 Hate, 3.3 Sexual Love, 3.4 Friendship, 3.5 Charity and Mercy, and 3.6 Love of Country: Patriotism.

While many of the passages here quoted are so multifaceted in their significance that they could have been placed in two or more sections, the division of the texts holds up for the most part. We have placed first the passages that try to say what love is and what different types of love there are. That is immediately followed by quotations dealing with hate—the antithesis or, as some maintain, the correlate of love. Then come three sections each devoted to one of the principal kinds of love, and last a section dealing with a variant of one of these kinds.

The reader may wonder about the relation of this chapter to the one that precedes it. Conjugal love and the love between parents and children, treated in quotations included in the chapter on marriage, involve two of the types of love that are discussed here—sexual love and friendship. There are reasons for placing quotations of this sort in the chapter on Family; however, the reader interested in these subjects can consult the index under appropriate terms to find the passages in Chapter 2 that might have been included in Sections 3.4 and 3.5 of this chapter.

There is also a problem about the relation of this chapter to the one that follows it. In the opinion of many, love is an emotion and might, therefore, have been covered in one of the several sections of Chapter 4. But this would have done violence to the opinion of those who maintain that love involves components that are not emotional or passionate, and that certain types of love are the very antithesis of passion. In addition, the sheer quantity and variety of the quotations about love would have made it practically unfeasible to include them all without differentiation in a single section of Chapter 4.

...

3.1 The Nature, Kinds, and Power of Love

As the title of the section indicates, the passages assembled here are of three sorts: they try to say what love is or what distinctively characterizes it; they try to distinguish the various kinds of love and to relate them to one another; and they express diverse attitudes toward the power that love exerts over human beings.

Those who attempt to define what love is and what it is not cannot avoid facing questions about its relation to desire. Is the word "love" just a synonym for the word "desire"? Is desire only one of the components of love? Is the kind of desire that enters into love different from all the desires that are not transformed by love? Can there be love without desire? Different answers to such questions result in

different conceptions of love and different classifications of the kinds of love. After reading the passages here that deal with these matters, the reader might find it useful to turn to the quotations dealing with desire in Section 4.4 of the chapter that follows.

The fact that English has only one word to cover what other languages use at least three words to name complicates the interpretation of passages that attempt to distinguish different types of love. The Greek triad of *eris*, *philia*, and *agape*, and the Latin triad of *amor*, *delictio*, and *caritas*, name three distinct types of love that can only be designated in English by such phrases as "erotic or sexual love," "friendly love" "divine love" or "the love of God and of one's self and others as creatures of God." Though we do have single English words—"friendship" and "charity"—for the second and third types of love, our over-broad or over-narrow usage of them, together with a prevalent tendency to over-stress the sexual or erotic aspect of love, often obscures or distorts our understanding of the kinds of love and their relation to one another.

One consequence of these linguistic difficulties is the necessity of placing here not only passages that use the word "love" with maximum generality to cover every kind of love, but also passages that use the term in one or another more restricted sense without indicating the specific type of love that is intended. To have done otherwise would have required us to impose our interpretation upon the quotations. We felt that it was better to let the reader interpret them for himself, if he wishes, after he has explored the variety of loves that the quotations in later sections of this chapter discuss or exemplify.

The passages that express the attitudes writers have taken toward the force of love in human life range from

admiration bordering on awe or reverence to complaints verging on fear or dread. Though in most of these quotations the word "love" is employed without any qualifying adjective, the reader, we think, will discover for himself that most of them are referring to sexual or erotic love, especially those that express qualms about the effects of love.

■ ■ ■

- 1 And Ruth said, Intreat me not to leave thee, or to return from following after thee; for whither thou goest, I will go; and where thou lodgest, I will lodge; thy people shall be my people, and thy God my God:

Where thou dicst, will I die, and there will I be buried: the Lord do so to me, and more also, if ought but death part thee and me.

Ruth 1; 16-17

- 2 Set me as a seal upon thine heart, as a seal upon thine arm: for love is strong as death; jealousy is cruel as the grave: the coals thereof are coals of fire, which hath a most vehement flame.

Many waters cannot quench love, neither can the floods drown it: if a man would give all the substance of his house for love, it would utterly be contemned.

Song of Solomon 8:6-7

- 3 *Chorus.* Love unconquered in fight, love who falls on our havings.

You rest in the bloom of a girl's unwithered face.

You cross the sea, you are known in the wildest lairs.

Not the immortal gods can fly,
nor men of a day. Who has you within him is mad.

Sophocles, Antigone, 781

- 4 *Deianira*. How foolish one would be to climb into the ring
with Love and try to trade blows with him, like a boxer.
For he rules even the Gods as he pleases.

Sophocles, Women of Trachis, 441

- 5 *Chorus*. When in excess and past all limits Love doth
come, he brings not glory or repute to man; but if the
Cyprian queen in moderate might approach, no goddess
is so full of charm as she.

Euripides, Medea, 627

- 6 *Chorus*. Cypris, you guide men's hearts
and the inflexible
hearts of the Gods and with you
comes Love with the flashing wings,
comes Love with the swiftest of wings.
Over the earth he flies
and the loud-echoing salt-sea.
He bewitches and maddens the heart
of the victim he swoops upon.
He bewitches the race of the mountain-hunting
lions and beasts of the sea,
and all the creatures that earth feeds,
and the blazing sun sees—
and man, too—
over all you hold kingly power,
Love, you are only ruler
over all these.

Euripides, Hippolytus, 1268

- 7 *Socrates*. The soul of the lover will never forsake his beautiful one, whom he esteems above all; he has forgotten mother and brethren and companions, and he thinks nothing of the neglect and loss of his property; the rules and proprieties of life, on which he formerly prided himself, he now despises, and is ready to sleep like a servant, wherever he is allowed, as near as he can to his desired one, who is the object of his worship, and the physician who can alone assuage the greatness of his pain.

Plato, Phaedrus, 252A

- 8 *Pausanias*. Not every love, but only that which has a noble purpose, is noble and worthy of praise. The Love who is the offspring of the common Aphrodite is essentially common, and has no discrimination, being such as the meaner sort of men feel, and is apt to be of women as well as of youths, and is of the body rather than of the soul—the most foolish beings are the objects of this love which desires only to gain an end, but never thinks of accomplishing the end nobly, and therefore does good and evil quite indiscriminately. The goddess who is his mother is far younger than the other, and she was born of the union of the male and female, and partakes of both.

But the offspring of the heavenly Aphrodite is derived from a mother in whose birth the female has no part,—she is from the male only; this is that love which is of youths, and the goddess being older, there is nothing of wantonness in her. Those who are inspired by this love turn to the male, and delight in him who is the more valiant and intelligent nature; any one may recognise the

pure enthusiasts in the very character of their attachments. For they love not boys, but intelligent beings whose reason is beginning to be developed, much about the time at which their beards begin to grow. And in choosing young men to be their companions, they mean to be faithful to them, and pass their whole life in company with them, not to take them in their inexperience, and deceive them, and play the fool with them, or run away from one to another of them. But the love of young boys should be forbidden by law, because their future is uncertain; they may turn out good or bad, either in body or soul, and much noble enthusiasm may be thrown away upon them.

Plato, Symposium, 181A

- 9 "What then is Love?" I (Socrates) asked; "Is he mortal?" "No." "What then?" "As in the former instance, he is neither mortal nor immortal, but in a mean between the two." "What is he, Diotima?" "He is a great spirit, and like all spirits he is intermediate between the divine and the mortal." "And what," I said, "is his power?" "He interprets," she [Diotima] replied, "between gods and men, conveying and taking across to the gods the prayers and sacrifices of men, and to men the commands and replies of the gods; he is the mediator who spans the chasm which divides them, and therefore in him all is bound together, and through him the arts of the prophet and the priest, their sacrifices and mysteries and charms, and all prophecy and incantation, find their way. For God mingles not with man; but through Love all the intercourse and converse of god with man, whether awake or asleep, is carried on."

Plato, Symposium, 202B

10 “For love, Socrates, is not, as you imagine, the love of the beautiful only.” “What then?” “The love of generation and of birth in beauty.” “Yes ” I said. “Yes, indeed,” she [Diotima] replied. “But why of generation?” “Because to the mortal creature, generation is a sort of eternity and immortality,” she replied; “and if, as has been already admitted, love is of the everlasting possession of the good, all men will necessarily desire immortality together with good: Wherefore love is of immortality.”

All this she taught me at various times when she spoke of love. And I remember her once saying to me, “What is the cause, Socrates, of love, and the attendant desire? See you not how all animals, birds, as well as beasts, in their desire of procreation, are in agony when they take the infection of love, which begins with the desire of union; whereto is added the care of offspring, on whose behalf the weakest are ready to battle against the strongest even to the uttermost, and to die for them, and will let themselves be tormented with hunger or suffer anything in order to maintain their young. Man may be supposed to act thus from reason; but why should animals have these passionate feelings? Can you tell me why?” Again I replied that I did not know. She said to me: “And do you expect ever to become a master in the art of love, if you do not know this?” “But I have told you already, Diotima, that my ignorance is the reason why I come to you; for I am conscious that I want a teacher; tell me then the cause of this and of the other mysteries of love.” “Marvel not,” she said, “if you believe that love is of the immortal, as we have several times acknowledged; for here again, and on the same principle too, the mortal

nature is seeking as far as is possible to be everlasting and immortal: and this is only to be attained by generation, because generation always leaves behind a new existence in the place of the old. Nay even in the life of the same individual there is succession and not absolute unity: a man is called the same, and yet in the short interval which elapses between youth and age, and in which every animal is said to have life and identity, he is undergoing a perpetual process of loss and reparation—hair, flesh, bones, blood, and the whole body are always changing. Which is true not only of the body, but also of the soul, whose habits, tempers, opinions, desires, pleasures, pains, fears, never remain the same in any one of us, but are always coming and going; and equally true of knowledge, and what is still more surprising to us mortals, not only do the sciences in general spring up and decay, so that in respect of them we are never the same; but each of them individually experiences a like change. For what is implied in the word 'recollection', but the departure of knowledge, which is ever being forgotten, and is renewed and preserved by recollection, and appears to be the same although in reality new, according to that law of succession by which all mortal things are preserved, not absolutely the same, but by substitution, the old worn-out mortality leaving another new and similar existence behind—unlike the divine, which is always the same and not another? And in this way, Socrates, the mortal body, or mortal anything, partakes of immortality; but the immortal in another way. Marvel not then at the love which all men have of their offspring; for that universal love and interest is for the sake of immortality."

Plato, Symposium, 206B

- 11 The pleasure of the eye is the beginning of love. For no one loves if he has not first been delighted by the form of the beloved, but he who delights in the form of another does not, for all that, love him, but only does so when he also longs for him when absent and craves for his presence.

Aristotle, Ethics, 1167a3

- 12 Those who have done a service to others feel friendship and love for those they have served even if these are not of any use to them and never will be. This is what happens with craftsmen too; every man loves his own handiwork better than he would be loved by it if it came alive; and this happens perhaps most of all with poets; for they have an excessive love for their own poems, doting on them as if they were their children. This is what the position of benefactors is like; for that which they have treated well is their handiwork, and therefore they love this more than the handiwork does its maker. The cause of this is that existence is to all men a thing to be chosen and loved, and that we exist by virtue of activity (that is, by living and acting), and that the handiwork is in a sense, the producer in activity; he loves his handiwork, therefore, because he loves existence. And this is rooted in the nature of things; for what he is in potentiality, his handiwork manifests in activity.

Aristotle, Ethics, 1167b32

- 13 It is pleasant to be loved, for this . . . makes a man see himself as the possessor of goodness, a thing that every being that has a feeling for it desires to possess: to be

loved means to be valued for one's own personal qualities.

Aristotle, Rhetoric, 1371a18

14 Mother of the Aeneadae, darling of men and gods, increase-giving Venus, who beneath the gliding signs of heaven fittest with thy presence the ship-carrying sea, the corn-bearing lands, since through thee every kind of living things is conceived, rises up and beholds the light of the sun. Before thee, goddess, flee the winds, the clouds of heaven; before thee and thy advent; for thee earth manifold in works puts forth sweet-smelling flowers; for thee the levels of the sea do laugh and heaven propitiated shines with outspread light. For soon as the vernal aspect of day is disclosed, and the birth-favouring breeze of Favonius unbarred is blowing fresh, first the fowls of the air, O lady, show signs of thee and thy entering in, thoroughly smitten in heart by thy power. Next the wild herds bound over The glad pastures and swim the rapid rivers: in such wise each made prisoner by thy charms follows thee with desire, whither thou goest to lead it on. Yes, throughout seas and mountains and sweeping rivers and leafy homes of birds and grassy plains, striking fond love into the breasts of all thou constrainest them each after its kind to continue their races with desire.... Thou... art sole mistress of the nature of things and without thee nothing rises up into the divine borders of light, nothing grows to be glad or lovely.

Lucretius, Nature of Things, I

15 The passion we usually call love (and, heaven help me! I can come up with no other name for it) is so trivial that I

can think of nothing to compare it with.

Cicero, Disputations, IV, 32

16 Love conquers all; and we must yield to Love.

Virgil, Eclogues, X

17 Not only man's imperial race, but they
That wing the liquid air, or swim the sea,
Or haunt the desert, rush into the flame:
For Love is lord of all, and is in all the same.
 'Tis with this rage, the mother-lion stung,
Scours o'er the plain, regardless of her young:
Demanding rites of love, she sternly stalks.
And hunts her lover in his lonely walks.
 'Tis then the shapeless bear his den forsakes;
In woods and fields, a wild destruction makes:
Boars with their tusks; to battle tigers move,
Enraged with hunger, more enraged with love.
Then woe to him, that, in the desert land
Of Libya, travels o'er the burning sand!
The stallion snuffs the well-known scent afar,
And snorts and trembles for the distant mare;
Nor bits nor bridles can his rage restrain,
And rugged rocks are interposed in vain:
He makes his way o'er mountains, and contemns
Unruly torrents, and unforded streams.
The bristled boar, who feels the pleasing wound,
New grinds his arming tusks, and digs the ground.
The sleepy lecher shuts his little eyes;
About his churning chaps the frothy bubbles rise:
He rubs his sides against a tree; prepares
And hardens both his shoulders for the wars.

What did the youth, when Love's unerring dart
Transfixed his liver and inflamed his heart?
Alone, by night, his watery way he took;
About him, and above the billows broke;
The sluices of the sky were open spread.
And rolling thunder rattled o'er his head;
The raging tempests called him back in vain,
And every boding omen of the main:
Nor could his kindred, nor the kindly force
Of weeping parents, change his fatal course;
No, not the dying maid, who must deplore
His floating carcase on the Sestian shore.

Virgil, Georgics, III

- 18 Now everyone recognizes that the emotional state for which we make this "Love" responsible rises in souls aspiring to be knit in the closest union with some beautiful object, and that this aspiration takes two forms, that of the good whose devotion is for beauty itself, and that other which seeks its consummation in some vile act.... It is sound, I think, to find the primal source of Love in a tendency of the Soul towards pure beauty, in a recognition, in a kinship, in an unreasoned consciousness of friendly relation.

Plotinus, Third Ennead, V, I

- 19 Those that love beauty of person without carnal desire love for beauty's sake; those that have—for women, of course—the copulative love, have the further purpose of self-perpetuation: as long as they are led by these motives, both are on the right path, though the first have taken the nobler way.

Plotinus, Third Ennead, V, 1

20 A body tends by its weight towards the place proper to it —weight does not necessarily tend towards the lowest place but towards its proper place. Fire tends upwards, stone downwards. By their weight they are moved and seek their proper place. Oil poured over water is borne on the surface of the water, water poured over oil sinks below the oil: it is by their weight that they are moved and seek their proper place. Things out of their place are in motion: they come to their place and are at rest. My love is my weight: wherever I go my love is what brings me there.

Augustine, Confessions, XIII, 9

21 If we were beasts, we should love the fleshly and sensual life, and this would be our sufficient good; and when it was well with us in respect of it, we should seek nothing beyond. In like manner, if we were trees, we could not, indeed, in the strict sense of the word, love anything; nevertheless we should seem, as it were, to long for that by which we might become more abundantly and luxuriantly fruitful. If we were stones, or waves, or wind, or flame, or anything of that kind, we should want, indeed, both sensation and life, yet should possess a kind of attraction towards our own proper position and natural order. For the specific gravity of bodies is, as it were, their love, whether they are carried downwards by their weight, or upwards by their levity. For the body is borne by its gravity, as the spirit by love, whithersoever it is borne. But we are men, created in the image of our Creator, Whose eternity is true, and Whose truth is eternal, Whose love is eternal and true.

Augustine, City of God, XI, 28

22 Two cities have been formed by two loves: the earthly by the love of self, even to the contempt of God: the heavenly by the love of God, even to the contempt of self. The former, in a word, glories in itself, the latter in the Lord. For the one seeks glory from men; but the greatest glory of the other is God, the witness of conscience.

Augustine, City of God, XIV, 28

23 Through Love the universe with constancy makes changes all without discord: earth's elements, though contrary, abide in treaty bound: Phoebus in his golden car leads up the glowing day; his sister rules the night that Hesperus brought: the greedy sea confines its waves in bounds, lest the earth's borders be changed by its beating on them: all these are firmly bound by Love, which rules both earth and sea, and has its empire in the heavens too. If Love should slacken this its hold, all mutual love would change to war; and these would strive to undo the scheme which now their glorious movements carry out with trust and with accord. By Love are peoples too kept bound together by a treaty which they may not break. Love binds with pure affection the sacred tie of wedlock, and speaks its bidding to all trusty friends. O happy race of mortals, if your hearts are ruled as is the universe, by Love!

Boethius, Consolation of Philosophy, 11

24 The good we receive from God is twofold, the good of nature, and the good of grace. Now the fellowship of natural goods bestowed on us by God is the foundation of natural love, in virtue of which not only man, so long as

his nature remains unimpaired, loves God above all things and more than himself, but also every single creature, each in its own way, that is, either by an intellectual, or by a rational, or by an animal, or at least by a natural love, as stones do, for instance, and other things bereft of knowledge, because each part naturally loves the common good of the whole more than its own particular good. This is evidenced by its operation, since the principal inclination of each part is towards common action conducive to the usefulness of the whole. It may also be seen in political virtues according to which sometimes the citizens suffer damage even to their own property and persons for the sake of the common good. And so much more is this realized with regard to the friendship of charity which is based on the fellowship of the gifts of grace. Therefore man ought, out of charity, to love God, Who is the common good of all. more than himself, since happiness is in God as in the universal and fountain-head principle of all who are able to have a share of that happiness.

Aquinas, Summa Theologica, II-II, 26, 3

- 25 It is natural to a man to love his own work (thus it is to be observed that poets love their own poems); and the reason is that we love to be and to live, and these are made manifest especially in our action.

Aquinas, Summa Theologica, II-II, 26, 12

- 26 [Everything] hath its specific love, as, for example, the simple bodies have a love which has an innate affinity to their proper place; and that is why earth ever drops to the centre; but the love of fire is for the upper

circumference, under the heaven of the moon, and therefore it ever riseth thereto.

Primary compound bodies, like the minerals, have a love for the place where their generation is ordained; and therein they grow, and thence draw vigour and power. Whence we see the magnet ever receive power from the direction of its generation.

Plants, which are the primary living things, have a more manifest love for certain places, according as their composition requires; and therefore we see certain plants almost always gather along watercourses, and certain on the ridges of mountains, and certain on slopes and at the foot of hills, the which, if we transplant them, either die altogether or live as if in gloom, like things parted from the place dear to them.

As for the brute animals, not only have they a more manifest love for their place, but we see that they love one another.

Men have their proper love for perfect and comely things. And because man (though his whole form be one sole substance) has in himself, by his nobility, something of the nature of each of these things, he may have all these loves, and has them all indeed. For in virtue of the nature of the simple body, which predominates in the subject, he naturally loves to descend; and therefore when he moves his body upward it is more toilsome. By the second nature, of a complex body, he loves the place and further the time of his generation, and therefore everyone is naturally of more efficient body at the place where he was generated, and at the time of his generation, than at any other....

And by the third nature, to wit that of plants, man hath love for certain food, not in so far as it affects the

sense but in so far as it is nutritious; and such food maketh the working of this nature most perfect; and other food does not so, but makes it imperfect. And therefore we see that some certain food shall make men fair of face and stout of limb, and of a lively colour; and certain other shall work the contrary' of this. And in virtue of the fourth nature, that of animals, to wit the sensitive, man hath another love whereby he loveth according to sensible appearance, like to a beast; and this is the love in man which most needeth a ruler, because of its overmastering operation, especially in the delight of taste and touch. And by the fifth and last nature, that is to say the truly human or, rather say, the angelic, to wit the rational, man hath love to truth and to virtue; and from this love springeth the true and perfect friendship, drawn from nobility.

Dante, Convivio, III, 3

27 *Virgil*. Nor Creator, nor creature, my son, was ever without love, either natural or rational; and this thou knowest.

The natural is always without error; but the other may err through an evil object, or through too little or too much vigour.

While it is directed to the primal goods, and in the secondary, moderates itself, it cannot be the cause of sinful delight;

but when it is turned awry to evil, or speeds towards the good with more or less care than it ought, against the Creator his creature works. Hence thou mayst understand that love must be the seed of every virtue in you, and of every deed that deserves punishment.

Now inasmuch as love can never turn its face from the weal of its subject, all things are safe from self-hatred;

and because no being can be conceived as existing alone in isolation from the Prime Being, every affection is cut off from hate of him.

It follows, if I judge well in my division, that the evil we love is our neighbour's, and this love arises in three ways in your clay.

There is he who through his neighbour's abasement hopes to excel, and solely for this desires that he be cast down from his greatness; there is he who fears to lose power, favour, honour and fame because another is exalted, wherefore he groweth sad so that he loves the contrary; and there is he who seems to be so shamed through being wronged, that he becomes greedy of vengeance, and such must needs seek another's hurt.

This threefold love down below is mourned for: now I desire that thou understand of the other, which hastes toward good in faulty degree. Each one apprehends vaguely a good wherein the mind may find rest, and desires it; wherefore each one strives to attain thereto.

If lukewarm love draw you towards the vision of it or the gaining of it, this cornice, after due penitence, torments you for it.

Another good there is, which maketh not men happy; 'tis not happiness, 'tis not the good essence, the fruit and root of all good.

The love that abandons itself too much to this, is mourned for above us in three circles: but how it is distinguished in three divisions, I do not say, in order that thou search for it of thyself.

Dante, Purgatorio, XVII, 91

28 "Master, my vision is so quickened in thy light, that I discern clearly all that thy discourse imports or describes;

therefore I pray thee, sweet Father dear, that thou define love to me, to which thou dost reduce every good work and its opposite."

"Direct," said he [Virgil], "towards me the keen eyes of the understanding, and the error of the blind who make them guides shall be manifest to thee.

The mind which is created quick to love, is responsive to everything that is pleasing, soon as by pleasure it is awakened into activity.

Your apprehensive faculty draws an impression from a real object, and unfolds it within you, so that it makes the mind turn thereto.

And if, being turned, it inclines towards it, that inclination is love; that is nature, which through pleasure is bound anew within you.

Then, even as fire moves upward by reason of its form, whose nature it is to ascend, there where it endures longest in its material;

so the enamoured mind falls to desire, which is a spiritual movement, and never rests until the object of its love makes it rejoice.

Now may be apparent to thee, how deeply the truth is hidden from the folk who aver that every act of love is in itself a laudable thing,

because, forsooth, its material may seem always to be good; but not every' imprint is good, albeit the wax may be good."

"Thy words and my attendant wit," I answered him, "have made love plain to me, but that has made me more teeming with doubt;

for if love is offered to us from without, and the soul walks with no other foot, it is no merit of hers whether she go straight or crooked."

And he to me: "So far as reason sees here, I can tell thee; from beyond that point, ever await Beatrice, for 'tis a matter of faith.

Every substantial form, which is distinct from matter and is in union with it, has a specific virtue contained within itself

which is not perceived save in operation, nor is manifested except by its effects, just as life in a plant by the green leaves.

Therefore man knows not whence the understanding of the first cognitions may come, nor the inclination to the prime objects of appetite,

which are in you, even as the instinct in bees to make honey; and this prime will admits no desert of praise or of blame.

Now in order that to this will every other may be related, innate with you is the virtue which giveth counsel, and ought to guard the threshold of assent.

This is the principle whence is derived the reason of desert in you, according as it garners and winnows good and evil loves.

Those who in their reasoning went to the foundation, perceived this innate freedom, therefore they left ethics to the world.

Wherefore suppose that every love which is kindled within you arise of necessity, the power to arrest it is within you."

Dante, Purgatorio, XVIII, 10

29 So fared it with this rash and hardy knight [Troilus].
Who was a king's son of most high degree.
For though he thought that nothing had the might
To curb the heart of such a one as he,

Yet with a look, no longer was he free.
And he who stood but now in pride above
All men, at once was subject most to Love,
 And now I bid you profit by this man,
Ye worthy folk, and wise and proud withal,
And scorn not Love, he who so lightly can
The freedom of rebellious hearts enthrall;
For still the common fate on you must fall.
That love, at nature's very heart indwelling,
Shall bind all things by nature's might compelling.
 That this is true hath oftentimes been proved,
For well you know, and in wise books may read,
That men of greatest worth have deepest loved.
And none so powerful in word or deed,
But he the greater power of love must heed,
For all his fame or high nobility;
Thus hath it been and ever shall it be!
 And fitting is it that it should be so,
For wisest men have most with love been pleased,
And those that dwelt in sorrow and in woe.
By love have often been consoled and eased,
And cruel wrath by love hath been appeased;
For love lends lustre to an honorable name,
And saves mankind from wickedness and shame.

Chaucer, Troilus and Cressida, I, 33-36

30 [Her] thought was this, "Alas, since I [Cressida] am free,
Should I now love and risk my happy state And maybe
put in bonds my liberty?
What folly such a course to contemplate!
Am I not satisfied to see the fate
Of others, with their fear and joy and pain?
Who loveth not, no cause hath to complain,

"For lovers ever lead a stormy life,
And have done so since loving was begun.
For always some distrust and foolish strife
There is in love, some cloud across the sun.
Then nothing by us women can be done,
But weep in wretchedness and sit and think,
'This is our lot, the cup of woe to drink!'

"And slanderous tongues, they are so very quick
To do us harm, and men are so untrue.
And once they're satisfied, they soon grow sick
Of ancient love and look for something new!
But when all's done, then what can women do!
These men at first their love like mad will spend.
But sharp attacks oft weaken at the end.

"Full often it hath been exemplified,
The treason that to women men will show;
And that's the end, when such a love hath died.
For what becomes of it, when it doth go.
No living creature on this earth can know.
For then there's nothing left to love or spurn;
What once was naught, to nothing doth return.

"And if I love, how busy must I be
To guard against all idle people's chatter.
And fool them that they see no fault in me.
For true or not, to them it doesn't matter,
If but their lying tales amuse or flatter;
For who can stop the wagging of a tongue,
Or sound of bells the while that they are rung!"

Chaucer, Troilus and Cressida, II, 111-115

31 O happy light, of which the beams so clear
Illume the third expanse of heaven's air.
Loved of the sun, of Jove the daughter dear,

O Love's Delight, thou goodly one and fair,
In gentle hearts abiding everywhere,
Thou primal cause of joy and all salvation.
Exalted be thy name through all creation!

In heaven and hell, on earth and salty sea,
All creatures answer to thy might supernal,
For man, bird, beast, fish, herb and leafy tree.
Their seasons know from thy breath ever vernal,
God loves, and grants that love shall be eternal.
All creatures in the world through love exist,
And lacking love, lack all that may persist.

Mover of Jove to that so happy end,
Through which all earthly creatures live and be,
When mortal love upon him thou didst send,
For as thou wilt, the power lies with thee
Of case in love or love's adversity,
And in a thousand forms is thy descent
On earth, in love to favor or prevent!

Fierce Mars for thee must subjugate his ire,
All hearts from thee receive their fates condign;
Yet ever when they feel thy sacred fire,
In dread of shame, their vices they resign,
And gentler grow, more brave and more benign;
And high or low, as each in his rank strives,
All owe to thee the joys of all their lives.

Houses and realms in greater unity,
And faith in friendship thou canst make to grow.
Thou understandest likings hard to see.
Which cause much wonder that they should be so,
As when in puzzlement, one seeks to know.
Why this loves that, why she by him is sought.
Why one and not the other fish is caught.

From thee comes law for all the universe,
And this I know, as all true lovers see,
That who opposeth, ever hath the worse.
Now, lady bright, in thy benignity,
Help me to honor those who honor thee,
And teach me, clerk of love, that I may tell
The joy of those who in thy service dwell.

Chaucer, Troilus and Cressida, III, 1-6

- 32 *Arcita*. Know you not well the ancient writer's saw
Of 'Who shall give a lover any law?'
Love is a greater law, aye by my pan,
Than man has ever given to earthly man.

Chaucer, Canterbury Tales: Knight's Tale

- 33 *Proteus*. O, how this spring of love resembleth
The uncertain glory of an April day.
Which now shows all the beauty of the sun,
And by and by a cloud takes all away!

Shakespeare, Two Gentlemen of Verona, I, iii, 84

- 34 *Biron*. Love, first learned in a lady's eyes.
Lives not alone immured in the brain;
But, with the motion of all elements,
Courses as swift as thought in every power.
And gives to every power a double power,
Above their functions and their offices.
It adds a precious seeing to the eye;
A lover's eyes will gaze an eagle blind;
A lover's ear will hear the lowest sound,
When the suspicious head of theft is stopp'd:
Love's feeling is more soft and sensible

Than are the tender horns of cockled snails;
Love's tongue proves dainty Bacchus gross in taste:
For valour, is not Love a Hercules,
Still climbing trees in the Hesperides?
Subtle as Sphinx; as sweet and musical
As bright Apollo's lute, strung with his hair;
And when Love speaks, the voice of all the gods
Make heaven drowsy with the harmony.
Never durst poet touch a pen to write
Until his ink were temper'd with Love's sighs;
O, then his lines would ravish savage ears
And plant in tyrants mild humility.

Shakespeare, Love's Labour's Lost, IV, iii, 327

35 *Juliet*. Dost thou love me? I know thou wilt say "Ay,"
And I will take thy word: yet, if thou swear'st.
Thou mayst prove false; at lovers' perjuries,
They say, Jove laughs. O gentle Romeo,
If thou dost love, pronounce it faithfully:
Or if thou think'st I am too quickly won,
I'll frown and be perverse and say thee nay.
So thou wilt woo; but else, not for the world.
In truth, fair Montague, I am too fond,
And therefore thou mayst think my 'haviour light;
But trust me, gentleman, I'll prove more true
Than those that have more cunning to be strange.

Shakespeare, Romeo and Juliet, II, ii, 90

36 *Lysander*. Ay me! for aught that I could ever read,
Could ever hear by tale or history.
The course of true love never did run smooth;
But, either it was different in blood—

Hermione. O cross! too high to be enthrall'd to low.

Lys. Or else misgraffed in respect of years—

Her. O spite! too old to be engaged to young.

Lys. Or else it stood upon the choice of friends—

Her, O hell! to choose love by another's eyes.

Lys. Or, if there were a sympathy in choice.

War, death, or sickness did lay siege to it.

Making it momentary as a sound.

Swift as a shadow, short as any dream;

Brief as the lightning in the collied night.

That, in a spleen, unfolds both heaven and earth, And ere
a man hath pow-er to say "Behold!"

The jaws of darkness do devour it up:

So quick bright things come to confusion.

Shakespeare, Midsummer-Night's Dream, I, i, 132

37 *Lorenzo.* The moon shines bright: in such a night as this,
When the sweet wind did gently kiss the trees
And they did make no noise, in such a night
Troilus methinks mounted the Trojan walls
And sigh'd his soul toward the Grecian tents.
Where Cressid lay that night.

Jessica. In such a night
Did Thisbe fearfully o'ertrip the dew
And saw the lion's shadow ere himself
And ran dismay'd away.

Lor. In such a night
Stood Dido with a willow in her hand
Upon the wild sea banks, and waft her love
To come again to Carthage.

Jes. In such a night
Medea gather'd the enchanted herbs
That did renew old AEson.

Lor. In such a night
Did Jessica steal from the wealthy Jew,
And with an unthrift love did run from Venice
As far as Belmont.

Jes. In such a night
Did young Lorenzo swear he loved her well.
Stealing her soul with many vows of faith
And ne'er a true one.

Lor. In such a night
Did pretty Jessica, like a little shrew.
Slander her love, and he forgave it her.

Jes. I would out-night you, did no body come;
But, hark, I hear the footing of a man.

Shakespeare, Merchant of Venice, V, i, 1

38 *Benedick.* I do much wonder that one man, seeing how much another man is a fool when he dedicates his behaviours to love, will, after he hath laughed at such shallow follies in others, become the argument of his own scorn by falling in love: and such a man is Claudio. I have known when there was no music with him but the drum and the fife; and now had he rather hear the tabor and the pipe: I have known when he would have walked ten mile a-foot to see a good armour; and now will he lie ten nights awake, carving the fashion of a new doublet. He was wont to speak plain and to the purpose, like an honest man and a soldier; and now is he turned orthography; his words are a very fantastical banquet, just so many strange dishes. May I be so converted and see with these eyes? I cannot tell; I think not: I will not be sworn but love may transform me to an oyster; but I'll take my oath on it, till he have made an oyster of me, he shall never make me such a fool. One woman is fair, yet I

am well; another is wise, yet I am well; another virtuous, yet I am well; but till all graces be in one woman, one woman shall not come in my grace. Rich she shall be, that's certain; wise, or I'll none; virtuous, or I'll never cheapen her; fair, or I'll never look on her; mild, or come not near me; noble, or not I for an angel; of good discourse, an excellent musician, and her hair shall be of what colour it please God.

Shakespeare, Much Ado About Nothing, II, iii, 7

- 39 *Rosalind*. Love is merely a madness, and, I tell you, deserves as well a dark house and a whip as madmen do: and the reason why they are not so punished and cured is that the lunacy is so ordinary that the whippers are in love too.

Shakespeare, As You Like It, III, ii, 420

- 40 *Rosalind*. Why, how now, Orlando! where have you been all this while? You a lover! An you serve me such another trick, never come in my sight more.

Orlando. My fair Rosalind, I come within an hour of my promise.

Ros. Break an hour's promise in love! He that will divide a minute into a thousand parts and break but a part of the thousandth part of a minute in the affairs of love, it may be said of him that Cupid hath clapped him o' the shoulder, but I'll warrant him heart-whole.

Shakespeare, As You Like It, IV, i, 38

- 41 *Rosalind*. The poor world is almost six thousand years old, and in all this time there was not any man died in his own person, *videlicet*, in a love-cause. Troilus had his brains

dashed out with a Grecian club; yet he did what he could to die Before, and he is one of the patterns of love. Leander, he would have lived many a fair year, though Hero had turned nun, if it had not been for a hot midsummer night; for, good youth, he went but forth to wash him in the Hellespont and being taken with the cramp was drowned: and the foolish chroniclers of that age found it was "Hero of Sestos." But these are all lies: men have died from time to time and worms have eaten them, but not for love.

Shakespeare, As You Like It, IV, i, 94

42 *Othello*. Most potent, grave, and reverend signiors,
My very noble and approved good masters,
That I have ta'en away this old man's daughter,
It is most true; true, I have married her:
The very head and front of my offending
Hath this extent, no more. Rude am I in my speech,
And little bless'd with the soft phrase of peace.
For since these arms of mine had seven years' pith,
Till now some nine moons wasted, they have used
Their dearest action in the tented field,
And little of this great world can I speak
More than pertains to feats of broil and battle,
And therefore little shall I grace my cause
In speaking for myself. Yet, by your gracious patience,
I will a round unvarnish'd tale deliver
Of my whole course of love; what drugs, what charms,
What conjuration, and what mighty magic,
For such proceeding I am charged withal,
I won his daughter. . . .

Her father loved me; oft invited me;
Still question'd me the story of my life,

From year to year, the battles, sieges, fortunes,
That I have pass'd.
I ran it through, even from my boyish days,
To the very moment that he bade me tell it;
Wherein I spake of most disastrous chances,
Of moving accidents by flood and field,
Of hair-breadth scapes i' the imminent deadly breach,
Of being taken by the insolent foe
And sold to slavery, of my redemption thence
And portance in my travels' history;
Wherein of antres vast and deserts idle,
Rough quarries, rocks, and hills whose heads touch
heaven,
It was my hint to speak—such was the process
And of the Cannibals that each other eat,
The Anthropophagi and men whose heads
Do grow beneath their shoulders. This to hear
Would Desdemona seriously incline;
But still the house-affairs would draw her thence,
Which ever as she could with haste dispatch,
She'd come again, and with a greedy ear
Devour up my discourse; which I observing,
Took once a pliant hour, and found good means
To draw from her a prayer of earnest heart
That I would all my pilgrimage dilate,
Whereof by parcels she had something heard,
But not intentively. I did consent,
And often did beguile her of her tears
When I did speak of some distressful stroke
That my youth suffer'd. My story being done,
She gave me for my pains a world of sighs.
She swore, in faith, 'twas strange, 'twas passing strange,
'Twas pitiful, 'twas wondrous pitiful.

She wish'd she had not heard it, yet she wish'd
That heaven had made her such a man. She thank'd me.
And bade me, if I had a friend that loved her,
I should but teach him how to tell my story.
And that would woo her. Upon this hint I spake:
She loved me for the dangers I had pass'd,
And I loved her that she did pity them.
This only is the witchcraft I have used.
Here comes the lady; let her witness it.

Shakespeare, Othello, I, iii, 76

- 43 *Othello*. Excellent wretch! Perdition catch my soul,
But I do love thee! and when I love thee not.
Chaos is come again.

Shakespeare, Othello, III, iii, 90

- 44 *Othello*. I pray you, in your letters,
When you shall these unlucky deeds relate.
Speak of me as I am; nothing extenuate.
Nor set down aught in malice. Then must you speak
Of one that loved not wisely but too well;
Of one not easily jealous, but being wrought
Perplex'd in the extreme; of one whose hand,
Like the base Indian, threw a pearl away Richer than all
his tribe.

Shakespeare, Othello, V, ii, 340

- 45 *Cleopatra*. If it be love indeed, tell me how much.
Antony. There's beggary in the love than can be
reckon'd.
Cleo. I'll set a bourn how far to be beloved.

Ant. Then must thou needs find out new heaven, new earth.

Shakespeare, Antony and Cleopatra, I, i, 14

46 Not mine own fears, nor the prophetic soul
Of the wide world dreaming on things to come.
Can yet the lease of my true love control.
Supposed as forfeit to a confined doom.
The mortal moon hath her eclipse endured,
And the sad augurs mock their own presage;
Incertainties now crown themselves assured,
And peace proclaims olives of endless age.
Now with the drops of this most balmy time
My love looks fresh, and Death to me subscribes,
Since, spite of him, I'll live in this poor rhyme.

Shakespeare, Sonnet CVII

47 Let me not to the marriage of true minds
Admit impediments. Love is not love
Which alters when it alteration finds,
Or bends with the remover to remove.
O, no! it is an ever-fixed mark
That looks on tempests and is never shaken;
It is the star to every wandering bark,
Whose worth's unknown, although his height be taken.
Love's not Time's fool, though rosy lips and cheeks
Within his bending sickle's compass come;
Love alters not with his brief hours and weeks,
But bears it out even to the edge of doom.

Shakespeare, Sonnet CKVI

48 Reply'd Don *Quixote*; a Knight-Errant cannot be without a Mistress; 'tis not more essential for the Skies to have Stars; than 'tis to us to be in Love. Insomuch, that I dare affirm, that no History ever made mention of any Knight-Errant, that was not a Lover; for were any Knight free from the Impulses of that generous Passion, he wou'd not be allow'd to be a lawful Knight; but a mis-born Intruder, and one who was not admitted within the Pale of Knighthood at the Door, but leap'd the Fence, and stole in like a Robber and a Thief.

Cervantes, Don Quixote, I, 13

49 *Don Quixote*. Dost thou not know, excommunicated Traitor (for certainly Excommunication is the least Punishment can fall upon thee, after such Profanations of the peerless *Dulcinea's* Name) and art thou not assur'd, vile Slave and ignominious Vagabond, that I shou'd not have Strength sufficient to kill a Flea, did not [*Dulcinea*] give Strength to my Nerves, and infuse Vigour into my Sinews? Speak, thou Villain with the Viper's Tongue; Who do'st thou imagine has restor'd the Queen to her Kingdom, cut off the Head of a Giant, and made thee a Marquis (for I count all this as done already) but the Power of *Dulcinea*, who makes use of my Arm, as the Instrument of her Act in me? She fights and overcomes in me; and I live and breathe in her, holding Life and Being from her.

Cervantes, Don Quixote, I, 30

50 Stand still, and I will read to thee
A lecture, love, in Love's philosophy.
These three hours that we have spent,

Walking here, two shadow's went
Along with us, which we ourselves produced;
But, now the sun is just above our head,
We do those shadows tread.
And to brave clearness all things are reduced.
So whilst our infant loves did grow,
Disguises did, and shadow's, flow
From us and our cares; but, now 'tis not so.

That love hath not attained the high'st degree,
Which is still diligent lest others see.

Except our loves at this noon stay,
We shall new shadows make the other way.
As the first were made to blind
Others, these which come behind
Will work upon ourselves, and blind our eyes.
If our loves faint, and westwardly decline.
To me thou, falsely, thine,
And I to thee, mine actions shall disguise.
The morning shadows wear away,
But these grow longer all the day;
But oh, love's day is short, if love decay.

Love is a growing, or full constant light,
And his first minute after noon, is night.

Donne, A Lecture upon the Shadow

51 Dull sublunary lovers' love

(Whose soul is sense) cannot admit
Absence, because it doth remove
Those things which elemented it.

But we, by a love so much refined,
That ourselves know not what it is,
Inter-assured of the mind.

Care less, eyes, lips, and hands to miss.

Our two souls therefore, which are one,
Though I must go, endure not yet
A breach, but an expansion.
Like gold to airy thinness beat.

If they be two, they are two so
As stiff twin compasses are two,
Thy soul the fixt foot, makes no show
To move, but doth, if the other do.

And though it in the centre sit,
Yet when the other far doth roam,
It leans, and hearkens after it,
And grows erect, as that comes home.

Such wilt thou be to me, who must
Like th' other foot, obliquely run;
Thy firmness makes my circle just,
And makes me end, where I begun.

Donne, A Valediction: Forbidding Mourning

- 52 The stage is more beholding to love than the life of man.
For as to the stage, love is ever matter of comedies, and
now and then of tragedies; but in life it doth much
mischief, sometimes like a siren, sometimes like a fury.

Bacon, Of Love

- 53 We may, it seems to me, find differences in love
according to the esteem which we bear to the object
loved as compared with oneself: for when we esteem the

object of love less than ourselves, we have only a simple affection for it; when we esteem it equally with ourselves, that is called friendship; and when we esteem it more, the passion which we have may be called devotion.

Descartes, Passions of the Soul, LXXXIII

54 The heart has its reasons, which reason does not know. We feel it in a thousand things. I say that the heart naturally loves the Universal Being, and also itself naturally, according as it gives itself to them; and it hardens itself against one or the other at its will. You have rejected the one and kept the other. Is it by reason that you love yourself?

Pascal, Pensees, IV, 277

55 Love is joy with the accompanying idea of an external cause. This... explains with sufficient clearness the essence of love; that which is given by some authors, who define love to be the will of the lover to unite himself to the beloved object, expressing not the essence of love but one of its properties, and in as much as these authors have not seen with sufficient clearness what is the essence of love, they could not have a distinct conception of its properties, and consequently their definition has by everybody been thought very obscure. I must observe, however, when I say that it is a property in a lover to will a union with the beloved object, that I do not understand by a will a consent or deliberation or a free decree of the mind..., nor even a desire of the lover to unite himself with the beloved object when it is absent, nor a desire to continue in its presence when it is present, for love can be conceived without either one or

the other of these desires; but by will I understand the satisfaction that the beloved object produces in the lover by its presence, by virtue of which the joy of the lover is strengthened, or at any rate supported.

Spinoza, Ethics, III, Prop. 59, Schol. 6

56 Any one reflecting upon the thought he has of the delight which any present or absent thing is apt to produce in him, has the idea we call love. For when a man declares in autumn when he is eating them, or in spring when there are none, that he loves grapes, it is no more but that the taste of grapes delights him: let an alteration of health or constitution destroy the delight of their taste, and he then can be said to love grapes no longer.

Locke, Concerning Human Understanding, Bk. 11, XX, 4

37 *Fainall*. For a passionate lover, methinks you are a man somewhat too discerning in the failings of your mistress.

Mirabell And for a discerning man, somewhat too passionate a lover; for I like her with all her faults, nay, like her for her faults. Her follies are so natural, are so artful, that they become her, and those affectations which in another woman would be odious, serve but to make her more agreeable. I'll tell thee, Fainall, she once used me with that insolence that in revenge I took her to pieces; sifted her, and separated her failings; I studied 'em, and got 'em by rote. The catalogue was so large that I was not without hopes, one day or other, to hate her heartily: to which end I so used myself to think of 'em that at length, contrary to my design and expectation, they gave me every hour less and less disturbance, till in a few days it became habitual to me to remember 'em

without being displeased. They are now grown as familiar to me as my own frailties, and in all probability in a little time longer I shall like 'em as well.

Congreve, Way of the Worlds I, iii

58 *Mirabell*. Do you lock yourself up from me, to make my search more curious? Or is this pretty artifice contrived to signify that here the chase must end, and my pursuit be crowned, for you can fly no further?

Millamant. Vanity! No—Fll fly and be followed to the last moment. Though I am upon the very verge of matrimony, I expect you should solicit me as much as if I were wavering at the grate of a monastery, with one foot over the threshold. I'll be solicited to the very last, nay and afterwards.

Mira. What, after the last?

Milla. O, I should think I was poor and had nothing to bestow, if I were reduced to an inglorious ease; and freed from the agreeable fatigues of solicitation.

Mira. But do not you know that when favors are conferred upon instant and tedious solicitation, that they diminish in their value and that both the giver loses the grace, and the receiver lessens his pleasure?

Milla. It may be in things of common application, but never sure in love. O, I hate a lover that can dare to think he draws a moment's air, independent on the bounty of his mistress. There is not so impudent a thing in nature as the saucy look of an assured man, confident of success. The pedantic arrogance of a very husband has not so pragmatistical an air.

Congreve, Way of the World, IV, v

59 To avoid, however, all contention, if possible, with these philosophers, if they will be called so; and to show our own disposition to accommodate matters peaceably between us, we shall here make them some concessions, which may possibly put an end to the dispute.

First, we will grant that many minds, and perhaps those of the philosophers, are entirely free from the least traces of such a passion.

Secondly, that what is commonly called love, namely, the desire of satisfying a voracious appetite with a certain quantity of delicate white human flesh, is by no means that passion for which I here contend. This is indeed more properly hunger; and as no glutton is ashamed to apply the word love to his appetite, and to say he loves such and such dishes; so may the lover of this kind, with equal propriety, say, he hungers after such and such women.

Thirdly, I will grant, which I believe will be a most acceptable concession, that this love for which I am an advocate, though it satisfies itself in a much more delicate manner, doth nevertheless seek its own satisfaction as much as the grossest of all our appetites.

And, lastly, that this love, when it operates towards one of a different sex, is very apt, towards its complete gratification, to call in the aid of that hunger which I have mentioned above; and which it is so far from abating, that it heightens all its delights to a degree scarce imaginable by those who have never been susceptible of any other emotions than what have proceeded from appetite alone.

In return to all these concessions, I desire of philosophers to grant, that there is in some (I believe in many) human breasts a kind and benevolent disposition, which is gratified by contributing to the happiness of

others. That in this gratification alone, as in friendship, in parental and filial affection, as indeed in general philanthropy, there is a great and exquisite delight. That if we will not call such disposition love, we have no name for it. That though the pleasures arising from such pure love may be heightened and sweetened by the assistance of amorous desires, yet the former can subsist alone, nor are they destroyed by the intervention of the latter. Lastly, that esteem and gratitude are the proper motives to love, as youth and beauty are to desire, and, therefore, though such desire may naturally cease, when age or sickness overtakes its object; yet these can have no effect on love, nor ever shake or remove, from a good mind, that sensation or passion which hath gratitude and esteem for its basis.

Fielding, Tom Jones, VI, I

60 Our connections with the fair sex are founded on the pleasure of enjoyment; on the happiness of loving and being loved; and likewise on the ambition of pleasing the ladies, because they are the best judges of some of those things which constitute personal merit. This general desire of pleasing produces gallantry, which is not love itself, but the delicate, the volatile, the perpetual simulation of love. According to the different circumstances of every country and age, love inclines more to one of those three things than to the other two.

Montesquieu, Spirit of Laws, XXVIII, 22

61 In general, it may be affirm'd, that there is no such passion in human minds, as the love of mankind, merely as such, independent of personal qualities, of services, or

of relation to ourself.... We may affirm, that man in general, or human nature, is nothing but the object both of love and hatred, and requires some other cause, which by a double relation of impressions and ideas, may excite these passions.

Hume, Treatise of Human Nature, Bk. III, 11 1

62 There are so many sorts of love that one does not know to whom to address oneself for a definition of it. The name of "love" is given boldly to a caprice lasting a few days, a sentiment without esteem, gallants' affectations, a frigid habit, a romantic fantasy, relish followed by prompt disrelish: people give this name to a thousand chimeras.

If philosophers want to probe to the bottom this barely philosophical matter, let them meditate on the banquet of Plato, in which Socrates, honourable lover of Alcibiades and Agathon, converses with them on the metaphysics of love.

Lucretius speaks of it more as a natural philosopher: Virgil follows in the steps of Lucretius; *amor omnibus idem*.

It is the stuff of nature brodered by nature. Do you want an idea of love? look at the sparrows in your garden; look at your pigeons; look at the bull which is brought to the heifer; look at this proud horse which two of your grooms lead to the quiet mare awaiting him; she draws aside her tail to welcome him; see how her eyes sparkle; hark to the neighing; watch the prancing, the curvetting, the ears pricked, the mouth opening with little convulsions, the swelling nostrils, the flaring breath, the manes rising and floating, the impetuous movement with which he hurls himself on the object which nature has

destined for him; but be not jealous of him, and think of the advantages of the human species; in love tjicy compensate for all those that nature has given to the animals— strength, beauty, nimbleness, speed....

As men have received the gift of perfecting all that nature accords them, they have perfected love. Cleanliness, the care of oneself, by rendering the skin more delicate, increase the pleasure of contact; and attention to one's health renders the organs of voluptuousness more sensitive. All the other sentiments that enter into that of love, just like metals which amalgamate with gold: friendship, regard, come to help; the faculties of mind and body are still further chains.

Self-love above all lightens all these bonds. One applauds oneself for one's choice, and a crowd of illusions form the decoration of the building of which nature has laid the foundations.

That is what you have above the animals. Hut if you taste so many pleasures unknown to them, how many sorrows too of which the beasts have no idea! What is frightful for you is that over three-fourths of the earth nature has poisoned the pleasures of love and the sources of life with an appalling disease to which man alone is subject, and which infects in him the organs of generation alone.

Voltaire, Philosophical Dictionary: Love

- 63 To argue from her [Mrs. Johnson's] being much older than Johnson, or any other circumstances, that he could not really love her, is absurd; for love is not a subject of reasoning, but of feeling, and therefore there are no common principles upon which one can persuade another concerning it. Every man feels for himself, and knows

how he is affected by particular qualities in the person he admires, the impressions of which are too minute and delicate to be substantiated in language.

Boswell, Life of Johnson (1752)

64 If our friend has been injured, we readily sympathise with his resentment, and grow angry with the very person with whom he is angry. If he has received a benefit, we readily enter into his gratitude, and have a very high sense of the merit of his benefactor. But if he is in love, though we may think his passion just as reasonable as any of the kind, yet we never think ourselves bound to conceive a passion of the same kind, and for the same person for whom he has conceived it. the passion appears to every body, but the man who feels it, entirely disproportioned to the value of the object; and love, though it is pardoned in a certain age because we know it is natural, is always laughed at, because we cannot enter into it.

Adam Smith, Theory of Moral Sentiments, I, 4

65 Love is a matter of *feeling*, not of will or volition, and I cannot love because I will to do so, still less because I *ought* (I cannot be necessitated to love); hence there is no such thing as a *duty to love*. *Benevolence* however { *amor benevolentiae* }, as a mode of action, may be subject to a law of duty. Disinterested benevolence is often called (though very improperly) *love*; even where the happiness of the other is not concerned, but the complete and free surrender of all one's own ends to the ends of another (even a superhuman) being, love is spoken of as being also our duty. But all duty is *necessitation* or constraint, although it may be self-

constraint according to a law. But what is done from constraint is not done from love.

It is a duty *to do good* to other men according to our power, whether we love them or not, and this duty loses nothing of its weight, although we must make the sad remark that our species, alas! is not such as to be found particularly worthy of love when we know it more closely. *Hatred of men*, however, is always hateful: even though without any active hostility it consists only in complete aversion from mankind (the solitary misanthropy). For benevolence still remains a duty even towards the manhater, whom one cannot love, but to whom we can show kindness.

Kant, Introduction to the Metaphysical Elements of Ethics, XII

66 I went to the Garden of Love,
And saw what I never had seen:
A Chapel was built in the midst.
Where I used to play on the green.

And the gates of this chapel were shut,
And "Thou shalt not" writ over the door;
So I turned to the Garden of Love,
That so many sweet flowers bore;

And I saw it was filled with graves,
And tombstones where flowers should be;
And priests in black gowns were walking their rounds.
And binding with briars my joys and desires.

Blake, The Garden of Love

67 "Love seeketh not Itself to please,
Nor for itself hath any care.
But for another gives its ease,
And builds a Heaven in Hell's despair."

So sung a little Clod of Clay
Trodden with the cattle's feet,
But a Pebble of the brook
Warbled out these metres meet:

"Love seeketh only Self to please.
To bind another to Its delight,
Joy's in another's loss of ease.
And builds a Hell in Heaven's despite."

Blake, The Clod and the Pebble

68 No move towards the extinction of the passion between the sexes has taken place in the five or six thousand years that the world has existed. Men in the decline of life have in all ages declaimed against a passion which they have ceased to feel, but with as little reason as success. Those who from coldness of constitutional temperament have never felt what love is will surely be allowed to be very incompetent judges with regard to the power of this passion to contribute to the sum of pleasurable sensations in life. Those who have spent their youth in criminal excesses and have prepared for themselves, as the comforts of their age, corporal debility' and mental remorse, may well inveigh against such pleasures as vain and futile, and unproductive of lasting satisfaction. But the pleasures of pure love will bear the contemplation of the most improved reason, and the most exalted virtue. Perhaps there is scarcely a man w'ho has once

experienced the genuine delight of virtuous love,
however great his intellectual pleasures may have been,
that does not look back to the period as the sunny spot in
his whole life, where his imagination loves to bask, which
he recollects and contemplates with the fondest regrets,
and which he would most wish to live over again.

Malthus, Population, XI

69 And if she met him, though she smiled no more,
She look'd a sadness sweeter than her smile.
As if her heart had deeper thoughts in store
She must not own, but cherish'd more the while
For that compression in its burning core;
Even innocence itself has many a wile.
And will not dare to trust itself with truth,
And love is taught hypocrisy from youth.

Byron, Don Juan, 1 , 72

70 Love in a hut, with water and a crust,
Is—Love, forgive us!—cinders, ashes, dust;
Love in a palace is perhaps at last
More grievous torment than a hermit's fast.

Keats, Lamia, II, 1

71 Love means in general terms the consciousness of my
unity with another, so that I am not in selfish isolation but
win my self-consciousness only as the renunciation of my
independence and through knowing myself as the unity
of myself with another and of the other with me. Love,
however, is feeling, that is, ethical life in the form of
something natural. In the state, feeling disappears; there
we are conscious of unity as law; there the content must

be rational and known to us. The first moment in love is that I do not wish to be a self-subsistent and independent person and that, if I were, then I would feel defective and incomplete. The second moment is that I find myself in another person, that I count for something in the other, while the other in turn comes to count for something in me. Love, therefore, is the most tremendous contradiction; the Understanding cannot resolve it since there is nothing more stubborn than this point of self-consciousness which is negated and which nevertheless I ought to possess as affirmative. Love is at once the propounding and the resolving of this contradiction. As the resolving of it, love is unity of an ethical type.

Hegel, Philosophy of Right, Additions, Par. 158

72 This is what goes on in the mind [in the birth of love]:

1. Admiration.

2. One says to one's self: "How delightful to kiss her, to be kissed in return," etc.

3. Hope.

One studies her perfections. It is at this moment that a woman should surrender herself, to get the greatest possible sensual pleasure. The eyes of even the most modest women light up the moment hope is born; passion is so strong and pleasure is so acute that they betray themselves in the most obvious manner.

4. Love is born.

To love is to derive pleasure from seeing, touching and feeling through all one's senses and as closely as possible, a lovable person who loves us.

5. The first crystallization begins.

We take a joy in attributing a thousand perfections to a woman of whose love we are sure; we analytic all our

happiness with intense satisfaction. This reduces itself to giving ourselves an exaggerated idea of a magnificent possession which has just fallen to us from Heaven in some way we do not understand, and the continued possession of which is assured to us.

This is what you will find if you let a lover turn things over in his mind for twenty-four hours.

In the salt mines of Salzburg a bough stripped of its leaves by winter is thrown into the depths of the disused workings; two or three months later it is pulled out again, covered with brilliant crystals: even the tiniest twigs, no bigger than a tit's claw, are spangled with a vast number of shimmering, glittering diamonds, so that the original bough is no longer recognizable.

I call crystallization that process of the mind which discovers fresh perfections in its beloved at every turn of events....

This phenomenon which I have allowed myself to call *crystallization*, arises from the promptings of Nature which urge us to enjoy ourselves and drive the blood to our brains, from the feeling that our delight increases with the perfections of the beloved, and from the thought: "She is mine," The savage has no time to get beyond the first step. He grasps his pleasures, but his brain is concentrated on following the buck fleeing from him through the forest, and with whose flesh he must repair his own strength as quickly as possible, at the risk of falling beneath the hatchet of his enemy.

At the other extreme of civilization, I have no doubt that a sensitive woman arrives at the point of experiencing no sensual pleasure except with the man she loves. This is in direct opposition to the savage. But, amongst civilized communities woman has plenty of

leisure, whilst the savage lives so close to essentials that he is obliged to treat his female as a beast of burden. If the females of many animals have an easier lot, it is only because the subsistence of the males is more assured.

But let us leave the forests and return to Paris. A passionate man sees nothing but perfection in the woman he loves; and yet his affections may still wander, for the spirit wearies of monotony, even in the case of the most perfect happiness.

So what happens to rivet his attention at this:

6. Doubt is born.

When his hopes have first of all been raised and then confirmed by ten or a dozen glances, or a whole series of other actions which may be compressed into a moment or spread over several days, the lover, recovering from his first amazement and growing used to his happiness, or perhaps merely guided by theory which, based always on his most frequent experiences, is really only correct in the case of light women, the lover, I say, demands more positive proofs of love and wants to advance the moment of his happiness.

If he takes too much for granted he will be met with indifference, coldness or even anger: in France there will be a suggestion of irony which seems to say: "You think you have made more progress than you really have." A woman behaves in this way either because she is recovering from a moment of intoxication and obeys the behests of modesty, which she is alarmed at having transgressed, or merely from prudence or coquettishness.

The lover begins to be less sure of the happiness which he has promised himself; he begins to criticize the reasons he gave himself for hoping.

He tries to fall back on the other pleasures of life. He *finds they no longer exist*. He is seized with a dread of appalling misery, and his attention becomes concentrated.

7. Second crystallization.

Now begins the second crystallization, producing as its diamonds various confirmations of the following idea:

"She loves me."

Every quarter of an hour, during the night following the birth of doubt, after a moment of terrible misery, the lover says to himself: "Yes, she loves me"; and crystallization sets to work to discover fresh charms; then gaunt-eyed doubt grips him again and pulls him up with a jerk. His heart misses a beat; he says to himself: "But does she love me?" Through all these harrowing and delicious alternations the poor lover feels acutely: "With her I would experience joys which she alone in the world could give me."

It is the clearness of this truth and the path he treads between an appalling abyss and the most perfect happiness, that make the second crystallization appear to be so very much more important than the first.

The lover hovers incessantly amongst these three ideas;

1. She is perfect in every way.
2. She loves me,
3. How can I get the strongest possible proof of her love for me?

The most heart-rending moment in love that is still young is when it finds that it has been wrong in its chain of reasoning and must destroy a whole agglomeration of crystals.

Even the fact of crystallization itself begins to appear doubtful.

Stendhal, On Love, I, 2

73 Man is not free to refuse to do the thing which gives him more pleasure than any other conceivable action.

Love is like a fever; it comes and goes without the will having any part in the process. That is one of the principal differences between sympathy-love and passion-love, and one can only congratulate one's self on the fine qualities of the person one loves as on a lucky chance.

Stendhal, On Love, I, 5

74 Give all to love;
Obey thy heart;
Friends, kindred, days.
Estate, good-fame.
Plans, credit and the Muse,—
Nothing refuse.

'Tis a brave master;
Let it have scope;
Follow it utterly,
Hope beyond hope:
High and more high
It dives into noon,
With wing unspent,
Untold intent;
But it is a god,
Knows its own path
And the outlets of the sky.

It was never for the mean;
It requireth courage stout.
Souls above doubt,
Valor unbending,
It will reward,—
They shall return
More than they were.
And ever ascending.

Leave all for love;
Yet, hear me, yet,
One word more thy heart behoved,
One pulse more of firm endeavor,—
Keep thee to-day,
To-morrow, forever.
Free as an Arab
Of thy beloved.

Cling with life to the maid;
But when the surprise.
First vague shadow of surmise
Flits across her bosom young,
Of a joy apart from thee,
Free be she, fancy-free;
Nor thou detain her vesture's hem,
Nor the palest rose she flung
From her summer diadem.

Though thou loved her as thyself,
As a self of purer clay.
Though her parting dims the day,
Stealing grace from all alive;
Heartily know,
When half-gods go.
The gods arrive.

Emerson, Give All to Love

75 I hold it true, whatever befall;
I feel it, when I sorrow most;
'T is better to have loved and lost
Than never to have loved at all,

Tennyson, In Memoriam, XXVII

76 In the spring a livelier iris changes on the burnish'd dove;
In the spring a young man's fancy lightly turns to
thoughts of love.

Tennyson, Locksley Hall, 19

77 To love one maiden only, cleave to her,
And worship her by years of noble deeds,
Until they won her; for indeed I knew
Of no more subtle master under heaven
Than is the maiden passion for a maid.
Not only to keep down the base in man.
But teach high thought, and amiable words
And courtliness, and the desire of fame,
And love of truth, and all that makes a man.

Tennyson, Guinevere, 472

78 Young love-making—that gossamer web! Even the points
it clings to—the things whence its subtle interlacings are
swung—are scarcely perceptible: momentary touches of
finger-tips, meetings of rays from blue and dark orbs,
unfinished phrases, lightest changes of cheek and lip,
faintest tremors. The web itself is made of spontaneous
beliefs and indefinable joys, yearnings of one life towards
another, visions of completeness, indefinite trust.

George Eliot, Middlemarch, IV, 36

79 *Father Zossima.* Love in action is a harsh and dreadful thing compared with love in dreams. Love in dreams is greedy for immediate action, rapidly performed and in the sight of all. Men will even give their lives if only the ordeal does not last long but is soon over, with all looking on and applauding as though on the stage. But active love is labour and fortitude, and for some people too, perhaps, a complete science.

Dostoevsky, Brothers Karamazov, Pt. 1,11, 4

80 She began to cry and a still greater sense of pity, tenderness, and love welled up in Pierre. He felt the tears trickle under his spectacles and hoped they would not be noticed.

"We won't speak of it any more, my dear," said Pierre, and his gentle, cordial tone suddenly seemed very strange to Natasha.

"We won't speak of it, my dear—I'll tell him everything; hut one thing I beg of you, consider me your friend and if you want help, advice, or simply to open your heart to someone—not now, but when your mind is clearer—think of me!" He took her hand and kissed it. "I shall be happy if it's in my power . .

Pierre grew confused.

"Don't speak to me like that. I am not worth it!" exclaimed Natasha and turned to leave the room, but Pierre held her hand.

He knew he had something more to say to her. But when he said it he was amazed at his own words.

"Stop, stop! You have your whole life before you," said he to her.

"Before me? No! All is over for me," she replied with shame and self-abasement.

"All over?" he repeated. "If I were not myself, but the handsomest, cleverest, and best man in the world, and were free, I would this moment ask on my knees for your hand and your love!"

For the first time for many days Natasha wept tears of gratitude and tenderness, and glancing at Pierre she went out of the room.

Pierre too when she had gone almost ran into the anteroom, restraining tears of tenderness and joy that choked him, and without finding the sleeves of his fur cloak threw it on and got into his sleigh.

"Where to now, your excellency?" asked the coachman.

"Where to?" Pierre asked himself. "Where can I go now? Surely not to the Club or to pay calls?" All men seemed so pitiful, so poor, in comparison with this feeling of tenderness and love he experienced: in comparison with that softened, grateful, last look she had given him through her tears.

"Home!" said Pierre, and despite twenty-two degrees of frost Fahrenheit he threw open the bearskin cloak from his broad chest and inhaled the air with joy.

It was clear and frosty. Above the dirty, ill-lit streets, above the black roofs, stretched the dark starry sky. Only looking up at the sky did Pierre cease to feel how sordid and humiliating were all mundane things compared with the heights to which his soul had just been raised. At the entrance to the Arbat Square an immense expanse of dark starry sky presented itself to his eyes. Almost in the center of it, above the Prechistenka Boulevard, surrounded and sprinkled on all sides by stars but

distinguished from them all by its nearness to the earth, its white light, and its long uplifted tail, shone the enormous and brilliant comet of 1812—the comet which was said to portend all kinds of woes and the end of the world. In Pierre, however, that comet with its long luminous tail aroused no feeling of fear. On the contrary he gazed joyfully, his eyes moist with tears, at this bright comet which, having traveled in its orbit with inconceivable velocity through immeasurable space, seemed suddenly—like an arrow piercing the earth—to remain fixed in a chosen spot, vigorously holding its tail erect, shining and displaying its white light amid countless other scintillating stars. It seemed to Pierre that this comet fully responded to what was passing in his own softened and uplifted soul, now blossoming into a new life.

Tolstoy, War and Peace, VIII, 22

- 81 "When loving with human love one may pass from love to hatred, but divine love cannot change. No, neither death nor anything else can destroy it. It is the very essence of the soul. Yet how many people have I hated in my life? And of them all, I loved and hated none as I did her." And... [Prince Andrew] vividly pictured to himself Natasha, not as he had done in the past with nothing but her charms which gave him delight, but for the first time picturing to himself her soul. And he understood her feelings, her sufferings, shame, and remorse. He now understood for the first time all the cruelty of his rejection of her, the cruelty of his rupture with her. "If only it were possible for me to see her once more! Just once, looking into those eyes to say..."

, . . . And his attention was suddenly carried into another world, a world of reality and delirium in which something particular was happening. In that world some structure was still being erected and did not fall, something was still stretching out, and the candle with its red halo was still burning, and the same shirtlike sphinx lay near the door; but besides all this something creaked, there was a whiff of fresh air, and a new white sphinx appeared, standing at the door. And the sphinx had the pale face and shining eyes of the very Natasha of whom he had just been thinking.

"Oh, how oppressive this continual delirium is," thought Prince Andrew, trying to drive that face from his imagination. But the face remained before him with the force of reality and drew nearer. Prince Andrew wished to return to that former world of pure thought, but he could not, and delirium drew him back into its domain. The soft whispering voice continued its rhythmic murmur, something oppressed him and stretched out, and the strange face was before him. Prince Andrew collected all his strength in an effort to recover his senses, he moved a little, and suddenly there was a ringing in his ears, a dimness in his eyes, and like a man plunged into water he lost consciousness. When he came to himself, Natasha, that same living Natasha whom of all people he most longed to love with this new pure divine love that had been revealed to him, was kneeling before him. He realized that it was the real living Natasha, and he was not surprised but quietly happy. Natasha, motionless on her knees (she was unable to stir), with frightened eyes riveted on him, was restraining her sobs. Her face was pale and rigid. Only in the lower part of it something quivered.

Prince Andrew sighed with relief, smiled, and held out his hand.

"You?" he said. "How fortunate!"

With a rapid but careful movement Natasha drew nearer to him on her knees and, taking his hand carefully, bent her face over it and began kissing it, just touching it lightly with her lips.

"Forgive me!" she whispered, raising her head and glancing at him. "Forgive me!"

"I love you," said Prince Andrew.

"Forgive...!"

"Forgive what?" he asked.

"Forgive me for what I ha-ve do-ne!" faltered Natasha in a scarcely audible, broken whisper, and began kissing his hand more rapidly, just touching it with her lips.

"I love you more, better than before," said Prince Andrew, lifting her face with his hand so as to look into her eyes.

Tolstoy, War and Peace, XI, 32

82 All men from their very earliest years know that besides the good of their animal personality there is another, a better, good in life, which is not only independent of the gratification of the appetites of the animal personality, but on the contrary the greater the renunciation of the welfare of the animal personality the greater this good becomes.

This feeling, solving all life's contradictions and giving the greatest good to man, is known to all. That feeling is love.

Life is the activity of animal personality subjected to the laws of reason. Reason is the law to which, for his own

good, man's animal personality must be subjected. Love is the only reasonable activity of man.

Tolstoy, On Life, XXII

83 Philosophy, when just escaping from its golden pupa-skin, mythology, proclaimed the great evolutionary agency of the universe to be Love. Or, since this pirate-lingo, English, is poor in such-like words, let us say Eros, the exuberance-love. Afterwards, Empedocles set up passionate-love and hate as the two co-ordinate powers of the universe. In some passages, kindness is the word. But certainly, in any sense in which it has an opposite, to be senior partner of that opposite, is the highest position that love can attain. Nevertheless, the ontological gospeller, in whose days those views were familiar topics, made the One Supreme Being, by whom all things have been made out of nothing, to be cherishing-love. What, then, can he say to hate?... [John's] statement that God is love seems aimed at that saying of Ecclesiastes that we cannot tell whether God bears us love or hatred. "Nay," says John, "we can tell, and very simply! We know and have trusted the love which God hath in us. God is love." There is no logic in this, unless it means that God loves all men. In the preceding paragraph, he had said, "God is light and in him is no darkness at all." We are to understand, then, that as darkness is merely the defect of light, so hatred and evil are mere imperfect stages of . . . love and loveliness. This concords with that utterance reported in John's Gospel: "God sent not the Son into the world to judge the world; but that the world should through him be saved. He that believeth on him is not judged: he that believeth not hath been judged already.. . . And this is the judgment, that the light is come into the

world, and that men loved darkness rather than the light." That is to say, God visits no punishment on them; they punish themselves, by their natural affinity for the defective. Thus, the love that God is, is not a love of which hatred is the contrary; otherwise Satan would be a co-ordinate power; but it is a love which embraces hatred as an imperfect stage of it, an Anteros—yea, even needs hatred and hatefulness as its object. For self-love is no love; so if God's self is love, that which he loves must be defect of love; just as a luminary can light up only that which otherwise would be dark.

C. S. Peirce, Evolutionary Love

84 Whatever is done from love always occurs beyond good and evil.

Nietzsche, Beyond Good and Evil, IV, 153

85 *Libido* is an expression taken from the theory of the emotions. We call by that name the energy (regarded as a quantitative magnitude, though not at present actually measurable) of those instincts which have to do with all that may be comprised under the word love. The nucleus of what we mean by love naturally consists (and this is what is commonly called love, and what the poets sing of) in sexual love with sexual union as its aim. But we do not separate from this—what in any case has a share in the name love —on the one hand, self-love, and on the other, love for parents and children, friendship, and love for humanity in general, and also devotion to concrete objects and to abstract ideas. Our justification lies in the fact that psycho-analytic research has taught us that all these tendencies are an expression of the same

instinctive activities; in relations between the sexes these instincts force their way towards sexual union, but in other circumstances they are diverted from this aim or are prevented from reaching it, though always preserving enough of their original nature to keep their identity recognizable (as in such features as the longing for proximity, and self-sacrifice).

We are of opinion, then, that language has carried out an entirely justifiable piece of unification in creating the word love with its numerous uses, and that we cannot do better than take it as the basis of our scientific discussions and expositions as well.

Freud, Group Psychology and the Analysis of the Ego, IV

86 In the development of mankind as a whole, just as in individuals, love alone acts as the civilizing factor in the sense that it brings a change from egoism to altruism. And this is true both of the sexual love for women, with all the obligations which it involves of sparing what women are fond of, and also of the desexualized, sublimated homosexual love for other men, which springs from work in common.

Freud, Group Psychology and the Analysis of the Ego, VI

87 A small minority are enabled ... to find happiness along the path of love; but far-reaching mental transformations of the erotic function are necessary before this is possible. These people make themselves independent of their object's acquiescence by transferring the main value from the fact of being loved to their own act of loving; they protect themselves against loss of it by attaching their love not to individual objects but to all

men equally and they avoid the uncertainties and disappointments of genital love by turning away from its sexual aim and modifying the instinct into an impulse with an *inhibited aim*. The state which they induce in themselves by this process— an unchangeable, undeviating, tender attitude— has little superficial likeness to the stormy vicissitudes of genital love, from which it is nevertheless derived.

Freud, Civilization and Its Discontents, IV

- 88 When a love-relationship is at its height, no room is left for any interest in the surrounding world; the pair of lovers are sufficient unto themselves, do not even need the child they have in common to make them happy. In no other case does Eros so plainly betray the core of his being, his aim of making one out of many.

Freud, Civilization and Its Discontents, V

- 89 An animal exhibits in its life-activity a multitude of acts of breathing, digesting, secreting, excreting, attack, defense, search for food, etc., a multitude of specific responses to specific stimulations of the environment. But mythology comes in and attributes them all to a *nisus* for self-preservation. Thence it is but a step to the idea that all conscious acts are prompted by self-love. This premiss is then elaborated in ingenious schemes, often amusing when animated by a cynical knowledge of the "world," tedious when of a would-be logical nature, to prove that every act of man including his apparent generosity is a variation played on the theme of self-interest.

Dewey, Human Nature and Conduct, II, 5

90 When you are old and gray and full of sleep,
And nodding by the fire, take down this book,
And slowly read, and dream of the soft look
Your eyes had once, and of their shadow's deep;
 How many loved your moments of glad grace,
And loved your beauty with love false or true,
But one man loved the pilgrim soul in you,
And loved the sorrow's of your changing face;
 And bending down beside the glowing bars,
Murmur, a little sadly, how Love fled
And paced upon the mountains overhead
And hid his face amid a crowd of stars.

Yeats, When You Are Old

91 Down by the salley gardens my love and I did meet;
 She passed the salley gardens with little snow-white
feet.
 She bid me take love easy, as the leaves grow on the
tree;
 But I, being young and foolish, with her would not
agree.
 In a field by the river my love and I did stand.
 And on my leaning shoulder she laid her snow-white
hand.
 She bid me take life easy, as the grass grows on the
weirs;
 But I was young and foolish, and now am full of tears.

Yeats, Down by the Salley Gardens

92 Imagine a piece of music which expresses love. It is not
love for any particular person. Another piece of music will
express another love. Here we have two distinct

emotional atmospheres, two different fragrances, and in both cases the quality of love will depend upon its essence and not upon its object. Nevertheless, it is hard to conceive a love which is, so to speak, at work, and yet applies to nothing. As a matter of fact, the mystics unanimously bear witness that God needs us, just as we need God. Why should He need us unless it be to love us? And it is to this very conclusion that the philosopher who holds to the mystical experience must come. Creation will appear to him as God undertaking to create creators, that He may have, besides Himself, beings worthy of His love.

We should hesitate to admit this if it were merely a question of humdrum dwellers on this corner of the universe called Earth. But, as we have said before, it is probable that life animates all the planets revolving round all the stars. It doubtless takes, by reason of the diversity of conditions in which it exists, the most varied forms, some very remote from what we imagine them to be; but its essence is everywhere the same, a slow accumulation of potential energy' to be spent suddenly in free action. We might still hesitate to admit this, if we regarded as accidental the appearance amid the plants and animals that people the earth of a living creature such as man, capable of loving and making himself loved. But we have shown that this appearance, while not predetermined, was not accidental either. Though there were other lines of evolution running alongside the line which led to man, and though much is incomplete in man himself, we can say, while keeping closely to what experience shows, that it is man who accounts for the presence of life on our planet. Finally, we might well go on hesitating if we believed that the universe is essentially raw matter, and that life has been super-

added to matter. We have shown, on the contrary', that matter and life, as we define them, are coexistent and interdependent. This being the case, there is nothing to prevent the philosopher from following to its logical conclusion the idea which mysticism suggests to him of a universe which is the mere visible and tangible aspect of love and of the need of loving, together with all the consequences entailed by this creative emotion: I mean the appearance of living creatures in which this emotion finds its complement; of an infinity of other beings without which they could not have appeared, and lastly of the unfathomable depths of material substance without which life would not have been possible.

Bergson, Two Sources of Morality and Religion, III

- 93 To be omnivorous is one pole of true love: to be exclusive is the other. A man whose heart, if I may say so, lies deeper, hidden under a thicker coat of mail, will have less play of fancy, and will be far from finding every charm charming, or every sort of beauty a stimulus to love. Yet he may not be less prone to the tender passion, and when once smitten may be so penetrated by an unimagined tenderness and joy, that he will declare himself incapable of ever loving again, and may actually be so. Having no rivals and in deeper soil, love can ripen better in such a constant spirit; it will not waste itself in a continual patter of little pleasures and illusions. But unless the passion of it is to die down, it must somehow assert its universality: what it loses in diversity it must gain in applicability. It must become a principle of action and an influence colouring everything that is dreamt of; otherwise it would have lost its dignity and sunk into a dead memory or a domestic bond.

True love, it used to be said, is love at first sight. Manners have much to do with such incidents, and the race which happens to set, at a given time, the fashion in literature makes its temperament public and exercises a sort of contagion over all men's fancies. If women are rarely seen and ordinarily not to be spoken to; if all imagination has to build upon is a furtive glance or casual motion, people fall in love at first sight. For they must fall in love somehow, and any stimulus is enough if none more powerful is forthcoming. When society, on the contrary, allows constant and easy intercourse between the sexes, a first impression, if not reinforced, will soon be hidden and obliterated by others. Acquaintance becomes necessary for love when it is necessary for memory. But what makes true love is not the information conveyed by acquaintance, not any circumstantial charms that may be therein discovered: it is still a deep and dumb instinctive affinity, an inexplicable emotion seizing the heart, an influence organising the world, like a luminous crystal, about one magic point. So that although love seldom springs up suddenly in these days into anything like a full-blown passion, it is sight, it is presence, that makes in time a conquest over the heart; for all virtues, sympathies, confidences will fail to move a man to tenderness and to worship, unless a poignant effluence from the object envelop him, so that he begins to walk, as it were, in a dream.

Santayana, Life of Reason, II, 1

94 If to create was love's impulse originally, to create is its effort still, after it has been chastened and has received some rational extension. The machinery which serves reproduction thus finds kindred but higher uses, as every

organ does in a liberal life; and what Plato called a desire for birth in beauty may be sublimated even more, until it yearns for an ideal immortality in a transfigured world, a world made worthy of that love which its children have so often lavished on it in their dreams.

Santayana, Life of Reason, II, 1

3.2 Hate

In almost all the traditional enumerations of the emotions, love and hate are joined together as contraries, along with such paired opposites as hope and desire, pleasure and pain, desire and aversion, and so on. If there are kinds of love that are either not emotional at all or involve bodily passion as just one, and perhaps even a minor, component, then it may be the case that there are also kinds of hate that are pure acts of will without passion or involve will as well as emotion. The reader should have this in mind as he discovers that there may be as many varieties of hate as there are of love. He should also explore related passages in Section 4.10 on Jealousy in the following chapter.

Where passages treat love and hate together, they are usually quoted here rather than under love. Also included here are passages from Freud That deal with instinctual aggressiveness, even though the word "hate" does not appear in them; in addition, of course, there are other passages from Freud in which his theory of love-hate ambivalence is set forth.

One of the major subjects covered in this section is misanthropy—hatred for mankind. The reader may wonder about the type of love that is its opposite. Is it friendship or

charity or both? Comparing the texts with passages in Sections 3.4 and 3.5 may help him to arrive at an answer.

■ ■ ■

- 1 Terror drove them, and Fear, and Hate whose wrath is relentless,
she the sister and companion of murderous Arcs, she who is only a little thing at the first, but thereafter grows until she strides on the earth with her head striking heaven.

Homer, Iliad, IV, 440

- 2 *Socrates*. I have said enough in answer to the charge of Meletus: any elaborate defence is unnecessary; but I know only too well how many are the enmities which I have incurred, and this is what will be my destruction if I am destroyed;— not Meletus, nor yet Anytus, but the envy and detraction of the world, which has been the death of many good men, and will probably be the death of many more; there is no danger of my being the last of them.

Plato, Apology, 20A

- 3 *Socrates*. Misanthropy arises out of the too great confidence of inexperience;—you trust a man and think him altogether true and sound and faithful, and then in a little while he turns out to be false and knavish; and then another and another, and when this has happened several times to a man, especially when it happens among those whom he deems to be his own most trusted

and familiar friends, and he has often quarrelled with them, he at last hates all men, and believes that no one has any good in him at all. . . . Experience would have taught him the true state of the case, that few are the good and few the evil, and that the great majority are in the interval between them.

Plato, Phaedo, 89B

- 4 Enmity and Hatred should clearly be studied by reference to their opposites. Enmity may be produced by anger or spite or calumny. Now whereas anger arises from offences against oneself, enmity may arise even without that; we may hate people merely because of what we take to be their character. Anger is always concerned with individuals, . . . whereas hatred is directed also against classes: we all hate any thief and any informer. Moreover, anger can be cured by time; but hatred cannot. The one aims at giving pain to its object, the other at doing him harm; the angry man wants his victims to feel; the hater does not mind whether they feel or not. All painful things are felt; but the greatest evils, injustice and folly, are the least felt, since their presence causes no pain. And anger is accompanied by pain, hatred is not: the angry man feels pain, but the hater does not. Much may happen to make the angry man pity those who offend him, but the hater under no circumstances wishes to pity a man whom he has once hated: for the one would have the offenders suffer for what they have done; the other would have them cease to exist.

Aristotle, Rhetoric, 1382b1

5 What I am most apprehensive about concerning you is this: because you are unaware of (the real pathway to fame, you may think it is really glorious to have more power than anyone else and to lord it over your fellow citizens. If this is your opinion, you really are blind when it comes to knowing real fame. What really is glorious is to be a citizen held in high regard by all, deserving well of the republic, one who is praised, courted, and loved. But to be feared and hated is obnoxious. It is a proof of weakness and degeneracy.

Cicero, Philippics, I, 14

6 Injuries done to us by those of higher rank must be endured, and not only with composure, but with the appearance of good cheer. They will commit the same offense again if they are convinced they got away with it once. Those whose spirit has become overbearing because of good fortune have this serious fault; they hate those whom they have injured.

Seneca, On Anger, II, 33

7 He that saith he is in the light, and hateth his brother, is in darkness even until now.

He that loveth his brother abideth in the light, and there is none occasion of stumbling in him.

But he that hateth his brother is in darkness, and walketh in darkness, and knoweth not whither he goeth, because that darkness hath blinded his eyes.

I John 2:9-11

8 For this is the message that ye heard from the beginning, that we should love one another.

Not as Cain, who was of that wicked one, and slew his brother. And wherefore slew he him? Because his own works were evil, and his brother's righteous.

Marvel not, my brethren, if the world hate you.

I John 3:11-13

9 If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?

I John 4:20

10 Benefits received are a delight to us as long as we think we can requite them; when that possibility is far exceeded, they are repaid with hatred instead of gratitude.

Tacitus, Annals, IV, 18

11 It is, indeed, human nature to hate the man whom you have injured.

Tacitus, Agricola

12 It is strange that we should not realise that no enemy could be more dangerous to us than the hatred with which we hate him, and that by our efforts against him we do less damage to our enemy than is wrought in our own heart.

Augustine, Confessions, I, 18

13 It is impossible for an effect to be stronger than its cause. Now every hatred arises from some love as its cause. . . . Therefore it is impossible absolutely for hatred to be stronger than love.

But furthermore, love must be stronger, absolutely speaking, than hatred. Because a thing is moved to the end more strongly than to the means. Now turning away from evil is ordered as a means to the gaining of good, as to amend. Therefore, absolutely speaking, the soul's movement in respect of good is stronger than its movement in respect of evil.

Nevertheless hatred sometimes seems to be stronger than love, for two reasons. First, because hatred is more keenly felt than love. . . . Secondly, because comparison is made between a hatred and a love which do not correspond to one another.

Aquinas, Summa Theologica, I-II, 29, 3

14 I saw two frozen in one hole so *closely*, that the one head was a cap to the other; and as bread is chewed for hunger, so the uppermost put his teeth into the other there where the brain joins with the nape.

Not otherwise did Tydeus gnaw the temples of Menalippus for rage, than he the skull and the other parts,

"O thou! who by such brutal token shewest thy hate on him whom thou devourest, tell me why," I said; "on this condition,

that if thou with reason complainest of him, I, knowing who ye are and his offence, may yet repay thee in the world above, if that, wherewith I speak, be not dried up."

From the fell repast that sinner raised his mouth, wiping it upon the hair of the head he had laid waste behind.

Then he began: "Thou wilt that I renew desperate grief, which wrings my heart, even at the very thought, before I tell thereof.

But if my words are to be a seed, that may bear fruit of infamy to the traitor whom I gnaw, thou shalt see me speak and weep at the same time.

I know not who thou mayest be, nor by what mode thou hast come down here; but, when I hear thee, in truth thou seemest to me a Florentine.

Thou hast to know that I was Count Ugolino, and this the Archbishop Ruggieri; now I will tell thee why I am such a neighbour to *him*.

That by the effect of his ill devices I, confiding in him, was taken and thereafter put to death, it is not necessary to say.

But that which thou canst not have learnt, that is, how cruel was my death, thou shalt hear—and know if he has offended me.

A narrow hole within the mew, which from me has the title of Famine, and in which others yet must be shut up, had through its opening already shewn me several moons, when I slept the evil sleep that rent for me the curtain of the future.

This *man* seemed to me lord and master, chasing the wolf and his whelps, upon the mountain for which the Pisans cannot see Lucca.

With hounds meagre, keen, and dexterous, he had put in front of him Gualandi with Sismondi, and with Lanfranchi.

After short course, the father and his sons seemed to me weary; and methought I saw their flanks torn by the sharp teeth.

When I awoke before the dawn, I heard my sons [who were with me, weeping in their sleep, and] asking for bread.

Thou art right cruel, if thou dost not grieve already at the thought of what my heart foreboded; and if thou weepst not, at what are thou used to weep?

They were now awake, and the hour approaching at which our food used to be brought us, and each was anxious from his dream,

and below I heard the outlet of the horrible tower locked up: whereat I looked into the faces of my sons, without uttering a word.

I did not weep: so stony grew I within; they wept; and my little Anselm said: 'Thou lookest so, father, what ails thee?'

But I shed no tear, nor answered all that day, nor the next night, till another sun came forth upon the world.

When a small ray was sent into the doleful prison, and I discerned in their four faces the aspect of my own,

I bit on both my hands for grief. And they, thinking that I did it from desire of eating, of a sudden rose up,

and said: 'Father, it will give us much less pain, if thou wilt eat of us: thou didst put upon us this miserable flesh, and do thou strip it off.'

Then I calmed myself, in order not to make them, more unhappy; that day and the next we all were mute. Ah, hard earth! why didst thou not open?

When we had come to the fourth day, Gaddo threw himself stretched out at my feet, saying: 'My father! why don't you help me?'

There he died; and even as thou seest me, saw I the three fall one by one, between the fifth day and the sixth; whence I betook me, already blind, to groping over each, and for three days called them, after they were dead; then fasting had more power than grief."

When he had spoken this, with eyes distorted he
seized the miserable skull again with his teeth, which as
a dog's were strong upon the bone.

Dante, Inferno, XXXII, 124

- 15 The prince must consider... how to avoid those things
which will make him hated or contemptible; and as often
as he shall have succeeded he will have fulfilled his part,
and he need not fear any danger in other reproaches.

It makes him hated above all things, as I have said, to
be rapacious, and to be a violator of the property and
women of his subjects, from both of which he must
abstain. And when neither their property nor honour is
touched, the majority of men live content, and he has
only to contend with the ambition of a few, whom he can
curb with ease in many ways.

Machiavelli, Prince, XIX

- 16 Hatred is acquired as much by good works as by bad
ones.

Machiavelli, Prince, XIX

- 17 *Gloucester*. Now is the winter of our discontent
Made glorious summer by this sun of York;
And all the clouds that lour'd upon our house
In the deep bosom of the ocean buried.
Now are our brows bound with victorious wreaths;
Our bruised arms hung up for monuments;
Our stern alarums changed to merry meetings,
Our dreadful marches to delightful measures.
Grim-visaged War hath smooth'd his wrinkled front;
And now, instead of mounting barbed steeds

To fright the souls of fearful adversaries,
He capers nimbly in a lady's chamber
To the lascivious pleasing of a lute.
But I, that am not shaped for sportive tricks,
Nor made to court an amorous looking-glass;
I, that am rudely stamp'd, and want love's majesty
To strut before a wanton ambling nymph;
I, that am curtail'd of this fair proportion.
Cheated of feature by dissembling nature,
Deform'd, unfinish'd, sent before my time
Into this breathing world, scarce half made up.
And that so lamely and unfashionable
That dogs bark at me as I halt by them;
Why, I, in this weak piping time of peace,
Have no delight to pass away the time.
Unless to spy my shadow in the sun
And descant on mine own deformity:
And therefore, since I cannot prove a lover.
To entertain these fair well-spoken days,
I am determin'd to prove a villian
And hate the idle pleasures of these days.

Shakespeare, Richard III, I, i, 1

- 18 *Lady Anne*. Poor key-cold figure of a holy king!
Pale ashes of the house of Lancaster!
Thou bloodless remnant of that royal blood!
Be it lawful that I invoke thy ghost.
To hear the lamentations of poor Anne,
Wife to thy Edward, to thy slaughter'd son,
Stabb'd by the selfsame hand (Richard's) that made
these wounds!
Lo, in these windows that let forth thy life,
I pour the helpless balm of my poor eyes.

Cursed be the hand that made these fatal holes!
Cursed be the heart that had the heart to do it!
Cursed the blood that let this blood from hence!
More direful hap betide that hated wretch
That makes us wretched by the death of thee
Than I can wish to adders, spiders, toads,
Or any creeping venom'd thing that lives!
If ever he have child, abortive be it,
Prodigious, and untimely brought to light,
Whose ugly and unnatural aspect
May fright the hopeful mother at the view;
And that be heir to his unhappiness!
If ever he have wife, let her be made
As miserable by the death of him
As I am made by my poor lord and thee!

Shakespeare, Richard III, I, ii, 5

- 19 *Shylock*. You'll ask me, why I rather choose to have
A weight of carrion flesh than to receive
Three thousand ducats: I'll not answer that:
But say it is my humour: is it answer'd?
What if my house be troubled with a rat
And I be pleased to give ten thousand ducats
To have it baned? What, are you answer'd yet?
Some men there are love not a gaping pig;
Some, that are mad if they behold a cat;
And others, when the bagpipe sings i' the nose,
Cannot contain their urine: for affection,
Mistress of passion, sways it to the mood
Of what it likes or loathes. Now, for your answer:
As there is no firm reason to be render'd.
Why he cannot abide a gaping pig;
Why he, a harmless necessary cat;

Why he, a woollen bag-pipe; but of force
Must yield to such inevitable shame
As to offend, himself being offended;
So can I give no reason, nor I will not.
More than a lodged hate end a certain loathing
I bear Antonio, that I follow thus
A losing suit against him. Are you answer'd?

Bassanio. This is no answer, thou unfeeling man,
To excuse the current of thy cruelty.

Shy. I am not bound to please thee with my answers.

Bass. Do all men kill the things they do not love?

Shy. Hates any man the thing he would not kill?

Shakespeare, Merchant of Venice, IV, i, 40

20 *Iago.* That Cassio loves her, I do well believe it;
That she loves him, 'tis apt and of great credit.
The Moor, howbeit that I endure him not,
Is of constant, loving, noble nature,
And I dare think he'll prove to Desdemona
A most dear husband. Now, I do love her too;
Not out of absolute lust, though peradventure
I stand accountant for as great a sin,
But partly led to diet my revenge,
For that I do suspect the lusty Moor
Hath leap'd into my seat; the thought whereof
Doth, like a poisonous mineral, gnaw my inwards;
And nothing can or shall content my soul
Till I am even'd with him, wife for wife,
Or failing so, yet that I put the Moor
At least into a jealousy so strong
That judgement cannot cure. Which thing to do,
If this poor trash of Venice, whom I trash
For his quick hunting, stand the putting on,

I'll have our Michael Cassio on the hip.
Abuse him to the Moor in the rank garb—
For I fear Cassio with my night-cap too—
Make the Moor thank me, love me, and reward me.
For making him egregiously an ass
And practising upon his peace and quiet
Even to madness.

Shakespeare, Othello, II, i, 295

21 *Timon*. Let me look back upon thee. O thou wall
That girdlest in those wolves, dive in the earth
And fence not Athens! Matrons, turn incontinent!
Obedience fail in children! slaves and fools.
Pluck the grave wrinkled Senate from the bench,
And minister in their steads! To general filths
Convert o' the instant, green virginity!
Do't in your parents' eyes! Bankrupts, hold fast;
Rather than render back, out with your knives
And cut your trusters' throats! Bound servants, steal!
Large-handed robbers your grave masters are,
And pill by law. Maid, to thy master's bed;
Thy mistress is o' the brothel! Son of sixteen.
Pluck the lined crutch from thy old limping sire.
With it beat out his brains! Piety, and fear,
Religion to the gods, peace, justice, truth.
Domestic awe, night-rest, and neighbourhood,
Instruction, manners, mysteries, and trades.
Degrees, observances, customs, and laws,
Decline to your confounding contraries.
And let confusion live! Plagues, incident to men.
Your potent and infectious fevers heap
On Athens, ripe for stroke! Thou cold sciatica.
Cripple our senators, that their limbs may halt

As lamely as their manners! Lust and liberty
Creep in the minds and marrows of our youth.
That 'gainst the stream of virtue they may strive.
And drown themselves in riot! Itches, blains,
Sow all the Athenian bosoms; and their crop
Be general leprosy! Breath infect breath,
That their society, as their friendship, may
Be merely poison! Nothing I'll bear from thee.
But nakedness, thou detestable town!
Take thou that too, with multiplying bans!
Timon will to the woods; where he shall find
The unkindest beast more kinder than mankind.
The gods confound—hear me, you good gods all—
The Athenians both within and out that wall!
And grant, as Timon grows, his hate may grow
To the whole race of mankind, high and low!
Amen.

Shakespeare, Timon of Athens, IV, i, 1

- 22 As for the passions, of hate, lust, ambition, and covetousness, what crimes they are apt to produce is so obvious to every man's experience and understanding as there needeth nothing to be said of them, saying that they are infirmities, so annexed to the nature, both of man and all other living creatures, as that their effects cannot be hindered but by extraordinary use of reason, or a constant severity in punishing them. For in those things men hate, they find a continual and unavoidable molestation; whereby either a man's patience must be everlasting, or he must be eased by removing the power of that which molesteth him: the former is difficult; the latter is many times impossible without some violation of the law.

Hobbes, Leviathan, II, 27

- 23 All men naturally hate one another. They employ lust as far as possible in the service of the public weal. But this is only a [*pretence*] and a false image of love; for at bottom it is only hate.

Pascal, Pensees, VII, 451

- 24 Love is nothing but joy accompanied with the idea of an external cause, and haired is nothing but sorrow with the accompanying idea of an external cause. We see too that he who loves a thing necessarily endeavours to keep it before him and to preserve it, and, on the other hand, he who hates a thing necessarily endeavours to remove and destroy it.

Spinoza, Ethics, III, Prop, 13, Schol.

- 25 Every one endeavours as much as possible to make others love what he loves, and to hate what he hates. And so we see that each person by nature desires that other persons should live according to his way of thinking; but if every one does this, then all are a hindrance to one another, and if every one wishes to be praised or beloved by the rest, then they all hate one another.

Spinoza, Ethics, III, Prop. 31, Corol.

- 26 No one can hate God....

The idea of God which is in us is adequate and perfect, and therefore insofar as we contemplate God do we act, and consequently no sorrow can exist with the accompanying idea of God; that is to say, no one can hate God....

Love to God cannot be turned into hatred....

But some may object, that if we understand God to be the cause of all things, we do for that very reason consider Him to be the cause of sorrow. But I reply, that insofar as we understand the causes of sorrow, it ceases to be a passion, that is to say, it ceases to be sorrow; and therefore insofar as we understand God to be the cause of sorrow do we rejoice.

Spinoza, Ethics, V, Prop. 18

27 *Zara*. Heav'n has no Rage like Love to hatred turn'd,
Nor Hell a Fury like a Woman scorn'd.

Congreve, The Mourning Bride, III, ii

28 My wife and family received me with great surprize and joy, because they concluded me certainly dead; but I must freely confess, the sight of them filled me only with hatred, disgust and contempt; and the more, by reflecting on the near alliance I had to them. For, although since my unfortunate exile from the Houyhnhnm country, I had compelled my self to tolerate the sight of Yahoos, and to converse with Don Pedro de Mendez; yet my memory and imaginations were perpetually filled with the virtues and ideas of those exalted Houyhnhnms. And when I began to consider, that by copulating with one of the Yahoo-species, I had become a parent of more, it struck me With the utmost shame, confusion, and horror.

Swift, Gulliver's Travels, IV, 11

29 I have ever hated all nations, professions and communities, and all my love is toward individuals.... But

principally I hate and detest that animal called man;
although I heartily love John, Peter, Thomas, and so forth.

Swift, Letter to Pope (Sept. 29, 1725)

- 30 The body of Jonathan Swift, Doctor of Divinity, dean of this cathedral church, is buried here, where fierce indignation can no longer lacerate his heart. Go, passerby, and imitate if you can one who strove with all his strength to serve human liberty.

Swift, Epitaph in St. Patrick's Cathedral, Dublin

- 31 In this, we have said, he [Mr. Allworthy] did not agree with his wife; nor, indeed, in anything else: for though an affection placed on the understanding is, by many wise persons, thought more durable than that which is founded on beauty, yet it happened otherwise in the present case. Nay, the understandings of this couple were their principal bone of contention, and one great cause of many quarrels, which from time to time arose between them; and which at last ended, on the side of the lady, in a sovereign contempt for her husband; and on the husband's, in an utter abhorrence of his wife.

Fielding, Tom Jones, II, 7

- 32 One situation only of the married state is excluded from pleasure: and that is, a state of indifference: but as many of my readers, I hope, know what an exquisite delight there is in conveying pleasure to a beloved object, so some few, I am afraid, may have experienced the satisfaction of tormenting one we hate. It is, I apprehend, to come at this latter pleasure, that we see both sexes often give up that ease in marriage which they might

otherwise possess, though their mate was never so disagreeable to them. Hence the wife often puts on fits of love and jealousy, nay, even denies herself any pleasure, to disturb and prevent those of her husband; and he again, in return, puts frequent restraints on himself, and stays at home in company which he dislikes, in order to confine his wife to what she equally detests. Hence, too, must flow those tears which a widow sometimes so plentifully sheds over the ashes of a husband with whom she led a life of constant disquiet and turbulency, and whom now she can never hope to torment any more.

Fielding, Tom Jones, II, 7

33 "If I was not as great philosopher as Socrates himself," returned Mrs. Western, "you would overcome my patience. What objection can you have to the young gentleman?"

"A very solid objection, in my opinion," says Sophia—"I hate him."

"Will you never learn a proper use of words?" answered the aunt. "Indeed, child, you should consult Bailey's Dictionary'. It is impossible you should hate a man from whom you have received no injury. By hatred, therefore, you mean no more than dislike, which is no sufficient objection against your marrying of him. I have known many couples, who have entirely disliked each other, lead very comfortable genteel lives. Believe me, child, I know these things better than you. You will allow me, I think, to have seen the world, in which I have not an acquaintance who would not rather be thought to dislike her husband than to like him. The contrary is such out-of-fashion romantic nonsense, that the very imagination of it is shocking."

Fielding, Tom Jones, VII, 3

34 *Johnson*. A man will please more upon the whole by negative qualities than by positive; by never offending, than by giving a great deal of delight. In the first place, men hate more steadily than they love; and if I have said something to hurt a man once, I shall not get the better of this, by saving many things to please him.

Boswell, Life of Johnson (1777)

35 *Ahab*. "All visible objects, man, are but as pasteboard masks. But in each event—in the living act, the undoubted deed—there, some unknown but still reasoning thing puts forth the mouldings of its features from behind the unreasoning mask. If man will strike, strike through the mask! How can the prisoner reach outside except by thrusting through the wall? To me, the white whale is that wall, shoved near to me. Sometimes I think there's naught beyond. But 'tis enough. He tasks me; he heaps me; I see in him outrageous strength, with an inscrutable malice sinewing it. That inscrutable thing is chiefly what I hate; and be the white whale agent, or be the white whale principal, I will wreak that hate upon him. Talk not to me of blasphemy, man; I'd strike the sun if it insulted me."

Melville, Moby Dick, XXXVI

36 His three boats stove around him, and oars and men both, whirling in the eddies; one captain, seizing the line-knife from his broken prow', had dashed at the whale, as an Arkansas duellist at his foe, blindly seeking with a six-inch blade to reach the fathom-deep life, of the whale. That captain was Ahab. And then it was, that suddenly

sweeping his sickle-shaped lower jaw beneath him, Moby Dick had reaped away Ahab's leg, as a mower a blade of grass in the field. No turbaned Turk, no hired Venetian or Malay, could have smote him with more seeming malice. Small reason was there to doubt, then, that ever since that almost fatal encounter, Ahab had cherished a wild vindictiveness against the whale, all the more fell for that in his frantic morbidness he at last came to identify with him, not only all his bodily woes, but all his intellectual and spiritual exasperations. The White Whale swam before him as the monomaniac incarnation of all those malicious agencies which some deep men feel eating in them, till they are left living on with half a heart and half a lung. That intangible malignity which has been from the beginning; to whose dominion even the modem Christians ascribe one-half of the worlds; which the ancient Ophites of the east revered in their statue devil;—Ahab did not fall down and worship it like them; but deliriously transferring its idea to the abhorred white whale, he pitted himself, all mutilated, against it. All that most maddens and torments; all that stirs up the lees of things; all truth with malice in it; all that cracks the sinews and cakes the brain; all the subtle demonisms of life and thought; all evil, to crazy Ahab, were visibly personified, and made practically assailable in Moby Dick. He piled upon the whale's white hump the sum of all the general rage and hate felt by his whole race from Adam down; and then, as if his chest had been a mortar, he burst his hot heart's shell upon it.

Melville, Moby Dick, XLI

- 37 Enmity or hatred seems also to be a highly persistent feeling, perhaps more so than any other that can be

named.... Dogs are very apt to hate both strange men and strange dogs, especially if they live near at hand, but do not belong to the same family, tribe, or clan; this feeling would thus seem to be innate, and is certainly a most persistent one. It seems to be the complement and converse of the true social instinct. From what we hear of savages, it would appear that something of the same kind holds good with them. If this be so, it would be a small step in any one to transfer such feelings to any member of the same tribe if he had done him an injury and had become his enemy. Nor is it probable that the primitive conscience would reproach a man for injuring his enemy; rather it would reproach him, if he had not revenged himself. To do good in return for evil, to love your enemy, is a height of morality to which it may be doubted whether the social instincts would, by themselves, have ever led us. It is necessary that these instincts, together with Sympathy, should have been highly cultivated and extended by the aid of reason, instruction, and the love or fear of God, before any such golden rule would ever be thought of and obeyed.

Darvin, Descent of Man, I, 4, fn. 27

- 38 The hunting instinct has [a]. . . remote origin in the evolution of the race. The hunting and the fighting instinct combine in many manifestations. They both support the emotion of anger; they combine in the fascination which stories of atrocity have for most minds; and the utterly blind excitement of giving the rein to our fury when our blood is up (an excitement whose intensity is greater than that of any other human passion save one) is only explicable as an impulse aboriginal in character, and having more to do with immediate and

overwhelming tendencies to muscular discharge than to any possible reminiscences of effects of experience, or association of ideas. I say this here, because the pleasure of disinterested cruelty has been thought a paradox, and writers have sought to show that it is no primitive attribute of our nature, but rather a resultant of the subtle combination of other less malignant elements of mind. This is a hopeless task. If evolution and the survival of the fittest be true at all, the destruction of prey and of human rivals must have been among the most important of man's primitive functions, the fighting and the chasing instincts must have become ingrained. Certain perceptions must immediately, and without the intervention of interferences and ideas, have prompted emotions and motor discharges; and both the latter must, from the nature of the case, have been very violent, and therefore, when unchecked, of an intensely pleasurable kind. It is just because human bloodthirstiness is such a primitive part of us that it is so hard to eradicate, especially where a fight or a hunt is promised as part of the fun.

William James, Psychology, XXIV

- 39 I will put the following case: Let there be a person near me whom I hate so strongly that I have a lively impulse to rejoice should anything happen to him. But the moral side of my nature does not give way to this impulse; I do not dare to express this sinister wish, and when something does happen to him which he does not deserve I suppress my satisfaction, and force myself to thoughts and expressions of regret. Everyone will at some time have found himself in such a position. But now let it happen that the hated person, through some

transgression of his own, draws upon himself a well-deserved calamity; I shall now be allowed to give free rein to my satisfaction at his being visited by a just punishment, and I shall be expressing an opinion which coincides with that of other impartial persons. But I observe that my satisfaction proves to be more intense than that of others, for it has received reinforcement from another source—from my hatred, which was hitherto prevented by the inner censorship from furnishing the affect, but which, under the altered circumstances, is no longer prevented from doing so. This case generally occurs in social life when antipathetic persons or the adherents of an unpopular minority have been guilty of some offence. Their punishment is then usually commensurate not with their guilt, but with their guilt plus the ill-will against them that has hitherto not been put into effect.

Freud, Interpretation of Dreams, VI, H

40 It is noteworthy that in the use of the word hate no . . . intimate relation to sexual pleasure and the sexual function appears: on the contrary, the painful character of the relation seems to be the sole decisive feature. The ego hates, abhors, and pursues with intent to destroy all objects which are for it a source of painful feelings, without taking into account whether they mean to it frustration of sexual satisfaction or of gratification of the needs of self-preservation. Indeed, it may be asserted that the true prototypes of the hate-relation are derived not from sexual life, but from the struggle of the ego for self-preservation and self-maintenance.

Freud, Instincts and Their Vicissitudes

- 41 The relation of hate to objects is older than that of love. It is derived from the primal repudiation by the narcissistic ego of the external world whence flows the stream of stimuli. As an expression of the pain-reaction induced by objects, it remains in constant intimate relation with the instincts of self-preservation, so that sexual and ego-instincts readily develop an antithesis which repeats that of love and hate.

Freud, Instincts and Their Vicissitudes

- 42 Almost every intimate emotional relation between two people which lasts for some time—marriage, friendship, the relations between parents and children—leaves a sediment of feelings of aversion and hostility, which have first to be eliminated by repression. This is less disguised in the common wrangles between business partners or in the grumbles of a subordinate at his superior. The same thing happens when men come together in larger units. Every time two families become connected by a marriage, each of them thinks itself superior to or of better birth than the other. Of two neighbouring towns, each is the other's most jealous rival; every little canton looks down upon the others with contempt. Closely related races keep one another at arm's length; the South German cannot endure the North German, the Englishman casts every kind of aspersion upon the Scotchman, the Spaniard despises the Portuguese. We are no longer astonished that greater differences should lead to an almost insuperable repugnance, such as the Gallic people feel for the German, the Aryan for the Semite, and the white races for the coloured.

Freud, Group Psychology and the Analysis of the Ego, VI

43 In our unconscious we daily and hourly deport all who stand in our way, all who have offended or injured us. the expression: "Devil take him!" which so frequently comes to our lips in joking anger, and which really means "Death take him!" is in our unconscious an earnest, deliberate death-wish. Indeed, our unconscious will murder even for trifles; like the ancient Athenian law of Draco, it knows no other punishment for crime than death; and this has a certain consistency, for every injury to our almighty and autocratic ego is at bottom a crime of *lese-majeste*

And so, if we are to be judged by the wishes in our unconscious, we are, like primitive man, simply a gang of murderers. It is well that all these wishes do not possess the potency' which was attributed to them by primitive men; in the crossfire of mutual maledictions, mankind would long since have perished, the best and wisest of men and the loveliest and fairest of women with the rest.

Freud, Thoughts on War and Death, II

44 Men clearly do not find it easy to do without satisfaction of this tendency to aggression that is in them; when deprived of satisfaction of it they' are ill at ease. There is an advantage, not to be undervalued, in the existence of smaller communities, through which the aggressive instinct can find an outlet in enmity towards those outside the group. It is always possible to unite considerable numbers of men in love towards one another, so long as there are still some remaining as objects for aggressive manifestations,... The Jewish people, scattered in all directions as they are, have in this way rendered services which deserve recognition to the development of culture in the countries where they settled; but unfortunately not all the massacres of Jew's

in the Middle Ages sufficed to procure peace and security for their Christian contemporaries.

Freud, Civilization and Its Discontents, V

3.3 Sexual Love

The love that the Greeks called *eros* and the Romans *amor* is certainly always a love that involves intense bodily passions, persistent emotional drives, powerful, often disturbing, desires, and a mixture of sensual pleasures and pains that are usually inseparable from one another. This much is explicitly clear or plainly intimated in the passages that treat sexual or erotic love. But what may not be clear, and even perplexing, is the relation of sexuality itself to sexual love.

Are all sexual desires or acts impulses or embodiments of love—in men and other animals? Or does sexual behavior become a manifestation of love, or a kind of love, only when sexual desires and activities are somehow transformed by other sentiments and impulses, such as the sentiments and impulses that are involved in the kind of love called friendship? Such questions lead to still another. If there can be mere sexuality, i.e., sexual desire or performance, without love, can there also be love without sexual involvement of any kind? If the reader wishes to pursue such inquiries, he will find it useful to consider what is said about other kinds of love, as set forth in the next two sections.

Light on these matters may also come from a pivotal distinction that underlies many discussions of love and that is particularly germane to the consideration of sexual love—the distinction between acquisitive and benevolent impulses. Acquisitive desire aims at self-satisfaction or benefit to one's self, whereas the benevolent impulse tends

in the opposite direction toward the good of another or benefit to the person beloved. The term "concupiscence" or "concupiscent" that occurs in certain of the quotations connotes acquisitive desire unaccompanied by any benevolent impulse. The answer to the question about the distinction between mere sexuality and sexual love may, therefore, turn on the answer to another question: Is concupiscence or purely acquisitive desire ever truly a form of love? The reader will find that the authors quoted do not agree on any single or simple answer to the question.

Wherever the truth of the matter lies, the fact that concupiscence enters into the consideration of sexual love impels us to include in this section texts that deal with lust in its myriad forms—not just sexual lust, but the lust for power, the lust for worldly goods, and so on. This, in turn, makes a certain amount of moralizing unavoidable; for, though love, especially sexual love, is either favored or feared, it is never condemned as immoral, as lust, sexual or otherwise, always is. If the moral problems that are raised interest the reader, he should turn to Chapter 9 on Ethics, and especially to Section 9.10 on Virtue and Vice and Section 9.12 on temperance and Intemperance.

The discussion of sexual love as well as lust also involves moral considerations of the sort connoted by such terms as "fornication" and "adultery" which are relevant to the treatment of marriage and conjugal love in the preceding chapter as well as here.

■ ■ ■

I And it came to pass after these things, that his master's [Potiphar's] wife cast her eyes upon Joseph; and she said, Lie with me.

But he refused, and said unto his master's wife, Behold, my master wotteth not what is with me in the house, and he hath committed all that he hath to my hand;

There is none greater in this house than I; neither hath he kept back any thing from me but thee, because thou art his wife: how then can I do this great wickedness, and sin against God?

And it came to pass, as she spake to Joseph day by day, that he hearkened not unto her, to lie by her, or to be with her.

And it came to pass about this time, that Joseph went into the house to do his business; and there was none of the men of the house there within.

And she caught him by his garment, saying, Lie with me: and he left his garment in her hand, and fled, and got him out.

And it came to pass, when she saw that he had left his garment in her hand, and was fled forth,

That she called unto the men of her house, and spake unto them, saying. See, he hath brought in an Hebrew unto us to mock us; he came in unto me to lie with me, and I cried with a loud voice:

And it came to pass, when he heard that I lifted up my voice and cried, that he left his garment with me, and fled, and got him out.

And she laid up his garment by her, until his lord came home.

And she spake unto him, according to these words, saying, The Hebrew servant, which thou hast brought

unto us, came in unto me to mock me:

And it came to pass, as I lifted up my voice and cried, that he left his garment with me, and fled out.

And it came to pass, when his master heard the words of his wife, which she spake unto him, saying, After this manner did thy servant to me; that his wrath was kindled.

And Joseph's master took him, and put him into the prison, a place where the king's prisoners were bound: and he was there in the prison.

Genesis 39:7-20

2 And it came to pass in an eveningtide, that David arose from off his bed, and walked upon the roof of the king's house: and from the roof he saw a woman washing herself; and the woman was very beautiful to look upon.

And David sent and enquired after the woman. And one said. Is not this Bath-sheba, the daughter of E-li-am, the wife of U-ri-ah the Hittite?

And David sent messengers, and took her; and she came in unto him, and he lay with her; for she was purified from her uncleanness: and she returned unto her house.

And the woman conceived, and sent and told David, and said, I am with child.... And it came to pass in the morning, that David wrote a letter to Joab, and sent it by the hand of U-ri-ah.

And he wrote in the letter, saying. Set ye U-ri-ah in the forefront of the hottest battle, and retire yet from him, that he may be smitten, and die.

And it came to pass, when Joab observed the city, that he assigned U-ri-ah unto a place where he knew that valiant men were.

And the men of the city went out, and fought with Joab: and there fell some of the people of the servants of David: and U-ri-ah the Hittite died also.... And when the wife of U-ri-ah heard that U-ri-ah her husband was dead, she mourned for her husband.

And when the mourning was past, David sent and fetched her to his house, and she became his wife, and bare him a son. But the thing that David had done displeased the Lord.

// Samuel 11:2-21

3 And Amnon said unto Tamar, Bring the meat into the chamber, that I may eat of thine hand. And Tamar took the cakes which she had made, and brought them into the chamber to Amnon her brother.

And when she had brought them unto him to eat, he took hold of her, and said unto her. Come lie with me, my sister.

And she answered him, Nay, my brother, do not force me; for no such thing ought to be done in Israel; do not thou this folly.

And I, whither shall I cause my shame to go? and as for thee, thou shalt be as one of the fools in Israel. Now therefore, I pray thee, speak unto the king; for he will not withhold me from thee.

Howbeit he would not hearken unto her voice; but, being stronger than she, forced her, and lay with her.

Then Amnon hated her exceedingly; so that the hatred wherewith he hated her was greater than the love wherewith he had loved her. And Amnon said unto her, Arise, be gone.

And she said unto him, There is no cause: this evil in sending me away is greater than the other that thou didst

unto me. But he would not hearken unto her.

Then he called his servant that ministered unto him, and said, Put now this woman out from me, and bolt the door after her.

And she had a garment of divers colours upon her; for with such robes were the king's daughters that were virgins apparelled. Then his servant brought her out, and bolted the door after her.

II Samuel 13:10-18

4 To keep thee from the evil woman, from the flattery of the tongue of a strange woman.

Lust not after her beauty in thine heart; neither let her take thee with her eyelids.

For by means of a whorish woman a man is brought to a piece of bread: and the adulteress will hunt for the precious life.

Can a man take fire in his bosom, and his clothes not be burned?

Can one go upon hot coals, and his feet not be burned?

So he that goeth in to his neighbour's wife; whosoever toucheth her shall not be innocent.

Proverbs 6:24-29

5 Now to his harp the blinded minstrel sang of Ares' dalliance with Aphrodite; how hidden in Hephaistos' house they played at love together, and the gifts of Ares, dishonoring Hephaistos' bed—and how the word that wounds the heart came to the master from Helios, who had seen the two embrace; and when he learned it. Lord Hephaistos went with baleful calculation to his forge.

There mightily he armed his anvil block and hammered out a chain, whose tempered links could not be sprung or bent; he meant that they should hold.

Those shackles fashioned, hot in wrath Hephaistos climbed to the bower and the bed of love, pooled all his net of chain around the bed posts and swung it from the rafters overhead— light as a cobweb even gods in bliss could not perceive, so wonderful his cunning. Seeing his bed now made a snare, he feigned a journey to the trim stronghold of Lemnos, the dearest of earth's towns to him. And Arcs? Ah, golden Arcs' watch had its reward when he beheld the great smith leaving home. How promptly to the famous door he came, intent on pleasure with sweet Kythereia!

She, who had left her father's side but now, sat in her chamber when her lover entered; and tenderly he pressed her hand and said;

"Come and lie down, my darling, and be happy! Hephaistos is no longer here, but gone to see his grunting Sintian friends on Lemnos."

As she, too, thought repose would be most welcome, the pair went in to bed—into a shower of clever chains, the netting of Hephaistos. So trussed, they could not move apart, nor rise, at last they knew there could be no escape, they were to see the glorious cripple now— for Helios had spied for him, and told him; so he turned back, this side of Lemnos Isle, sick at heart, making his way homeward. Now in the doorway of the room he stood while deadly rage took hold of him; his voice, hoarse and terrible, reached all the gods:

"O Father Zeus, O gods in bliss forever, here is indecorous entertainment for you, Aphrodite, Zeus's daughter, caught in the act, cheating me, her cripple,

with Ares—devastating Ares. Cleanlimbed beauty is her joy, not these bandy legs I came into the world with: no one to blame but the two gods who bred me! Come see this pair entwining here in my own bed! How hot it makes me burn! I think they may not care to lie much longer, pressing on one another, passionate lovers; they'll have enough of bed together soon. And yet the chain that bagged them holds them down till Father sends me back my wedding gifts— all that I poured out for his damned pigeon, so lovely, and so wanton."

All the others were crowding in, now, to the brazen house— Poseidon who embraces earth, and Hermes the runner, and Apollo, lord of Distance. The goddesses stayed home for shame; but these munificences ranged there in the doorway, and irrepressible among them all arose the laughter of the happy gods. Gazing hard at Hephaistos' handiwork the gods in turn remarked among themselves:

"No dash in adultery now."

"The tortoise tags the hare— Hephaistos catches Ares—and Ares outran the wind."

"The lame god's craft has pinned him. Now shall he pay what is due from gods taken in cuckoldry."

They made these improving remarks to one another, but Apollo leaned aside to say to Hermes:

"Son of Zeus, beneficent Wayfinder, would you accept a coverlet of chain, if only you lay by Aphrodite's golden side?"

To this the Wayfinder replied, shining:

"Would I not, though, Apollo of distances! Wrap me in chains three times the weight of these, come goddesses and gods to see the fun; only let me lie beside the pale-golden one!"

The gods gave way again to peals of laughter.

Homer, Odyssey, VIII, 266

6 That man seems to me peer of gods, who sits in thy presence, and hears close to him thy sweet speech and lovely laughter; that indeed makes my heart flutter in my bosom. For when I see thee but a little, I have no utterance left, my tongue is broken down, and straightway a subtle fire has run under my skin, with my eyes I have no sight, my ears ring, sweat pours down, and a trembling seizes all my body; I am paler than grass, and seem in my madness little better than one dead.

Sappho, The Ode to Aphrodite (fragment)

7 *The Nurse*. The chaste, they love not vice of their own will, but yet they love it.

Euripides, Hippolytus, 359

8 *Socrates*. In the friendship of the lover there is no real kindness; he has an appetite and wants to feed upon you. "Just as the wolf loves the lamb, so the lover adores his beloved."

Plato, Phaedrus, 241B

9 Aristophanes . . . had a mind to praise Love in another way, unlike that either of Pausanias or Eryximachus. Mankind, he said, judging by their neglect of him, have never, as I think, at all understood the power of Love. For if they had understood him they would surely have built noble temples and altars, and offered solemn sacrifices in his honour; but this is not done, and most certainly ought to be done: since of all the gods he is the best friend of

men, the helper and the healer of the ills which are the great impediment to the happiness of the race. I will try to describe his power to you [Eryximachus], and you shall teach the rest of the world what I am teaching you. In the first place, let me treat of the nature of man and what has happened to it; for the original human nature was not like the present, but different. The sexes were not two as they are now, but originally three in number; there was man, woman, and the union of the two, having a name corresponding to this double nature, which had once a real existence, but is now lost, and the word "Androgynous" is only preserved as a term of reproach. In the second place, the primeval man was round, his back and sides forming a circle; and he had four hands and four feet, one head with two faces, looking opposite ways, set on a round neck and precisely alike; also four ears, two privy members, and the remainder to correspond. He could walk upright as men now do, backwards or forwards as he pleased, and he could also roll over and over at a great pace, turning on his four hands and four feet, eight in all, like tumblers going over and over with their legs in the air; this was when he wanted to run fast. Now the sexes were three, and such as I have described them; because the sun, moon, and earth are three; and the man was originally the child of the sun, the woman of the earth, and the man-woman of the moon, which is made up of sun and earth, and they were all round and moved round and round like their parents. Terrible was their might and strength, and the thoughts of their hearts were great, and they made an attack upon the gods; of them is told the tale of Otys and Ephialtes who, as Homer says, dared to scale heaven, and would have laid hands upon the gods. Doubt reigned in the celestial councils. Should

they kill them and annihilate the race with thunderbolts, as they had done the giants, then there would be an end of the sacrifices and worship which men offered to them; but, on the other hand, the gods could not suffer their insolence to be unrestrained.

At last, after a good deal of reflection, Zeus discovered a way. He said: "Methinks I have a plan which will humble their pride and improve their manners; men shall continue to exist, but I will cut them in two and then they will be diminished in strength and increased in numbers; this will have the advantage of making them more profitable to us. They shall walk upright on two legs, and if they continue insolent and will not be quiet, I will split them again and they shall hop about on a single leg." He spoke and cut men in two, like a sorb-apple which is halved for pickling, or as you might divide an egg with a hair; and as he cut them one after another, he bade Apollo give the face and the half of the neck a turn in order that the man might contemplate the section of himself: he would thus learn a lesson of humility. Apollo was also bidden to heal their wounds and compose their forms. So he gave a turn to the face and pulled the skin from the sides all over that which in our language is called the belly, like the purses which draw in, and he made one mouth at the centre, which he fastened in a knot (the same which is called the navel); he also moulded the breast and took out most of the wrinkles, much as a shoemaker might smooth leather upon a last; he left a few, however, in the region of the belly and navel, as a memorial of the primeval state. After the division the two parts of man, each desiring his other half, came together, and throwing their arms about one another, entwined in mutual embraces, longing to grow

into one, they were on the point of dying from hunger and self-neglect, because they did not like to do anything apart; and when one of the halves died and the other survived, the survivor sought another mate, man or woman as we call them,—being the sections of entire men or women,—and clung to that. They were being destroyed, when Zeus in pity of them invented a new plan; he turned the parts of generation round to the front, for this had not been always their position, and they sowed the seed no longer as hitherto like grasshoppers in the ground, but in one another; and after the transposition the male generated in the female in order that by the mutual embraces of man and woman they might breed, and the race might continue; or if man came to man they might be satisfied, and rest, and go their ways to the business of life: so ancient is the desire of one another which is implanted in us, reuniting our original nature, making one of two, and healing the state of man.

Each of us when separated, having one side only, like a flat fish, is but the indenture of a man, and he is always looking for his other half. Men who are a section of that double nature which was once called Androgynous are lovers of women; adulterers are generally of this breed, and also adulterous women who lust after men: the women who are a section of the woman do not care for men, but have female attachments; the female companions are of this sort. But they who are a section of the male follow the male, and while they are young, being slices of the original man, they hang about men and embrace them, and they are themselves the best of boys and youths, because they have the most manly nature. Some indeed assert that they are shameless, but

this is not true; (or they do not act thus from any want of shame, but because they are valiant and manly, and have a manly countenance, and they embrace that which is like them. And these when they grow up become our statesmen, and these only, which is a great proof of the truth of what I am saying. When they reach manhood they are lovers of youth, and are not naturally inclined to marry or beget children,—if at all, they do so only in obedience to the law; but they are satisfied if they may be allowed to live with one another un-wedded; and such a nature is prone to love and ready to return love, always embracing that which is akin to him. And when one of them meets with his other half, the actual half of himself, whether he be a lover of youth or a lover of another sort, the pair are lost in an amazement of love and friendship and intimacy, and will not be out of the other's sight, as I may say, even for a moment: these are the people who pass their whole lives together; yet they could not explain what they desire of one another. For the intense yearning which each of them has towards the other does not appear to be the desire of lover's intercourse, but of something else which the soul of either evidently desires and cannot tell, and of which she has only a dark and doubtful presentiment. Suppose Hephaestus, with his instruments, to come to the pair who are lying side by side and to say to them, "What do you people want of one another?" they would be unable to explain. And suppose further, that when he saw their perplexity he said: "Do you desire to be wholly one; always day and night to be in one another's company? for if this is what you desire, I am ready to melt you into one and let you grow together, so that being two you shall become one, and while you live live a common life as if you were a single man, and

after your death in the world below still be one departed soul instead of two—I ask whether this is what you lovingly desire, and whether you are satisfied to attain this?"—there is not a man of them who when he heard the proposal would deny or would not acknowledge that this meeting and melting into one another, this becoming one instead of two, was the very expression of his ancient need. And the reason is that human nature was originally one and we were a whole, and the desire and pursuit of the whole is called love.

Plato, Symposium, 189A

- 10 Animals in general seem naturally disposed to this intercourse at about the same period of the year, and that is when winter is changing into summer. And this is the season of spring, in which almost all things that fly or walk or swim take to pairing. Some animals pair and breed in autumn also and in winter, as is the case with certain aquatic animals and certain birds. Man pairs and breeds at all seasons, as is the case also with domesticated animals, owing to the shelter and good feeding they enjoy: that is to say, with those whose period of gestation is also comparatively brief, as the sow and the bitch, and with those birds that breed frequently. Many animals time the season of intercourse with a view to the right nurture subsequently of their young. In the human species, the male is more under sexual excitement in winter, and the female in summer.

Aristotle, History of Animals, 542a20

- 11 Men in most cases continue to be sexually competent until they are sixty years old, and if that limit be

overpassed then until seventy years; and men have been actually known to procreate children at seventy years of age. With many men and many women it so happens that they are unable to produce children to one another, while they are able to do so in union with other individuals. The same thing happens with regard to the production of male and female offspring; for sometimes men and w'omcn in union with one another produce male children or female, as the ease may be, but children of the opposite sex when otherwise mated. And they are apt to change in this respect with advancing age: for sometimes a husband and wife while they are young produce female children and in later life male children; and in other eases the very contrary occurs. And just the same thing is true in regard to the generative faculty: for some while young are childless, but have children when they grow older; and some have children to begin with, and later on no more.

Aristotle, History of Animals, 585b6

12 As when in sleep a thirsty man seeks to drink and water is not given to quench the burning in his frame, but he seeks the idols of waters and toils in vain and thirsts as he drinks in the midst of the torrent stream, thus in love Venus mocks lovers with idols, nor can bodies satisfy them by all their gazing upon them nor can they with their hands rub aught off the soft limbs, wandering undecided over the whole body. At last when they have united and enjoy the flower of age, when the body now has a presage of delights and Venus is in the mood to sow the fields of woman, they greedily clasp each other's body and suck each other's lips and breathe in, pressing meanwhile teeth on each other's mouth; all in vain, since

they can rub nothing off nor enter and pass each with his whole body into the other's body; for so sometimes they seem to will and strive to do: so greedily are they held in the chains of Venus, while their limbs melt overpowered by the might of the pleasure. At length when the gathered desire has gone forth, there ensues for a brief while a short pause in the burning passion; and then returns the same frenzy, then comes back the old madness, when they are at a loss to know what they really desire to get, and cannot find what device is to conquer that mischief; in such utter uncertainty they pine away by a hidden wound.

Lucretius, Nature of Things, IV

- 13 But anxious cares already seiz'd the queen:
She fed within her veins a flame unseen;
The hero's valor, acts, and birth inspire
Her soul with love, and fan the secret fire.
His words, his looks, imprinted in her heart.
Improve the passion, and increase the smart.

Virgil, Aeneid, IV

- 14 *Dido*. To this one error I might yield again;
For, since Sichaeus was untimely slain.
This only man is able to subvert
The fix'd foundations of my stubborn heart.
And, to confess my frailty, to my shame.
Somewhat I find within, if not the same,
Too like the sparkles of my former flame.

Virgil, Aeneid, IV

15 What priestly rites, alas! what pious art.
What vows avail to cure a bleeding heart!
A gentle fire she feeds within her veins.
Where the soft god secure in silence reigns.
Sick with desire, and seeking him she loves.
From street to street the raving Dido roves.
So when the watchful shepherd, from the blind,
Wounds with a random shaft the careless hind.
Distracted with her pain she flies the woods.
Bounds o'er the lawn, and seeks the silent floods,
With fruitless care; for still the fatal dart
Sticks in her side, and rankles in her heart.

Virgil, Aeneid, IV

16 The queen and prince, as love or fortune guides.
One common cavern in her bosom hides.
Then first the trembling earth the signal gave.
And flashing fires enlighten all the cave;
Hell from below, and Juno from above.
And howling nymphs, were conscious of their love
From this ill-omen'd hour in time arose
Debate and death, and all succeeding woes.
The queen, whom sense of honor could not move,
No longer made a secret of her love.
But call'd it marriage, by that specious name
To veil the crime and sanctify the shame.

Virgil, Aeneid, IV

17 What I hate is the girl who gives with a feeling she has to.
Dry in the bed, with her mind somewhere else, gathering
wool.
Duty is all very well, hut's let's not confuse it with

pleasure;
I do not want any girl doing her duty for me.
What I like to hear are the words of utter abandon,
Words that say, "Not too soon!", words that say, "Wait just
a while!"
Let me see my girl with eyes that confess her excitement;
Let her, after she comes, want no more for a while.
What does youth know of delight? Some things ought not
to be hurried;
After some thirty-odd years, lovers begin to learn how.
Let the premature guzzle wine that is hardly fermented,
I'll take wine from a jar mellowed in vintage with time.
Only the full-grown tree resists the heat of the sunlight,
Meadow's too recently sown offer the barefoot no joy.
Who wants Hermione, if Helen is his for the taking?
Look for a woman, mature, not any slip of a girl.
Love is an art learned late, but if you are willing, and
patient,
Playing your part like a man, you will have fitting reward.

Ovid, Art of Love, II, 685

- 18 What a girl ought to know is herself, adapting her
method,
Taking advantage of ways nature equips her to use.
Lie on your back, if your face and all of your features are
pretty;
If your posterior's cute, better be seen from behind.
Milon used to bear Atalanta's legs on his shoulders;
If you have beautiful legs, let them be lifted like hers.
Little girls do all right if they sit on top, riding horseback;
Hector's Andromache knew she could not do this: too tall!
Press the couch with your knees and bend your neck
backward a little,

If your view, full-length, seems what a lover should crave.
If the breasts and thighs are youthful and lovely to look
at,
Let the man stand and the girl lie on a slant on the bed.
Let your hair come down, in the Laodamian fashion:
If your belly is lined, better be seen from behind.
There are a thousand ways: a simple one, never too
tiring,
Is to lie on your back, turning a bit to the right.
My Muse can give you the truth, more truth than Apollo
or Ammon;
Take it from me, what I know took many lessons to learn.
Let the woman feel the act of love to her marrow,
Let the performance bring equal delight to the two.
Coax and flatter and tease, with inarticulate murmurs,
Even with sexual words, in the excitement of play,
And if nature, alas! denies you the final sensation
Cry out as if you had come, do your best to pretend.
Really, I pity the girl whose place, let us say, cannot give
her
Pleasure it gives to the man, pleasure she ought to enjoy.
So, if you have to pretend, be sure the pretense is
effective,
Do your best to convince, prove it by rolling your eyes.
Prove by your motions, your moans, your sighs, what a
pleasure it gives you.
Ah, what a shame! That part has its own intimate signs.

Ovid, Art of Love, III, 771

- 19 Love not the world, neither the things that are in the
world. If any man love the world, the love of the Father is
not in him.

For all that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but is of the world.

And the world passeth away, and the lust thereof; but he that doeth the will of God abideth for ever.

I John 2:15-17

20 I came to Carthage, where a cauldron of illicit loves leapt and boiled about me. I was not yet in love, but I was in love with love, and from the very depth of my need hated myself for not more keenly feeling the need. I sought some object to love, since I was thus in love with loving; and I hated security and a life with no snares for my feet. For within I was hungry, all for the want of that spiritual food which is Thyself, my God; yet [though I was hungry for want of it] I did not hunger for it: I had no desire whatever for incorruptible food, not because I had it in abundance but the emptier I was, the more I hated the thought of it. Because of all this my soul was sick, and broke out in sores, whose itch I agonized to scratch with the rub of carnal things—carnal, yet if there were no soul in them, they would not be objects of love. My longing then was to love and to be loved, but most when I obtained the enjoyment of the body of the person who loved me.

Thus I polluted the stream of friendship with the filth of unclean desire and sullied its limpidity with the hell of lust. And vile and unclean as I was, so great was my vanity that I was bent upon passing for clean and courtly. And I did fall in love, simply from wanting to. O my God, my Mercy, with how much bitterness didst Thou in Thy goodness sprinkle the delights of that time! I was loved, and our love came to the bond of consummation: I wore

my chains with bliss but with torment too, for I was scourged with red hot rods of jealousy, with suspicions and fears and tempers and quarrels.

Augustine, Confessions, III, 1

21 I in my great worthlessness—for it was greater thus early—had begged You for chastity, saying "Grant me chastity and continence, but not yet." For I was afraid that You would hear my prayer too soon, and too soon would heal me from the disease of lust which I wanted satisfied rather than extinguished.

Augustine, Confessions, VIII, 7

22 Certainly, had not culpable disobedience been visited with penal disobedience, the marriage of Paradise should have been ignorant of this struggle and rebellion, this quarrel between will and lust, that the will may be satisfied and lust restrained, but those members, like all the rest, should have obeyed the will. The field of generation should have been sown by the organ created for this purpose, as the earth is sown by the hand. And whereas now, as we essay to investigate this subject more exactly, modesty hinders us and compels us to ask pardon of chaste ears, there would have been no cause to do so, but we could have discoursed freely, and without fear of seeming obscene, upon all those points which occur to one who meditates on the subject. There would not have been even words which could be called obscene, but all that might be said of these members would have been as pure as what is said of the other parts of the body. Whoever, then, comes to the perusal of these pages with unchaste mind, let him blame his

disposition, not his nature; let him brand the actings of his own impurity, not the words which necessity forces us to use, and for which every pure and pious reader or hearer will very readily pardon me.

Augustine, City of God, XIV, 23

- 23 I define charity as a motion of the soul whose purpose is to enjoy God for His own sake and one's self and one's neighbor for the sake of God. Lust, on the other hand is a motion of the soul bent upon enjoying one's self, one's neighbor, and any creature without reference to God.

Augustine, Christian Doctrine, III, 10

- 24 Some of the earlier doctors, considering the nature of concupiscence as regards generation in our present state, concluded that in the state of innocence generation would not have been effected in the same way, Thus Gregory of Nyssa says that in Paradise the human race would have been multiplied by some other means, just as the angels were multiplied without coition by the operation of the Divine Power. He adds that God made man male and female before sin because He foreknew the mode of generation which would take place after sin, which He foresaw.

But this is unreasonable. For what is natural to man was neither acquired nor forfeited by sin. Now it is clear that generation by coition is natural to man by reason of his animal life, which he possessed even before sin... just as it is natural to other perfect animals, as the corporeal members make it clear. So we cannot allow that these members would have had a natural use, as other members had, before sin.

Aquinas, Summa Theologica, I, 98, 2

- 25 The virtue of chastity most of all makes man apt for contemplation, since sexual pleasures most of all weigh the mind down to sensible objects.

Aquinas, Summa Theologica, II-II, 180, 2

- 26 A remedy can be employed against concupiscence in two ways. First, on the part of concupiscence by repressing it in its root, and thus matrimony affords a remedy by the grace given therein. Secondly, on the part of its act, and this in two ways: first, by depriving the act to which concupiscence inclines of its outward shamefulness, and this is done by the marriage blessings which justify carnal concupiscence; secondly, by hindering the shameful act, which is done by the very nature of the act; because concupiscence, being satisfied by the conjugal act, does not incline so much to other wickedness.

Aquinas, Summa Theologica, III Suppl., 42, 3

- 27 No wise man should allow himself to lose a thing except for some compensation in the shape of an equal or better good. Wherefore for a thing that has a loss attached to it to be eligible, it needs to have some good connected with it, which by compensating for that loss makes that thing ordinate and right. Now there is a loss of reason incidental to the union of man and woman, both because the reason is carried away entirely on account of the vehemence of the pleasure, so that it is unable to understand anything at the same time... and again because of the tribulation of the flesh which such persons have to suffer from solicitude for temporal things. Consequently the choice of this union cannot be made

ordinate except by certain compensation whereby that same union is righted; and these are the goods which excuse marriage and make it right.

Aquinas, Summa Theologica, III Suppl., 49, 1

- 28 Some say that whenever pleasure is the chief motive for the marriage act it is a mortal sin; that when it is an indirect motive it is a venial sin; and that when it spurns the pleasure altogether and is displeasing, it is wholly void of venial sin; so that it \s'ould be a mortal sin to seek pleasure in this act, a venial sin to take the pleasure when offered, but that perfection requires one to detest it. But this is impossible since... the same judgment applies to pleasure as to action, because pleasure in a good action is good, and in an evil action, evil; wherefore, as the marriage act is not evil in itself, neither will it be always a mortal sin to seek pleasure therein. Consequently the right answer to this question is that if pleasure be sought in such a way as to exclude the honesty of marriage, so that, to wit, it is not as a wife but as a woman that a man treats his wife, and that he is ready to use her in the same way if she were not his wife, it is a mortal sin; wherefore such a man is said to be too ardent a lover of his wife, because his ardor carries him away from the goods of marriage. If, however, he seek pleasure within the bounds of marriage, so that it would not be sought in another than his wife, it is a venial sin.

Aquinas, Summa Thcologica, III Suppl., 49, 6

- 29 Although old people have not sufficient calidity to procreate, they have sufficient to copulate. Wherefore they are allowed to marry, insofar as marriage is intended

as a remedy, although it does not befit them as fulfilling an office of nature.

Aquinas, Summa Theologica, III Suppl., 58. 1

30 I came into a place void of all light, which bellows like the sea in tempest, when it is combated by warring winds.

The hellish storm, which never rests, leads the spirits with its sweep; whirling, and smiting it vexes them.

When they arrive before the min, there the shrieks, the meanings, and the lamentation; there they blaspheme the divine power.

I learnt that to such torment are doomed the carnal sinners, who subject reason to lust.

Dante, Inferno, V, 28

31 I began: "Poet [Virgil], willingly would I speak with those two that go together, and seem so light upon the wind."

And he to me: "Thou shall see when they are nearer to us; and do thou then entreat them by that love, which leads them; and they will come."

Soon as the wind bends them to us, I raised my voice: "O wearied souls! come to speak with us, if none denies it."

As doves called by desire, with raised and steady wings come through the air to their loved nest, borne by their will:

so those spirits issued from the band where Dido is, coming to us through the malignant air; such was the force of my affectuous cry.

"O living creature, gracious and benign! that goest through the black air, visiting us who stained the earth with blood; if the King of the Universe were our friend, we

would pray him for thy peace; seeing that thou hast pity of our perverse misfortune.

Of that which it pleases thee to hear and to speak, we will hear and speak with you, whilst the wind, as now, is silent for us.

The town, where I was born, sits on the shore, where Po decends to rest with his attendant streams.

Love, which is quickly caught in gentle heart, took him with the fair body of which I was bereft; and the manner still afflicts me.

Love, which to no loved one permits excuse for loving, took me so strongly with delight in him, that, as thou seest, even now it leaves me not.

Love led us to one death; Caina waits for him who quenched our life." These words from them were offered to us.

After I had heard those wounded souls, I bowed my face, and held it low until the Poet said to me: "What art thou thinking of?"

When I answered, I began: "Ah me! what sweet thoughts, what longing led them to the woful pass!"

Then I turned again to them; and I spoke, and began: "Francesca, thy torments make me weep with grief and pity.

But tell me: in the time of the sweet sighs, by what and how love granted you to know the dubious desires?"

And she to me: "There is no greater pain than to recall a happy time in wretchedness; and this thy teacher knows.

But if thou hast such desire to learn the first root of our love, I will do like one who weeps and tells.

One day, for pastime, we read of Lancelot, how love constrained him; we were alone, and without all

suspicion.

Several times that reading urged our eyes to meet,
and changed the colour of our faces; but one moment
alone it was that overcame us.

When we read how the fond smile was kissed by such
a lover, he, who shall never be divided from me,
kissed my mouth all trembling: the book, and he who
wrote it, was a Galeotto; that day we read in it no farther."

Whilst the one spirit spake, the other wept so, that I
fainted with pity, as if I have been dying; and fell, as a
dead body falls.

Dante, Inferno, V, 73

32 And then he [Troilus] told him [Pandar] of his happy
night,
And how at first he was afraid, and why,
And said, "I swear upon my honor bright
And by my faith in you and God on high,
I never knew what loving did imply;
For as my heart's desires rose in height,
The greater grew my love and my delight,"

Chaucer, Troilus and Cressida, III, 236

33 Now, to speak of the first desire, that is, concupiscence,
according to the law for our sexual parts, which were
lawfully made and by rightful word of God; I say, for as
much as man is not obedient to God, Who is his Lord,
therefore is the flesh disobedient to Him, through
concupiscence, which is also called the nourishing of and
the reason for sin. Therefore all the while that a man has
within himself the penalty of concupiscence, it is
impossible but that he will be sometimes tempted and

moved in his flesh to do sin. And this shall not fail so long as he lives; it may well grow feeble and remote by virtue of baptism and by the grace of God through penitence; but it shall never be fully quenched so that he shall never be moved within himself, unless he be cooled by sickness or by maleficence of sorcery or by opiates.

Chaucer, Canterbury Tales: Parson's Tale

34 This is the Devil's other hand, with five fingers to catch the people into his slavery. The first finger is the foolish interchange of glances between the foolish woman and the foolish man, which slays just as the basilisk slays folk by the venom of its sight; for the lust of the eyes follows the lust of the heart. The second finger is vile touching in wicked manner; and thereupon Solomon says that he who touches and handles a woman fares like the man that handles the scorpion which stings and suddenly slays by its poisoning; even as, if any man touch warm pitch, it defiles his fingers. The third is vile words, which are like fire, which immediately burns the heart. The fourth finger is kissing; and truly he were a great fool who would kiss the mouth of a burning oven or of a furnace. And the more fools they are who kiss in vileness; for that mouth is the mouth of Hell; and I speak specifically of these old dotard whoremongers, who will yet kiss though they cannot do anything, and so taste them. Certainly they are like dogs, for a dog, when he passes a rosebush, or other bushes, though he cannot piss, yet will he heave up his leg and make an appearance of pissing. And as for the opinion of many that a man cannot sin for any lechery he does with his wife, certainly that opinion is wrong. God knows, a man may slay himself with his own knife, and make himself drunk out of his own tun.

Certainly, be it wife, be it child, or any worldly thing that a man loves more than he loves God, it is his idol, and he is an idolater. Man should love his wife with discretion, calmly and moderately; and then she is as it were his sister. The fifth finger of the Devil's hand is the stinking act of lechery. Truly, the five fingers of gluttony the Fiend thrusts into the belly of a man, and with his five fingers of lechery he grips him by the loins in order to throw him into the furnace of Hell; wherein he shall have the fire and the everlasting worms, and weeping and wailing, sharp hunger and thirst, and horror of devils that shall trample all over him, without respite and without end.

Chaucer, Canterbury Tales: Parson's Tale

35 Then said Pantagruel, How dost thou know that the privy parts of women are at such a cheap rate? For in this city there are many virtuous, honest, and chaste women besides the maids. *Et ubi prenus?* [And where will you find them?] said Panurge. I will give you my opinion of it, and that upon certain and assured knowledge. I do not brag, that I have bum-basted four hundred and seventeen, since I came into this city, though it be but nine days ago; but this very morning I met with a good fellow, who in a wallet, such as AEsop's was, carried two little girls, of two or three years old at the most, one before, and the other behind. He demanded alms of me, but I made him answer, that I had more cods than pence. Afterwards I asked him. Good man, these two girls, are they maids? Brother, said he, I have carried them thus these two years, and in regard of her that is before, whom I see continually, in my opinion she is a virgin; nevertheless, I will not put my finger in the fire for it; as for her that is behind, doubtless I can say nothing.

Rabelais, Gargantua and Pantagruel, II, 15

- 36 The woman who goes to bed with a man should put off her modesty with her skirt and put it on again with her petticoat.

Montaigne, Essays, I, 21, Power of the Imagination

- 37 Married people, whose time is all their own, should neither press their undertaking nor even attempt it if they are not ready; it is better to fail unbecomingly to handsel the nuptial couch, which is full of agitation and feverishness, and wait for some other more private and less tense opportunity, than to fall into perpetual misery for having been stunned and made desperate by a first refusal. Before taking possession, the patient should try himself out and offer himself, lightly, by sallies at different times, without priding himself and obstinately insisting on convincing himself definitively. Those who know that their members are naturally obedient, let them take care only to counteract the tricks of their fancies.

People are right to notice the unruly liberty of this member, obtruding so importunately when we have no use for it, and failing so importunately when we have the most use for it, and struggling for mastery so imperiously with our will, refusing with so much pride and obstinacy our solicitations, both mental and manual.

Montaigne, Essays, I, 21, Power of the Imagination

- 38 Truly it is also a fact worthy of consideration that the masters of the craft order as a remedy to amorous passions the entire and open sight of the body that we pursue; that to cool our love, we need only see freely what we love.... And although this recipe may perhaps

proceed from a somewhat cooled and delicate temperament, still it is a wonderful sign of our defectiveness that acquaintance and familiarity disgust us with one another. It is not so much modesty as artfulness and prudence that makes our ladies so circumspect in refusing us entry to their boudoirs before they are painted and dressed up for public display.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

39 we eat and drink as the animals do, but these are not actions that hinder the operations of our mind. In these we keep our advantage over them. But this other puts every other thought beneath its yoke and by its imperious authority brutifies and bestializes all the theology and philosophy there is in Plato; and yet he does not complain of it. In everything else you can keep some decorum; all other operations come under the rules of decency. This one cannot even be imagined other than vicious or ridiculous. Just to see this, try to find a wise and discreet way of doing it. Alexander used to say that he knew himself to be mortal chiefly by this action and by sleep. Sleep suffocates and suppresses the faculties of our mind; the sexual act likewise absorbs and dissipates them. Truly it is a mark not only of our original corruption but also of our inanity and deformity.

On the one hand Nature pushes us on to it, having attached to this desire the most noble, useful, and pleasant of all her operations; and on the other hand she lets us accuse and shun it as shameless and indecent, blush at it, and recommend abstinence. Are we not brutes to call brutish the operation that makes us?

The various nations in their religions have many conventions in common, such as sacrifices, lamps,

burning incense, fasts, offerings, and, among other things, the condemnation of this action. All opinions come to this, besides the very widespread practice of cutting off the foreskin, which is a punishment of the act. Perhaps we are right to blame ourselves for making such a stupid production as man, to call the action shameful, and shameful the parts that are used for it.

Montaigne, Essays, III, 5, On Some Verses of Virgil

40 The truth is that it is contrary to the nature of love if it is not violent, and contrary to the nature of violence if it is constant. And those who are astonished at this and exclaim against it and seek out the causes of this malady in women as if it were unnatural and incredible, why don't they see how often they accept it in themselves without being appalled and calling it a miracle? It would perhaps be more strange to see any stability in it. It is not simply a bodily passion. If there is no end to avarice and ambition, neither is there any to lechery. It still lives after satiety; no constant satisfaction or end can be prescribed to it, for it always goes beyond its possession.

Montaigne, Essays, III, 5, On Some Verses of Virgil

41 He who can await, the morning after, without dying of shame, the disdain of those fair eyes that have witnessed his limpness and impertinence,... never felt the satisfaction and pride of having conquered them and put circles around them by the vigorous exercise of a busy and active night.

Montaigne, Essays, III, 5, On Some Verses of Virgil

42 Now this is a relationship that needs mutuality and reciprocity. The other pleasures that we receive may be acknowledged by recompenses of a different nature, but this one can be paid for only in the same kind of coin. In truth, in this delight the pleasure I give tickles my imagination more s%vcctly than that which I feel. Now there is no nobility in a man who can receive pleasure where he gives none; it is a mean soul that is willing to owe everything and takes pleasure in fostering relations with persons to whom he is a burden. There is neither beauty, nor grace, nor intimacy so exquisite that a gallant man should desire it at this price. If they can be kind to us only out of pity, I had much rather not live at all than live on alms.

Montaigne, Essays, III, 5, On Some Verses of Virgil

43 Friar Laurence. These violent delights have violent ends
And in their triumph die, like fire and powder.
Which as they kiss consume: the sweetest honey
Is loathesome in his own deliciousness
And in the taste confounds the appetite:
Therefore love moderately; long love doth so;
Too swift arrives as tardy as too slow.

Shakespeare, Romeo and Juliet, II, vi, 9

44 *Theseus*, Fair Hermia, question your desires;
Know of your youth, examine well your blood,
Whether, if you yield not to your father's choice,
You can endure the livery of a nun,
For aye to be in shady cloister mew'd,
To live a barren sister all your life,
Chanting faint hymns to the cold fruitless moon.

Thrice-blessed they that master so their blood
To undergo such maiden pilgrimage;
But earthlier happy is the rose distill'd
Than that which withering on the virgin thorn
Grows, lives, and dies in single blessedness.

Shakespeare, Midsummer-Night's Dream, I, i, 67

45 *Polonius*. I do know,
When the blood burns, how prodigal the soul
Lends the tongue vows: these blazes, daughter,
Giving more light than heat, extinct in both.
Even in their promise, as it is a-making,
You must not take for fire.

Shakespeare, Hamlet, I, iii, 115

46 *Queen*. O Hamlet, speak no more.
Thou turn'st mine eyes into my very soul;
And there I see such black and grained spots
As will not leave their tinct.
Hamlet. Nay, but to live
In the rank sweat of an enseamed bed.
Stew'd in corruption, honeying and making love
Over the nasty sty—

Queen. O, speak to me no more;
These words, like daggers, enter in mine ears;
No more, sweet Hamlet!

Ham. A murderer and a villain;
A slave that is not twentieth part the tithe
Of your precedent lord; a vice of kings;
A cutpurse of the empire and the rule,
That from a shelf the precious diadem stole.
And put it in his pocket!

Queen. No more!

Shakespeare, Hamlet, III, iv, 88

47 *Fairies.* Fie on sinful fantasy!

Fie on lust and luxury!

Lust is but a bloody fire,

Kindled with unchaste desire.

Fed in heart, whose flames aspire

As thoughts do blow them, higher and higher.

Pinch him, fairies, mutually;

Pinch him for his villainy;

Pinch him, and burn him, and turn him about,
Till candles and starlight and moonshine be out.

Shakespeare, Merry Wives of Windsor, V, v, 97

48 *Cressida.* They say all lovers swear more performance than they are able and yet reserve an ability that they never perform, vowing more than the perfection of ten and discharging less than the tenth part of one.

Shakespeare, Troilus and Cressida, III, ii, 91

49 *Pandarus.* Go to, a bargain made. Seal it, seal it; I'll be the witness. Here I hold your hand, here my cousin's. If ever you prove false one to another, since I have taken such pains to bring you together, let all pitiful goers-between be called to the world's end after my name; call them all Pan-dars; let all constant men be Troiluses, all false women Cressids, and all brokers-between Pandars! say, amen.

Troilus. Amen.

Cressida. Amen.

Pan. Amen. Whereupon I will show you a chamber with a bed; which bed, because it shall not speak of your pretty encounters, press it to death. Away!
And Cupid grant all tongue-tied maidens here Bed, chamber, Pandar to provide this gear!

Shakespeare, Troilus and Cressida, III, ii, 204

50 *Iago.* Mark me with what violence she first loved the Moor, but for bragging and telling her fantastical lies; and will she love him still for prating? let not thy discreet heart think it. Her eye must be fed; and what delight shall she have to look on the devil? When the blood is made dull with the act of sport, there should be, again to inflame it and to give satiety a fresh appetite, loveliness in favour, sympathy in years, manners, and beauties; all which the Moor is defective in. Now, for want of these required conveniences, her delicate tenderness will find itself abused, begin to heave the gorge, disrelish and abhor the Moor; very nature will instruct her in it and compel her to some second choice.

Shakespeare, Othello, II, i, 224

51 *Fool.* Now' a little fire in a wild field were like an old lecher's heart; a small spark, all the rest on's body cold.

Shakespeare, Lear, III, iv, 116

52 *Gloucester.* The trick of that voice I do well remember.
Is't not the King?

Lear. Ay, every inch a king!
When I do stare, see how the subject quakes.
I pardon that man's life. What was thy cause?
Adultery?

Thou shalt not die. Die for adultery! No:
the wren goes to't, and the small gilded fly
Docs lecher in my sight.
Let copulation thrive; for Gloucester's bastard son
Was kinder to his father than my daughters
Got 'tween the lawful sheets.
To't, luxury, pell-mell; for I lack soldiers.

Shakespeare, Lear, IV, vi, 108

53 *Philo.* Nay, but this dotage of our general's
O'erflows the measure. Those his goodly eyes,
That o'er the files and musters of the war
Have glow'd like plated Mars, now bend, now turn,
The office and devotion of their view
Upon a tawny front; his captain's heart.
Which in the scuffles of great fights hath burst
The buckles on his breast, reneges all temper,
And is become the bellows and the fan
To cool a gipsy's lust.

Flourish. Enter Antony, Cleopatra, her Ladies, the
Train, with Eunuchs fanning her.

Look, where they come!
Take but good note, and you shall see in him
The triple pillar of the world transform'd
Into a strumpet's fool.

Shakespeare, Antony and Cleopatra, I, i, 1

54 *Prospero.* Look thou be true; do not give dalliance Too
much the rein. The strongest oaths are straw To the fire i'
the blood.

Shakespeare, Tempest, IV, i, 51

55 The expense of spirit in a waste of shame
Is lust in action; and till action, lust
Is perjured, murderous, bloody, full of blame,
Savage, extreme, rude, cruel, not to trust,
Enjoy'd no sooner but despised straight,
Past reason hunted, and no sooner had.
Past reason hated, as a swallow'd bait
On purpose laid to make the taker mad;
Mad in pursuit, and in possession so;
Had, having, and in quest to have, extreme;
A bliss in proof, and proved, a very woe;
Before, a joy proposed; behind, a dream.
All this the world well knows; yet none knows well
To shun the heaven that leads men to this hell.

Shakespeare, Sonnet CXXIX

56 I could be content that we might procreate like trees,
without conjunction, or that there were any way to
perpetuate the World without this trivial and vulgar way
of coition; it is the foolishhest act a wise man commits in
all his life; nor is there any thing that will more deject his
cool'd imagination, when he shall consider what an odd
and unworthy piece of folly he hath committed.

Sir Thomas Browne, Religio Medici, II, 9

57 Lust has become natural to us and has made our second
nature. Thus there are two natures in us— the one good,
the other bad. Where is God? Where you are not, and the
kingdom of God is within you.

Pascal, Pensées, X, 660

58 When lust

By unchaste looks, loose gestures, and foul talk.
But most by leud and lavish act of sin,
Lets in defilement to the inward parts,
The soul grows clotted by contagion,
Imbodies, and imbrutes, till she quite loose
The divine property of her first being.

Milton, Comus, 463

59 Nor those mysterious parts were then conceald,

Then was not guiltie shame, dishonest shame
Of natures works, honor dishonorable,
Sin-bred, how have ye troubl'd all mankind
With shews instead, meer shews of seeming pure,
And banisht from mans life his happiest life,
Simplicitie and spotless innocence.

Milton, Paradise Lost, IV, 312

60 The love of a harlot, that is to say, the lust of sexual intercourse, which arises from mere external form, and absolutely all love which recognises any other cause than the freedom of the mind, easily passes into hatred, unless, which is worse, it becomes a species of delirium, and thereby discord is cherished rather than concord.

Spinoza, Ethics, IV, Appendix XIX

61 He [Johnson] for a considerable time used to frequent the Green Room, and seemed to take delight in dissipating his gloom, by mixing in the sprightly chit-chat of the motley circle then to be found there. Mr. David Hume related to me from Mr. Garrick, that Johnson at last denied himself this amusement, from considerations of rigid

virtue; saying, "I'll come no more behind your scenes, David; for the silk stockings and white bosoms of your actresses excite my amorous propensities."

Boswell, Life of Johnson (1749)

62 *Boswell* "So then. Sir, you would allow of no irregular intercourse whatever between the sexes?"

Johnson "To be sure I would not. Sir. I would punish it much more than it is done, and so restrain it. In all countries there has been fornication, as in all countries there has been theft; but there may be more or less of the one, as well as of the other, in proportion to the force of law. All men will naturally commit fornication, as all men will naturally steal. And, Sir, it is very absurd to argue, as has been often done, that prostitutes are necessary to prevent the violent effects of appetite from violating the decent order of life; nay, should be permitted, in order to preserve the chastity of our wives and daughters. Depend upon it, Sir, severe laws, steadily enforced, would be sufficient against those evils, and would promote marriage."

Boswell, Life of Johnson (Apr. 5, 1776)

63 With the venerable proconsul [Gordianus], his son, who had accompanied him into Africa as his lieutenant, was likewise declared emperor. His manners were less pure, but his character was equally amiable with that of his father. Twenty-two acknowledge concubines, and a library of sixty-two thousand volumes, attested the variety of his inclinations, and from the productions which he left behind him, it appears that the former as well as the latter were designed for use rather than ostentation.

Gibbon, Decline and Fall of the Roman Empire, VII

64 Although the progress of civilisation has undoubtedly contributed to assuage the fiercer passions of human nature, it seems to have been less favourable to the virtue of chastity, whose most dangerous enemy is the softness of the mind. The refinements of life corrupt while they polish the intercourse of the sexes. The gross appetite of love becomes most dangerous when it is elevated, or rather, indeed, disguised by sentimental passion. The elegance of dress, of motion, and of manners gives a lustre to beauty, and inflames the senses through the imagination. Luxurious entertainments, midnight dances, and licentious spectacles, present at once temptations and opportunity to female frailty.

Gibbon, Decline and Fall of the Roman Empire, IX

65 The laws of Constantine against rapes were dictated with very little indulgence for the most amiable weaknesses of human nature; since the description of that crime was applied not only to the brutal violence which compelled, but even to the gentle seduction which might persuade, an unmarried woman, under the age of twenty-five, to leave the house of her parents.

Gibbon, Decline and Fall of the Roman Empire, XIV

66 O Rose, thou art sick.

The invisible worm
That flies in the night
In the howling storm

Has found out thy bed
Of crimson joy,

And his dark secret love
Does thy life destroy.

Blake, The Sick Rose

67 *Mephistopheles*. What good is it to reap immediate pleasure?

The joy's not near so great, I say,
As if you first prepare the ground
With every sort of idle folly,
Knead and make ready your pretty dolly,
As many Romance tales expound.

Goethe, Faust, I, 2647

68 Julia's voice was lost, except in sighs,
Until too late for useful conversation;
The tears were gushing from her gentle eyes,
I wish, indeed, they had not had occasion,
But who, alas! can love, and then be wise?
Not that remorse did not oppose temptation;
A little still she strove, and much repented,
And whispering "I will ne'er consent"— consented.

Byron, Don Juan, 1,117

69 A wise woman should never give herself for the first time by appointment—it should be an unforeseen delight.

Stendhal, On Love, II, 60

70 If. . . one considers the important part which the sexual impulse in all its degrees and nuances plays not only on the stage and in novels, but also in the real world, where, next to the love of life, it shows itself the strongest and most powerful of motives, constantly lays claim to half

the powers and thoughts of the younger portion of mankind, is the ultimate goal of almost all human effort, exerts an adverse influence on the most important events, interrupts the most serious occupations every hour, sometimes embarrasses for a while even the greatest minds, does not hesitate to intrude with its trash interfering with the negotiations of statesmen and the investigations of men of learning, knows how to slip its love letters and locks of hair even into ministerial portfolios and philosophical manuscripts, and no less devises daily the most entangled and the worst actions, destroys the most valuable relationships, breaks the firmest bonds, demands the sacrifice sometimes of life or health, sometimes of wealth, rank, and happiness, nay, robs those who are otherwise honest of all conscience, makes those who have hitherto been faithful, traitors; accordingly, on the whole, appears as a malevolent demon that strives to pervert, confuse, and overthrow everything;—then one will be forced to cry, Wherefore all this noise? Wherefore the straining and storming, the anxiety and want? It is merely a question of every Hans finding his Grethe. Why should such a trifle play so important a part, and constantly introduce disturbance and confusion into the well-regulated life of man? But to the earnest investigator the spirit of truth gradually reveals the answer. It is no trifle that is in question here; on the contrary, the importance of the matter is quite proportionate to the seriousness and ardour of the effort. The ultimate end of all love affairs, whether they are played in sock or cothurnus, is really more important than all other ends of human life, and is therefore quite worthy of the profound seriousness with which every one pursues it. That which is decided by it is nothing less than *the*

composition of the next generation. The dramatis personae who shall appear when we are withdrawn are here determined, both as regards their existence and their nature, by these frivolous love affairs.

Schopenhauer, The World as Will and Idea, Vol. III, 44

- 71 All love, however ethereally it may bear itself, is rooted in the sexual impulse alone, nay, it absolutely is only a more definitely determined, specialised, and indeed in the strictest sense individualised sexual impulse.

Schopenhauer, The World as Will and Idea, Vol. III, 44

- 72 With the great majority of animals ... the taste for the beautiful is confined, as far as we can judge, to the attractions of the opposite sex.

Darwin, Descent of Man, I, 3

- 73 The law of battle for the possession of the female appears to prevail throughout the whole great class of mammals. Most naturalists will admit that the greater size, strength, courage, and pugnacity of the male, his special weapons of offence, as well as his special means of defence, have been acquired or modified through that form of selection which I have called sexual. This does not depend on any superiority in the general struggle for life, but on certain individuals of one sex, generally the males, being successful in conquering other males, and leaving a larger number of offspring to inherit their superiority than do the less successful males.

Darwin, Descent of Man, II, 18

74 Of all the causes which have led to the differences in external appearance between the races of man, and to a certain extent between man and the lower animals, sexual selection has been the most efficient.

Darwin, Descent of Man, III, 20

75 *Ratikin*. There's something here, my dear boy [Alyosha], that you don't understand yet. A man will fall in love with some beauty, with a woman's body, or even with a part of a woman's body (a sensualist can understand that), and he'll abandon his own children for her, sell his father and mother, and his country, Russia, too. If he's honest, he'll steal; if he's humane, he'll murder; if he's faithful, he'll deceive. Pushkin, the poet of women's feet, sung of their feet in his verse. Others don't sing their praises, but they can't look at their feet without a thrill—and it's not only their feet. Contempt's no help here, brother, even if he did despise Grushenka. He does, but he can't tear himself away.

Dostoevsky, Brothers Karamazov, Pt. I, II, 7

76 Of the delights of this world man cares most for sexual intercourse. He will go any length for it— risk fortune, character, reputation, life itself. And what do you think he has done? In a thousand years you would never guess—*He has left it out of his heaven! Prayer takes its place.*

Mark Twain, Notebook

77 Christianity gave Eros poison to drink: he did not die of it but degenerated—into a vice.

Nietzsche, Beyond Good and Evil, IV, 168

78 What can be the aim of withholding from children, or let us say from young people, this information about the sexual life of human beings? Is it a fear of arousing interest in such matters prematurely, before it spontaneously stirs in them? Is it a hope of retarding by concealment of this kind the development of the sexual instinct in general, until such time as it can find its way into the only channels open to it in the civilized social order? Is it supposed that children would show no interest or understanding for the facts and riddles of sexual life if they were not prompted to do so by outside influence? Is it regarded as possible that the knowledge withheld from them will not reach them in other ways? Or is it genuinely and seriously intended that later on they should consider everything connected with sex as something despicable and abhorrent from which their parents and teachers wish to keep them apart as long as possible?

I am really at a loss to say which of these can be the motive for the customary concealment from children of everything connected with sex. I only know that these arguments are one and all equally foolish, and that I find it difficult to pay them the compliment of serious refutation.

Freud, Sexual Enlightenment of Children

79 Seriously, it is not so easy to define what the term sexual includes. Everything connected with the difference between the two sexes is perhaps the only way of hitting the mark; but you will find that too general and indefinite. If you take the sexual act itself as the central point, you will perhaps declare sexual to mean everything which is concerned with obtaining pleasurable gratification from the body (and particularly the sexual organs) of the opposite sex; in the narrowest sense,

everything which is directed to the union of the genital organs and the performance of the sexual act. In doing so, however, you come very near to reckoning the sexual and the improper as identical, and childbirth would really have nothing to do with sex. If then you make the function of reproduction the kernel of sexuality you run the risk of excluding from it a whole host of things like masturbation, or even kissing, which are not directed towards reproduction, but which are nevertheless undoubtedly sexual. However, we have already found that attempts at definition always lead to difficulties; let us give up trying to do any better in this particular case.

Freud, General Introduction to Psycho-Analysis, XX

80 It is indeed one of the most important social tasks of education to restrain, confine, and subject to an individual control (itself identical with the demands of society) the sexual instinct when it breaks forth in the form of the reproductive function. In its own interests, accordingly, society would postpone the child's full development until it has attained a certain stage of intellectual maturity, since educability practically ceases with the full onset of the sexual instinct. Without this the instinct would break all bounds, and the laboriously erected structure of civilization would be swept away. Nor is the task of restraining it ever an easy one; success in this direction is often poor and, sometimes, only too great. At bottom society's motive is economic; since it has not means enough to support life for its members without work on their part, it must see to it that the number of these members is restricted and their energies directed away from sexual activities on to their work—the

eternal primordial struggle for existence, therefore, persisting to the present day.

Experience must have taught educators that the task of moulding the sexual will of the next generation can only be carried out by beginning to impose their influence very early, and intervening in the sexual life of children before puberty, instead of waiting till the storm bursts. Consequently almost all infantile sexual activities are forbidden or made disagreeable to the child; the ideal has been to make the child's life asexual, and in course of time it has come to this that it is really believed to be asexual, and is given out as such, even at the hands of science. In order, then, to avoid any contradiction with established beliefs and aims, the sexual activity of children is overlooked—no small achievement by the way—while science contents itself with otherwise explaining it away. The little child is supposed to be pure and innocent; he who says otherwise shall be condemned as a hardened blasphemer against humanity's tenderest and most sacred feelings.

The children alone take no part in this convention; they assert their animal nature naively enough and demonstrate persistently that they have yet to learn their purity. Strange to say, those who deny sexuality in children are the last to relax educative measures against it; they follow up with the greatest severity every manifestation of the childish tricks the existence of which they deny. Moreover, it is theoretically of great interest that the time of life which most flagrantly contradicts the prejudice about asexual childhood, the years of infancy up to five or six, is precisely the period which is veiled by oblivion in most people's memories; an oblivion which can only be dispelled completely by analysis but which

even before this was sufficiently penetrable to allow some of the dreams of childhood to be retained.

Freud, General Introduction to Psycho Analysis, XX

81 A woman can be proud and stiff
When on love intent;
But Love has pitched his mansion in
The place of excrement;
For nothing can be sole or whole
That has not been rent.

Yeats, Crazy Jane Talks with the Bishop

82 What lively lad most pleased me
Of all that with me Jay?
I answer that I gave my soul
And loved in misery,
But had great pleasure with a lad
That I loved bodily.

Flinging from his arms I laughed
To think his passion such
He fancied that I gave a soul
Did but our bodies touch.
And laughed upon his breast to think
Beast gave beast as much.

I gave what other women gave
That stepped out of their clothes,
But when this soul, its body off.
Naked to naked goes,
He it has found shall find therein
What none other knows,

And give his own and take his own
And rule in his own right;
And though it loved in misery
Close and cling so tight,
There's not a bird of day that dare
Extinguish that delight.

Yeats, A Last Confession

3.4 Friendship

Though friendship is exemplified and extolled in passages taken from the poets, biographers, and historians, the analysis of it is drawn mainly from the pages of philosophers, theologians, and essayists—especially Plato, Aristotle, and Cicero, Augustine and Aquinas, and Montaigne.

The most complete analysis is, perhaps, to be found in Aristotle's *Ethics*. He devotes two whole books of that work to the subject, from which there are many quotations here. His differentiation of the types of friendship sharply separates associations based on mutual pleasure or reciprocal utility from that relationship in which each of the persons is concerned with the good of the other. Only this, in his judgment, is true or genuine friendship; the others are counterfeits of it. True friendship, in other words, always involves the dominance of benevolent impulses, tending toward the benefit of the beloved, whereas the counterfeits of friendship spring primarily or purely from acquisitive desire—seeking something for one's self.

It is true friendship thus conceived that almost all the other writers have in mind when they discuss the subject or describe examples of it. It is also friendship thus conceived that is identified with a kind of love that is distinct from erotic or sexual love, whether between men and women or between persons of the same sex. How the love that is friendship is affected by the admixture of sexual love or by the absence of it is the obverse of a question raised earlier—how is sexual or erotic love affected by the admixture of friendship or the absence of it?

However these questions are answered, the reader will find that the difference between heterosexual and homosexual relationships enters into the consideration of the love that is friendship as well as into the consideration of sexual or erotic love. Can persons of the opposite sex be friends as readily and as enduringly as persons of the same gender? Are there fewer obstacles to genuine friendship among persons of the same sex?

■ ■ ■

- 1 Saul and Jonathan were lovely and pleasant in their lives, and in their death they were not divided: they were swifter than eagles, they were stronger than lions.

Ye daughters of Israel, weep over Saul, who clothed you in scarlet, with other delights, who put on ornaments of gold upon your apparel.

How are the mighty fallen in the midst of the battle! O Jonathan, thou wast slain in thine high places.

I am distressed for thee, my brother Jonathan: very pleasant hast thou been unto me; thy love to me was

wonderful, passing the love of women.

II Samuel 1:25~26

- 2 Two are better than one; because they have a good reward for their labour.

For if they fall, the one will lift up his fellow: but woe to him that is alone when he falleth; for he hath not another to help him up.

Again, if two lie together, then they have heat: but how can one be warm alone?

And if one prevail against him, two shall withstand him; and a threefold cord is not quickly broken.

Ecclesiastes 4:9-12

- 3 *Diomedes*. When two go together, one of them at least looks forward

to see what is best; a man by himself, though he be careful,

still has less mind in him than two, and his wits have less weight.

Homer, Iliad, X, 224

- 4 *Darius*. There is nothing in all the world so precious as a friend who is at once wise and true,

Herodotus, History, V, 24

- 5 *Creon*. To throw away an honest friend is, as it were, to throw your life away, which a man loves the best.

Sophocles, Oedipus the King, 611

6 *The Nurse*. I have learned much from my long life. The mixing bowl of friendship, the love of one for the other, must be tempered. Love must not touch the marrow of the soul. Our affections must be breakable chains that we can cast them off or tighten them.

Euripides, Hippolytus, 251

7 *Hecuba*. Real friendship is shown in times of trouble
prosperity is full of friends.

Euripides, Hecuba, 1227

8 *Menelaus*. Friends—and I mean real friends—reserve nothing:

The property of one belongs to the other.

Euripides, Andromache, 376

9 *Pericles*. The doer of the favour is the firmer friend of the t\vo, in order by continued kindness to keep the recipient in his debt; while the debtor feels less keenly from the very consciousness that the return he makes will be a payment, not a free gift.

Thucydides, Peloponnesian War, II, 40

10 *Socrates*. All people have their fancies; some desire horses, and others dogs; and some are fond of gold, and others of honour. Now, I have no violent desire of any of these things; but I have a passion for friends; and I would rather have a good friend than the best cock or quail in the world: I would even go further, and say the best horse or dog. Yea, by the dog of Egypt, I should greatly prefer a real friend to all the gold of Darius, or even to Darius himself: I am such a lover of friends as that. And when I

see you and Lysis, at your early age, so easily possessed of this treasure, and so soon, he of you, and you of him, I am amazed and delighted, seeing that I myself, although I am now advanced in years, am so far from having made a similar acquisition, that I do not even know in what way a friend is acquired.

Plato, Lysis, 21 IB

- 11 Without friends no one would choose to live, though he had all other goods; even rich men and those in possession of office and of dominating power are thought to need friends most of all; for what is the use of such prosperity without the opportunity of beneficence, which is exercised chiefly and in its most laudable form towards friends? Or how can prosperity be guarded and preserved without friends? The greater it is, the more exposed is it to risk. And in poverty and in other misfortunes men think friends are the only refuge. It helps the young, too, to keep from error; it aids older people by ministering to their needs and supplementing the activities that are failing from weakness; those in the prime of life it stimulates to noble actions ... for with friends men are more able both to think and to act.

Aristotle, Ethics, 1155a5

- 12 There are therefore three kinds of friendship, equal in number to the things that are lovable; for with respect to each there is a mutual and recognized love, and those who love each other wish well to each other in that respect in which they love one another. Now those who love each other for their utility do not love each other for themselves but in virtue of some good which they get

from each other. So too with those who love for the sake of pleasure; it is not for their character that men love ready-witted people, but because they find them pleasant. Therefore those who love for the sake of utility love for the sake of what is good for themselves, and those who love for the sake of pleasure do so for the sake of what is pleasant to themselves, and not in so far as the other is the person loved but in so far as he is useful or pleasant. And thus these friendships are only incidental; for it is not as being the man he is that the loved person is loved, but as providing some good or pleasure. Such friendships, then, are easily dissolved, if the parties do not remain like themselves; for if the one party is no longer pleasant or useful the other ceases to love him,...

Perfect friendship is the friendship of men who are good, and alike in virtue; for these wish well alike to each other qua good, and they are good in themselves. Now those who wish well to their friends for their sake are most truly friends; for they do this by reason of their own nature and not incidentally; therefore their friendship lasts as long as they are good—and goodness is an enduring thing. And each is good without qualification and to his friend, for the good are both good without qualification and useful to each other. So too they are pleasant; for the good are pleasant both without qualification and to each other, since to each his own activities and others like them are pleasurable, and the actions of the good are the same or like. And such a friendship is as might be expected permanent, since there meet in it all the qualities that friends should have. For all friendship is for the sake of good or of pleasure—good or pleasure either in the abstract or such as will be enjoyed by him who has the friendly feeling—and is

based on a certain resemblance; and to a friendship of good men all the qualities we have named belong in virtue of the nature of the friends themselves; for in the case of this kind of friendship the other qualities also are alike in both friends, and that which is good without qualification is also without qualification pleasant, and these are the most lovable qualities. Love and friendship therefore are found most and in their best form between such men.

But it is natural that such friendships should be infrequent; for such men are rare. Further, such friendship requires time and familiarity; as the proverb says, men cannot know each other till they have 'eaten salt together'; nor can they admit each other to friendship or be friends till each has been found lovable and been trusted by each. Those who quickly show the marks of friendship to each other wish to be friends, but are not friends unless they both are lovable and know the fact; for a wish for friendship may arise quickly, but friendship does not.

Aristotle, Ethics, 1156a7

- 13 Between sour and elderly people friendship arises less readily, inasmuch as they are less good-tempered and enjoy companionship less; for these are thought to be the greatest marks of friendship and most productive of it. This is why, while young men become friends quickly, old men do not; it is because men do not become friends with those in whom they do not delight; and similarly sour people do not quickly make friends either. But such men may bear goodwill to each other; for they wish one another well and aid one another in need; but they are hardly *friends* because they do not spend their days

together nor delight in each other, and these are thought the greatest marks of friendship

Aristotle, 1158a1

14 There is another kind of friendship, viz. that which involves an inequality between the parties, for example that of father to son and in general of elder to younger, that of man to wife and in general that of ruler to subject. And these friendships differ also from each other; for it is not the same that exists between parents and children and between rulers and subjects, nor is even that of father to son the same as that of son to father, nor that of husband to wife the same as that of wife to husband. For the virtue and the function of each of these is different, and so are the reasons for which they love; the love and the friendship are therefore different also. Each party, then, neither gets the same from the other, nor ought to seek it; but when children render to parents what they ought to render to those who brought them into the world, and parents render what they should to their children, the friendship of such persons will be abiding and excellent. In all friendships implying inequality the love also should be proportional, that is, the better should be more loved than he loves, and so should the more useful, and similarly in each of the other cases; for when the love is in proportion to the merit of the parties, then in a sense arises equality, which is certainly held to be characteristic of friendship.

Aristotle, Ethics, 1158b12

15 If, then, being is in itself desirable for the supremely happy man (since it is by its nature good and pleasant),

and that of his friend is very much the same, a friend will be one of the things that are desirable. Now that which is desirable for him he must have, or he will be deficient in this respect. The man who is to be happy will therefore need virtuous friends.

Aristotle, 1170b14

16 Friendship is a partnership, and as a man is to himself, so is he to his friend; now in his own case the consciousness of his being is desirable, and so therefore is the consciousness of his friend's being, and the activity of this consciousness is produced when they live together, so that it is natural that they aim at this. And whatever existence means for each class of men, whatever it is for whose sake they value life, in that they wish to occupy themselves with their friends; and so some drink together, others dice together, others join in athletic exercises and hunting, or in the study of philosophy, each class spending their days together in whatever they love most in life; for since they wish to live with their friends, they do and share in those things which give them the sense of living together. Thus the friendship of bad men turns out an evil thing (for because of their instability they unite in bad pursuits, and besides they become evil by becoming like each other), while the friendship of good men is good, being augmented by their companionship; and they are thought to become better too by their activities and by improving each other; for from each other they take the mould of the characteristics they approve— whence the saying 'noble deeds from noble men'.

Aristotle, Ethics, 1171b33

17 We may describe friendly feeling towards any one as wishing for him what you believe to be good things, not for your own sake but for his, and being inclined, so far as you can, to bring these things about. A friend is one who feels thus and excites these feelings in return: those who think they feel thus towards each other think themselves friends. This being assumed, it follows that your friend is the sort of man who shares your pleasure in what is good and your pain in what is unpleasant, for your sake and for no other reason. This pleasure and pain of his will be the token of his good wishes for you, since we all feel glad at getting what we wish for, and pained at getting what we do not. Those, then, are friends to whom the same things are good and evil.

Aristotle, Rhetoric, 1380b35

18 Kindness—under the influence of which a man is said to ‘be kind’—may be defined as helpfulness towards some one in need, not in return for anything, nor for the advantage of the helper himself, but for that of the person helped. Kindness is great if shown to one who is in great need, or who needs what is important and hard to get, or who needs it at an important and difficult crisis; or if the helper is the only, the first, or the chief person to give the help. Natural cravings constitute such needs; and in particular cravings, accompanied by pain, for what is not being attained. The appetites are cravings of this kind; sexual desire, for instance, and those which arise during bodily injuries and in dangers; for appetite is active both in danger and in pain. Hence those who stand by us in poverty or in banishment, even if they do not help us much, are yet really kind to us, because our need is great and the occasion pressing.

Aristotle, Rhetoric, 1385a17

19 Now friendship may be thus defined: *a complete accord on all subjects human and divine, joined with mutual good will and affection*. And with the exception of wisdom, I am inclined to think nothing better than this has been given to man by the immortal gods. There are people who give the palm to riches or to good health, or to power and office, many even to sensual pleasures. This last is the ideal of brute beasts; and of the others we may say that they are frail and uncertain, and depend less on our own prudence than on the caprice of fortune. Then there are those who find the "chief good" in virtue. Well, that is a noble doctrine. But the very virtue they talk of is the parent and preserver of friendship, and without it friendship cannot possibly exist.

Cicero, Friendship, VI

20 *Laelius*. And great and numerous as are the blessings of friendship, this certainly is the sovereign one, that it gives us bright hopes for the future and forbids weakness and despair. In the face of a true friend a man sees as it were a second self. So that where his friend is he is; if his friend be rich, he is not poor; though he be weak, his friend's strength is his; and in his friend's life he enjoys a second life after his own is finished. This last is perhaps the most difficult to conceive. But such is the effect of the respect, the loving remembrance, and the regret of friends which follow us to the grave. While they take the sting out of death, they add a glory to the life of the survivors. Nay, if you eliminate from nature the tie of affection, there will be an end of house and city, nor will so much as the cultivation of the soil be left. If you don't

see the virtue of friendship and harmony, you may learn it by observing the effects of quarrels and feuds. Was any family ever so well established, any state so firmly settled, as to be beyond the reach of utter destruction from animosities and factions? This may teach you the immense advantage of friendship.

Cicero, Friendship, VII

- 21 *Laelius*. True friendship is very difficult to find among those who engage in politics and the contest for office. Where can you find the man to prefer his friend's advancement to his own? And to say nothing of that, think how grievous and almost intolerable it is to most men to share political disaster. You will scarcely find any one who can bring himself to do that. And though what Ennius says is quite true—"the hour of need shows the friend indeed"—yet it is in these two ways that most people betray their untrustworthiness and inconstancy, by looking down on friends when they are themselves prosperous, or deserting them in their distress. A man, then, who has shown a firm, unshaken, and unvarying friendship in both these contingencies we must reckon as one of a class the rarest in the world, and all but superhuman.

Cicero, Friendship, XVII

- 22 Thinking of departed friends is to me something sweet and mellow. For when I had them with me it was with the feeling that I was going to lose them, and now that I have lost them I keep the feeling that I have them with me still.

Seneca, Letters to Lucilius, 63

23 Greater love hath no man than this, that a man lay down his life for his friends.

John 15:13

24 Did you never see little dogs caressing and playing with one another, so that you might say there is nothing more friendly? but, that you may know what friendship is, throw a bit of flesh among them, and you will learn.

Epictetus, Discourses, II, 22

25 During the period in which I first began to teach in the town of my birth, I had found a very dear friend, who was pursuing similar studies. He was about my own age, and was now coming, as I was, to the very flowering-time of young manhood. He had indeed grown up with me as a child and we had gone to school together and played together. Neither in those earlier days nor indeed in the later time of which I now speak was he a friend in the truest meaning of friendship: for there is no true friendship unless You weld it between souls that cleave together through that charity which is shed in our hearts by the Holy Ghost who is given to us.

Augustine, Confessions, IV, 4

26 All kinds of things rejoiced my soul in their [my friends'] company—to talk and laugh and do each other kindnesses; read pleasant books together, pass from lightest jesting to talk of the deepest things and back again; differ without rancour, as a man might differ with himself, and when most rarely dissension arose find our normal agreement all the sweeter for it; teach each other or learn from each other; be impatient for the return of

the absent, and welcome them with joy on their home-coming; these and such like things, proceeding from our hearts as we gave affection and received it back, and shown by face, by voice, by the eyes, and a thousand other pleasing ways, kindled a flame which fused our very souls and of many made us one. This is what men value in friends.

Augustine, Confessions, IV, 8-9

27 Is not the unfeigned confidence and mutual love of true and good friends our one solace in human society, filled as it is with misunderstandings and calamities? And yet the more friends we have, and the more widely they are scattered, the more numerous are our fears that some portion of the vast masses of the disasters of life may light upon them. For we are not only anxious lest they suffer from famine, war, disease, captivity, or the inconceivable horrors of slavery, but we are also affected with the much more painful dread that their friendship may be changed into perfidy, malice, and injustice. And when these contingencies actually occur—as they do the more frequently the more friends we have and the more widely they are scattered—and when they come to our knowledge, who but the man who has experienced it can tell with what pangs the heart is torn?

Augustine, City of God, XIX, 8

28 The happy man needs friends , . . not, indeed, to make use of them, since he suffices himself, nor to delight in them, since he possesses perfect delight in the operation of virtue, but for the purpose of a good operation, namely, that he may do good to them, that he may

delight in seeing them do good, and again that he may be helped by them in his good work.

Aquinas, Summa Theologica, I-II, 4, 8

- 29 The movement of love has a twofold tendency: towards the good which a man wishes to someone, whether for himself or for another; and towards that to which he wishes some good. Accordingly, man has love of concupiscence towards the good that he wishes to another, and love of friendship towards him to whom he wishes good.

Aquinas, Summa Theologica, I-II, 26, 4

- 30 When our friends fall into sin, we ought not to deny them the benefits of friendship so long as there is hope of their mending their ways, and we ought to help them more readily to regain virtue than to recover money, had they lost it, since virtue is more akin than money to friendship. When, however, they fall into very great wickedness, and become incurable, we ought no longer to show them friendliness.

Aquinas, Summa Theologica, II-II, 25, 6

- 31 Because the friendship of comrades originates through their own choice, love of this kind takes precedence of the love of kindred in matters where we are free to do as we choose, for instance in matters of action. Yet the friendship of kindred is more stable, since it is more natural, and preponderates over others in matters touching nature. Consequently we are more bound to them in the providing of necessities.

Aquinas, Summa Theologica, II-II, 26, 8

32 *Pandar*. And I will gladly share with you your pain.
If it turn out I can no comfort bring;
For his a friend's right, please let me explain.
To share in woful as in joyful things,

Chaucer, Troilus and Cressida, I, 85

33 This perfect friendship I speak of is indivisible: each one gives himself so wholly to his friend that he has nothing left to distribute elsewhere; on the contrary, he is sorry that he is not double, triple, or quadruple, and that he has not several souls and several wills, to confer them all on this one object. Common friendships can be divided up: one may love in one man his beauty, in another his easygoing ways, in another liberality, in one paternal love, in another brotherly love, and so forth; but this friendship that possesses the soul and rules it with absolute sovereignty cannot possibly be double. If two called for help at the same time, which one would you run to? If they demanded conflicting services of you, how would you arrange it? If one confided to your silence a thing that would be useful for the other to know, how would you extricate yourself? A single dominant friendship dissolves all other obligations. The secret I have sworn to reveal to no other man, I can impart without perjury to the one who is not another man: he is myself. It is a great enough miracle to be doubled, and those who talk of tripling themselves do not realize the loftiness of the thing: nothing is extreme that can be matched. And he who supposes that of two men I love one just as much as the other, and that they love each other and me just as much as I love them, multiplies into a fraternity the most singular and unified of all things, of

which even a single one is the rarest thing in the world to find.

Montaigne, Essays, I, 28, Of Friendship

34 We need very strong ears to hear ourselves judged frankly; and because there are few who can endure frank criticism without being stung by it, those who venture to criticize us perform a remarkable act of friendship; for to undertake to wound and offend a man for his own good is to have a healthy love for him, I find it a rough task to judge a man in whom the bad qualities exceed the good. Plato prescribes three qualities in a man who wants to examine another man's soul: knowledge, good will, boldness.

Montaigne, Essays, III, 13, Of Experience

35 *Amiens*. Blow, blow, thou winter wind,
Thou art not so unkind
As man's ingratitude;
Thy tooth is not so keen,
Because thou art not seen,
 Although thy breath be rude. . . .
Freeze, freeze, thou bitter sky,
That dost not bite so nigh
 As benefits forgot:
Though thou the waters warp,
Thy sting is not so sharp
As friend remember'd not.

Shakespeare, As You Like It, II, vii, 174

36 *Polonius*. Be thou familiar, but by no means vulgar.
Those friends thou hast, and their adoption tried,

Grapple them to thy soul with hoops of steel;
But do not dull thy palm with entertainment
Of each new-hatch'd, unfledged comrade.

Shakespeare, Hamlet, I, iii, 61

37 *Buckingham*. Heaven has an end in all; yet, you that hear me,
This from a dying man receive as certain:
Where you are liberal of your loves and counsels
Be sure you be not loose; for those you make friends
And give your hearts to, when they once perceive
The least rub in your fortunes, fall away
Like water from ye, never found again
But where they mean to sink ye.

Shakespeare, Henry VIII, II, i, 124

38 Well, *Sancho*, (said *Don Quixote* . . . turning to his 'Squire) did not I tell thee I should not want 'Squires; behold who offers me his Service, the most excellent Batchelor of Arts, *Sampson Carrasco*, the perpetual Darling of the Muses, and Glory of the *Salamanca-Schools*, sound and active of Body, patient of Labour, inur'd to Abstinence, silent in Misfortune, and in short, endow'd with all the Accomplishments that constitute a 'Squire. But forbid it Heav'n, that to indulge my private Inclinations I should presume to weaken the whole Body of Learning, by removing from it so substantial a Pillar, so vast a Repository of Sciences, and so eminent a Branch of the Liberal Arts. No, my Friend, remain thou another *Sampson* in thy Country, be the Honour of Spain, and the Delight of thy ancient Parents; I shall content myself with any 'Squire, since *Sancho* does not vouchsafe to go with

me. I do, I do, (cry'd *Sancho*, relenting with Tears in his Eyes) I do vouchsafe; it shall never be said of Sancho Panza, no longer Pipe no longer Dance.

Cervantes, Don Quixote, II, 7

39 My Master, quoth the Squire of the Wood, is more stout than foolish, but more Knave than either. Mine is not like yours then, quoth Sancho, he has not one Grain of Knavery in him; he's as dull as an old crack'd Pitcher, hurts no Body, does all the Good he can to every Body; a Child may persuade him it is Night at Noon-Day, and he is so simple, that I can't help loving him, with all my Heart and Soul, and can't leave him, in spite of all his Follies.

Cervantes, Don Quixote, II, 13

40 It had been hard for him that spake it to have put more truth and untruth together in few words than in that speech, "Whosoever is delighted in solitude is either a wild beast or a god." For it is most true that a natural and secret hatred and aversion towards society in any man hath somewhat of the savage beast; but it is most untrue that it should have any character at all of the divine nature, except it proceed, not out of a pleasure in solitude, but out of a love and desire to sequester a man's self for a higher conversation, such as is found to have been falsely and feignedly in some of the heathen, as Epimenides the Candian, Numa the Roman, Empedocles the Sicilian, and Apollonius of Tyana, and truly and really in divers of the ancient hermits and holy fathers of the church. But little do men perceive what solitude is, and how far it extendeth. For a crowd is not company; and faces are but a gallery of pictures; and talk but a tinkling

cymbal, where there is no love. The Latin adage meeteth with it a little: *Magna civitas, magna solitudo* [A great city is a great solitude]; because in a great town friends are scattered; so that there is not that fellowship, for the most part, which is in less neighbourhoods. But we may go further, and affirm most truly that it is a mere and miserable solitude to want true friends, without which the world is but a wilderness; and even in this sense also of solitude, whosoever in the frame of his nature and affections is unfit for friendship, he taketh it of the beast, and not from humanity.

Bacon, Of Friendship

- 41 We may have affection for a flower, a bird, a horse; but unless we have a very ill-regulated mind, we can have friendship for men alone. And they are so truly the object of this passion, that there is no man so imperfect that we cannot have for him a very perfect friendship, when we are loved by him, and when we have a truly noble and generous soul.

Descartes, Passions of the Soul, LXXXIII

- 42 Human life is thus only a perpetual illusion; men deceive and flatter each other. No one speaks of us in our presence as he does of us in our absence. Human society is founded on mutual deceit; few friendships would endure if each knew what his friend said of him in his absence, although he then spoke in sincerity and without passion.

Man is, then, only disguise, falsehood, and hypocrisy', both in himself and in regard to others. He does not wish any one to tell him the truth; he avoids telling it

to others, and all these dispositions, so removed from justice and reason, have a natural root in his heart. I set it down as a fact that if all men knew' w'hat each said of the other, there w'ould not be four friends in the world.

Pascal, Pensées, II, 100-101

43 *Alceste*. The more we love our friends, the less we flatter them; it is by excusing nothing that pure love shows itself.

Moliere, Le Misanthrope, II, v

44 In all distresses of our friends,
We first consult our private ends;
While nature, kindly bent to case us,
Points out some circumstance to please us,

Swift, On the Death of Dr, Swift, 7

45 I hope my friends will pardon me when I declare, I know' none of them without a fault; and I should be sorry if I could imagine I had any friend who could not see mine. Forgiveness of this kind we give and demand in turn. It is an exercise of friendship, and perhaps none of the least pleasant And this forgiveness we must bestow, without desire of amendment. There is, perhaps, no surer mark of folly, than an attempt to correct the natural infirmities of those we love.

Fielding, Tom Jones, 11, 7

46 The only way when friends quarrel is to see it out fairly in a friendly manner, as a man may call it, either with a fist, or sword, or pistol, according as they like, and then let it be all over; for my own part, d—n me if ever I love my

friend better than when I am fighting with him! To bear malice is more like a Frenchman than an Englishman.

Fielding, Tom Jones, IX, 4

47 Friendship is the marriage of the soul; and this marriage is subject to divorce. It is a tacit contract between t\ sensitive and virtuous persons, I say "sensitive," because a monk, a recluse can be not wicked and live without knowing what friendship is. I say "virtuous," because the wicked have only accomplices; voluptuaries have companions in debauch, self-seekers have partners, politicians get partisans; the generality of idle men have attachments; princes have courtiers; virtuous men alone have friends.

Voltaire, Philosophical Dictionary: Friendship

48 [Johnson] was well acquainted with Mr. Henry Hervey, one of the branches of the noble family of that name, who had been quartered at Lichfield as an officer of the army, and had at this time a house in London, where Johnson was frequently entertained, and had an opportunity of meeting genteel company. Not very long before his death, he mentioned this, among other particulars of his life, which he was kindly communicating to me; and he described this early friend, "Harry Hervey," thus: "He was a vicious man, but very kind to me. If you call a dog Hervey, I shall love him."

Boswell, Life of Johnson (1737)

49 I have often thought, that as longevity is generally desired, and I believe, generally expected, it would be wise to be continually adding to the number of our

friends, that the loss of some may be supplied by others. Friendship, "the wine of life," should like a well-stocked cellar, be thus continually renewed; and it is consolatory to think, that although we can seldom add what will equal the generous first-growths of our youth, yet friendship becomes insensibly old in much less time than is commonly imagined, and not many years are required to make it very' mellow and pleasant. Warmth will, no doubt, make a considerable difference. Men of affectionate temper and bright fancy will coalesce a great deal sooner than those who are cold and dull.

The proposition which I have now endeavoured to illustrate was, at a subsequent period of his life, the opinion of Johnson himself. He said to Sir Joshua Reynolds, "If a man does not make ne>v acquaintance as he advances through life, he will soon find himself left alone. A man. Sir, should keep his friendship in constant repair."

Boswell, Life of Johnson (1755)

50 A literary lady of large fortune was mentioned, as one who did good to many, but by no means "by stealth," and instead of "blushing to find it fame," acted evidently from vanity. *Johnson*. "I have seen no beings who do as much good from benevolence, as she does, from whatever motive. If there are such under the earth, or in the clouds, I wish they would come up, or come down. What Soame Jenyns says upon this subject is not to be minded; he is a wit. No, Sir; to act from pure benevolence is not possible for finite beings. Human benevolence is mingled with vanity, interest, or some other motive."

Boswell, Life of Johnson (Apr. 1776)

51 On Wednesday, May 19, I sat a part of the evening with him [Johnson], by ourselves. I observed, that the death of our friends might be a consolation against the fear of our own dissolution, because we might have more friends in the other world than in this. He perhaps felt this as a reflection upon his apprehension as to death; and said, with heat, "How can a man know where his departed friends are, or whether they will be his friends in the other world? How many friendships have you known formed upon principles of virtue? Most friendships are formed by caprice or by chance, mere confederacies in vice or leagues in folly."

Boswell, *Life of Johnson* (May 19, 1784)

52 In civilised society [man] stands at all times in need of the cooperation and assistance of great multitudes, while his whole life is scarce sufficient to gain the friendship of a few persons.

Adam Smith, Wealth of Nations, I, 2

53 Love is an agreeable; resentment, a disagreeable, passion: and accordingly we are not half so anxious that our friends should adopt our friendships, as that they should enter into our resentments.

Adam Smith, Theory of Moral Sentiments, I, 1

54 They who would confine friendship to two persons, seem to confound the wise security of friendship with the jealousy and folly of love. The hasty, fond, and foolish intimacies of young people, founded commonly upon some slight similarity of character altogether unconnected with good conduct, upon a taste, perhaps,

for the same studies, the same amusements, the same diversions, or upon their agreement in some singular principle or opinion not commonly adopted; those intimacies which a freak begins, and which a freak puts an end to, how agreeable soever they may appear while they last, can by no means deserve the sacred and venerable name of friendship.

Adam Smith, Theory of Moral Sentiments, I, 2

55 Friendship (in its perfection) is the union of two persons through equal mutual love and respect. One easily sees that it is an ideal in which a morally good will unites both parties in sympathy and shared well-being. If it does not also cause life's entire happiness, the acceptance of this ideal in such mutual sentiment includes the worthiness to be happy, so that friendship among men is our duty. It is easy to see that although aiming at friendship, as a maximum of good sentiment toward one another, is no ordinary duty but rather an honorable one proposed by reason, yet perfect friendship is a mere idea (but still a practically necessary one), unattainable in every attempt to realize it.

Kant, Elements of Ethics, 46

56 A friend in need—how much to be wished for (assuming that he is an active one, helpful at his own expense)! But it is also a great burden to feel oneself tied to the destiny of others and laden with alien responsibilities. Friendship, therefore, cannot be a bond aimed at mutual advantage, but must be purely moral; and the assistance which each may count on from the other in case of need must not be thought of as the end and determining ground of

friendship (for thereby one person would partly lose the respect of the other), but only as the outward sign of their inner, heartfelt benevolence (without putting it to a test, which is always dangerous). Friendship is not based on advantage, for each friend is magnanimously concerned with sparing the other any burden, bearing any such burden entirely by himself, and, yes, even completely concealing it from the other; but each one, nevertheless, can always flatter himself with the idea that in case of need he could definitely count upon the other's help. But if one accepts a benefit from the other, then he can probably count on an equality in their love, but not in their respect; for he sees himself plainly as a step lower, inasmuch as he is obligated and yet not reciprocally able to obligate.

Kant, Elements of Ethics, 46

57 To stand in true relations with men in a false age is worth a fit of insanity, is it not? We can seldom go erect. Almost every man we meet requires some civility—requires to be humored; he has some fame, some talent, some whim of religion or philanthropy in his head that is not to be questioned, and which spoils all conversation with him. But a friend is a sane man who exercises not my ingenuity, but me. My friend gives me entertainment without requiring any stipulation on my part. A friend therefore is a sort of paradox in nature. I who alone am, I who see nothing in nature whose existence I can affirm with equal evidence to my own, behold now the semblance of my being, in all its height, variety and curiosity, reiterated in a foreign form; so that a friend may well be reckoned the masterpiece of nature.

Emerson, Friendship

58 “Wal’r, my boy,” replied the captain, “in the Proverbs of Solomon you will find the following words, ‘May we never want a friend in need, nor a bottle to give him!’ When found, make a note of.”

Dickens, Dombey and Son, I, 15

59 There is no place like a bed for confidential disclosures between friends. Man and wife, they say, there open the very bottom of their souls to each other; and some old couples often lie and chat over old times till nearly morning.

Melville, Moby Dick, X

60 I dream’d in a dream I saw a city invincible to the attacks of the whole of the rest of the earth, I dream’d that was the new city of Friends.

Whitman, I Dream’d in a Dream

61 *Father Zossima.* Until you have become really, in actual fact, a brother to everyone, brotherhood will not come to pass. No sort of scientific teaching, no kind of common interest, will ever teach men to share property and privileges with equal consideration for all. Everyone will think his share too small and they will be always envying, complaining and attacking one another. You ask when it will come to pass; it will come to pass, but first we have to go through the period of isolation.... The isolation that prevails everywhere, above all in our age—it has not fully developed, it has not reached its limit yet. For everyone strives to keep his individuality as apart as possible, wishes to secure the greatest possible fullness of life for

himself; but meantime all his efforts result not in attaining fullness of life but self-destruction, for instead of self-realisation he ends by arriving at complete solitude. All mankind in our age have split up into units, they all keep apart, each in his own groove; each one holds aloof, hides himself and hides what he has, from the rest, and he ends by being repelled by others and repelling them. He heaps up riches by himself and thinks, 'How strong I am now and how secure,' and in his madness he does not understand that the more he heaps up, the more he sinks into self-destructive impotence. For he is accustomed to rely upon himself alone and to cut himself off from the whole; he has trained himself not to believe in the help of others, in men and in humanity, and only trembles for fear he should lose his money and the privileges that he has won for himself. Everywhere in these days men have, in their mockery, ceased to understand that the true security is to be found in social solidarity rather than in isolated individual effort. But this terrible individualism must inevitably have an end, and all will suddenly understand how unnaturally they are separated from one another. It will be the spirit of the time, and people will marvel that they have sat so long in darkness without seeing the light. And then the sign of the Son of Man will be seen in the heavens.... But, until then, we must keep the banner flying. Sometimes even if he has to do it alone, and his conduct seems to be crazy, a man must set an example, and so draw men's souls out of their solitude, and spur them to some act of brotherly love, that the great idea may not die.

Dostoevsky, Brothers Karamazov, Pt. II, VI, 2

62 The holy passion of Friendship is of so sweet and steady and loyal and enduring a nature that it will last through a whole lifetime, if not asked to lend money.

Mark Twain, Pudd'nhead Wilson's Calendar, VIII

63 We have to conclude that all the feelings of sympathy, friendship, trust and so forth which we expend in life are genetically connected with sexuality and have developed out of purely sexual desires by an enfeebling of their sexual aim, however pure and non-sensual they may appear in the forms they take on to our conscious self-perception. To begin with we knew none but sexual objects; psycho-analysis shows us that those persons whom in real life we merely respect or are fond of may be sexual objects to us in our unconscious minds still.

Freud, Dynamics of the Transference

64 A friend's only gift is himself, and friendship is not friendship, it is not a form of free or liberal society, if it does not terminate in an ideal possession, in an object loved for its own sake. Such objects can be ideas only, not forces, for forces are subterranean and instrumental things, having only such value as they borrow from their ulterior effects and manifestations. To praise the utility of friendship, as the ancients so often did, and to regard it as a political institution justified, like victory or government, by its material results, is to lose one's moral bearings. The value of victory or good government is rather to be found in the fact that, among other things, it might render friendship possible. We are not to look now for what makes friendship useful, but for whatever may be found in friendship that may lend utility to life.

Santayana, Life of Reason, II, 6

65 Friendship may indeed come to exist without sensuous liking or comradeship to pave the way; but unless intellectual sympathy and moral appreciation are powerful enough to react on natural instinct and to produce in the end the personal affection which at first was wanting, friendship does not arise. Recognition given to a man's talent or virtue is not properly friendship. Friends must desire to live as much as possible together and to share their work, thoughts, and pleasures. Good-fellowship and sensuous affinity are indispensable to give spiritual communion a personal accent; otherwise men would be indifferent vehicles for such thoughts and powers as emanated from them, and attention would not be in any way arrested or refracted by the human medium through which it beheld the good.

Santayana, Life of Reason, II, 6

3.5 Charity and Mercy

The main texts quoted in this section take their departure from the message of the Gospels that God is love and from the precepts of charity enunciated by Jesus Christ—that one should love God with all one's heart and all one's soul, and one's neighbor as one's self. The quotations from Christian theologians, apologists, and poets constitute an extended commentary on the love that is an obligation for those who follow the teachings of Christ. Augustine and Aquinas, particularly, show how fundamental and far-reaching the precepts of charity are, and explain why, of the three theological virtues—faith, hope, and charity—the greatest is charity.

One impulse of charity, too often allowed to obscure more important aspects of it, involves care or concern for the relief of the needy or suffering. We have, therefore, included passages that praise or recommend almsgiving. We have also included texts that extol mercy and recommend forgiveness to temper strict justice. These too reflect aspects of charity in the theological or religious sense, whether Jewish or Christian. But we have not included here passages that dwell on the benevolent impulses at the heart of friendship when pagan or later writers who treat such love approach it entirely from a secular and not a religious point of view.

...

1 Thou shall love thy neighbour as thyself.

Leviticus 19:18

2 The Lord is merciful and gracious, slow to anger, and plenteous in mercy.

He will not always chide: neither will he keep his anger for ever.

He hath not dealt with us after our sins; nor rewarded us according to our iniquities.

For as the heaven h high above the earth, so great is his mercy toward them that fear him.

As far as the east is from the west, so far hath he removed our transgressions from us.

Like as a father pitieth his children, so the Lord pitieth them that fear him.

For he knoweth our frame; he remembereth that we are dust.

As for man, his days are as grass: as a flower of the field, so he flourisheth.

For the wind passeth over it, and it is gone; and the place thereof shall know it no more.

But the mercy of the Lord is from everlasting to everlasting upon them that fear him, and his righteousness unto children's children.

Psalms 103:8-17

3 If thine enemy be hungry, give him bread to eat; and if he be thirsty, give him water to drink:

For thou shalt heap coals of fire upon his head, and the Lord shall reward thee.

Proverbs 25:21-22

4 Take heed that ye do not your alms before men, to be seen of them: otherwise ye have no reward of your Father which is in heaven.

Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, they have their reward.

But when thou doest alms, let not thy left hand know what thy right hand doeth:

That thine alms may be in secret; and thy Father which seeth in secret himself shall reward thee openly.

Matthew 6:1-4

5 Therefore is the kingdom of heaven likened unto a certain king, which would take account of his servants.

And when he had begun to reckon, one was brought unto him, which owed him ten thousand talents.

But forasmuch as he had not to pay, his lord commanded him to be sold, and his wife, and children, and all that he had, and payment to be made.

The servant therefore fell down, and worshipped him, saying, Lord, have patience with me, and I will pay thee all.

Then the lord of that servant was moved with compassion, and loosed him, and forgave him the debt.

But the same servant went out, and found one of his fellow servants, which owed him an hundred pence: and he laid hands on him, and took him by the throat, saying, Pay me that thou owest.

And his fellow servant fell down at his feet, and besought him, saying, Have patience with me, and I will pay thee all.

And he would not; but went and cast him into prison, till he should pay the debt.

So when his fellowservants saw what was done, they were very sorry, and came and told unto their lord all that was done.

Then his lord, after that he had called him, said unto him, O thou wicked servant, I forgave thee all that debt, because thou desiredst me:

Shouldest not thou also have had compassion on thy fellowservant, even as I had pity on thee?

And his lord was wroth, and delivered him to the tormentors, till he should pay all that was due unto him.

So likewise shall my heavenly Father do also unto you, if ye from your hearts forgive not every one his brother their trespasses.

Matthew 18:23-35

6 Then shall the King say unto them on his right hand, Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world:

For I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger, and ye took me in:

Naked, and ye clothed me; I was sick, and ye visited me; I was in prison, and ye came unto me.

Then shall the righteous answer him, saying, Lord, when saw we thee an hungred, and fed thee? or thirsty, and gave thee drink?

When saw we thee a stranger, and took thee in? or naked, and clothed thee?

Or when saw we thee sick, or in prison, and came unto thee?

And the King shall answer and say unto them. Verily I say unto you. Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me.

Matthew 25:34-40

7 And one of the scribes came, and having heard them reasoning together, and perceiving that he had answered them well, asked him, Which is the first commandment of all?

And Jesus answered him, The first of all the commandments is, Hear, O Israel; The Lord our God is one Lord:

And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment.

And the second is like, namely this, Thou shalt love thy neighbour as thyself. There is none other commandment greater than these.

Mark 12:28-31

8 And, behold, a certain lawyer stood up, and tempted him, saying. Master, what shall I do to inherit eternal life?

He said unto him. What is written in the law? how readest thou?

And he answering said, Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbour as thyself.

And he said unto him. Thou hast answered right; this do, and thou shalt live.

But he, wiling to justify himself, said unto Jesus, And who is my neighbour?

And Jesus answering said, A certain man went down from Jerusalem to Jericho, and fell among thieves, which stripped him of his raiment, and wounded him, and departed, leaving him half dead.

And by chance there came down a certain priest that way: and when he saw him, he passed by on the other side.

And likewise a Levite, when he was at the place, came and looked on him, and passed by on the other side.

But a certain Samaritan, as he journeyed, came where he was; and when he saw him, he had compassion on him,

And went to him, and bound up his wounds, pouring in oil and wine, and set him on his own beast, and brought him to an inn, and took care of him.

And on the morrow when he departed, he took out two pence, and gave them to the host, and said unto him. Take care of him; and whatsoever thou spendest more, when I come again, I will repay thee.

Which now of these three, thinkest thou, was neighbour unto him that fell among the thieves?

And he said. He that shewed mercy on him. Then said Jesus unto him. Go, and do thou likewise.

Luke 10:25-37

9 Jesus went unto the mount of Olives.

And early in the morning he came again into the temple, and all the people came unto him; and he sat down, and taught them.

And the scribes and Pharisees brought unto him a woman taken in adultery; and when they had set her in the midst.

They say unto him, Master, this woman was taken in adultery, in the very act.

Now Moses in the law commanded us, that such should be stoned: but what sayest thou?

This they said, tempting him, that they might have to accuse him. But Jesus stooped down, and with his finger wrote on the ground, as though he heard them not.

So when they continued asking him, he lifted up himself, and said unto them, He that is without sin among you, let him first cast a stone at her.

And again he stooped down, and wrote on the ground.

And they which heard it, being convicted by their own conscience, went out one by one, beginning at the eldest, even unto the last: and Jesus was left alone, and the woman standing in the midst.

When Jesus had lifted up himself, and saw none but the woman, he said unto her. Woman, where are those thine accusers? hath no man condemned thee?

She said, No man, Lord. And Jesus said unto her. Neither do I condemn thee: go, and sin no more.

John 8:1-11

10 It is more blessed to give than to receive.

Acts 20:35

11 Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal.

And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing.

And though I bestow all my goods to feed the poor,
and though I give my body to be burned, and have not
charity, it profiteth me nothing.

Charity suffereth long, and is kind; charity en-victh
not; charity vaunteth not itself, is not puffed up.

Doth not behave itself unseemly, secketh not her own,
is not easily provoked, thinketh no evil;

Rejoiceth not in iniquity, but rejoiceth in the truth;
Beareth all things, believeth all things, hopeth all
things, endureth all things.

Charity never faileth: but whether there be
prophecies, they shall fail; whether there be tongues,
they shall cease; whether there be knowledge, it shall
vanish away.

For we know in part, and we prophesy in part.

But when that which is perfect is come, then that
which is in part shall be done away.

When I was a child, I spake as a child, I understood as
a child, I thought as a child: but when I became a man, I
put away childish things.

For now we see through a glass, darkly; but then face
to face: now I know in part; but then shall I know even as
also I am known.

And now abideth faith, hope, charity, these three; but
the greatest of these is charity.

/ Corinthians 13:1-13

12 Charity shall cover the multitude of sins.

/ Peter 4:8

13 Beloved, let us love one another: for love is of God; and
every one that loveth is born of God, and knoweth God.

He that loveth not knoweth not God; for God is love.

I John 4:7-8

- 14 Kindness or humanity has a larger field than bare justice to exercise itself in; law and justice we cannot, in the nature of things, employ on others than men; but we may extend our goodness and charity even to irrational creatures; and such acts flow from a gentle nature, as water from an abundant spring. It is doubtless the part of a kind-natured man to keep even worn-out horses and dogs, and not only take care of them when they are foals and whelps, but also when they are grown old.

Plutarch, Marcus Cato

- 15 [The] divine Master inculcates two precepts—the love of God and the love of our neighbour—and as in these precepts a man finds three things he has to love—God, himself, and his neighbour— and that he who loves God loves himself thereby, it follows that he must endeavour to get his neighbour to love God, since he is ordered to love his neighbour as himself. He ought to make this endeavour in behalf of his wife, his children, his household, all within his reach, even as he would wish his neighbour to do the same for him if he needed it; and consequently he will be at peace, or in well-ordered concord, with all men, as far as in him lies.

Augustine, City of God, XIX, 14

- 16 We are commanded to love one another: but it is a question whether man is to be loved by man for his own sake, or for the sake of something else. If it is for his own sake, we enjoy him; if it is for the sake of something else,

we use him. It seems to me, then, that he is to be loved for the sake of something else. For if a thing is to be loved for its own sake, then in the enjoyment of it consists a happy life, the hope of which at least, if not yet the reality, is our comfort in the present time. But a curse is pronounced on him who places his hope in man.

Augustine, Christian Doctrine, I, 22

- 17 But if they shall so love God with all their heart, and all their mind, and all their soul, that still all the heart, and all the mind, and all the soul shall not suffice for the worthiness of this love; doubtless they will so rejoice with all their heart, and all their mind, and all their soul, that all the heart, and all the mind, and all the soul shall not suffice for the fulness of their joy.

Anselm of Canterbury, Proslogium, XXV

- 18 Charity signifies not only the love of God but also a certain friendship with Him; and this implies, besides love, a certain mutual return of love, together with mutual communion.... Now this fellowship of man with God, which consists in a certain familiar intercourse with Him, is begun here, in this life, by grace, but will be perfected in the future life, by glory; each of which things we hold by faith and hope. Therefore just as friendship with a person would be impossible if one disbelieved in, or despaired of, the possibility of his fellowship or familiar intercourse, so too, friendship with God, which is charity, is impossible without faith, so as to believe in this fellowship and intercourse with God, and to hope to attain to this fellowship. Therefore charity is altogether impossible without faith and hope.

Aquinas, Summa Theologica, I—II, 65, 5

19 Since good, in human acts, depends on their being regulated by the due rule, it is necessary that human virtue, which is a principle of good acts, consist in attaining the rule of human acts. Now the rule of human acts is twofold namely, human reason and God. Yet God is the first rule, by which even human reason must be regulated. Consequently the theological virtues which consist in attaining this first rule, since their object is God, are more excellent than the moral, or the intellectual virtues, which consist in attaining human reason: and it follows that among the theological virtues themselves, the first place belongs to that which attains God most.

Now that which is of itself always ranks before that which is by another. But faith and hope attain God indeed in so far as we derive from Him the knowledge of truth or the acquisition of good; but charity attains God Himself that it may rest in Him, but not that something may accrue to us from Him. Hence charity is more excellent than faith or hope, and, consequently, than all the other virtues, just as prudence, which by itself attains reason, is more excellent than the other moral virtues, which attain reason in so far as it appoints the mean in human operations of passions.

Aquinas, Summa Theologica, II-II, 23, 6

20 Charity... consists in man's loving God above all things, and subjecting himself to Him entirely, by referring all that is his to God. It is therefore of the very notion of charity that man should so love God as to wish to submit to Him in all things, and always to follow' the rule of His

commandments; for whatever is contrary to His commandments is manifestly contrary to charity, and therefore by its very nature is capable of destroying charity.

If indeed charity were an acquired habit dependent on the power of its subject, it would not necessarily be removed by one mortal sin, for act is directly contrary', not to habit but to act. Now the endurance of a habit in its subject does not require the endurance of its act, so that when a contrary act supervenes, the acquired habit is not at once done away. But charity, being an infused habit, depends on the action of God Who infuses it, Who stands in relation to the infusion and preservation of charity, as the sun does to the diffusion of light in the air. . . , Consequently, just as the light would cease at once in the air, were an obstacle placed to its being lit up by the sun, even so charity ceases at once to be in the soul through the placing of an obstacle to the outpouring of charity by God into the soul.

Now it is evident that through every mortal sin which is contrary to God's commandments, an obstacle is placed to the outpouring of charity, since from the very fact that a man chooses to prefer sin to God's friendship, which requires that we should follow His will, it follows that the habit of charity is lost at once through one mortal sin.

Aquinas, Summa Theologica, II-II, 24, 12

- 21 Love of one's enemies may be understood in three ways. First, as though we were to love our enemies as enemies; this is perverse, and contrary to charity, since it implies love of that which is evil in another.

Secondly love of one's enemies may mean that we love them as to their nature, but in a universal way, and in this sense charity requires that we should love our enemies, namely, that in loving God and our neighbour, we should not exclude our enemies from the love given to our neighbour in general.

Thirdly love of one's enemies may be considered as specially directed to them, namely, that we should have a special movement of love towards our enemies. Charity does not require this absolutely, because it does not require that we should have a special movement of love to every individual man, since this would be impossible. Nevertheless charity does require this, in respect of our being prepared in mind, namely that we should be ready to love our enemies individually, if the necessity were to occur.

That man should actually do so, and love his enemy for God's sake, without it being necessary' for him to do so, belongs to the perfection of charity-

Aquinas, Summa Theologica, II-II, 25, 8

22 "I am more fasting from being satisfied," said I, "than if I had kept silent at first, and more perplexity I amass in my mind.

How can it be that a good when shared, shall make the greater number of possessors richer in it, than if it is possessed by a few?"

And he [Virgil] to me: "Because thou dost again fix thy mind merely on things of earth, thou drawest darkness from true light.

That infinite and ineffable Good, that is on high, speedeth so to love as a ray of light comes to a bright body.

As much of ardour as it finds, so much of itself doth it
give, so that how far soever love extends, eternal
goodness giveth increase upon it;

and the more people on high who comprehend each
other, the more there are to love well, and the more love
is there, and like a mirror one giveth back to the other."

Dante, Purgatorio, XV, 58

23 Ye youth, so happy at the dawn of life.

In whom love springs as native to your days.
Estrange you from the world and its vain strife.
And let your hearts their eyes to him upraise
Who made you in his image! Give him praise,
And think this world is but a passing show,
Fading like blooms that all too briefly blow.

And love ye him who on the cross did buy
Our souls from timeless death to live for aye,
Who died and rose and reigns in heaven high!
Your deepest love his love will ne'er betray,
Your faith on him I bid you safely lay;
And since his love is best beyond compare,
Love of the world deny with all its care.

Chaucer, Troilus and Cressida, V, 263-264

24 The hearts of men, which fondly here admyre

Faire seeming shewes, and feed on vaine delight,
Transported with celestiall desyre
Of those faire formes, may lift themselves up hyer.
And learne to love with zealous humble dewty
Th' Eternall Fountaine of that heavenly Beauty.

Spenser, Hymne of Heavenly Beautie, 16

25 *Portia*. The quality of mercy is not strain'd,
It droppeth as the gentle rain from heaven
Upon the place beneath: it is twice blest;
It blesseth him that gives and him that takes:
'Tis mightiest in the mightiest: it becomes
The throned monarch better than his crown;
His sceptre shows the force of temporal power,
The attribute to awe and majesty.
Wherein doth sit the dread and fear of kings;
But mercy is above this sceptred sway;
It is enthroned in the hearts of kings,
It is an attribute to God himself;
And earthly power doth then show likest God's
When mercy seasons justice. Therefore, Jew,
Though justice be thy plea, consider this,
That, in the course of justice, none of us
Should see salvation: we do pray for mercy;
And that same prayer doth teach us all to render
The deeds of mercy.

Shakespeare, Merchant of Venice, IV, i, 184

26 *Isabella*. Well, believe this,
No ceremony that to great ones 'longs,
Not the king's crown, nor the deputed sword,
The marshal's truncheon, nor the judge's robe.
Become them with one half so good a grace
As mercy does.

Shakespeare, Measure for Measure, II, ii, 58

27 *Angelo*. Your brother is a forfeit of the law.
And you but waste your words.

Isabella. Alas, alas!

Why, all the souls that were were forfeit once;
And He that might the vantage best have took
Found out the remedy. How would you be,
If He, which is the top of judgement, should
But judge you as you are? O, think on that;
And mercy then will breathe within your lips.
Like man new made,

Ang. Be you content, fair maid;
It is the law, not I, condemn your brother.
Were he my kinsman, brother, or my son,
It should be thus with him. He must die tomorrow.

Isab. To-morrow! O, that's sudden! Spare him, spare him!

He's not prepared for death. Even for our kitchens
We kill the fowl of season. Shall we serve Heaven
With less respect than we do minister
To our gross selves?

Shakespeare, Measure for Measure, II, ii, 71

28 Cry'd Don *Quixote*, Is it for a Knight-Errant when he
meets with People laden with Chains, and under
Oppression, to examine whether they are in those
Circumstances for their Crimes, or only thro' Misfortune?
We are only to relieve the Afflicted, to look on their
Distress, and not on their Crimes.

Cervantes, Don Quixote, I, 30

29 To forgive sin is not an act of injustice, though the
punishment have been threatened. Even amongst men,
though the promise of good bind the promiser; yet
threats, that is to say, promises of evil, bind them not;

much less shall they bind God, who is infinitely more merciful than men.

Hobbes, Leviathan, III, 38

- 30 The infinite distance between body and mind is a symbol of the infinitely more infinite distance between mind and charity; for charity is supernatural.

Pascal, Pensées, XII, 793

- 31 He who lives according to the guidance of reason strives as much as possible to repay the hatred, anger, or contempt of others towards himself with love or generosity.

All affects of hatred are evil, and, therefore, the man who lives according to the guidance of reason will strive as much as possible to keep himself from being agitated by the affects of hatred, and, consequently, will strive to keep others from being subject to the same affects. But hatred is increased by reciprocal hatred, and, on the other hand, can be extinguished by love, so that hatred passes into love. Therefore he who lives according to the guidance of reason will strive to repay the hatred of another, etc., with love, that is to say, with generosity....

He who wishes to avenge injuries by hating in return does indeed live miserably. But he who, on the contrary, strives to drive out hatred by love, fights joyfully and confidently, with equal case resisting one man or a number of men, and needing scarcely any assistance from fortune. Those whom he conquers yield gladly, not from defect of strength, but from an increase of it.

Spinoza, Ethics, IV, Prop. 46

32 The intellectual love of the mind towards God is the very love with which He loves Himself, not in so far as He is infinite, but in so far as He can be manifested through the essence of the human mind, considered under the form of eternity; that is to say, the intellectual love of the mind towards God is part of the infinite love with which God loves Himself....

Hence it follows that God, in so far as He loves Himself, loves men, and consequently that the love of God towards men and the intellectual love of the mind towards God are one and the same thing.

Spinoza, Ethics, V, Prop. 36, Corol.

33 "Those," he [Capt. Blifil] said, "came nearer to the Scripture meaning, who understood by it [charity] candour, or the forming of a benevolent opinion of our brethren, and passing a favourable judgment on their actions; a virtue much higher, and more extensive in its nature, than a pitiful distribution of alms, which, though we would never so much prejudice, or even ruin our families, could never reach many; whereas charity, in the other and truer sense, might be extended to all mankind."

Fielding, Tom Jones, II, 3

34 Thwackum was for doing justice, and leaving mercy to heaven.

Fielding, Tom Jones, III, 10

35 It is in endeavouring to instruct mankind that we are best able to practise that general virtue which comprehends the love of all.

Montesquieu, Spirit of Laws, Pref.

36 My uncle Toby had scarce a heart to retaliate upon a fly.

Go—says he, one day at dinner, to an over-grown one which had buzzed about his nose, and tormented him cruelly all dinner-time,—and which after infinite attempts, he had caught at last, as it flew by him;—Pll not hurt thee, says my uncle Toby, rising from his chair, and going across the room, with the fly in his hand,—FU not hurt a hair of thy head:—Go, says he, lifting up the sash, and opening his hand as he spoke, to let it escape;—go, poor devil, get thee gone, why should I hurt thee? This world surely is wide enough to hold both thee and me.

Sterne, Tristram Shandy, 11, 12

37 "—She had since that, she told me, stray'd as far as Rome, and walk'd round St. Peter's once—and return'd back—that she found her way alone across the Apennines—had travell'd over all Lombardy without money,—and through the flinty roads of Savoy without shoes—how she had borne it, and how she had got supported, she could not tell—but God tempers the wind, said Maria, to the shorn lamb."

Sterne, Sentimental Journey: "Maria"

38 He who the Ox to wrath has mov'd
Shall never be by Woman lov'd.
The wanton Boy that kills the Fly
Shall feel the Spider's enmity.
He who torments the Chafer's sprite
Weaves a Bower in endless Night.
The Catterpillar on the Leaf
Repeats to thee thy Mother's grief.

Kill not the Moth nor Butterfly
For the Last Judgment draweth nigh.

Blake, Auguries of Innocence, 39

39 Give all thou canst; high Heaven rejects the lore Of
nicely-calculated less or more.

Wordsworth, Ecclesiastical Sonnets, III, 43

40 No love and no expression of love may, in the merely human and worldly sense, be deprived of a relationship to God. Love is a passionate emotion, but in this emotion, even before he enters into a relation with the object of his love, the man must first enter into a relationship with God, and thereby realize the claim that love is the fulfillment of the law. Love is a relation to another man or to other men, but it is by no means and dares by no means be a matrimonial, a friendly, a merely human agreement, however steadfast and tender the connection between man and man. Everyone individually before he in love enters into a relation with the beloved, with the friend, the loved ones, the contemporaries, has first to enter into a relation with God and with God's demands. As soon as one leaves out the God-relationship the questions at issue become merely human determinations of what they wish to understand by loving; what they will require of one another; and their mutual judgment because of this becomes the highest judgment. Not only the one who listens absolutely to the call of God will not belong to a woman, in order not to be delayed through wishing to please her; but also the one who in love belongs to a woman, will first and foremost belong to God; he will not seek first to please his wife, but will first

endeavor to make his love pleasing unto God. Hence it is not the wife who will teach her husband how he ought to love her, or the husband the wife, or the friend the friend, or the contemporary the contemporary, but it is God who will teach every individual how he ought to love, even if his love still only lays hold on the law referred to when the apostle say's, "Love is the fulfillment of the law." This makes it quite natural that the one who has only a worldly, or a merely human conception about what love is. must come to regard that as self-love and unkindness which, understood in the Christian sense, is precisely love. When, on the other hand, the God-relationship determines what love is between man and man, then love is kept from pausing in any self-deception or illusion, while certainly the demand for self-abnegation and sacrifice is again made more infinite. The love which does not lead to God, the love which does not have this as its sole goal, to lead the lovers to love God, stops at the purely human judgment as to what love and What love's sacrifice and submission are; it stops and thereby escapes the possibility of the last and most terrifying horror of the collision: that in the love relationship there are infinite differences in the idea of what love is.

Kierkegaard, Works of Love, I, 3A

- 41 With malice toward none; with charity for all; with firmness in the right as God gives us to see the right. Let us strive on to finish the work we are in; to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphan—to do all which may achieve and cherish a just and a lasting peace, among ourselves and with all nations.

Lincoln, Second Inaugural Address

42 "I must make you one confession," Ivan began. "I could never understand how one can love one's neighbours. It's just one's neighbours, to my mind, that one can't love, though one might love those at a distance. I once read somewhere of John the Merciful, a saint, that when a hungry', frozen beggar came to him, he took him into his bed, held him in his arms, and began breathing into his mouth, which was putrid and loathsome from some awful disease. I am convinced that he did that from 'self-laceration,' from the self-laceration of falsity, for the sake of the charity imposed by duty, as a penance laid on him. For anyone to love a man, he must be hidden, for as soon as he shows his face, love is gone."

"Father Zossima has talked of that more than once," observed Alyosha; "he, too, said that the face of a man often hinders many people not practised in love, from loving him. But yet there's a great deal of love in mankind, and almost Christ-like love. I know that myself, Ivan,"

Dostoevsky, Brothers Karamazov, Pt. 11, V, 4

43 *Father Zossima.* And can it be a dream, that in the end man will find his joy only in deeds of light and mercy, and not in cruel pleasures as now, in gluttony, fornication, ostentation, boasting and envious rivalry of one with the other? I firmly believe that it is not and that the time is at hand. People laugh and ask; "When will that time come and does it look like coming?" I believe that with Christ's help we shall accomplish this great thing. And how many ideas there have been on earth in the history of man which were unthinkable ten years before they appeared!

Yet when their destined hour had come, they came forth and spread over the whole earth. So it will be with us, and our people will shine forth in the world, and all men will say: stone which the builders rejected has become the cornerstone of the building."

Dostoevsky, Brothers Karamazov, Pt. II, VI, 3

44 Do not do unto others as you would that they should do unto you. their tastes may not be the same.

Shaw, A fan and Superman Maxims for Revolutionists

3.6 Love of Country PATRIOTISM

Unlike the diverse loves treated in the three preceding sections, patriotism, or love of one's country, is not a distinct type of love. It can probably be most closely aligned with the kind of love that is true friendship, the dominantly benevolent tendency which would impel a man to lay down his life for his friend. So, it is often said, the patriot too would, if necessary, lay down his life for his country.

For the most part, the writers here quoted praise patriotism as something desirable and even virtuous, while others raise doubts about its value or condemn an uncritical or blind patriotism. Dr. Johnson may have gone too far in that direction when he said that patriotism is the last refuge of a scoundrel, but that helps to preserve a balance against the other extreme which attaches no qualifications to its praise of patriotism.

■ ■ ■

- 1 Go tell the Spartans, thou who passest by,
That here obedient to their laws we lie.

Simonides, Epigram on Thermopylae

- 2 Had the Athenians, from fear of the approaching danger, quitted their country, or had they without quitting it submitted to the power of Xerxes, there would certainly have been no attempt to resist the Persians by sea; in which case the course of events by land would have been the following. Though the Peloponnesians might have carried ever so many breastworks across the Isthmus, yet their allies would have fallen off from the Lacedaemonians, not by voluntary desertion, but because town after town must have been taken by the fleet of the barbarians; and so the Lacedaemonians would at last have stood alone, and, standing alone, would have displayed prodigies of valour and died nobly. Either they would have done thus, or else, before it came to that extremity, seeing one Greek state after another embrace the cause of the Medes, they would have come to terms with King Xerxes—and thus, either way Greece would have been brought under Persia. For I cannot understand of what possible use the walls across the Isthmus could have been, if the king had had the mastery of the sea. If then a man should now say that the Athenians were the saviours of Greece, he would not exceed the truth. For they truly held the scales; and whichever side they espoused must have carried the day. They too it was who, when they had determined to maintain the freedom of

Greece, roused up that portion of the Greek nation which had not gone over to the Medes; and so, next to the gods, repulsed the invader. Even the terrible oracles which reached them from Delphi, and struck fear into their hearts, failed to persuade them to fly from Greece. They had the courage to remain faithful to their land, and await the coming of the foe.

Herodotus, History, VII, 139

- 3 *Cassandra*. The Trojans have that glory which is loveliest: they died for their own country.

Euripides, Trojan Women, 386

- 4 *Pericles*. There is justice in the claim that steadfastness in his country's battles should be as a cloak to cover a man's other imperfections; since the good action has blotted out the bad, and his merit as a citizen more than outweighed his demerits as an individual.

Thucydides, Peloponnesian War, II, 42

- 5 *Pericles*. Your country has a right to your services in sustaining the glories of her position. These are a common source of pride to you all, and you cannot decline the burdens of empire and still expect to share its honours.

Thucydides, Peloponnesian War, 11, 63

- 6 *Alcibiades*. I hope that none of you will think any the worse of me if, after having hitherto passed as a lover of my country, I now actively join its worst enemies in attacking it, or will suspect what I say as the fruit of an outlaw's enthusiasm. I am an outlaw from the iniquity of those

who drove me forth, not, if you will be guided by me, from your service; my worst enemies are not you who only harmed your foes, but they who forced their fiends to become enemies; and love of country' is what I do not feel when I am wronged, but what I felt when secure in my rights as a citizen. Indeed I do not consider that I am now attacking a country that is still mine; I am rather trying to recover one that is mine no longer; and the true lover of his country' is not he who consents to lose it unjustly rather than attack it, but he who longs for it so much that he will go all lengths to recover it.

Thucydides, Peloponnesian War, VI, 92

- 7 The good man should be a lover of self (for he will both himself profit by doing noble acts, and will benefit his fellows), but the wicked man should not; for he will hurt both himself and his neighbours, following as he does evil passions. For the wicked man, what he does clashes with what he ought to do, but what the good man ought to do he does; for reason in each of its possessors chooses what is best for itself, and the good man obeys his reason. It is true of the good man too that he does many acts for the sake of his friends and his country, and if necessary dies for them; for he will throw away both wealth and honours and in general the goods that are objects of competition, gaining for himself nobility; since he would prefer a short period of intense pleasure to a long one of mild enjoyment, a twelvemonth of noble life to many years of humdrum existence, and one great and noble action to many' trivial ones. Now those who die for others doubtless attain this result; it is therefore a great prize that they choose for themselves.

Aristotle, 1169a12

- 8 Good 'tis and fine, for fatherland to die!
Death tracks him too who shirks; nor will
He fail To smite the coward loins that quail,
The coward limbs that fly!

Horace, III, 2

- 9 By what sweet charm I know not the native land
draws all men nor allows them to forget her.

Ovid, Epistulae Ex Ponto, I, 3

- 10 [Sertorius] was a sincere lover of his country, and had a great desire to return home; but in his adverse fortune he showed undaunted courage, and behaved himself towards his enemies in a manner free from all dejection and mean-spiritedness; and when he was in his prosperity, and in the height of his victories, he sent word to Metellus and Pompey that he was ready to lay down his arms and live a private life if he were allowed to return home, declaring that he had rather live as the meanest citizen in Rome than, exiled from it, be supreme commander of all other cities together.

Plutarch, Sertorius

- 11 A wise prince ought to adopt such a course that his citizens will always in every sort and kind of circumstance have need of the state and of him, and then he will always find them faithful.

Machiavelli, Prince, IX

12 Not because Socrates said it, but because it is really my feeling, and perhaps excessively so, I consider all men my compatriots, and embrace a Pole as I do a Frenchman, setting this national bond after the universal and common one. I am scarcely infatuated with the sweetness of my native air. Brand-new acquaintances that are wholly of my own choice seem to me to be well worth those other common chance acquaintances of the neighborhood. Friendships purely of our own acquisition usually surpass those to which community of climate or of blood binds us. Nature has put us into the world free and unfettered; we imprison ourselves in certain narrow districts, like the kings of Persia, who bound themselves never to drink any other water than that of the river Choaspes, stupidly gave up their right to use any other waters, and dried up all the rest of the world as far as they were concerned.

What Socrates did near the end of his life, in considering a sentence of exile against him worse than a sentence of death, I shall never, I think, be so broken or so strictly attached to my own country as to do. These divine lives have quite a few aspects that I embrace more by esteem than by affection. And there are also some so lofty and extraordinary that I cannot embrace them even by esteem, inasmuch as I cannot understand them. That was a very fastidious attitude for a man who considered the world his city.

Montaigne, Essays, III, 9, Of Vanity

13 *Gaunt*. This royal throne of kings, this scepter'd isle,
This earth of majesty, this seat of Mars,
This other Eden, demi-paradise,
Tin's fortress built by Nature for herself

Against infection and the hand of war,
This happy breed of men, this little world.
This precious stone set in the silver sea,
Which serves it in the office of a wall
Or as a moat defensive to a house.
Against the envy of less happier lands,
This blessed plot, this earth, this realm, this England.

Shakespeare, Richard II, II, i, 40

- 14 There is an honour... which may be ranked amongst the greatest, which happeneth rarely; that is, of such as sacrifice themselves to death or danger for the good of their country.

Bacon, Of Honour and Reputation

- 15 What I distinguish by the name of virtue, in a republic, is the love of one's country, that is, the love of equality. It is not a moral, nor a Christian, but a political virtue; and it is the spring which sets the republican government in motion, as honour is the spring which gives motion to monarchy.

Montesquieu, Spirit of Laws, Advertisement

- 16 Do we wish men to be virtuous? Then let us begin by making them love their country: but how can they love it, if their country be nothing more to them than to strangers, and afford them nothing but what it can refuse nobody?

Rousseau, Political Economy

- 17 If children are brought up in common in the bosom of equality; if they are imbued with the laws of the State

and the precepts of the general will; if they are taught to respect these above all things; if they are surrounded by examples and objects which constantly remind them of the tender mother who nourishes them, of the love she bears them, of the inestimable benefits they receive from her, and of the return they owe her, we cannot doubt that they will learn to cherish one another mutually as brothers, to will nothing contrary to the will of society, to substitute the actions of men and citizens for the futile and vain babbling of sophists, and to become in time defenders and fathers of the country of which they will have been so long the children.

Rousseau, Political Economy

- 18 As soon as any man says of the affairs of the State *What does it matter to me?* the State may be given up for lost.

Rousseau, Social Contract, III, 15

- 19 The [religion of the State] is good in that it unites the divine cult with love of the law's, and, making country the object of the citizens' adoration, teaches them that service done to the State is service done to its tutelary god. It is a form of theocracy, in which there can be no pontiff save the prince, and no priests save the magistrates. To die for one's country then becomes martyrdom; violation of its laws, impiety; and to subject one who is guilty to public execration is to condemn him to the anger of the gods: *Sacer est od.*

On the other hand, it is bad in that, being founded on lies and error, it deceives men, makes them credulous and superstitious, and drowns the true cult of the Divinity in empty ceremonial. It is bad, again, when it becomes

tyrannous and exclusive, and makes a people bloodthirsty and intolerant, so that it breathes fire and slaughter, and regards as a sacred act the killing of every' one who does not believe in its gods. The result is to place such a people in a natural state of war with all others, so that its security is deeply endangered.

Rousseau, Social Contract, IV, 8

20 Patriotism having become one of our topicks, Johnson suddenly uttered, in a strong determined tone, an apophthegm, at which many will start: "Patriotism is the last refuge of a scoundrel." But let it be considered, that he did not mean a real and generous love of our country, but that pretended patriotism which so many, in all ages and countries, have made a cloak for self-interest. I maintained, that certainly all patriots were not scoundrels. Being urged, (not by Johnson,) to name one exception, I mentioned an eminent person, whom we all greatly admired. *Johnson*. "Sir, I do not say that he is not honest; but we have no reason to conclude from his political conduct that he is honest. Were he to accept of a place from this ministry, he would lose that character of firmness which he has, and might be turned out of his place in a year."

Boswell, Life of Johnson (Apr, 7, 1775)

21 The more the operations of the national authority are intermingled in the ordinary exercise of government, the more the citizens are accustomed to meet with it in the common occurrences of their political life, the more it is familiarised to their sight and to their feelings, the further it enters into those objects which touch the most sensible

chords and put in motion the most active springs of the human heart, the greater will be the probability that it will conciliate the respect and attachment of the community. Man is very much a creature of habit. A thing that rarely strikes his senses will generally have but little influence upon his mind. A government continually at a distance and out of sight can hardly be expected to interest the sensations of the people.

Hamilton, Federalist 27

- 22 Patriotism is often understood to mean only a readiness for exceptional sacrifices and actions. Essentially, however, it is the sentiment which, in the relationships of our daily life and under ordinary conditions, habitually recognizes that the community is one's substantive groundwork and end. It is out of this consciousness, which during life's daily round stands the test in all circumstances, that there subsequently also arises the readiness for extraordinary exertions. But since men would often rather be magnanimous than law-abiding, they readily persuade themselves that they possess this exceptional patriotism in order to be sparing in the expression of a genuine patriotic sentiment or to excuse their lack of it. If again this genuine patriotism is looked upon as that which may begin of itself and arise from subjective ideas and thoughts, it is being confused with opinion, because so regarded patriotism is deprived of its true ground, objective reality.

Hegel, Philosophy of Right, 268

- 23 Theirs not to make reply,
Theirs not to reason why,

Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

Tennyson, The Charge of the Light Brigade

- 24 It has been said of old, that in a despotism there is at most but one patriot, the despot himself; and the saying rests on a just appreciation of the effects of absolute subjection, even to a good and wise master.

Mill, Representative Government, III

- 25 [The] feeling of nationality may have been generated by various causes. Sometimes it is the effect of identity of race and descent. Community of language, and community of religion, greatly contribute to it. Geographical limits are one of its causes. But the strongest of all is identity of political antecedents; the possession of a national history and consequent community of recollections; collective pride and humiliation, pleasure and regret, connected with the same incidents in the past.

Mill, Representative Government, XVI

- 26 It is natural for us who were not living in those days to imagine that when half Russia had been conquered and the inhabitants were fleeing to distant provinces, and one levy after another was being raised for the defense of the fatherland, all Russians from the greatest to the least were solely engaged in sacrificing themselves, saving their fatherland, or weeping over its downfall. The tales and descriptions of that time without exception speak only of the self-sacrifice, patriotic devotion, despair, grief,

and the heroism of the Russians. But it was not really so. It appears so to us because we see only the general historic interest of that time and do not see all the personal human interests that people had. Yet in reality those personal interests of the moment so much transcend the general interests that they always prevent the public interest from being felt or even noticed. Most of the people at that time paid no attention to the general progress of events but were guided only by their private interests, and they were the very people whose activities at that period were most useful.

Those who tried to understand the general course of events and to take part in it by self-sacrifice and heroism were the most useless members of society, they saw everything upside down, and all they did for the common good turned out to be useless and foolish.

Tolstoy, War and Peace, XII, 4

Chapter 4

EMOTION

Chapter 4 is divided into eleven sections: 4.1 The Passions: The Range of the Emotions, 4.2 Fear, 4.3 Anger, 4.4 Desire, 4.5 Hope and Despair, 4.6 Joy and Sorrow, 4.7 Pleasure and Pain, 4.8 Pity and Envy, 4.9 Greed and Avarice, 4.10 Jealousy, and 4.11 Pride and Humility.

The section titles immediately tell the reader what to expect here. He is acquainted in his own experience with most of the feelings, dispositions, sentiments, moods, or states of mind and body that are named; those he has not experienced himself, he has met with in the behavior of others—in fact or fiction. Yet they are not all emotions or passions in the strict sense in which these terms have come to mean a state of feeling that arises from profound bodily changes, of relatively short duration, so intense that for a short time the individual is completely dominated by it. In fact, only fear and anger exemplify this very strict conception of emotion or passion involving widespread physiological changes that run a brief course during which they completely control and determine the individual's behavior. But we also use the words "fear" and "anger" to name much less violent upheavals—persistent feelings, moods, or sentiments that underlie and color an individual's attitudes or responses toward certain aspects of his environment. The same holds for desire, hope and despair, and joy and sorrow. All of these are emotions or passions in

the sense just indicated—relatively persistent states of feeling, determinative of attitude or conduct, involving bodily changes that are milder than the violent seizures of fear and anger in their most intense occurrence.

In the discussion of these matters, "passion" is the older, "emotion" the newer term. In assembling the passages quoted in this chapter, we have treated them as synonymous. Still another traditional term that has similar meaning is "affect."

The study of emotion now falls within the province of psychology, and has for a century or more; but earlier than that the analysis and classification of the passions was mainly the work of moral and political philosophers, or even of those concerned with oratory. In fact, the first comprehensive account of the passions appears in Aristotle's *Rhetoric*, although the subject is also considered in his *Ethics* in connection with his analysis of such virtues as courage and temperance.

Section 4.1 sets the stage for all the sections to follow: its quotations, drawn from a wide variety of contexts, deal with emotion or passion in general, and with the enumeration and classification of specific passions or emotions, or even milder feelings or sentiments. It will be noted that, in such enumerations and classifications, some of the passions are paired opposites, such as joy and sorrow, or hope and despair, and some stand alone and do not have opposites, such as fear and anger. It will also be noted that different principles are employed in classifying the passions; sometimes they are divided into the irascible and the concupiscible; sometimes into the pleasant and the unpleasant; sometimes into the violent and the mild. In ordering the sections of this chapter, we have adopted still another principle.

We have put first, in Sections 4.2 through 4.7, emotions, passions, or feelings that, from the point of view of most moralists and of men generally, are in themselves neither good nor bad. Thus, for example, what we do about fear or anger, pleasure or pain, joy and sorrow, and desire—how we control such feelings or give into them—may be the subject of moral approval or disapproval, but not the feelings themselves. Nevertheless, hope and despair, included in this group, are not always treated merely as feelings without moral coloration; hope is also regarded as a theological virtue, and despair as its opposite—one of the mortal sins. This is also true of anger. Nevertheless, in the main, the subjects treated in Sections 4.2 through 4.7 are approached as phenomena to be examined rather than as dispositions to be praised or censured.

In contrast, the subjects treated in Sections 4.8 through 4.11 do, for the most part, elicit approbation or censure from those who discuss them. For example, such words as "envy," "greed," "avarice," and "jealousy," usually connote excessive or inordinate tendencies or dispositions—desire or other passions out of control. While this does not hold to the same extent for "pity," it, too, is frequently used in a pejorative sense. And while the terms "pride" and "humility" almost always connote attitudes or dispositions that are considered admirable or reprehensible, sometimes pride is condemned and humility praised, and sometimes the reverse.

One pair of feelings—love and hate, usually included in enumerations of the passions—are not given a special section in this chapter because Chapter 3 deals with them. However, an emotion closely connected with love and hate—jealousy—is treated here in Section 4.10.

A whole chapter might have been devoted to pleasure and pain, so extensive and so varied is the discussion of

these subjects. While the main treatment of them will be found in Section 4.7, the reader will also find reference to them in other sections, for almost all the other passions or emotions are tinged with pleasure or pain, or at least with the affective tone of the pleasant or the unpleasant. They also appear, in connection with desire, under the guise of satisfaction and dissatisfaction. When our desires are satisfied, we are pleased; when they are unsatisfied, we are displeased or pained.

On the psychological plane, the matters treated in this chapter have a bearing on matters treated in Chapter 5 on Mind, especially Section 5.7 on Will: Free Choice, and even, to some extent, Section 5.6 on Madness. On the plane of moral philosophy, the connection is with subjects covered in Chapter 9 on Ethics, especially Section 9.10 on Virtue and Vice, Section 9.11 on Courage and Cowardice, and Section 9.12 on Temperance and Intemperance.

These remarks about the subject matter of Chapter 4 as a whole make it unnecessary to append forewords to each of its sections.

...

4.1 The Passions

THE RANGE OF THE EMOTIONS

- 1 Since things that are found in the soul are of three kinds—passions, faculties, states of character, virtue must be one of these. By passions I mean appetite, anger, fear, confidence, joy, friendly feeling, hatred, longing,

emulation, pity, and in general the feelings that are accompanied by pleasure or pain; by faculties the things in virtue of which we are said to be capable of feeling these, for example, of becoming angry or being pained or feeling pity; by states of character the things in virtue of which we stand well or badly with reference to the passions, for example, with reference to anger we stand badly if we feel it violently or too weakly, and well if we feel it moderately; and similarly with reference to the other passions.

Now neither the virtues nor the vices are passions, because we are not called good or bad on the ground of our passions, but are so called on the ground of our virtues and our vices, and because we are neither praised nor blamed for our passions (for the man who feels fear or anger is not praised, nor is the man who simply feels anger blamed, but the man who feels it in a certain way), but for our virtues and our vices we are praised or blamed.

Aristotle, Ethics,

- 2 The emotions are all those feelings that so change men as to affect their judgements, and that are also attended by pain or pleasure. Such are anger, pity, fear and the like, with their opposites.

Aristotle, Phetoric, 1378a20

- 3 Now I assert that the mind and the soul are kept together in close union and make up a single nature, but that the directing principle which we call mind and understanding, is the head so to speak and reigns paramount in the whole body. It has a fixed seat in the

middle region of the breast: here throb fear and apprehension, about these spots dwell soothing joys; therefore here is the understanding or mind. All the rest of the soul disseminated through the whole body obeys and moves at the will and inclination of the mind. It by itself alone knows for itself, rejoices for itself, at times when the impression does not move either soul or body together with it. And as when some part of us, the head or the eye, suffers from an attack of pain, we do not feel the anguish at the same time over the whole body, thus the mind sometimes suffers pain by itself or is inspirited with joy, when all the rest of the soul throughout the limbs and frame is stirred by no novel sensation. But when the mind is excited by some more vehement apprehension, we see the whole soul feel in unison through all the limbs, sweats and paleness spread over the whole body, the tongue falter, the voice die away, a mist cover the eyes, the ears ring, the limbs sink under one; in short we often see men drop down from terror of mind; so that anybody may easily perceive from this that the soul is closely united with the mind, and, when it has been smitten by the influence of the mind, forthwith pushes and strikes the body.

Lucretius, Nature of Things, III

- 4 Every disturbance is the disruption of a mind either devoid of or contemptuous of reason, or disobedient to reason. Such a disruption is provoked in two ways, either by an idea of good or by an idea of evil. So we end up with four types of mental disruption. Two of them proceed from an idea of good. One of these is exultant pleasure, in other words, extreme joy brought on by the presence of some great good. The counterpart of this is an excessive

longing for some great good. Such a longing is contrary to reason, and it may rightly be called desire or lust. These two instances, exultant pleasure and lust deriving from some idea of a good, both disrupt the soul. So do their two opposites, fear and distress, also cause such disruptions because of the idea of evil. Fear is the imagining of a threatened evil, and distress is occasioned by the presence of a serious evil. Distress is really the strong awareness of an evil real enough to cause genuine anguish. Thus the man who feels pain is convinced that he is meant to feel pain. With all our power we must strive to resist these disturbances, loosed as they are by folly coupled with a kind of evil spirit over the life of mankind, if we want to pass our days in peace and quiet.

Cicero, Disputations, III, 11

- 5 In our ethics, we do not so much inquire whether a pious soul is angry, as why he is angry; not whether he is sad, but what is the cause of his sadness; not whether he fears, but what he fears. For I am not aware that any right thinking person would find fault with anger at a wrongdoer which seeks his amendment, or with sadness which intends relief to the suffering, or with fear lest one in danger be destroyed. The Stoics, indeed, are accustomed to condemn compassion. But how much more honourable had it been in that Stoic we have been telling of had he been disturbed by compassion prompting him to relieve a fellow-creature than to be disturbed by the fear of shipwreck!... However, it may justly be asked, whether our subjection to these affections, even while we follow virtue, is a part of the infirmity of this life? For the holy angels feel no anger while they punish those whom the eternal law of God

consigns to punishment, no fellow-feeling with misery while they relieve the miserable, no fear while they aid those who are in danger; and yet ordinary language ascribes to them also these mental emotions, because, though they have none of our weakness, their acts resemble the actions to which these emotions move us.

Augustine, City of God, IX, 5

6 The character of the human will is of moment; because, if it is wrong, these motions of the soul will be wrong, but if it is right, they will be not merely blameless, but even praiseworthy. For the will is in them all; yea, none of them is anything else than will. For what are desire and joy but a volition of consent to the things we wish? And what are fear and sadness but a volition of aversion from the things which we do not wish? But when consent takes the form of seeking to possess the things we wish, this is called desire; and when consent takes the form of enjoying the things we wh, this is called joy. In like manner, when we turn with aversion from that which we do not wish to happen, this volition is termed fear; and when we turn away from that which has happened against our will, this act of will is called sorrow'. And generally in respect of all that we seek or shun, as a man's wall is attracted or repelled, so it is changed and turned into these different affections.

Augustine, City of God, XIV, 6

7 The sensitive appetite is one generic power, and is called sensuality; but it is divided into two powers, which are species of the sensitive appetite—the irascible and the concupiscible. . . , Therefore... there must be two

appetitive powers in the sensitive part—one through which the soul is inclined absolutely to seek what is suitable according to the senses, and to fly from what is hurtful, and this is called the concupiscible; and another by which an animal resists these attacks that hinder what is suitable and inflict harm, and this is called the irascible. . . ,

Now these two are not to be reduced to one principle, for sometimes the soul busies itself with unpleasant things against the inclination of the concupiscible appetite in order that, following the impulse of the irascible appetite, it may fight against obstacles. Hence also the passions of the irascible appetite seem to go against the passions of the concupiscible appetite, since concupiscence, on being roused, diminishes anger, and anger being roused, diminishes concupiscence in many cases. This is clear also from the fact that the irascible is, as it were, the champion and defender of the concupiscible, when it rises up against what hinders the acquisition of the suitable things which the concupiscible desires, or against what inflicts harm, from which the concupiscible flies. And for this reason all the passions of the irascible appetite rise from the passions of the concupiscible appetite and terminate in them; for instance, anger rises from sadness, and having wrought vengeance, terminates in joy.

Aquinas, Summa Theologica, I, 81, 2

- 8 All the irascible passions imply movement towards something. Now this movement in the irascible part towards something may be due to two causes; one is the mere aptitude or proportion to the end, and this pertains

to love or hatred; the other is the presence of good or evil, and this pertains to sadness or joy....

Since then in the order of generation or sequence, proportion or aptitude to the end precedes the achievement of the end, it follows that, of all the irascible passions, anger is the last in the order of generation. And among the other passions of the irascible part which imply a movement arising from love of good or hatred of evil, those whose object is good, namely, hope and despair, must naturally precede those whose object is evil, namely, daring and fear.... In like manner fear, through being a movement from evil, precedes daring....

And if we wish to know the order of all the passions in the way of generation, love and hatred are first; desire and aversion, second; hope and despair, third; fear and daring, fourth; anger, fifth; sixth and last, joy and sadness, which follow from all the passions... yet so that love precedes hatred; desire precedes aversion; hope precedes despair; fear precedes daring; and joy precedes sadness.

Aquinas, Summa Theologica, I—II, 25, 3

9 Joy relates to present good, sadness relates to present evil, hope regards future good, and fear, future evil. As to the other passions that concern good or evil, present or future, they all culminate in these four. For this reason have some said that these four are the principal passions, because they are general passions. And this is true, provided that by hope and fear we understand the common tendency of the appetite to desire or aversion for something.

Aquinas, Summa Theologica, I-II, 25, 4

- 10 All passions that allow themselves to be savored and digested are only mediocre.

Montaigne, Essays, I, 2, Of Sadness

- 11 Ambition can teach men valor, and temperance, and liberality, and even justice. Greed can implant in the heart of a shop apprentice, brought up in obscurity and idleness, the confidence to cast himself far from hearth and home, in a frail boat at the mercy of the waves and angry Neptune; it also teaches discretion and wisdom. Venus herself supplies resolution and boldness to boys still subject to discipline and the rod, and arms the tender hearts of virgins who are still in their mothers' laps....

In view of this, a sound intellect will refuse to judge men simply by their outward actions; we must probe the inside and discover what springs set men in motion. But since this is an arduous and hazardous undertaking, I wish fewer people would meddle with it.

Montaigne, Essays, II, 1, Of the Inconsistency

- 12 Hamlet O, what a rogue and peasant slave am I!
Is it not monstrous that this player here,
But in a fiction, in a dream of passion,
Could force his soul so to his own conceit
That from her working all his visage wann'd,
Tears in his eyes, distraction in's aspect,
A broken voice, and his whole function suiting
With forms to his conceit? and all for nothing!
For Hecuba!
What's Hecuba to him, or he to Hecuba,
That he should weep for her? What would he do.
Had he the motive and the cue for passion

That I have? He would drown the stage with tears
And cleave the general ear with horrid speech.
Make mad the guilty and appal the free.
Confound the ignorant, and amaze indeed
The very faculties of eyes and ears.
Yet I,
A dull and muddy-mettled rascal, peak,

Like Jobn-a-dreams, unpregnant of my cause,
And can nothing; no, not for a king.
Upon whose property and most dear life
A damn'd defeat was made. Am I a coward?
Who calls me villain? breaks my pate across?
Plucks off beard, and blows it in my face?
Tweaks me by the nose? gives me the lie i' the throat,
As deep as to the lungs? who does me this?
Ha!
'Swounds, I should take it: for it cannot be
But I am pigeon-liver'd and lack gall
To make oppression bitter, or ere this
I should have fatted all the region kites
With this slave's offal. Bloody, bawdy, villain!
Remorseless, treacherous, lecherous, kindless villain!
O, vengeance!
Why, what an ass am I! This is most brave,
That I, the son of a dear father murder'd
Prompted to my revenge by heaven and hell,
Must, like a whore, unpack my heart with words,
And fall a-cursing, like a very drab,
A scullion!
Fie upon't! foh!

Shakespeare, Hamlet, II, ii, 576

- 13 *Hamlet*. Blest are those
Whose blood and judgement are so well commingled,
That they are not a pipe for fortune's finger
To sound what stop she please. Give me that man
That is not passion's slave, and I will wear him
In my heart's core, ay, in my heart of heart.

Shakespeare, Hamlet, III, ii, 73

- 14 I note ... that we do not observe the existence of any subject which more immediately acts upon our soul than the body to which it is joined, and that we must consequently consider that what in the soul is a passion is in the body commonly speaking an action; so that there is no better means of arriving at a knowledge of our passions than to examine the difference which exists between soul and body in order to know to which of the two we must attribute each one of the functions which are within us.

Descartes, Passions of the Soul, II

- 15 The number of [passions] which are simple and primitive is not very large. For, in making a review of all those which I have enumerated, we may easily notice that there are but six which are such, that is, wonder, love, hatred, desire, joy and sadness; and that all the others are composed of some of these six, or are species of them.

Descartes, Passions of the Soul, LXIX

- 16 Whoever has lived in such a way that his conscience cannot reproach him for ever having failed to perform those things which he has judged to be the best (which is what I here call following after virtue) receives from this a

satisfaction which is so powerful in rendering him happy that the most violent efforts of the passions never have sufficient power to disturb the tranquillity of his soul.

Descartes, Passions of the Soul, CXLVIII

- 17 The soul may have pleasures of its own, but as to those which are common to it and the body, they depend entirely on the passions, so that the men whom they can most move are capable of partaking most of enjoyment in this life. It is true that, such men may also find most bitterness when they do not know how to employ them well, or fortune is contrary to them. But the principal use of prudence or self-control is that it teaches us to be masters of our passions, and to so control and guide them that the evils which they cause are quite bearable, and that we even derive joy from them all.

Descartes, Passions of the Soul, CCXII

- 18 By knowing each man's ruling passion, we are sure of pleasing him; and yet each has his fancies, opposed to his true good, in the very idea which he has of the good. It is a singularly puzzling fact.

Pascal, Pensées, II, 106

- 19 There is internal war in man between reason and the passions.

If he had only reason without passions . . .

If he had only passions without reason . . .

But having both, he cannot be without strife, being unable to be at peace with the one without being at war with the other. Thus he is always divided against and opposed to himself.

This internal war of reason against the passions has made a division of those who would have peace into two sects. The first would renounce their passions and become gods; the others would renounce reason and become brute beasts. But neither can do so, and reason still remains, to condemn the vileness and injustice of the passions and to trouble the repose of those who abandon themselves to them; and the passions keep always alive in those who would renounce them.

Pascal, Pensées, VI, 412—413

- 20 The forms of speech by which the passions are expressed are partly the same and partly different from those by which we express our thoughts. And first generally all passions may be expressed *indicatively*; as, *I love, I fear, I joy, I deliberate, I will, I command*: but some of them have particular expressions by themselves, which nevertheless are not affirmations, unless it be when they serve to make other inferences besides that of the passion they proceed from. Deliberation is expressed *subjunctively*; which is a speech proper to signify suppositions, with their consequences; as, *If this be done, then this will follow*; and differs not from the language of reasoning, save that reasoning is in general words, but deliberation for the most part is of particulars. The language of desire, and aversion, is imperative; as, *Do this, forbear that*; which when the party is obliged to do, or forbear, is *command*; otherwise prayer; or else counsel. The language of vainglory, of indignation, pity and revengefulness, *optative*: but of the desire to know, there is a peculiar expression called *interrogative*; as, *What is it, when shall it, how is it done, and why so?* Other language of the passions I find none: for cursing,

swearing, reviling, and the like do not signify as speech, but as the actions of a tongue accustomed.

Hobbes, Leviathan, I, 6

- 21 The mind is subject to passions in proportion to the number of inadequate ideas which it has, and ... it acts in proportion to the number of adequate ideas which it has.

Spinoza, Ethics, III, Prop. 1, Corol.

- 22 Of joy, sorrow, and desire, and consequently of every effort which either, like vacillation of mind, is compounded of these, or, like love, hatred, hope, and fear, is derived from them, there are just as many kinds as there are kinds of objects by which we are affected.

Spinoza, Ethics, III, Prop. 56

- 23 *Envy* and *anger*, not being caused by pain and pleasure simply in themselves, but having in them some mixed considerations of ourselves and others, are not therefore to be found in all men, because those other parts, of valuing their merits, or intending revenge, is wanting in them. But all the rest [of the passions], terminating purely in pain and pleasure, are, I think, to be found in all men. For we love, desire, rejoice, and hope, only in respect of pleasure; we hate, fear, and grieve, only in respect of pain ultimately. In fine, all these passions are moved by things, only as they appear to be the causes of pleasure and pain, or to have pleasure or pain some way or other annexed to them.

Locke, Concerning Human Understanding, Bk. II, XX, 14

24 Modes of Self-love the Passions we may call;
'Tis real good, or seeming, moves them all;
But since not every good we can divide,
And Reason bids us for our own provide;
Passions, tho' selfish, if their means be fair,
List under Reason, and deserve her care;
Those, that imparted, court a nobler aim,
Exalt their kind, and take some Virtue's name.

Pope, Essay on Man, Epistle II, 93

25 Strength of mind is Exercise, not Rest:
The rising tempest puts in act the soul,
Parts it may ravage, but preserves the whole.
On life's vast ocean diversely we sail,
Reason the card, but Passion is the gale.

Pope, Essay on Man, Epistle II, 104

26 On diff'rent senses diff'rent objects strike;
Hence diff'rent Passions more or less inflame,
As strong or weak, the organs of the frame;
And hence one master Passion in the breast,
Like Aaron's serpent, swallows up the rest.
As Man, perhaps, the moment of his breath,
Receives the lurking principle of death;
The young disease, that must subdue at length,
Grows with his growth, and strengthens with his strength:
So, cast and mingled with his very frame,
The Mind's disease, its rulling Passion came.

Pope, Essay on Man, Epistle II, 128

27 Nothing can oppose or retard the impulse of passion, but
a contrary impulse; and if this contrary impulse ever

arises from reason, that latter faculty must have an original influence on the will, and must be able to cause, as well as hinder any act of volition. But if reason has no original influence, 'tis impossible it can withstand any principle, which has such an efficacy', or ever keep the mind in suspense a moment. Thus it appears, that the principle, which opposes our passion, cannot be the same with reason, and is only call'd so in an improper sense. We speak not strictly and philosophically when we talk of the combat of passion and of reason. Reason is, and ought only to be the slave of the passions, and can never pretend to any other office than to serve and obey them. As this opinion may appear somewhat extraordinary, it may not be improper to confirm it by some other considerations.

Hume, Treatise of Human Nature, Bk. II, III, 3

28 Reason is the discovery of truth or falshood. Truth or falshood consists in an agreement or disagreement either to the *real* relations of ideas, or to real existence and matter of fact. Whatever, therefore, is not susceptible of this agreement or disagreement, is incapable of being true or false, and can never be an object of our reason. Now 'tis evident our passions, volitions, and actions, are not susceptible of any such agreement or disagreement; being original facts and realities, compleat in themselves, and implying no reference to other passions, volitions, and actions. 'Tis impossible, therefore, they can be pronounced either true or false, and be either contrary or conformable to reason.

Hume, Treatise of Human Nature, Bk. III, I, 1

29 Emotions and passions are essentially distinct; the former belong to feeling insofar as this coming before reflection makes it more difficult or even impossible, Hence emotion is called hasty (*animus praeceps*). And reason declares through the notion of virtue that a man should collect himself; but this weakness in the life of one's understanding, joined with the strength of a mental excitement, is only a lack of virtue { *Untugend* }, and as it were a weak and childish thing, which may very well consist with the best will, and has further this one good thing in it, that this storm soon subsides. A propensity to emotion (for example, *resentment*) is therefore not so closely related to vice as passion is. Passion, on the other hand, is the sensible *appetite* grown into a permanent inclination (for example, *hatred* in contrast to *resentment*). The calmness with which one indulges it leaves room for reflection and allows the mind to frame principles thereon for itself; and thus when the inclination falls upon what contradicts the law, to brood on it, to allow it to root itself deeply, and thereby to take up evil (as of set purpose) into one's maxim; and this is then specifically evil, that is, it is a true vice,

*Kant, Introduction to the Metaphysical Elements of
Ethics, XVI*

30 The lower animals, like man, manifestly feel pleasure and pain, happiness and misery. Happiness is never better exhibited than by young animals such as puppies, kittens, lambs, &c., when playing together, like our own children. Even insects play together, as has been described by that excellent observer, P. Huber, who saw ants chasing and pretending to bite each other, like so many puppies.

The fact that the lower animals are excited by the same emotions as ourselves is so well established, that it will not be necessary to weary the reader by many' details. Terror acts in the same manner on them as on us, causing the muscles to tremble, the heart to palpitate, the sphincters to be relaxed, and the hair to stand on end. Suspicion, the offspring of fear, is eminently characteristic of most wild animals. It is, I think, impossible to read the account given by Sir E. Tennent, of the behaviour of the female elephants, used as decoys, without admitting that they intentionally practise deceit, and well know what they are about. Courage and timidity are extremely variable qualities in the individuals of the same species, as is plainly seen in our dogs. Some dogs and horses are ill-tempered, and easily turn sulky; others are good-tempered; and these qualities are certainly inherited. Every' one knows how liable animals are to furious rage, and how' plainly they shew it. Many, and probably true, anecdotes have been published on the long-delayed and artful revenge of various animals. . . ,

The love of a dog for his master is notorious; as an old writer quaintly says, "A dog is the only thing on this earth that luv's you more than he luv's himself."

In the agony of death a dog has been known to caress his master, and every one has heard of the dog suffering under vivisection, who licked the hand of the operator; this man, unless the operation was fully justified by an increase of our knowledge, or unless he had a heart of stone, must have felt remorse to the last hour of his life. .

Most of the more complex emotions are common to the higher animals and ourselves. Every one has seen

how jealous a dog is of his master's affection, if lavished on any other creature; and I have observed the same fact with monkeys. This shews that animals not only love, but have desire to be loved. Animals manifestly feel emulation. They love approbation or praise; and a dog carrying a basket for his master exhibits in a high degree self-complacency or pride. There can, I think, be no doubt that a dog feels shame, as distinct from fear, and something very like modesty when begging too often for food. A great dog scorns the snarling of a little dog, and this may be called magnanimity. Several observers have stated that monkeys certainly dislike being laughed at; and they sometimes invent imaginary offences. In the Zoological Gardens I saw a baboon who always got into a furious rage when his keeper took out a letter or book and read it aloud to him; and his rage was so violent that, as I witnessed on one occasion, he bit his own leg till the blood flowed. Dogs shew what may be fairly called a sense of humour, as distinct from mere play; if a bit of stick or other such object be thrown to one, he will often carry it away for a short distance; and then squatting down with it on the ground close before him, will wait until his master comes quite close to take it away. The dog will then seize it and rush away in triumph, repeating the same manoeuvre, and evidently enjoying the practical joke.

We will now turn to the more intellectual emotions and faculties, which are very important, as forming the basis for the development of the higher mental powers. Animals manifestly enjoy excitement, and suffer from ennui, as may be seen with dogs, and, according to Rengger, with monkey's, All animals feel *Wonder*, and

many exhibit *Curiosity*. They sometimes suffer from this latter quality.

Darwin, Descent of Man, I, 3

- 31 In speaking of the instincts it has been impossible to keep them separate from the emotional excitements which go with them. Objects of rage, love, fear, etc., not only prompt a man to outward deeds, but provoke characteristic alterations in his attitude and visage, and affect his breathing, circulation, and other organic functions in specific ways. When the outward deeds are inhibited, these latter emotional expressions still remain, and we read the anger in the face, though the blow may not be struck, and the fear betrays itself in voice and color, though one may suppress all other sign, *Instinctive reactions and emotional expressions thus shade imperceptibly into each other. Every object that excites an instinct excites an emotion as well.* Emotions, however, fall short of instincts, in that the emotional reaction usually terminates in the subject's own body, whilst the instinctive reaction is apt to go farther and enter into practical relations with the exciting object.

William James, Psychology, XXV

- 32 Our natural way of thinking about these coarser emotions is that the mental perception of some fact excites the mental affection called the emotion, and that this latter state of mind gives rise to the bodily expression. My theory, on the contrary, is that *the bodily changes follow directly the perception of the exciting fact, and that our feeling of the same changes as they occur is the emotion.* Common-sense says, we lose our fortune, are

sorry and weep; we meet a bear, are frightened and run; we are insulted by a rival, are angry and strike. The hypothesis here to be defended says that this order of sequence is incorrect, that the one mental state is not immediately induced by the other, that the bodily manifestations must first be interposed between, and that the more rational statement is that we feel sorry because we cry, angry because we strike, afraid because we tremble, and not that we cry, strike, or tremble, because we are sorry, angry, or fearful, as the case may be. Without the bodily states following on the perception, the latter would be purely cognitive in form, pale, colorless, destitute of emotional warmth. We might then see the bear, and judge it best to run, receive the insult and deem it right to strike, but we should not actually feel afraid or angry.

William James, Psychology, XXV

- 33 If one should seek to name each particular [emotion] of which the human heart is the seat, it is plain that the limit to their number would be in the introspective vocabulary of the seeker, each race of men having found names for some shade of feeling which other races have left undiscriminated. If then we should seek to break the emotions, thus enumerated, into groups, according to their affinities, it is again plain that all sorts of groupings would be possible, according as we chose this character or that as a basis, and that all groupings would be equally real and true. The only question would be, does this grouping or that suit our purpose best? The reader may then class the emotions as he will, as sad or joyous, sthenic or asthenic, natural or acquired, inspired by animate or inanimate things, formal or material, sensuous

or ideal, direct or reflective, egoistic or non-egoistic, retrospective, prospective or immediate, organismally or environmentally initiated, or what more besides. All these are divisions which have been actually proposed. Each of them has its merits, and each one brings together some emotions which the others keep apart.

William James, Psychology, XXV

- 34 I think we shall gain a great deal by following the suggestion of a writer who, from personal motives, vainly insists that he has nothing to do with the rigours of pure science. I am speaking of Georg Groddeck, who is never tired of pointing out that the conduct through life of what we call our ego is essentially passive, and that, as he expresses it, we are "lived" by unknown and uncontrollable forces.

Freud, Ego and Id, II

- 35 The ego has the task of bringing the influence of the external world to bear upon the id and its tendencies, and endeavours to substitute the reality-principle for the pleasure-principle which reigns supreme in the id. In the ego, perception plays the part which in the id devolves upon instinct. The ego represents what we call reason and sanity, in contrast to the id which contains the passions....

The functional importance of the ego is manifested in the fact that normally control over the approaches to motility devolves upon it. Thus in its relation to the id it is like a man on horseback, who has to hold in check the superior strength of the horse; with this difference, that the rider seeks to do so with his own strength while the

ego uses borrowed forces. The illustration may be carried further. Often a rider, if he is not to be parted from his horse, is obliged to guide it where it wants to go; so in the same way the ego constantly carries into action the wishes of the id as if they were its own.

Freud, Ego and Id, II

4.2 Fear

- 1 The Lord is my light and my salvation; whom shall I fear?
the Lord is the strength of my life; of whom shall I be
afraid?

Psalm 27:1

- 2 Chorus. There are times when fear is good.
It must keep its watchful place
at the heart's controls. There is
advantage
in the wisdom won from pain.
Should the city, should the man
rear a heart that nowhere goes
in fear, how shall such a one
any more respect the right?

Aeschylus, Eumenides, 517

- 3 Xerxes. Fear not all things alike, nor count up every risk.
For if in each matter that comes before us thou wilt look
to all possible chances, never wilt thou achieve anything.
Far better is it to have a stout heart always, and suffer
one's share of evils, than to be ever fearing what may
happen, and never incur a mischance.

Herodotus, History, VII, 50

- 4 *Peloponnesian Commanders*. A faint heart will make all art powerless in the face of danger. For fear takes away presence of mind, and without valour art is useless.

Thucydides, Peloponnesian War, II, 87

- 5 *Nicias*. I do not call animals or any other things which have no fear of dangers, because they are ignorant of them, courageous, but only fearless and senseless. Do you [Laches] imagine that I should call little children courageous, which fear no dangers because they know none? There is a difference, to my way of thinking, between fearlessness and courage.

Plato, Laches, 197A

- 6 *Socrates*. In my opinion the terrible and the hopeful are the things which do or do not create fear, and fear is not of the present, nor of the past, but is of future and expected evil.

Plato, Laches, 198A

- 7 Fear may be defined as a pain or disturbance due to a mental picture of some destructive or painful evil in the future. Of destructive or painful evils only; for there are some evils, for example, wickedness or stupidity, the prospect of which does not frighten us: I mean only such as amount to great pains or losses. And even these only if they appear not remote but so near as to be imminent: we do not fear things that are a very long way off: for instance, we all know we shall die, but we are not troubled thereby, because death is not close at hand. From this definition it will follow that fear is caused by

whatever we feel has great power of destroying us, or of harming us in ways that tend to cause us great pain.

Aristotle, Rhetoric, 1382a21

- 8 Of those we have wronged, and of our enemies or rivals, it is not the passionate and outspoken whom we have to fear, but the quiet, dissembling, unscrupulous; since we never know when they are upon us, we can never be sure they are at a safe distance.

Aristotle, Rhetoric, 1382b19

- 9 If fear is associated with the expectation that something destructive will happen to us, plainly nobody will be afraid who believes nothing can happen to him; we shall not fear things that we believe cannot happen to us, nor people who we believe cannot inflict them upon us; nor shall we be afraid at times when we think ourselves safe from them. It follows therefore that fear is felt by those who believe something to be likely to happen to them, at the hands of particular persons, in a particular form, and at a particular time. People do not believe this when they are, or think they are, in the midst of great prosperity, and are in consequence insolent, contemptuous, and reckless—the kind of character produced by wealth, physical strength, abundance of friends, power: nor yet when they feel they have experienced every kind of horror already and have grown callous about the future, like men who are being flogged and are already nearly dead—if they are to feel the anguish of uncertainty, there must be some faint expectation of escape.

Aristotle, Rhetoric, 1382b29

10 Even as children are flurried and dread all things in the thick darkness, thus we in the daylight fear at times things not a whit more to be dreaded than what children shudder at in the dark and fancy sure to be. This terror therefore and darkness of mind must be dispelled not by the rays of the sun and glittering shafts of day, but by the aspect and law of nature.

Lucretius, Nature of Things, VI

11 If one were successful in getting rid of all fear, then we would also be rid of that judicious manner of living that is most highly evidenced in those who fear the laws, magistrates, poverty, disgrace, and pain.

Cicero, Disputations, IV, 20

12 *Aeneas*. Mute and amaz'd, my hair with terror stood;
Fear shrunk my sinews, and congeal'd my blood.
Mann'd once again, another plant I try:
That other gush'd with the same sanguine dye.
Then, fearing guilt for some offense unknown,
With pray'rs and vows and Dryads I atone,
With all the sisters of the woods, and most
The God of Arms, who rules the Thracian coast,
That they, or he, these omens would avert.
Release our fears, and better signs impart.
Clear'd, as I thought, and fully fix'd at length
To learn the cause, I tugged with all my strength:
I bent my knees against the ground; once more
The violated myrtle ran with gore.
Scarce dare I tell the sequel: from the womb
Of wounded earth, and caverns of the tomb,
A groan, as of a troubled ghost, renew'd

My fright, and then these dreadful words ensued:
'Why dost thou thus my buried body rend?
O spare the corpse of thy unhappy friend!
Spare to pollute thy pious hands with blood:
The tears distil not from the wounded wood;
But ev'ry drop this living tree contains
Is kindred blood, and ran in Trojan veins.
O fly from this unhospitable shore.
Warn'd by my fate; for I am Polydore!
Here loads of lances, in my blood embrued,
Again shoot upward, by my blood renew'd.'
"My falt'ring tongue and shiv'ring limbs declare
My horror, and in bristles rose my hair.

Virgil, Aeneid, III

- 13 To be feared is to fear: no one has been able to strike terror into others and at the same time enjoy peace of mind himself.

Seneca, Letters to Lucilius, 105

- 14 There is no fear in love; but perfect love casteth out fear: because fear hath torment. He that feareth is not made perfect in love.

I John 4:18

- 15 It is irrational and poor-spirited not to seek conveniences for fear of losing them, for upon the same account we should not allow ourselves to like wealth, glory, or wisdom, since we may fear to be deprived of all these; nay, even virtue itself, than which there is no greater nor more desirable possession. ... It is weakness that brings men, unarmed against fortune by reason, into these

endless pains and terrors; and they indeed have not even the present enjoyment of what they dote upon, the possibility of the future loss causing them continual pangs, tremors, and distresses. We must not provide against the loss of wealth by poverty, or of friends by refusing all acquaintance, or of children by having none, but by morality and reason.

Plutarch, Solon

- 16 The strangeness of things often makes them seem formidable when they are not so; and ... by our better acquaintance, even things which are really terrible lose much of their frightfulness.

Plutarch, Cains Marius

- 17 We are ... in the condition of deer; when they flee from the huntsmen's feathers in fright, whither do they turn and in what do they seek refuge as safe? They turn to the nets, and thus they perish by confounding things which are objects of fear with things that they ought not to fear. Thus we also act: in what cases do we fear? In things which are independent of the will. In what cases, on the contrary, do we behave with confidence, as if there were no danger? In things dependent on the will. To be deceived then, or to act rashly, or shamelessly or with base desire to seek something, does not concern us at all, if we only hit the mark in things which are independent of our will. But where there is death, or exile or pain or infamy, there we attempt to run away, there we are struck with terror. Therefore, as we may expect it to happen with those who err in the greatest matters, we convert natural confidence into audacity, desperation,

rashness, shamelessness; and we convert natural caution and modesty into cowardice and meanness, which are full of fear and confusion. For if a man should transfer caution to those things in which the will may be exercised and the acts of the will, he will immediately, by willing to be cautious, have also the power of avoiding what he chooses: but if he transfer it to the things which are not in his power and will, and attempt to avoid the things which are in the power of others, he will of necessity fear, he will be unstable, he will be disturbed. For death or pain is not formidable, but the fear of pain or death.

Epictetus, Discourses, 11, 1

- 18 In this abode of weakness, and in these wicked days,... anxiety has also its use, stimulating us to seek with keener longing for that security where peace is complete and unassailable.

Augustine, City of God, XIX, 10

- 19 Fear is twofold... one is filial fear, by which a son fears to offend his father or to be separated from him; the other is servile fear, by which one fears punishment. Now filial fear must increase when charity increases, even as an effect increases with the increase of its cause. For the more one loves a man, the more one fears to offend him and to be separated from him. On the other hand servile fear, as regards its servility, is entirely cast out when charity comes, although the fear of punishment remains as to its substance.... This fear decreases as charity increases, chiefly as regards its act, since the more a man loves God, the less he fears punishment; first, because he thinks less of his own good, to which punishment is

opposed; secondly, because, the faster he clings, the more confident he is of the reward, and consequently, the less fearful of punishment.

Aquinas, Summa Theologica, II-II, 19, 10

20 [The prince] ought to be slow to believe and to act, nor should he himself show fear, but proceed in a temperate manner with prudence and humanity, so that too much confidence may not make him incautious and too much distrust render him intolerable.

Upon this a question arises: whether it be better to be loved than feared or feared than loved? It may be answered that one should wish to be both, but, because it is difficult to unite them in one person, it is much safer to be feared than loved, when, of the two, either must be dispensed with. Because this is to be asserted in general of men, that they are ungrateful, fickle, false, cowardly, covetous, and as long as you succeed they are yours entirely; they will offer you their blood, property, life, and children, as is said above, when the need is far distant; but when it approaches they turn against you. And that prince who, relying entirely on their promises, has neglected other precautions, is ruined; because friendships that are obtained by payments, and not by greatness or nobility of mind, may indeed be earned, but they are not secured, and in time of need cannot be relied upon; and men have less scruple in offending one who is beloved than one who is feared, for love is preserved by the link of obligation which, owing to the baseness of men, is broken at every opportunity for their advantage; but fear preserves you by a dread of punishment which never fails.

Nevertheless a prince ought to inspire fear in such a way that, if he does not win love, he avoids hatred; because he can endure very well being feared whilst he is not hated, which will always be as long as he abstains from the property of his citizens and subjects and from their women.

Machiavelli, Prince, XVII

- 21 The thing I fear most is fear. . . . Those who have been well drubbed in some battle, and who are still all wounded and bloody—you can perfectly well bring them back to the charge the next day. But those who have conceived a healthy fear of the enemy—you would never get them to look him in the face. Those who are in pressing fear of losing their property, of being exiled, of being subjugated, live in constant anguish, losing even the capacity to drink, eat, and rest; whereas the poor, the exiles, and the slaves often live as joyfully as other men. And so many people who, unable to endure the pangs of fear, have hanged themselves, drowned themselves, or leaped to their death, have taught us well that fear is even more unwelcome and unbearable than death itself.

Montaigne, Essays, I, 18, Of Fear

- 22 Fear sometimes arises from want of judgment as well as from want of courage. All the dangers I have seen, I have seen with open eyes, with my sight free, sound, and entire; besides, it takes courage to be afraid.

Montaigne, Essays, III, 6, Of Coaches

- 23 He who fears he will suffer, already suffers from his fear.

Montaigne, Essays, III, 13, Of Experience

24 As to the significance of fear or terror, I do not see that it can ever be praiseworthy or useful; it likewise is not a special passion, but merely an excess of cowardice, astonishment and fear, which is always vicious, just as bravery is an excess of courage which is always good, provided that the end proposed is good; and because the principal cause of fear is surprise, there is nothing better for getting rid of it than to use premeditation and to prepare oneself for all eventualities, the fear of which may cause it.

Descartes, Passions of the Soul, CLXXVI

25 Being assured that there be causes of all things that have arrived hitherto, or shall arrive hereafter, it is impossible for a man, who continually endeavoureth to secure himself against the evil he fears, and procure the good he desireth, not to be in a perpetual solicitude of the time to come; so that every man, especially those that are overprovident, are in an estate like to that of Prometheus. For as Prometheus (which, interpreted, is the prudent man) was bound to the hill Caucasus, a place of large prospect, where an eagle, feeding on his liver, devoured in the day as much as was repaired in the night: so that man, which looks too far before him in the care of future time, hath his heart all the day long gnawed on by fear of death, poverty, or other calamity; and has no repose, nor pause of his anxiety, but in sleep.

Hobbes, Leviathan, I, 12

26 True fear comes from faith; false fear comes from doubt. True fear is joined to hope, because it is born of faith, and because men hope in the God in whom they believe.

False fear is joined to despair, because men fear the God in whom they have no belief. The former fear to lose Him; the latter fear to find Him.

Pascal, Pensées, IV, 262

- 27 Fear was given us as a monitor to quicken our industry, and keep us upon our guard against the approaches of evil; and therefore to have no apprehension of mischief at hand, not to make a just estimate of the danger, but heedlessly to run into it, be the hazard what it will, without considering of what use or consequence it may be, is not the resolution of a rational creature, but brutish fury.

Locke, Some Thoughts Concerning Education, 115

- 28 There is no passion so distressing as fear, which gives us great pain and makes us appear contemptible in our own eyes to the last degree.

Boswell, London Journal (Nov. 18, 1762)

- 29 Fear is in almost all cases a wretched instrument of government, and ought in particular never to be employed against any order of men who have the smallest pretensions to independency. To attempt to terrify them serves only to irritate their bad humour, and to confirm them in an opposition which more gentle usage perhaps might easily induce them either to soften, or to lay aside altogether.

Adam Smith, Wealth of Nations, V, 1

- 30 Fear has been the original parent of superstition, and every new calamity urges trembling mortals to deprecate

the wrath of their invisible enemies.

Gibbon, Decline and Fall of the Roman Empire, XI

31 And now this spell was snapt: once more
I viewed the ocean green.
And looked far forth, yet little saw
Of what had else been seen—

Like One, that on a lonesome road
Doth walk in fear and dread,
And having once turned round walks on,
And turns no more his head;
Because he knows, a frightful fiend
Doth close behind him tread.

Coleridge, The Rime of the Ancient Mariner, 442

32 They [the Norsemen] understood in their heart that it was indispensable to be brave; that Odin would have no favour for them, but despise and thrust them out, if they were not brave. Consider too whether there is not something in this! It is an everlasting duty, valid in our day as in that, the duty of being brave. *Valour* is still *value*. The first duty for a man is still that of subduing Fear. We must get rid of Fear; we cannot act at all till then. A man's acts are slavish, not true but specious; his very thoughts are false, he thinks too as a slave and coward, till he have got Fear under his feet.

Carlyle, The Hero as Divinity

33 In civilized life ... it has at last become possible for large numbers of people to pass from the cradle to the grave without ever having had a pang of genuine fear. Many of

us need an attack of mental disease to teach us the meaning of the word. Hence the possibility of so much blindly optimistic philosophy and religion.

William James, Psychology, XXIV

34 *Napoleon*. There is only one universal passion: fear. Of all the thousand qualities a man may have, the only one you will find as certainly in the youngest drummer boy in my army as in me, is fear. It is fear that makes men fight; it is indifference that makes them run away: fear is the mainspring of war. Fear! I know fear well, better than you, better than any woman- I once saw a raiment of good Swiss soldiers massacred by a mob in Paris because I was afraid to interfere: I felt myself a coward to the tips of my toes as I looked on at it. Seven months ago I revenged my shame by pounding that mob to death with cannon balls. Well, what of that? Has fear ever held a back from anything he really wanted—or a woman either?

Shaw, The Man of Destiny

4.3 Anger

1 He that is slow to anger is better than the mighty; and he that ruleth his spirit than he that taketh a city.

Proverbs 16:32

2 *Oedipus*. And as I journeyed I came to the place where, as you say, this king met with his death. Jocasta, I will tell you the whole truth. When I was near the branching of the crossroads, going on foot, I was encountered by a herald and a carriage with a man in it, just as you tell me.

He that led the way and the old man himself wanted to thrust me out of the road by force. I became angry and struck the coachman who was pushing me. When the old man saw this he watched his moment, and as I passed he struck me from the carriage, full on the head with his two pointed goad.

But he was paid in full and presently my stick had struck him backwards from the car and he rolled out of it. And then I killed them all.

Sophocles, Oedipus the King, 799

3 *Syracusan generals and Gylippus*. The fortune of our greatest enemies [the Athenians] having... betrayed itself, and their disorder being what I have described, let us engage in anger, convinced that, as between adversaries, nothing is more legitimate than to claim to sate the whole wrath of one's soul in punishing the aggressor, and nothing more sweet, as the proverb has it, than the vengeance upon an enemy, which it will now be ours to take. That enemies they are and mortal enemies you all know, since they came here to enslave our country, and if successful had in reserve for our men all that is most dreadful, and for our children and wives all that is most dishonourable.

Thucydides, Peloponnesian War, VII, 68

4 *Athenian Stranger*. Let this, then, be the law about abuse, which shall relate to all cases;—No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil-speaking; for out of the imprecations which men utter against one another, and

the feminine habit of casting aspersions on one another, and using foul names, out of words light as air, in very deed the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious clement of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilized by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men take to saying something ridiculous about their opponent, and there is no man who is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness.

Plato, Laws, XI, 934B

- 5 The man who is angry at the right things and with the right people, and, further, as he ought, when he ought, and as long as he ought, is praised. This will be the good-tempered man, then, since good temper is praised. For the good-tempered man tends to be unperturbed and not to be led by passion, but to be angry in the manner, at the things, and for the length of time, that the rule dictates.

Aristotle, Ethics, 1125b32

- 6 Anger seems to listen to argument to some extent, but to mishear it, as do hasty servants who run out before they have heard the whole of what one says, and then muddle the order, or as dogs bark if there is but a knock at the door, before looking to see if it is a friend: so anger by reason of the warmth and hastiness of its nature, though

it hears, does not hear an order, and springs to take revenge. For argument or imagination informs us that we have been insulted or slighted, and anger, reasoning as it were that anything like this must be fought against, boils up straightway.

Aristotle, Ethics, 1149a25

7 Anger may be defined as an impulse, accompanied by pain, to a conspicuous revenge for a conspicuous slight directed without justification towards what concerns oneself or towards what concerns one's friends. If this is a proper definition of anger, it must always be felt towards some particular individual... and not 'man' in general. It must be felt because the other has done or intended to do something to him or one of his friends. It must always be attended by a certain pleasure—that which arises from the expectation of revenge. For since nobody aims at what he thinks he cannot attain, the angry man is aiming at what he can attain, and the belief that you will attain your aim is pleasant.... It is also attended by a certain pleasure because the thoughts dwell upon the act of vengeance, and the images then called up cause pleasure, like the images called up in dreams.

Aristotle, Rhetoric, 1378a31

8 Enmity is anger waiting for a chance for revenge.

Cicero, Disputations, IV, 9

9 She [Armata] flew to rage; for now the snake possess'd
Her vital parts, and poison'd all her breast;
She raves, she runs with a distracted pace.
And fills with horrid howls the public place.

And, as young striplings whip the top for sport,
On the smooth pavement of an empty court;
The wooden engine flies and whirls about,
Admir'd, with clamors, of the beardless rout;
They lash aloud; each other they provoke,
And lend their little souls at ev'ry stroke:
Thus fares the queen; and thus her fury blows
Amidst the crowd, and kindles as she goes.
Nor yet content, she strains her malice more,
And adds new ills to those contriv'd before:
She flies the town, and, mixing with a throng
Of madding matrons, bears the bride along,
Wand'ring thro' woods and wilds, and devious ways.
And with these arts the Trojan match delays.

Virgil, Aeneid, VII

- 10 Aghast he [Turnus] wak'd; and, starting from his bed,
Cold sweat, in clammy drops, his limbs o'erspread.
"Arms! arms!" he cries: "my sword and shield prepare!"
He breathes defiance, blood, and mortal war.
So, when with crackling flames a caldron fries,
The bubbling waters from the bottom rise:
Above the brims they force their fiery way;
Black vapors climb aloft, and cloud the day.

Virgil, Aeneid, VII

- 11 He who will not curb his passion, will wish that undone
which his grief and resentment suggested, while he
violently plies his revenge with unsated rancour. Rage is
a short madness. Rule your passion, which commands, if
it do not obey; do you restrain it with a bridle, and with
fetters.

Horace, Epistles, I, 2

- 12 Hesitation is the best cure for anger. Seek this concession from anger right away, not to gain its pardon, but that it may evidence some discrimination. The first blows of anger are heavy, but if it wails, it will think again. Do not try to destroy it immediately. Attacked piecemeal, it will be entirely overcome.

Seneca, On Anger, II, 29

- 13 Marcius alone, himself, was neither stunned nor humiliated. In mien, carriage, and countenance he bore the appearance of entire composure, and, while all his friends were full of distress, seemed the only man that was not touched with his misfortune. Not that either reflection taught him, or gentleness of temper made it natural for him, to submit; he was wholly possessed, on the contrary, with a profound and deepseated fury, which passes with many for no pain at all. And pain, it is true, transmuted, so to say, by its own fiery heat into anger, loses every appearance of depression and feebleness; the angry man makes a show of energy, as the man in a high fever does of natural heat, while, in fact, all this action of soul is but mere diseased palpitation, distension, and inflammation.

Plutarch, Coriolanus

- 14 If any have offended against thee, consider first: What is my relation to men, and that we are made for one another....

Second, consider what kind of men they are... and particularly, under what compulsions in respect of

opinions they are; and as to their acts, consider with what pride they do what they do.

Third, that if men do rightly what they do, we ought not to be displeased; but if they do not right, it is plain that they do so involuntarily and in ignorance....

Fourth, consider that thou also doest many things wrong, and that thou art a man like others; and even if thou dost abstain from certain faults, still thou hast the disposition to commit them, though either through cowardice, or concern about reputation, or some such mean motive, thou dost abstain from such faults.

Fifth, consider That thou dost not even understand whether men are doing wrong or not, for many things are done with a certain reference to circumstances. And in short, a man must learn a great deal to enable him to pass a correct judgement on another man's acts.

Sixth, consider when thou art much vexed or grieved, that man's life is only a moment, and after a short time we are all laid out dead.

Seventh, that it is not men's acts which disturb us, for those acts have their foundation in men's ruling principles, but it is our own opinions which disturb us....

Eighth, consider how much more pain is brought on us by the anger and vexation caused by such acts than by the acts themselves....

Ninth, consider that a good disposition is invincible, if it be genuine, and not an affected smile and acting a part- For what will the most violent man do to thee, if thou continuest to be of a kind disposition towards him, and if, as opportunity offers, thou gently admonishest him and calmly correctest his errors at the very time when he is trying to do thee harm....

Remember these nine rules, as if thou hadst received them as a gift from the Muses, and begin at last to be a man while thou lives.

Marcus Aurelius, Meditations, XI, 18

- 15 Anger does not arise except on account of some pain inflicted, and unless there be the desire and hope of revenge. ... If the person who inflicted the injury excel very much, anger does not ensue, but only sorrow.

Aquinas, Summa Theologica, I-II, 46, 1

- 16 Unmerited contempt more than anything else is a provocative of anger. Consequently deficiency of littleness in the person with whom we are angry tends to increase our anger, insofar as it adds to the unmeritedness of being despised. For just as the higher a man's position is, the more undeservedly he is despised, so the lower it is the less reason he has for despising. Thus a nobleman is angry if he be insulted by a peasant; a wise man, if by a fool; a master, if by a servant.

Aquinas, Summa Theologica, I-II, 47, 4

- 17 We crossed the circle, to the other bank, near a fount, that boils and pours down through a cleft, which it has formed.

The water was darker far than perse; and we, accompanying the dusky waves, entered down by a strange path.

This dreary streamlet makes a Marsh, that is named Styx, when it has descended to the foot of the grey malignant shores.

And I, who stood intent on looking, saw muddy people in that bog, all naked and with a look of anger.

They were smiting each other, not with hands only, but with head, and with chest, and with feet; maiming one another with their teeth, piece by piece.

The kind Master said: "Son, now see the souls of those whom anger overcame; and also I would have thee to believe for certain,

that there are people underneath the water, who sob, and make it bubble at the surface; as thy eye may tell thee, whichever way it turns.

Fixed in the slime, they say: 'Sullen were we in the sweet air, that is gladdened by the Sun, carrying lazy smoke within our hearts;

now lie we sullen here in the black mire.' This hymn they gurgle in their throats, for they cannot speak it in full words."

Dante, Inferno, VII, 100

- 18 When I am angry I can write, pray, and preach well, for then my whole temperament is quickened, my understanding sharpened, and all mundane vexations and temptations depart.

Luther, Table Talk, H319

- 19 Aristotle says that anger sometimes serves as a weapon for virtue and valor. That is quite likely; yet those who deny it answer humorously that it is a weapon whose use is novel. For we move other weapons, this one moves us; our hand does not guide it, it guides our hand; it holds us, we do not hold it.

Montaigne, Essays, II, 31, Of Anger

20 *Norfolk* Stay, my lord.

And let your reason with your choler question
What 'tis you go about. To climb steep hills
Requires slow pace at first. Anger is like
A full hot horse, who being allow'd his way,
Self-mettle tires him.

Shakespeare, Henry VIII, I, i, 129

21 To seek to extinguish anger utterly is but a bravery of the Stoics.

Bacon, Of Anger

22 Anger is . . . , a species of hatred or aversion which we have towards those who have done some evil to or have tried to injure not any chance person but more particularly ourselves. Thus it has the same content as indignation, and all the more so in that it is founded on an action which affects us, and for which we desire to avenge ourselves, for this desire almost always accompanies it; and it is directly opposed to gratitude, as indignation is to favour. But it is incomparably more violent than these three other passions, because the desire to repel harmful things and to revenge oneself, is the most persistent of all desires.

Descartes, Passions of the Soul, CXCIX

23 We can distinguish two kinds of anger: the one which is very hasty and manifests itself very much on the surface, but which yet has little effect and can be easily appeased; the other which does not show itself so much to begin with, but which all the more powerfully gnaws the heart and has more dangerous effects. Those who

have much goodness and much love are most subject to the first, for it does not proceed from a profound hatred, but from an instant aversion, which surprises them, because, being impelled to imagine that all things should go in the way which they judge to be best, so soon as it happens otherwise, they wonder and frequently are displeased, even although the matter does not affect them personally, because, having much affection, they interest themselves for those whom they love in the same way as for themselves....

The other kind of anger in which hatred and sadness predominate, is not so apparent at first if it be not perhaps that it causes the face to grow pale; but its strength is little by little increased by the agitation of an ardent desire to avenge oneself excited in the blood, which, being mingled with the bile which is sent towards the heart from the lower part of the liver and spleen, excites there a very keen and ardent heat. And as it is the most generous souls who have most gratitude, it is those who have most pride, and who are most base and infirm, who most allow themselves to be carried away by this kind of anger; for the injuries appear so much the greater as pride causes us to esteem ourselves more, and likewise the more esteem the good things which they remove; which last we value so much the more, as our soul is the more feeble and base, because they depend on others.

Descartes, Passions of the Soul, CCI-CCII

24 *Betty*. They are gone, sir, in great anger.

Petulant. Enough, let 'em trundle. Anger helps complexion, saves paint.

Congreve, Way of the World, I, ix

25 I was angry with my friend:
I told my wrath, my wrath did end.
I was angry with my foe:
I told it not, my wrath did grow.

Blake, A Poison Tree

26 If you strike a child, take care that you strike it in anger,
even at the risk of maiming it for fife, A blow in cold blood
neither can nor should be forgiven.

Shaw, Man and Superman, Maxims for Revolutionists

4.4 Desire

1 *Socrates*. In every one of us there are two guiding and ruling principles which lead us whither they will; one is the natural desire of pleasure, the other is an acquired opinion which aspires after the best; and these two are sometimes in harmony and then again at war, and sometimes the one, sometimes the other conquers. When opinion by the help of reason leads us to the best, the conquering principle is called temperance; but when desire, which is devoid of reason, rules in us and drags us to pleasure, that power of misrule is called excess. Now excess has many names, and many members, and many forms, and any of these forms when very marked gives a name, neither honourable nor creditable, to the bearer of the name. The desire of eating, for example, which gets the better of the higher reason and the other desires, is called gluttony, and he who is possessed by it is called a

glutton; the tyrannical desire of drink, which inclines the possessor of the desire to drink, has a name which is only too obvious, and there can be as little doubt by what name any other appetite of the same family would be called;—it will be the name of that which happens to be dominant. And now I think that you will perceive the drift of my discourse; but as every spoken word is in a manner plainer than the unspoken, I had better say further that the irrational desire which overcomes the tendency of opinion towards right, and is led away to the enjoyment of beauty, and especially of personal beauty, by the desires which are her own kindred—that supreme desire, I say, which by leading conquers and by the force of passion is reinforced, from this very force, receiving a name, is called love.

Plato, Phaedrus, 237B

2 *Socrates.* Might a man be thirsty, and yet unwilling to drink?

Yes, he [Glaucón] said, it constantly happens.

And in such a case what is one to say? Would you not say that there was something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than the principle which bids him?

I should say so.

And the forbidding principle is derived from reason, and that which bids and attracts proceeds from passion and disease?

Clearly.

Then we may fairly assume that they are two, and that they differ from one another; the one with which a man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and

feels the flutterings of any other desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions?

Yes, he said, we may fairly assume them to be different.

Then let us finally determine that there are two principles existing in the soul. And what of passion, or spirit? Is it a third, or akin to one of the preceding?

I should be inclined to say—akin to desire.

Well, I said, there is a story which I remember to have heard, and in which I put faith. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground at the place of execution. He felt a desire to see them, and also a dread and abhorrence of them; for a time he struggled and covered his eyes, but at length the desire got the better of him; and forcing them open, he ran up to the dead bodies, saying, Look, ye wretches, take your fill of the fair sight.

I have heard the story myself, he said.

The moral of the tale is, that anger at times goes to war with desire, as though they were two distinct things.

Yes; that is the meaning, he said.

And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a State, his spirit is on the side of his reason—but for the passionate or spirited element to take part with the desires when reason decides that she should not be opposed, is a sort of thing which I believe that you never observed occurring in your-self, nor, as I should imagine, in any one else?

Plato, Republic, IV, 439A

3 *Athenian Stranger*. The class of men is small—they must have been rarely gifted by nature, and trained by education—who, when assailed by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite; their desires are unbounded, and when they might gain in moderation they prefer gains without limit.

Plato, Laws, XI, 918B

4 These two at all events appear to be sources of movement: appetite and mind (if one may venture to regard imagination as a kind of thinking; for many men follow their imaginations contrary to knowledge, and in all animals other than man there is no thinking or calculation but only imagination).

Both of these then are capable of originating local movement, mind and appetite: (1) mind, that is, which calculates means to an end, i.e. mind practical (it differs from mind speculative in the character of its end); while (2) appetite is in every form of it relative to an end: for that which is the object of appetite is the stimulant of mind practical; and that which is last in the process of thinking is the beginning of the action. It follows that there is a justification for regarding these two as the sources of movement, i.e. appetite and practical thought; for the object of appetite starts a movement and as a result of that thought gives rise to movement, the object of appetite being to it a source of stimulation. So too

when imagination originates movement, it necessarily involves appetite.

That which moves therefore is a single faculty and the faculty of appetite; for if there had been two sources of movement—mind and appetite— they would have produced movement in virtue of some common character. As it is, mind is never found producing movement without appetite (for wish is a form of appetite; and when movement is produced according to calculation it is also according to wish), but appetite can originate movement contrary to calculation, for desire is a form of appetite.

Aristotle, On the Soul, 433a8

- 5 The primary objects of desire and of thought are the same. For the apparent good is the object of appetite, and the real good is the primary object of rational wish. But desire is consequent on opinion rather than opinion on desire; for the thinking is the starting-point.

Aristotle, Metaphysics, 1072a27

- 6 The avarice of mankind is insatiable; at one time two obols was pay enough; but now, when this sum has become customary, men always want more and more without end; for it is of the nature of desire not to be satisfied, and most men live only for the gratification of it.

Aristotle, Politics, 1267a42

- 7 That which all desire is good, as we have said; and so, the more a thing is desired, the better it is.

Aristotle, Rhetoric, 1365a1

- 8 Whilst what we crave is wanting, it seems to transcend all the rest; then, when it has been gotten, we crave

something else, and ever does the same thirst of life possess us, as we gape for it open-mouthed.

Lucretius, Nature of Things, III

- 9 To you everything appears small that you possess: to me all that I have appears great. Your desire is insatiable: mine is satisfied. To (children) who put their hand into a narrow-necked earthen vessel and bring out figs and nuts, this happens; if they fill the hand, they cannot take it out, and then they cry. Drop a few of them and you will draw things out. And do you part with your desires; do not desire many things and you will have what you want.

Epictetus, Discourses, III, 9

- 10 There is no profit from the things which are valued and eagerly sought to those who have obtained them; and to those who have not yet obtained them there is an imagination that when these things are come, all that is good will come with them; then, when they are come, the feverish feeling is the same, the tossing to and fro is the same, the satiety, the desire of things which are not present; for freedom is acquired not by the full possession of the things which are desired, but by removing the desire.

Epictetus, Discourses, IV, 1

- 11 Remember that you must behave as at a banquet. Is anything brought round to you? Put out your hand and take a moderate share. Does it pass by you? Do not stop it. Is it not yet come? Do not yearn in desire toward it, but wait till it reaches you. So with regard to children, wife, office, riches; and you will some time or other be worthy

to feast with the gods. And if you do not so much as take the things which are set before you, but are able even to forego them, then you will not only be worthy to feast with the gods, but to rule with them also.

Epictetus, Encheiridion, XV

- 12 Theophrastus, in his comparison of bad acts—such a comparison as one would make in accordance with the common notions of mankind— says, like a true philosopher, that the offences which are committed through desire are more blameable than those which are committed through anger. For he who is excited by anger seems to turn away from reason with a certain pain and unconscious contraction; but he who offends through desire, being overpowered by pleasure, seems to be in a manner more intemperate and more womanish in his offences. Rightly then, and in a way worthy of philosophy, he said that the offence which is committed with pleasure is more blameable than that which is committed with pain; and on the whole the one is more like a person who has been first wronged and through pain is compelled to be angry; but the other is moved by his own impulse to do wrong, being carried towards doing something by desire.

Marcus Aurelius, Meditations, II, 10

- 13 All things in their own way are inclined by appetite towards good, but in different ways. Some are inclined to good by their natural inclination, without knowledge, as plants and inanimate bodies. Such inclination towards good is called a natural appetite. Others, again, are inclined towards good, but with some knowledge: not

that they know the aspect of goodness, but that they know some particular good; as the sense, which knows the sweet, the white, and so on. The inclination which follows this knowledge is called a sensitive appetite. Other things, again, have an inclination towards good, but with a knowledge whereby they know the aspect of good itself; this is proper to the intellect. This is most perfectly inclined towards good; not, indeed, as if it were merely guided by another towards good, like things devoid of knowledge, nor towards some particular good only, as things which have only sensitive knowledge, but as inclined towards good universal in itself. Such inclination is termed will.

Aquinas, Summa Theologica, I, 59, 1

- 14 Between two foods, distant and appetising in like measure, death by starvation would ensue ere a free man put either to his teeth.

So would a lamb stand still between two cravings of fierce wolves, in equipoise of dread; so would a dog stand still between two hinds.

Dante, Paradiso, IV, 1

- 15 Desires are either natural and necessary, like eating and drinking; or natural and not necessary, like intercourse with females; or neither natural nor necessary. Of this last type are nearly all those of men; they are all superfluous and artificial. For it is marvelous how little Nature needs to be content, how little she has left us to desire. The dressings of our cooking have nothing to do with her ordaining. The Stoics say that a man could stay alive on one olive a day. The delicacy of our wines is no part of her

teaching, nor the embellishments that we add to our amorous appetites....

These extraneous desires, which ignorance of the good and a false opinion have insinuated into us, are in such great number that they drive out almost all the natural ones; neither more nor less than if there were such a great number of foreigners in a city that they put out the natural inhabitants, or extinguished their ancient authority and power, completely usurping it and taking possession of it.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 16 That passion which they say is produced by idleness in the hearts of young men, although it makes its way with leisure and a measured step, very evidently shows, to those who have tried to oppose its strength, the power of that conversion and alteration that our judgment suffers.

I attempted at one time to keep tensed tensed to withstand it and beat it down: for I am so far from being one of those who invite vices, that I do not even follow them, unless they drag me away. I would feel it come to life, grow, and increase in spite of my resistance, and finally seize me, alive and watching, and possess me, to such an extent that, as from drunkenness, the picture of things began to seem to me other than usual. I would see the advantages of the object of my desire visibly expanding and growling, and increasing and swelling from the breath of my imagination; the difficulties of my undertaking growing easy and smooth, my reason and my conscience withdrawing. But, this fire having vanished all in an instant like a flash of lightning, I would see my soul regain another kind of sight, another state, and another judgment; the difficulties of the retreat

would seem to me great and invincible, and the same things would appear in a light and aspect very' different from that in which the heat of desire had presented them to me.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 17 It is an amusing conception to imagine a mind exactly balanced between two equal desires. For it is indubitable that it will never decide, since inclination and choice imply inequality in value; and if we were placed between the bottle and the ham with an equal appetite for drinking and for eating, there would doubtless be no solution but to die of thirst and of hunger.

Montaigne, II, 14, How Our Mind

- 18 *Salarino*, O, ten times faster Venus' pigeons fly
To seal love's bonds new-made, than they are wont
To keep obliged faith unforfeited!

Gratiano. That ever holds: who riseth from a feast
With that keen appetite that he sits down?
Where is the horse that doth untread again
His tedious measures with the unbated fire
That he did pace them first? All things that are,
Are with more spirit chased than enjoy'd.
How like a younker or a prodigal
The scarfed bark puts from her native bay,
Hugg'd and embraced by the strumpet wind!
How like the prodigal doth she return,
With over-weather'd ribs and ragged sails,
Lean, rent and beggar'd by the strumpet wind!

Shakespeare, Merchant of Venice, II, vi, 5

- 19 *Troilus*. This is the monstrosity in love, lady, that the will is infinite and the execution confined, that the desire is boundless and the act a slave to limit.

Shakespeare, Troilus and Cressida, III, ii, 87

- 20 The passion of desire is an agitation of the soul caused by the spirits which dispose it to wish for the future the things which it represents to itself as agreeable. Thus we do not only desire the presence of the absent good, but also the conservation of the present, and further, the absence of evil, both of that which we already have, and of that which we believe we might experience in time to come.

Descartes, Passions of the Soul, LXXXVI

- 21 That which men desire they are also said to love, and to hate those things for which they have aversion. So that desire and love are the same thing; save that by *desire*, we always signify the absence of the object; by *love*, most commonly the presence of the same. So also by *aversion*, we signify the absence; and by *hate*, the presence of the object.

Hobbes, Leviathan, I, 6

- 22 Continual success in obtaining those things which a man from time to time desireth, that is to say, continual prospering, is that men call *felicity*; I mean the felicity' of this life. For there is no such thing as perpetual tranquillity of mind, while we live here; because life itself is but motion, and can never be without desire, nor without fear, no more than without sense,

Hobbes, Leviathan, I, 6

23 *Elmira*. The declaration is extremely gallant, but, to say the truth, it is a good deal surprising. Me-thinks you ought to have fortified your mind better, and to have reasoned a little upon a design of this nature. A devotee as you are, whom every one speaks of as-

Tartuffe. Ah! being a devotee does not make me the less a man; and when one comes to view your celestial charms, the heart surrenders, and reasons no more. I know, that such language from me, seems somewhat strange; but, madam, after all, I am not an angel, and should you condemn the declaration I make, you must lay the blame upon your attractive charms.

Moliere, Tartuffe, III, iii

24 We do not desire a thing because we adjudge it to be good, but, on the contrary, we call it good because we desire it, and consequently everything to which we are averse we call evil. Each person, therefore, according to his affect judges or estimates what is good and what is evil, what is better and what is worse, and what is the best and what is the worst. Thus the covetous man thinks plenty of money to be the best thing and poverty the worst. The ambitious man desires nothing like glory, and on the other hand dreads nothing like shame. To the envious person, again, nothing is more pleasant than the misfortune of another, and nothing more disagreeable than the prosperity of another. And so each person according to his affect judges a thing to be good or evil, useful or useless.

Spinoza, Ethics, III, Prop. 39, Schol.

25 *Desire* is the essence itself of man insofar as it is conceived as determined to any action by any one of his affections.

Spinoza, Ethics, III, Prop. 59, Def. 1

26 That desire is a state of uneasiness, every one who reflects on himself will quickly find. Who is there that has not felt in desire what the wise man says of hope, (which is not much different from it), that it being "deferred makes the heart sick"; and that still proportionable to the greatness of the desire, which sometimes raises the uneasiness to that pitch, that it makes people cry out, "Give me children," give me the thing desired, "or I die." Life itself, and all its enjoyments, is a burden cannot be borne under the lasting and unremoved pressure of such an uneasiness.

Locke, Concerning Human Understanding, Bk. 11, XXI,
32

27 The Stoical Scheme of supplying our Wants, by lopping off our Desires, is like cutting off our Feet when we want Shoes.

Swift, Thoughts on Various Subjects

28 Every desire is a viper in the bosom, who, while he was chill, was harmless; but when warmth gave him strength, exerted it in poison.

Johnson, Letter to James Boswell (Dec, 8, 1763)

29 The desire of food is limited in every man by the narrow capacity of the human stomach; but the desire of the conveniences and ornaments of building, dress,

equipage, and household furniture, seems to have no limit or certain boundary.

Adam Smith, Wealth of Nations, I, 11

- 30 The desire of a man for a woman is not directed at her because she is a human being, but because she is a woman. That she is a human being is of no concern to him.

Kant, Lecture at Königsberg (1775)

- 31 Sooner murder an infant in its cradle than nurse unacted desires.

Blake, Marriage of Heaven and Hell, 10

- 32 The evening arrived; the boys took their places. The master, in his cook's uniform, stationed himself at the copper; his pauper assistants ranged themselves behind him; the gruel was served out; and a long grace was said over the short commons. The gruel disappeared; the boys whispered each other, and winked at Oliver, while his next neighbors nudged him. Child as he was, he was desperate with hunger, and reckless with misery. He rose from the table; and advancing to the master, basin and spoon in hand, said: somewhat alarmed at his own temerity:

"Please, sir, I want some more."

The master was a fat, healthy man; but he turned very pale. He gazed in stupefied astonishment on the small rebel for some seconds, and then clung for support to the copper. The assistants were paralysed with wonder; the boys with fear.

"What!" said the master at length, in a faint voice.

"Please, sir," replied Oliver, "I want some more,"
The master aimed a blow at Oliver's head with the
ladle; pinioned him in his arms; and shrieked aloud for
the beadle.

Dickens, Oliver Twist, II

33 Ah, Love! could you and I with Him conspire To grasp this
sorry Scheme of Things entire,
Would not we shatter it to bits—and then Remold it
nearer to the Heart's Desire!

FitzGerald, Rubaiyat, XCIX

34 *Mendoza*. There are two tragedies in life. One is to lose
your heart's desire. The other is to gain it.

Shaw, Man and Superman, IV

35 *Lady*. Havent you noticed that people always exaggerate
the value of the things they havent got? The poor think
they need nothing but riches to be quite happy and
good. Everybody worships truth, purity, unselfishness, for
the same reason: because they have no experience of
them. Oh, if they only knew!

Shaw, The Man of Destiny

4.5 Hope and Despair

1 And Job spake, and said,
Let the day perish wherein I was born, and the night in
which it was said, There is a man child conceived.

Let that day be darkness; let not God regard it from above, neither let the light shine upon it.

Let darkness and the shadow of death stain it; let a cloud dwell upon it; let the blackness of the day terrify it.

As for that night, let darkness seize upon it; let it not be joined unto the days of the year, let it not come into the number of the months.

Lo, let that night be solitary, let no joyful voice come therein.

Let them curse it that curse the day, who are ready to raise up their mourning.

Let the stars of the twilight thereof be dark; let it look for light, but have none; neither let it see the dawning of the day:

Because it shut not up the doors of my mother's womb, nor hid sorrow from mine eyes.

Why died I not from the womb? why did I not give up the ghost when I came out of the belly?

Why did the knees prevent me? or why the breasts that I should suck?

For now should I have lain still and been quiet, I should have slept: then had I been at rest,

With kings and counsellors of the earth, which built desolate places for themselves;

Or with princes that had gold, who filled their houses with silver:

Or as an hidden untimely birth I had not been; as infants which never saw light.

Job 3:2-16

2 My days are swifter than a weaver's shuttle, and are spent without hope.

Job 7:6

3 My God, my God, why hast thou forsaken me? why art thou so far from helping me, and from the words of my roaring?

O my God, I cry in the daytime, but thou hear-est not; and in the night season, and am not silent.

But thou art holy, O thou that inhabitest the praises of Israel.

Our fathers trusted in thee: they trusted, and thou didst deliver them.

They cried unto thee, and were delivered: they trusted in thee, and were not confounded.

But I am a worm, and no man; a reproach of men, and despised of the people.

Psalms 22:1-6

4 *Odyssus*. Then Sisyphos in torment I beheld being roustabout to a tremendous boulder. Leaning with both arms braced and legs driving, he heaved it toward a height, and almost over, but then a Power spun him round and sent the cruel boulder bounding again to the plain. Whereon the man bent down again to toil, dripping sweat, and the dust rose overhead.

Homer, Odyssey, XI, 594

5 *Athenians*. Hope, danger's comforter, may be indulged in by those who have abundant resources, if not without loss at all events without ruin; but its nature is to be extravagant, and those who go so far as to put their all upon the venture see it in its true colours only when they are ruined.

Thucydides, Peloponnesian War, V, 103

6 *Aeneas*. "Endure, and conquer! Jove will soon dispose
To future good our past and present woes.
With me, the rocks of Scylla you have tried;
Th' inhuman Cyclops and his den defied.
What greater ills hereafter can you bear?
Resume your courage and dismiss your care,
An hour will come, with pleasure to relate
Your sorrows past, as benefits of Fate.
Thro' various hazards and events, we move
To Latium and the realms foredoom'd by Jove.
Call'd to the seat (the promise of the skies)
Where Trojan kingdoms once again may rise,
Endure the hardships of your present state;
Live, and reserve yourselves for better fate,"
 These words he spoke, but spoke not from his heart;
His outward smiles conceal'd his inward smart.

Virgil, Aeneid, I

7 And he left them, and went out of the city into Bethany;
and he lodged there.

Now in the morning as he returned into the city, he
hungered.

And when he saw a fig tree in the way, he came to it,
and found nothing thereon, but leaves only, and said
unto it. Let no fruit grow on thee henceforward for ever.
And presently the fig tree withered away.

And when the disciples saw it, they marvelled, saying,
How soon is the fig tree withered away!

Matthew 21:17-20

8 And about the ninth hour Jesus cried with a loud voice, saying, Eli, Eli, la-ma sa-bach-tha-ni? that is to say, My God, my God, why hast thou forsaken me?

Matthew 27:46

9 For we are saved by hope: but hope that is seen is not hope: for what a man seeth, why doth he yet hope for?

But if we hope for that we see not, then do we with patience wait for it....

What shall we then say to these things? If God be for us, who can be against us?

He that spared not his own Son, but delivered him up for us all, how shall he not with him also freely give us all things?...

Who shall separate us from the love of Christ? shall tribulation, or distress, or persecution, or famine, or nakedness, or peril, or sword?

As it is written, For thy sake we are killed all the day long; we are accounted as sheep for the slaughter.

Nay, in all these things we are more than conquerors through him that loved us.

For I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come.

Nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord.

Romans 8:24-39

10 The species of a passion is taken from the object. Now, in the object of hope, we may note four conditions. First, that it is something good, since, properly speaking, hope

regards only the good; in this respect, hope differs from fear, which regards evil. Secondly, that it is future, for hope does not regard that which is present and already possessed. In this respect, hope differs from joy which regards a present good. Thirdly, that it must be something arduous and difficult to obtain, for we do not speak of any one hoping for trifles, which are in one's power to have at any time; in this respect, hope differs from desire or cupidity, which regards the future good absolutely. Therefore it belongs to the concupiscible, while hope belongs to the irascible part. Fourthly, that this difficult thing is something possible to obtain, for one does not hope for that which one cannot get at all; and, in this respect, hope differs from despair. It is therefore evident that hope differs from desire, as the irascible passions differ from the concupiscible. For this reason, moreover, hope presupposes desire, just as all the irascible passions presuppose the passions of the concupiscible part.

Aquinas, Summa Theologica, I-II, 40, 1

- 11 Every mortal sin takes its principal malice and gravity from the fact of its turning away from God, for if it were possible to turn to a changeable good, even inordinately, without turning away from God, it would not be a mortal sin. Consequently a sin which, first and of its very nature, includes turning away from God, is most grievous among mortal sins.

Now unbelief, despair and hatred of God are opposed to the theological virtues; and among them, if we compare hatred of God and unbelief to despair, we shall find that, in themselves, that is, in respect of their proper species, they are more grievous. For unbelief is due to a

man not believing God's own truth, while the hatred of God arises from man's will being opposed to God's goodness itself; but despair consists in a man ceasing to hope for a share of God's goodness. Hence it is clear that unbelief and hatred of God are against God as He is in Himself, while despair is against Him according as His good is shared in by us. Therefore strictly speaking it is a more grievous sin to disbelieve God's truth or to hate God than not to hope to receive glory from Him.

If, however, despair be compared to the other two sins from man's point of view, then despair is more dangerous, since hope withdraws us from evils and induces us to seek for good things, so that when hope is given up, men rush headlong into sin, and are drawn away from good works.

Aquinas, Summa Theologica, II-II, 20, 3

12 The good Master to me: "Thou askest not what spirits are these thou seest? I wish thee to know, before thou goest farther,

that they sinned not; and though they have merit, it suffices not: for they had not Baptism, which is the portal of the faith that thou believest;

and seeing they were before Christianity, they worshipped not God aright; and of these am I myself.

For such defects, and for no other fault, are we lost; and only in so far afflicted, that without hope we live in desire."

Great sadness took me at the heart on hearing this; because I knew men of much worth, who in that Limbo were suspense.

Dante, Inferno, IV, 31

- 13 "Hope," said I, "is a certain expectation of future glory, the product of divine grace and precedent merit."

Dante, Paradiso, XXV, 67

- 14 May heaven bring relief for all this sorrow!
There's ground for hope, for such is heaven's way;
For I have seen on many a misty morrow
Following oft a merry summer's day,
And after winter, comes along the May.
'Tis known, and vouched for by authorities,
That storms are presages of victories.

Chaucer, Troilus and Cressida, III, 152

- 15 Now enters despair, which is despair of the mercy of God, and comes sometimes of too extravagant sorrows and sometimes of too great fear: for the victim imagines that he has done so much sin that it will avail him not to repent and forgo sin; because of which fear he abandons his heart to every kind of sin, as Saint Augustine says. This damnable sin, if it be indulged to the end, is called sinning in the Holy Ghost. This horrible sin is so dangerous that, as for him that is so desperate, there is no felony or sin that he hesitates to do; as was well showed by Judas. Certainly, then, above all other sins, this sin is most displeasing to Christ, and most hateful.

Chaucer, Canterbury Tales: Parson's Tale

- 16 Everything that is done in the world is done by hope. No husbandman would sow one grain of corn if he hoped not it would grow up and become seed; no bachelor would marry a wife if he hoped not to have children; no

merchant or tradesman would set himself to work if he did not hope to reap benefit thereby.

Luther, Table Talk, H298

- 17 *Richmond*. True hope is swift and flies with swallow's wings;
Kings it makes gods and meaner creatures kings.

Shakespeare, Richard III, V, ii, 23

- 18 Hope is a disposition of the soul to persuade itself that what it desires will come to pass: and this is caused by a particular movement of the spirits, i.e. by that of joy and that of desire mingled together; and fear is another disposition of the soul which persuades it that the thing hoped for will not come to pass; and it must be observed that, although these two passions are contrary, we can nevertheless have them both at the same time, that is to say, when we represent to ourselves different reasons at the same time, some of which cause us to judge that the accomplishment of desire is easy, while the others make it seem difficult.

Descartes, Passions of the Soul, CLXV

- 19 When I see the blindness and the wretchedness of man, when I regard the whole silent universe and man without light, left to himself and, as it were, lost in this corner of the universe, without knowing who has put him there, what he has come to do, what will become of him at death, and incapable of all knowledge, I become terrified, like a man who should be carried in his sleep to a dreadful desert island and should awake without knowing where he is and without means of escape. And thereupon

I wonder how people in a condition so wretched do not fall into despair.

Pascal, Pensées, XI, 693

20 *Elder Brother*. Where an equall poise of hope and fear
Does arbitrate th'event, my nature is
That I encline to hope, rather than fear,
And gladly banish squint suspicion.

Milton, Comus, 410

21 *Satan*. Me miserable! which way shall I file
Infinite wrath, and infinite despair?
Which way I flie is Hell; my self am Hell;
And in the lowest deep a lower deep
Still threatening to devour me opens wide.
To which the Hell I suffer seems a Heav'n.

Milton, Paradise Lost, IV, 73

22 *Samson*. Promise was that I
Should Israel from *Philistian* yoke deliver;
Ask for this great Deliverer now, and find him
Eyeless in Gaza at the Mill with slaves,
Himself in bonds under *Philistian* yoke.

Milton, Samson Agonistes, 38

23 *Samson*. O loss of sight, of thee I most complain!
Blind among enemies, O worse than chains,
Dungeon, or beggery, or decrepit age!
Light the prime work of God to me is extinct,
And all her various objects of delight
Annul'd, which might in part my grief have eas'd,
Inferiour to the vilest now become

Of man or worm; the vilest here excel me,
They creep, yet see, I dark in light expos'd
To daily fraud, contempt, abuse and wrong,
Within doors, or without, still as a fool.
In power of others, never in my own;
Scarce half I seem to live, dead more then half.
O dark, dark, dark, amid the blaze of noon,
Irrecoverably dark, total Eclipse
Without all hope of day!

Milton, Samson Agonistes, 67

- 24 Despair is sorrow arising from the idea of a past or future object from which cause for doubting is removed. Confidence, therefore, springs from hope and despair from fear, whenever the reason for doubting the issue is taken away; a case which occurs either because we imagine a thing past or future to be present and contemplate it as present, or because we imagine other things which exclude the existence of those which made us to doubt.

Spinoza, Ethics, III, Prop. 59, Def. 15

- 25 Hope is that pleasure in the mind, which every one finds in himself, upon the thought of a probable future enjoyment of a thing which is apt to delight him.

Locke, Concerning Human Understanding, Bk. II, XX, 9

- 26 Despair is the thought of the unattainableness of any good, which works differently in men's minds, sometimes producing uneasiness or pain, sometimes rest and indolency.

Locke, Concerning Human Understanding, Bk. II, XX, 11

27 Hope springs eternal in the human breast:
Man never Is, but always To be blest:
The soul, uneasy and confined from home,
Rests and expatiates in a life to come.

Pope, Essay on Man, Epistle I, 95

28 I have many years ago magnified in my own mind, and repeated to you, a ninth beatitude, added to the eighth in the Scripture; "Blessed is he who expects nothing, for he shall never be disappointed."

Pope, Letter to John Gay (Oct. 16, 1727)

29 It is necessary to hope, though hope should always be deluded; for hope itself is happiness, and its frustrations, however frequent, are yet less dreadful than its extinction.

Johnson, Idier No. 58

30 Hope is itself a species of happiness, and, perhaps, the chief happiness which this world affords: but, like all other pleasures immoderately enjoyed, the excesses of hope must be expiated by pain; and expectations improperly indulged, must end in disappointment. If it be asked, what is the improper expectation which it is dangerous to indulge, experience will quickly answer, that it is such expectation as is dictated not by reason, but by desire; expectation raised, not by the common occurrences of life, but by the wants of the expectant; an expectation that requires the common course of things to be changed, and the general rules of action to be broken.

Johnson, Letter (June 8, 1762)

31 *Faust*. Look up!—The peaks, gigantic and supernal,
Proclaim the hour most solemn now is nearing. They early
may enjoy the light eternal
That later to us here below is wended.
Now on the alpine meadows, sloping, vernal,
A clear and lavish glory has descended
And step by step fulfils its journey's ending.
The sun steps forth!—Alas, already blinded,
I turn away, the pain my vision rending.

Thus is it ever when a hope long yearning
Has made a wish its own, supreme, transcending.
And finds Fulfilment's portals outward turning;
From those eternal deeps bursts ever higher
Too great a flame, we stand, with wonder burning.
To kindle life's fair torch we did aspire
And seas of flame—and what a flame!—embrace us!
Is it Love? Is it Hate? that twine us with their fire,
In alternating joy and pain enlase us.
So that again toward earth we turn our gazing,
Baffled, to hide in youth's fond veils our faces.

Goethe, Faust, II, 1, 4695

32 Hopes, what are they?—Beads of morning
Strung on slender blades of grass;
Or a spider's web adorning
In a strait and treacherous pass.

*Wordsworth. Inscription Supposed to be Found in and
Near a Hermit's Cell*

33 The concept of the sickness unto death must be
understood ... in a peculiar sense. Literally it means a
sickness the end and outcome of which is death. Titus

one speaks of a mortal sickness as synonymous with a sickness unto death. In this sense despair cannot be called the sickness unto death. But in the Christian understanding of it death itself is a transition unto life. In view of this, there is from the Christian standpoint no earthly, bodily sickness unto death. For death is doubtless the last phase of the sickness, but death is not the last thing. If in the strictest sense we are to speak of a sickness unto death, it must be one in which the last thing is death, and death the last thing. And this precisely is despair.

Yet in another and still more definite sense despair is the sickness unto death. It is indeed very far from being true that, literally understood, one dies of this sickness, or that this sickness ends with bodily death. On the contrary, the torment of despair is precisely this, not to be able to die. So it has much in common with the situation of the moribund when he lies and struggles with death, and cannot die. So to be sick *unto* death is, not to be able to die—yet not as though there were hope of life; no, the hopelessness in this case is that even the last hope, death, is not available. When death is the greatest danger, one hopes for life; but when one becomes acquainted with an even more dreadful danger, one hopes for death. So when the danger is so great that death has become one's hope, despair is the disconsolateness of not being able to die.

It is in this last sense that despair is the sickness unto death, this agonizing contradiction, this sickness in the self, everlastingly to die, to die and yet not to die, to die the death. For dying means that it is all over, but dying the death means to live to experience death; and if for a

single instant this experience is possible, it is tantamount to experiencing it forever. If one might die of despair as one dies of a sickness, then the eternal in him, the self, must be capable of dying in the same sense that the body dies of sickness. But this is an impossibility; the dying of despair transforms itself constantly into a living.

Kierkegaard, The Sickness Unto Death, I, I, C

34 *Ida*. Tears, idle tears, I know not what they mean,
Tears from the depth of some divine despair
Rise in the heart, and gather to the eyes.
In looking on the happy autumn-fields,
And thinking of the days that are no more....
Dear as remember'd kisses after death,
And sweet as those by hopeless fancy feign'd
On lips that are for others; deep as love.
Deep as first love, and wild with all regret;
O Death in Life, the days that are no more!

Tennyson, The Princess, IV, 21

35 The mass of men lead lives of quiet desperation. What is called resignation is confirmed desperation. From the desperate city you go into the desperate country, and have to console yourself with the bravery of minks and muskrats. A stereotyped but unconscious despair is concealed even under what are called the games and amusements of mankind. There is no play in them, for this comes after work. But it is a characteristic of wisdom not to do desperate things.

Thoreau, Walden: Economy

36 The Worldly Hope men set their Hearts upon
Turns Ashes—or it prospers; and anon.

Like Snow upon the Desert's dusty Face,
Lighting a little hour or two—is gone.

FitzGerald, Rubaiyat, XVI

37 Not, I'll not, carrion comfort. Despair, not feast on thee;
Not untwist—slack they may be—these last strands of
man

In me or, most weary, cry I can no more. I can; Can
something, hope, wish day come, not choose not to be.

G. M. Hopkins, Carrion Comfort

38 Zeus did not wish man, however much he might be
tormented by the other evils, to fling away his life, but to
go on letting himself be tormented again and again.
Therefore he gives man hope,— in reality it is the worst of
all evils, because it prolongs the torments of man.

Nietzsche, Human, All-Too-Human, 71

39 As for despair, the term has a very simple meaning. It
means that we shall confine ourselves to reckoning only
with what depends upon our will, or on the ensemble of
probabilities which make our action possible. When we
want something, we always have to reckon with
probabilities. I may be counting on the arrival of a friend.
The friend is coming by rail or streetcar; this supposes
that the train will arrive on schedule, or that the streetcar
will not jump the track. I am left in the realm of
possibility; but possibilities are to be reckoned with only
to the point where my action comports with the ensemble
of these possibilities, and no further. The moment the

possibilities I am considering are not rigorously involved by my action, I ought to disengage myself from them, because no God, no scheme, can adapt the world and its possibilities to my will. When Descartes said, "Conquer yourself rather than the world," he meant essentially the same thing.

Sartre, Existentialism

4.6 Joy and Sorrow

- 1 And if ye take this also from me, and mischief befall him, ye shall bring down my gray hairs with sorrow to the grave.

Genesis 44:29

- 2 Weeping may endure for a night, but joy cometh in the morning.

Psalms 30:5

- 3 It is better to go to the house of mourning, than to go to the house of feasting: for that is the end of all men; and the living will lay it to his heart.

Sorrow is better than laughter: for by the sadness of the countenance the heart is made better.

The heart of the wise is in the house of mourning; but the heart of fools is in the house of mirth.

It is better to hear the rebuke of the wise, than for a man to hear the song of fools.

For as the crackling of thorns under a pot, so is the laughter of the fool: this also is vanity.

Ecclesiastes 7:2-6

- 4 *Achilleus*. There is not any advantage to be won from grim lamentation. Such is the way the gods spun life for unfortunate mortals, that we live in unhappiness, but the gods themselves have no sorrows.

Homer, Iliad, XXIV, 523

5 So spoke great Achilles and went back into the shelter
and sat down on the elaborate couch from which he had
risen, against the inward wall, and now spoke his word to
Priam:

'Your son is given back to you, aged sir, as you asked
it.

He lies on a bier. When dawn shows you yourself shall
see him as you take him away. Now you and I must
remember our supper.

For even Niobe, she of the lovely tresses, remembered
to eat, whose twelve children were destroyed in her
palace, six daughters, and six sons in the pride of their
youth, whom Apollo killed with arrows from his silver bow,
being angered with Niobe....

But she remembered to eat when she was worn out
with weeping.'

Homer, Iliad, XXIV, 596

6 *Oedipus*. Who will be kind to Oedipus this evening And
give the wanderer charity?
Though he ask little and receive still less,
It is sufficient:
Suffering and time, Vast time, have been instructors in
contentment,

Sophocles, Oedipus at Colonus, 3

7 *Attendant*. There's nothing like the sight
Of an old enemy down on his luck.

Euripides, Heracleidae, 939

8 *Iphigenia*. The unfortunate, having once known prosperity
themselves, bear no kind feelings towards their luckier

neighbours.

Euripides, Iphigenia in Tauris, 353

- 9 *Pericles*. Grief is felt not so much for the want of what we have never known, as for the loss of that to which we have been long accustomed.

Thucydides, Peloponnesian War, 11, 44

- 10 It is difficult to convince a mourner that he grieves by his own choice and because he thinks he must.

Cicero, Disputations, III, 33

- 11 What first AEneas in this place beheld,
Reviv'd his courage, and his fear expell'd.
For while, expecting there the queen, he rais'd
His wond'ring eyes, and round the temple gaz'd.
Admir'd the fortune of the rising town.
The striving artists, and their arts' renown;
He saw, in order painted on the wall,
Whatever did unhappy Troy befall:
The wars that fame around the world had blown,
All to the life, and ev'ry leader known.
There Agamemnon, Priam here, he spies,
And fierce Achilles, who both kings defies.
He stopp'd, and weeping said: "O friend! ev'n here
The monuments of Trojan woes appear!
Our known disasters fill ev'n foreign lands:
See there, where old unhappy Priam stands!
Ev'n the mute walls relate the warrior's fame,
And Trojan griefs the Tyrians' pity claim."

Virgil, Aeneid, I

12 No pleasure is unalloyed: some trouble ever intrudes upon our happiness.

Ovid, Metamorphoses, VII

13 So much more does joy without discretion transport and agitate the mind than either fear or sorrow.

Plutarch, Aratus

14 I must die. Must I then die lamenting? I must be put in chains. Must I then also lament? I must go into exile. Does any man then hinder me from going with smiles and cheerfulness and contentment?

Epictetus, Discourses, I, 1

15 Imagine every man who is grieved at anything or discontented to be like a pig which is sacrificed and kicks and screams.

Marcus Aurelius, Meditations, X, 28

16 Every soul is wretched that is bound in affection of mortal things: it is tormented to lose them, and in their loss becomes aware of the wretchedness which in reality it had even before it lost them.

Augustine, Confessions, IV, 6

17 Wherever the soul of man turns, unless towards God, it cleaves to sorrow.

Augustine, Confessions, IV, 10

18 What is it in the soul... that makes it delight more to have found or regained the things it loves than if it had always had them? Creatures other than man bear the same

witness, and all things are filled with testimonies acclaiming that it is so. The victorious general has his triumph; but he would not have been victorious if he had not fought; and the greater danger there was in the battle, the greater rejoicing in the triumph. The storm tosses the sailors and threatens to wreck the ship; all are pale with the threat of death. But the sky grows clear, the sea calm, and now they are as wild with exultation as before with fear. A friend is sick and his pulse threatens danger; all who want him well feel as if they shared his sickness. He begins to recover, though he cannot yet walk as strongly as of old; and there is more joy than there was before, when he was still well and could walk properly.

Augustine, Confessions, VIII, 3

- 19 The pleasures of this life for which I should weep are in conflict with the sorrows of this life in which I should rejoice, and I know not on which side stands the victory. Woe is me, Lord, have pity on me! For I have likewise sorrows which are evil and these are in conflict with Joys that are good, and I know not on which side stands the victory. Woe is me, Lord have mercy upon me!... Is not the life of man on earth a trial? Who would choose trouble and difficulty? Thou dost command us to endure them, not to love them. No one loves what he endures, though he may love to endure. For though he rejoices at his endurance, yet he would rather that there were nothing to endure. In adversity I desire prosperity, in prosperity I fear adversity. Yet what middle place is there between the two, where man's life may be other than trial? There is woe and woe again in the prosperity of this world, woe from the fear of adversity, woe from the corruption of joy!

There is woe in the adversity of this world, and a second woe and a third, from the longing for prosperity, and because adversity itself is hard, and for fear that endurance may break! Is not man's life upon earth trial without intermission?

Augustine, Confessions, X, 28

- 20 Sadness may be considered in two ways; as existing actually, and as existing in the memory, and in both ways sadness can cause pleasure. Because sadness, as actually existing, causes pleasure, since it brings to mind that which is loved, the absence of which causes sadness; and yet the mere thought of it gives pleasure.—The recollection of sadness becomes a cause of pleasure on account of the subsequent deliverance, because absence of evil is looked upon as something good; hence according as a man thinks that he has been delivered from that which caused him sorrow and pain, so much reason has he to rejoice.

Aquinas, Summa Theologica, I-II, 32, 4

- 21 A hurtful thing hurts yet more if we keep it shut up, because the soul is more intent on it; but if it be allowed to escape, the soul's intention is dispersed as it were on outward things, so that the inward sorrow is lessened. This is why when men, burdened with sorrow, make outward show of their sorrow, by tears or groans or even by words, their sorrow is assuaged.

Aquinas, Summa Theologica, I-II, 38, 2

- 22 Immoderate sorrow is a disease of the mind, but moderate sorrow is the mark of a well disposed soul

according to the present state of life.

Aquinas, Summa Theologica, I-II, 59,3

23 *Pandar*. For as all joys on earth are short and brief,
So time will bring for sorrow its relief.

Because if Fortune's wheel should cease to turn,
Then Fortune she at once no more would be;
And since in no fixed place she may sojourn,
It may chance, by mere mutability,
Such good luck she hath now in store for thee,
And such a boon to thee she soon will bring.
That for the joy of it, thy heart shall sing.

Chaucer, Troilus and Cressida, I, 121-122

24 *Pandar*. For that same ground that bears the useless
weed,

Bears also wholesome herbs, and quite as oft;
And where the rough and stinging nettles breed,
Waxes the rose, so sweet and smooth and soft;
And next the valley, lifts the hill aloft,
And after night, then comes the glad tomorrow.
And so is joy the after end of sorrow.

Chaucer, Troilus and Cressida, I, 136

25 "O God," she cried, "these blessings temporal,
Which scholars falsely call felicity,
With bitterness are mingled and with gall!
God only knows what anguish then hath he
Who sees his empty joys before him flee!
For either joys arrive inopportune.
Or else they flit and vanish all too soon!

"O fickle fate! O worldly joy unstable!
Of men thou makest but a sport and play!
All know that they to hold their joy are able,
Or know it not—there is no other way.
Now if one knows it not, how may he say
That he of perfect joy perceives the spark,
If ignorance still leaves him in the dark?

"But if he knows that joy is transitory,
Since joy in every worldly thing must flee,
This troubling thought diminishes the glory
Of earthly joy, and so in such degree,
Imperfect must be his felicity;
If loss of joy he fears a jot or tittle.
This proves that earthly Joy is worth but little.

"And so this problem I must thus decide.
That verily, for aught that I can see.
No perfect joy can in this world abide."

Chaucer, Troilus and Cressida, III, 117-120

26 O true it is, before they can be cured,
Whether of fever or other great disease,
The sick must drink, for all they have endured.
Full bitter drink, and for their better ease,
Must oft partake of things that do not please,
All this to Troilus may be applied,
Who after pain it glad and satisfied.

And sweetness now seemed more than ever sweet.
For all the bitterness that went before;
And now the lime goes by on winged feet,
In joy so great, it never could be more,
Or better pay for all the griefs they bore.
And here I beg that lovers all will heed
This good example at their time of need!

Chaucer, Troilus and Cressida, III, 174-175

27 And to be glad they often her besought,
Which to her grief such mitigation brought
As for a splitting headache one might feel
If one were kindly rubbed upon the heel.

Chaucer, Troilus and Cressida, IV, 104

28 Good friends, my readers, who peruse this book.
Be not offended, whilst on it you look;
Denude yourselves of all deprav'd affection,
For it contains no badness nor infection:
'Tis true that it brings forth to you no birth
Of any value, but in point of mirth;
Thinking therefore how sorrow might your mind
Consume, I could no apter subject find;
One inch of joy surmounts of grief a span;
Because to laugh is proper to the man.

Rabelais, Gargantua and Pantagruel, I, To the Readers

29 Metrodorus used to say that in sadness there is some alloy of pleasure. I do not know whether he meant something else, but for my part I indeed imagine that there is design, consent, and pleasure in feeding ones melancholy; I mean beyond the ambition that can also be involved. There is some shadow of daintiness and luxury that smiles on us and flatters us in the very lap of melancholy.

Montaigne, Essays, II, 20, We Taste Nothing Pure

30 *Richard*. I cannot weep; for all my body's moisture
Scarce screeches to quench my furnace-burning heart:
Nor can my tongue unload my heart's great burthen;

For selfsame wind that I should speak withal
Is kindling coals that fires all my breast.
And burns me up with flames that tears would quench.
To weep is to make less the depth of grief:
Tears then for babes; blows and revenge for me.

Shakespeare, III Henry VI, II, i, 84

31 *Pandulph*. You hold too heinous a respect of grief.

Constance. He talks to me that never had a son.

King Philip. You are as fond of grief as of your child.

Const. Grief fills the room up of my absent child.

Lies in his bed, walks up and down with me,
Puts on his pretty looks, repeats his words,
Remembers me of all his gracious parts,
Stuffs out his vacant garments with his form;
Then, have I reason to be fond of grief?

Shakespeare, King John, III, iv, 90

32 *Claudio*. Silence is the perfectest herald of joy; I were but
little happy, if I could say how much.

Shakespeare, Much Ado About Nothing, II, i, 317

33 *Benedick* Every one can master a grief but he that has it.

Shakespeare, Much Ado About Nothing III, ii, 29

34 *King*. 'Tis sweet and commendable in your nature,
Hamlet,

To give these mourning duties to your father:
But, you must know, your father lost a father;
That father lost, lost his, and the survivor bound
In filial obligation for some term
To do obsequious sorrow. But to persevere

In obstinate condolment is a course
Of impious stubbornness. 'Tis unmanly grief.
It shows a will most incorrect to heaven,

A heart unfortified, a mind impatient,
An understanding simple and unschool'd.
For what we know must be and is as common
As any the most vulgar thing to sense,
Why should we in our peevish opposition
Take it to heart? Fie! 'Tis a fault to heaven,
A fault against the dead, a fault to nature,
To reason most absurd, whose common theme
Is death of fathers, and who still hath cried,
From the first corse till he that died today,
"This must be so."

Shakespeare, Hamlet, I, ii, 87

33 *King*. When sorrows come, they come not single spies,
But in battalions,

Shakespeare, Hamlet, IV, v, 78

36 *Ross*. Let not your ears despise my tongue for ever,
Which shall possess them with the heaviest sound
That ever yet they heard.

Macduff Hum! I guess at it.

Ross. Your castle is surprised; your wife and babes
Savagely slaughter'd. To relate the manner
Were, on the quarry of these murder'd deer.
To add the death of you.

Malcolm. Merciful heaven!

What, man! ne'er pull your hat upon your brows;
Give sorrow words. The grief that does not speak

Whispers the o'er-fraught heart and bids it break.

Macd. My children too?

Ross. Wife, children, servants, all
That could be found.

Macd. And I must be from thence!

My wife kill'd too?

Ross. I have said.

Mal. Be comforted.

Let's make us medicines of our great revenge
To cure this deadly grief.

Macd. He has no children. All my pretty ones?

Did you say all? O hell-kite! All?

What, all my pretty chickens and their dam
At one fell swoop?

Mal. Dispute it like a man.

Macd. I shall do so;

But I must also feel it as a man.

I cannot but remember such things were.

That were most precious to me.

Shakespeare, Macbeth, IV, iii, 201

37 However full of sadness a man may be, he is happy for the time, if you can prevail upon him to enter into some amusement; and however happy a man may be, he will soon be discontented and wretched, if he be not diverted and occupied by some passion or pursuit which prevents weariness from overcoming him. Without amusement there is no joy; with amusement there is no sadness.

Pascal, Pensees, II, 139

38 Hence loathed Melancholy
Of *Cerberus*, and blackest midnight bom,

In *Stygian* Cave forlorn
'Mongst horrid shapes, and shreiks, and sights unholy,
Find out som uncouth cell.
Where brooding darknes spreads his jealous wings,
And the night-Raven sings;
There under *Ebon* shades, and low-brow'd Rocks,
As ragged as thy Locks,
In dark *Cimmerian* desert ever dwell.
But com thou Goddes fair and free,
In heav'n ye leap'd *Euphrosyne*,
And by men, heart-easing Mirth,
Whom lovely *Venus* at a birth
With two sister Graces more
To Ivy-crowned *Bacchus* bore;
Or whether (as som Sager sing)
The frolick Wind that breathes the Spring,
Zephir with *Aurora* playing.
As he met her once a Maying,
There on Beds of Violets blew.
And fresh-blown Roses washt in dew,
Fill'd her with thee a daughter fair,
So bucksom, blith, and debonair.
Haste thee nymph, and bring with thee
Jest and youthful Jollity,
Quips and Cranks, and wanton Wiles,
Nods, and Becks, and Wreathed Smiles,
Such as hang on *Hebe's* cheek,
And love to live in dimple sleek;
Sport that wrincled Care derides,
And Laughter holding both his sides.
Com, and trip it as ye go
On the light fantastick toe,
And in thy right hand lead with thee,

The Mountain Nymph, sweet Liberty;
And if I give thee honour due.
Mirth, admit me of thy crue
To live with her, and live with thee.
In unreprieved pleasures free;
To hear the Lark begin his flight,
And singing startle the dull night.
From his watch-towre in the skies,
Till the dappled dawn doth rise;
Then to com in spight of sorrow,
And at my window bid good morrow,
Through the Sweet-Briar, or the Vine,
Or the twisted Eglantine.

Milton, L'Allegro, 1

39 Hence vain deluding joyes,
The brood of folly without father bred,
How little you bested,
Or fill the fixed mind with all your toyes;
Dwell in som idle brain.
And fancies bond with gaudy shapes possess.
As thick and numberless
As the gay motes that people the Sun Beams,
Or likest hovering dreams
The fickle Pensioners of *Morpheus* train.
But hail thou Goddes, sage and holy,
Hail divinest Melancholy,
Whose Saintly visage is too bright
To hit the Sense of human sight;
And therefore to our weaker view.
Ore laid with black staid Wisdoms hue.
Black, but such as in esteem.
Prince *Memnons* sister might beseem.

Or that Starr'd *Ethiope* Queen that strove
To set her beauties praise above
The Sea Nymphs, and their powers offended.
Yet thou art higher far descended.
Thee bright-hair'd *Vesta* long of yore.
To solitary *Saturn* bore;
His daughter she (in Saturns raign,
Such mixture was not held a stain)
Oft in glimmering Bowres, and glades
He met her, and in secret shades
Of woody *Ida's* inmost grove,
While yet there was no fear of *Jove*.
Com pensive Nun, devout and pure.
Sober, stedfast, and demure,
All in a robe of darkest grain,
Flowring with majestick train.
And sable stole of *Cipres* Lawn,
Over thy decent shoulders drawn.
Com, but keep thy wonted state,
With eev'n step, and musing gate,
And looks commercing with the skies,
Thy rapt soul sitting in thine eyes:
There held in holy passion still,
Forget thy self to Marble, till
With a sad Leaden downward cast,
Thou fix them on the earth as fast.
And joyn with thee calm Peace, and Quiet,
Spare Fast, that oft with gods doth diet.
And hears the Muses in a ring,
Ay round about *Joves* Altar sing.
And adde to these retired Leasure,
That in trim Gardens takes his pleasure;
But first, and chiefest, with thee bring.

Him that yon soars on golden wing,
Guiding the fiery-wheeled throne,
The Cherub Contemplation,
And the mute Silence hist along,
'Less *Philomel* will daign a Song,
In her sweetest, saddest plight.
Smoothing the rugged brow of night.
While *Cynthia* checks her Dragon yoke.
Gently o're th'accustom'd Oke;
Sweet Bird that shunn'st the noise of folly,
Most musicall, most melancholy!

Milton, Il Penseroso, 1

40 Bring the rathe Primrose that forsaken dies.
The tufted Crow-toe, and pale Gessamine,
The white Pink, and the Pansie freakt with jeat,
The glowing Violet.
The Musk-rose, and the well attir'd Woodbine.
With Cowslips wan that hang the pensive hed,
And every flower that sad embroidery wears:
Bid *Amaranthus* all his beauty shed,
And Daffadillies fill their cups with tears,
To strew the Laureat Herse where *Lycid* lies....
Look homeward Angel now, and melt with ruth.
And, O ye *Dolphins*, waft the haples youth.

Milton, Lycidas, 142

41 The desire which springs from joy, other things being
equal, is stronger than that which springs from sorrow.

Spinoza, Ethics, IV, Prop. 18

42 *Joy* is a delight of the mind, from the consideration of the present or assured approaching possession of a good; and we are then possessed of any good, when we have it so in our power that we can use it when we please. Thus a man almost starved has joy at the arrival of relief, even before he has the pleasure of using it: and a father, in whom the very well-being of his children causes delight, is always, as long as his children are in such a state, in the possession of that good; for he needs but to reflect on it, to have that pleasure.

Sorrow is uneasiness in the mind, upon the thought of a good lost, which might have been enjoyed longer; or the sense of a present evil.

Locke, Concerning Human Understanding, Bk. II, XX, 7-8

43 Remorse goes to sleep when our fortunes are prosperous, and makes itself felt more keenly in adversity.

Rousseau, Confessions, II

44 The subject of grief for the loss of relations and friends being introduced, I observed that it was strange to consider how soon it in general wears away. Dr. Taylor mentioned a gentleman of the neighbourhood as the only instance he had ever known of a person who had endeavoured to *retain* grief. He told Dr. Taylor, that after his Lady's death, which affected him deeply, he *resolved* that the grief, which he cherished with a kind of sacred fondness, should be lasting; but that he found he could not keep it long. *Johnson*. "All grief for what cannot in the course of nature be helped, soon wears away; in some sooner, indeed, in some later; but it never continues very long, unless where there is madness. ... If, indeed, the

cause of our grief is occasioned by our own misconduct, if grief is mingled with remorse of conscience, it should be lasting."

Boswell, Life of Johnson (Sept. 14, 1777)

45 Excess of sorrow laughs. Excess of joy weeps.

Blake, Marriage of Heaven and Hell, 8

46 A truth that's told with bad intent
Beats all the lies you can invent.
It is right it should be so;
Man was made for joy and woe;
And when this we rightly know.
Thro' the world we safely go.
Joy and woe are woven fine,
A clothing for the soul divine.

Blake, Auguries of Innocence, 53

47 On with the dance! let joy be unconfined;
No sleep till morn, when Youth and Pleasure meet
To chase the glowing Hours with flying feet—
But hark!—that heavy sound breaks in once more
As if the clouds its echo would repeat.

Byron, Childe Harold's Pilgrimage, III, 22

48 *Joy and sorrow* are not ideas of the mind but affections of the will, and so they do not lie in the domain of memory. We cannot recall our joys and sorrows; by which I mean that we cannot renew them. We can recall only the ideas that accompanied them; and, in particular, the things we were led to say; and these form a gauge of our feelings at the time. Hence our memory of joys and sorrows is always

imperfect, and they become a matter of indifference to us as soon as they are over. This explains the vanity of the attempt, which we sometimes make, to revive the pleasures and the pains of the past. Pleasure and pain are essentially an affair of the will; and the will, as such, is not possessed of memory, which is a function of the intellect; and this in its turn gives out and takes in nothing but thoughts and ideas, which are not here in question.

It is a curious fact that in bad days we can very vividly recall the good lime that is now no more; but that in good days we have only a very cold and imperfect memory of the bad.

Schopenhauer, Further Psychological Observations

49 Such was the deck where now lay the Handsome Sailor. Through the rosetan of his complexion no pallor could have shown. It would have taken days of sequestration from the winds and the sun to have brought about the effacement of that. Hut the skeleton in the cheekbone at the point of its angle was just beginning delicately to be defined under the warm-tinted skin. In fervid hearts self-contained, some brief experiences devour our human tissue as secret fire in a ship's hold consumes cotton in the bale.

Melville, Billy Budd

50 "It is Rachel of old." said the elder [Father Zossima], "weeping for her children, and will not be comforted because they are not. Such is the lot set on earth for you mothers. He not comforted. Consolation is not what you need. Weep and be not consoled, but weep. Only every

time that you weep be sure to remember that your little son is one of the angels of God, that he looks down from there at you and sees you, and rejoices at your tears, and points at them to the Lord God; and a long while yet will you keep that great mother's grief. But it will turn in the end into quiet joy, and your bitter tears will be only tears of tender sorrow that purifies the heart and delivers it from sin."

Dostoevsky, Brothers Karamazov, Pt. I, II, 3

51 *Father Zossima.* Tins is not your place for the time. I bless you for great service in the world. Yours will be a long pilgrimage. And you will have to take a wife, too. You will have to bear alt before you come back. There will much to do. Hut I don't doubt of you, and so I send you forth. Christ IS with you. Do not abandon Him and He will not abandon you. You will see great sorrow, and in that sorrow you will be happy. This is my last message to you: in sorrow seek happiness.

Dostoevsky, Brothers Karamazov, Pt. I, H, 7

52 The spiritual haughtiness and nausea of every man who has suffered profoundly—it almost determines the order of rank how profoundly human beings can suffer—his shuddering certainly, which permeates and colors him through and through, (hat by virtue of his suffering he knows more than the cleverest and wisest could possibly know, and that he knows his way and has once been "at home" in many distant, terrifying worlds of which know nothing"—this spiritual and silent haughtiness of the sufferer, this pride of the elect of knowledge, of the "initiated," of the almost sacrificed, finds all kinds of

disguises necessary to protect itself against contact with obtrusive and pitying hands and altogether against everything that is not its equal in suffering. Profound suffering makes noble; it separates.

Nietzsche, Beyond Good and Evil, IX, 270

53 The special kind of boredom from which modern urban populations suffer is intimately bound up with their separation from the life of Earth. It makes life hot and dusty and thirsty, like a pilgrimage in the desert. Among those who are rich enough to choose their way of life, the particular brand of unendurable boredom from which they suffer is due, paradoxical as this may seem, to their fear of boredom. In flying from the fructifying kind of boredom, they fall a prey to the other far worse kind. A happy life must be to a great extent a quiet life, for it is only in an atmosphere of quiet that true joy can live.

Russell, The Conquest of Happiness, 1, 4

34 Too long a sacrifice
Can make a stone of the heart.
O when may it suffice?

Yeats, Easter 1916

4.7 Pleasure and Pain

1 A man hath no better thing under the sun, than to eat, and to drink, and to be merry: for that shall abide with him of his labour the days of his life, which God giveth him under the sun.

Ecclesiastes 8:15

- 2 *Odysseus*. There is no boon in life more sweet, I say, than when a summer joy holds all the realm, and banqueters sit listening to a harper in a great hall, by rows of tables heaped with bread and roast meat, while a steward goes to dip up wine and brim your cups again. Here is the flower of life, it seems to me!

Homer, Odyssey, IX, 5

- 3 *Herald*. Who, except the gods, can live time through forever without any pain?

Aeschylus, Agamemnon, 553

- 4 *Chorus*. For sufferers it is sweet to know beforehand clearly the pain that still remains for them.

Aeschylus, Prometheus Bounds, 698

- 5 *Phaedrus*. Bodily pleasures... almost always have previous pain as a condition of them, and therefore are rightly called slavish.

Plato, Phaedrus, 258B

- 6 *Socrates*. How singular is the thing called pleasure, and how curiously related to pain, which might be thought to be the opposite of it; for they are never present to a man at the same instant, and yet he who pursues either is generally compelled to take the other; their bodies are two, but they are joined by a single head.

Plato, Phaedo, 60A

7 *Glaucon*. Pleasure deprives a man of the use of his faculties quite as much as pain.

Plato, Republic, III, 402B

8 *Socrates*. He whose desires are drawn towards knowledge in every form will be absorbed in the pleasures of the soul, and will hardly feel bodily pleasure. . . . Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous of having and spending, have no place in his character.

Plato, Republic, VI, 485B

9 *Athenian Stranger*. The true life should neither seek for pleasures, nor, on the other hand, entirely avoid pains, but should embrace the middle state.

Plato, Laws, VII, 792B

10 Since no one nature or state either is or is thought the best for all, neither do all pursue the same pleasure; yet all pursue pleasure. And perhaps they actually pursue not the pleasure they think they pursue nor that which they would say they pursue, but the same pleasure; for all things have by nature something divine in them.

Aristotle, 1153b28

11 The pleasures of creatures different in kind differ in kind, and it is plausible to suppose that those of a single species do not differ. But they vary to no small extent, in the case of men at least; the same things delight some people and pain others, and are painful and odious to some, and pleasant to and liked by others. This happens, too, in the case of sweet things; the same things do not

seem sweet to a man in a fever and a healthy man—nor hot to a weak man and one in good condition. The same happens in other cases. But in all such matters that which appears to the good man is thought to be really so. If this is correct, as it seems to be, and virtue and the good man as such are the measure of each thing, those also will be pleasures which appear so to him, and those things pleasant which he enjoys. If the things he finds tiresome seem pleasant to some one, that is nothing surprising; for men may be ruined and spoilt in many ways; but the things are not pleasant, but only pleasant to these people and to people in this condition. Those which are admittedly disgraceful plainly should not be said to be pleasures, except to a perverted taste; but of those that are thought to be good what kind of pleasure or what pleasure should be said to be that proper to man? Is it not plain from the corresponding activities? The pleasures follow these. Whether, then, the perfect and supremely happy man has one or more activities, the pleasures that perfect these will be said in the strict sense to be pleasures proper to man, and the rest will be so in a secondary and fractional way, as are the activities.

Aristotle, 1176a8

- 12 It is always the first sign of love, that besides enjoying some one's presence, we remember him when he is gone, and feel pain as well as pleasure, because he is there no longer. Similarly there is an element of pleasure even in mourning and lamentation for the departed. There is grief, indeed, at his loss, but pleasure in remembering him and as it were seeing him before us in his deeds and in his life.

Aristotle, Rhetoric, 1370b22

13 We must consider that of desires some are natural, others vain, and of the natural some are necessary and others merely natural; and of the necessary some are necessary for happiness, others for the repose of the body, and others for very life. The right understanding of these facts enables us to refer all choice and avoidance to the health of the body and the soul's freedom from disturbance, since this is the aim of the life of blessedness. For it is to obtain this end that we always act, namely, to avoid pain and fear. And when this is once secured for us, all the tempest of the soul is dispersed, since the living creature has not to wander as though in search of something that is missing, and to look for some other thing by which he can fulfil the good of the soul and the good of the body. For it is then that we have need of pleasure, when we feel pain owing to the absence of pleasure; but when we do not feel pain, we no longer need pleasure. And for this cause we call pleasure the beginning and end of the blessed life. For we recognize pleasure as the first good innate in us, and from pleasure we begin every act of choice and avoidance, and to pleasure we return again, using the feeling as the standard by which we judge every good.

Epicurus, Letter to Menoeceus

14 O miserable minds of men! O blinded breasts! in what darkness of life and in how great dangers is passed this term of life whatever its duration! not choose to see that nature craves for herself no more than this, that pain hold aloof from the body, and she in mind enjoy a feeling of pleasure exempt from care and fear? Therefore we see

that for the body's nature few things are needed at all, such and such only as take away pain.

Lucretius, Nature of Things, II

- 15 If someone maintains that pain is the greatest evil, what part can courage play in his philosophy? Courage is nothing less than indifference to hardship and pain.

Cicero, De Officiis, III, 33

- 16 The best thing we can say about pleasure is to admit that it may add some spice to life. But it certainly adds nothing really suitable.

Cicero, De Officiis, III, 33

- 17 Even when they're over, pleasures of a depraved nature are apt to carry feelings of dissatisfaction, in the same way as a criminal's anxiety doesn't end with the commission of the crime, even if it's undetected at the time. Such pleasures are insubstantial and unreliable; even if they don't do one any harm, they're fleeting in character. Look around for some enduring good instead.

Seneca, Letters to Lucilius, 27

- 18 The better pleasures gained in successful action and effort leave the baser appetites no time or place, and make active and heroic men forget them.

Plutarch, Cimon and Lucullus Compared

- 19 If you are dazzled by the semblance of any promised pleasure, guard yourself against being bewildered by it; but let the affair wait your leisure, and procure yourself some delay. Then bring to your mind both points of time—

that in which you shall enjoy the pleasure, and that in which you will repent and reproach yourself, after you have enjoyed it—and set before you, in opposition to these, how you will rejoice and applaud yourself if you abstain. And even though it should appear to you a seasonable gratification, take heed that its enticements and allurements and seductions may not subdue you, but set in opposition to this how much better it is to be conscious of having gained so great a victory.

Epictetus, Encheiridion, XXXIV

- 20 The pleasure demanded for the Sage's life cannot be in the enjoyments of the licentious or in any gratifications of the body—there is no place for these, and they stifle happiness—nor in any violent emotions—what could so move the Sage?—it can be only such pleasure as there must be where Good is, pleasure that does not rise from movement and is not a thing of process, for all that is good is immediately present to the Sage and the Sage is present to himself: his pleasure, his contentment, stands, immovable.

Plotinus, First Ennead, IV, 12

- 21 In old age . . . [the Sage] will desire neither pains nor pleasures to hamper him; he will desire nothing of this world, pleasant or painful; his one desire will be to know nothing of the body. If he should meet with pain he will pit against it the powers he holds to meet it; but pleasure and health and ease of life will not mean any increase of happiness to him nor will their contraries destroy or lessen it.

Plotinus, First Ennead, IV, 14

22 Men procure the actual pleasures of human life by way of pain—I mean not only the pain that comes upon us unlocked for and beyond our will, but unpleasantness planned and willingly accepted. There is no pleasure in eating or drinking, unless the discomfort of hunger and thirst come before. Drunkards eat salty things to develop a thirst so great as to be painful, and pleasure arises when the liquor quenches the pain of the thirst. And it is the custom that promised brides do not give themselves at once lest the husband should hold the gift cheap unless delay had set him craving.

We see this in base and dishonourable pleasure, but also in the pleasure that is licit and permitted, and again in the purest and most honourable friendship. We have seen it in the ease of him who had been dead and was brought back to life, who had been lost and was found. Universally the greater joy is heralded by greater pain.

Augustine, Confessions, VIII, 3

23 *Philosophy.* All pleasures have this way: those who enjoy them they drive on with stings. Pleasure, like the winged bee, scatters its honey sweet, then flies away, and with a clinging sting it strikes the hearts it touches.

Boethius, Consolation of Philosophy, III

24 Although the name of passion is more appropriate to those passions which have a corruptive and evil tendency, such as bodily ailments, and sadness and fear in the soul, yet some passions are ordered to something good. . . . And in this sense pleasure is called a passion.

Aquinas, Summa Theologica, I-II, 31,1

25 We take pleasure both in those things which we desire naturally, when we get them, and in those things which we desire as a result of reason. But we do not speak of joy except when pleasure follows reason; and so we do not ascribe joy to irrational animals, but only pleasure.

Now whatever we desire naturally can also be the object of reasoned desire and pleasure, and consequently whatever can be the object of pleasure, can also be the object of joy in rational beings. And yet everything is not always the object of joy, since sometimes one feels a certain pleasure in the body without rejoicing in it according to reason. And accordingly pleasure extends to more things than does joy.

Aquinas, Summa Theologica, I-II, 31, 3

26 If ... we compare intellectual pleasures with sensible pleasures according as we delight in the very actions, for instance in sensitive and in intellectual knowledge, without doubt intellectual pleasures are much greater than sensible pleasures. For man takes much more delight in knowing something, by understanding it, than in knowing something by perceiving it with his sense; both because intellectual knowledge is more perfect and because it is better known, since the intellect reflects on its own act more than sense does. Moreover intellectual knowledge is more loved; for there is no one who would not forfeit his bodily sight rather than his intellectual vision in the way beasts or fools are without the latter, as Augustine says in the *City of God*.

If, however, intellectual spiritual pleasures be compared with sensible bodily pleasures, then, in themselves and absolutely speaking, spiritual pleasures are greater. And this appears from the consideration of

the three things needed for pleasure; namely, the good which is brought into conjunction, that to which it is joined, and the union itself. For spiritual good is both greater and more loved than bodily good; a sign of this is that men abstain from even the greatest bodily pleasures, rather than suffer loss of honour which is an intellectual good. Likewise the intellectual part is much more noble and more knowing than the sensitive part. Also the conjunction is more intimate, more perfect and more firm. More intimate, because the senses stop at the outward accidents of a thing, while the intellect penetrates to the essence; for the object of the intellect is what a thing is. More perfect, because the conjunction of the sensible to the sense implies movement, which is an imperfect act; thus sensible pleasures are not wholly together at once, but some part of them is passing away, while some other part is looked forward to as yet to be realized, as is manifest in pleasures of the table and in sexual pleasures. But intelligible things are without movement; hence pleasures of this kind are realized all at once. They are more firm, because the objects of bodily pleasures are corruptible and soon pass away; but spiritual goods are incorruptible.

On the other hand, in relation to us, bodily pleasures are more vehement, for three reasons. First, because sensible things are more known to us than intelligible things. Secondly, because sensible pleasures, through being passions of the sensitive appetite, are accompanied by some alteration in the body; but this does not occur in spiritual pleasures unless by reason of a certain reaction of the superior appetite on the lower. Thirdly, because bodily pleasures are sought as remedies for bodily defects or troubles, from which various griefs

arise. And so bodily pleasures, because they come after griefs of this kind, are felt the more, and consequently are more welcome than spiritual pleasures, which have no contrary griefs.

Aquinas, Summa Theologica, I-II, 31, 5

- 27 Doing good to another may give pleasure in three ways. First, in relation to the effect, which is the good conferred on another. In this respect, since through being united to others by love we look upon their good as being our own, we take pleasure in the good we do to others, especially to our friends, as in our own good. Secondly, in consideration of the end; as when a man, from doing good to another, hopes to get some good for himself, either from God or from man; for hope is a cause of pleasure. Thirdly, in consideration of the principle; and thus, doing good to another can give pleasure in respect of a three-fold principle. One is the power of doing good; and in this regard doing good to another becomes pleasant in so far as it arouses in man an imagination of abundant good existing in him, of which he is able to give others a share. Therefore men take pleasure in their children, and in their own works, as being things on which they bestow a share of their own good. Another principle is a man's habitual inclination to do good, by reason of which doing good becomes connatural to him, for which reason the liberal man takes pleasure in giving to others. The third principle is the motive; for instance when a man is moved by one whom he loves to do good to someone. For whatever we do or suffer for a friend is pleasant, because love is the principle cause of pleasure.

Aquinas, Summa Theologica, I-II, 32, 6

28 Bodily pleasures hinder the use of reason in three ways. First, by distracting the reason ... we attend much to that which pleases us. Now when the attention is firmly fixed on one thing, it is either weakened in respect of other things, or it is entirely withdrawn from them; and thus if the bodily pleasure be great, either it entirely hinders the use of reason, by concentrating the mind's attention on itself, or else it hinders it considerably. Secondly, by being contrary to reason. Because some pleasures, especially those that are in excess, are contrary to the order of reason, and in this sense the Philosopher says that bodily pleasures destroy the estimate of prudence, but not the speculative estimate, to which they are not opposed, for instance that the three angles of a triangle are together equal to two right angles. In the first sense, however, they hinder both estimates. Thirdly, by fettering the reason, in so far as bodily pleasure is followed by a certain alteration in the body, greater even than in the other passions, in proportion as the appetite is more vehemently affected towards a present than towards an absent thing. Now such bodily disturbances hinder the use of reason, as may be seen in the case of drunkards, in whom the use of reason is fettered or hindered.

Aquinas, Summa Theologica, 33, 3

29 Now the greatest good of everything is its last end. And the end ... is twofold: namely, the thing itself, and the use of that thing; thus the miser's end is either money, or the possession of money. Accordingly, man's last end may be said to be either God Who is the Supreme Good absolutely; or the enjoyment of God, which denotes a certain pleasure in the last end. And in this sense a

certain pleasure of man may be said to be the greatest among human goods.

Aquinas, Summa Theologica, I-II, 34, 3

30 Pain itself can be pleasurable accidentally in so far as it is accompanied by wonder, as in stage-plays; or in so far as it recalls a beloved object to one's memory, and makes one feel one's love for the thing, whose absence gives us pain. Consequently, since love is pleasant, both pain and whatever else results from love, in so far as they remind us of our love, are pleasant. And, for this reason, we derive pleasure even from pains depicted on the stage, in so far as, in witnessing them, we perceive ourselves to conceive a certain love for those who are there represented.

Aquinas, Summa Theologica, I-II, 35, 3

31 The greatest of all pleasures consists in the contemplation of truth.

Aquinas, Summa Theologica, I-II, 38, 4

32 Every animal, as soon as it is born, whether rational or brute, loves itself and fears and flees those things which are counter to it, and hates them....

I say, then, that from the beginning it loves itself, although without discrimination. Then it comes to distinguish the things which are most pleasant, and less and more detestable, and follows and flees in greater and less degree according as its consciousness distinguishes not only in other things which it loves secondarily, but just in itself which it loves primarily. And recognising in itself divers parts, it loves those in itself most which are

most noble. And since the mind is a more noble part of man than the body, it loves that more; and thus, loving itself primarily and other things for its own sake, and loving the better part of itself better, it is clear that it loves the mind better than the body or aught else; which mind it ought by nature to love more than aught else. Wherefore if the mind always delights in the exercise of the thing it loves (which is the fruition of love), exercise in that thing which it loves most is the most delightful. The exercise of our mind then is most delightful to us; and that which is most delightful to us constitutes our felicity and our blessedness, beyond which there is no delight, nor any equal to it, as may be seen by whoso well considers the preceding argument.

Dante, Convivio, IV, 22

- 33 This should console us, that in the course of nature, if the pain is violent, it is short; if it is long, it is light. . . . You will not feel it very long, if you feel it too much; it will put an end to itself, or to you; both come to the same thing. If you cannot bear it, it will bear you off.

Montaigne, Essays, I, 14, That the Taste of Good

- 34 But to speak in good earnest, isn't man a miserable animal? Hardly is it in his power, by his natural condition, to taste a single pleasure pure and entire, and still he is at pains to curtail that pleasure by his reason.

Montaigne, Essays, I, 30, Of Moderation

- 35 If we got our headache before getting drunk, we should take care not to drink too much; but pleasure, to deceive us, walks ahead and hides her sequel from us.

Montaigne, Essays, I, 39, Of Solitude

36 When I imagine man besieged by desirable delights—let us put the case that all his members should be forever seized with a pleasure like that of generation at its most excessive point—I feel him sink under the weight of his delight, and I see him wholly incapable of supporting a pleasure so pure, so constant, and so universal. In truth, he flees it when he is in it, and naturally hastens to escape it, as from a place where he cannot stand firm, where he is afraid of sinking.

Montaigne, Essays, II, 20, We Taste Nothing Pure

37 Intemperance is the plague of sensual pleasure; and temperance is not its scourge, it is its seasoning.

Montaigne, Essays, III, 13, Of Experience

38 *Romeo*. He jests at scars that never felt a wound.

Shakespeare, Romeo and Juliet, II, ii, 1

39 *Juliet*. Parting is such sweet sorrow.

Shakespeare, Romeo and Juliet, II, ii, 185

40 *Bolingbroke*. O, who can hold a fire in his hand
By thinking on the frosty Caucasus?
Or cloy the hungry edge of appetite
By bare imagination of a feast?
Or wallow naked in December snow
By thinking on fantastic summer's heat?
O, no! the apprehension of the good
Gives but the greater feeling to the worse:

Fell sorrow's tooth doth never rankle more
Than when he bites, but lanceth not the sore.

Shakespeare, Richard II, I, iii, 294

- 41 *Leonato*. There was never yet philosopher That could endure the toothache patiently. However they have writ the style of gods And made a push at chance and sufferance.

Shakespeare, Much Ado About Nothing, V, i, 35

- 42 The pleasure and delight of knowledge and learning, it far surpasseth all other in nature. For, shall the pleasures of the affections so exceed the pleasure of the sense, as much as the obtaining of desire or victory exceedeth a song or a dinner? and must not of consequence the pleasures of the intellect or understanding exceed the pleasures of the affections? We see in all other pleasures there is satiety, and after they be used, their verdure departeth; which showeth well they be but deceits of pleasure, and not pleasures: and that it was the novelty which pleased, and not the quality.

Bacon, Advancement of Learning, Bk. I, VIII, 5

- 43 The deceiving of the senses is one of the pleasures of the senses.

Bacon, Advancement of Learning, Bk. II, X, 13

- 44 Pleasure ... or delight is the appearance or sense of good; and molestation or displeasure, the appearance or sense of evil. And consequently all appetite, desire, and love is accompanied with some delight more or less; and all

hatred and aversion with more or less displeasure and offence.

Of pleasures, or delights, some arise from the sense of an object present; and those may be called *pleasures of sense* (the word sensual, as it is used by those only that condemn them, having no place till there be laws). Of this kind are all operations and exonerations of the body; as also all that is pleasant, in the sight, hearing, smell, taste, or touch. Others arise from the expectation that proceeds from foresight of the end or consequence of things, whether those things in the sense please or displease: and these are *pleasures of the mind* of him that draweth those consequences, and are generally called joy. In the like manner, displeasures are some in the sense, and called *pain*; others, in the expectation of consequences, and are called *grief*.

Hobbes, Leviathan, I, 6

- 45 The principles of pleasure are not firm and stable. They are different in all men, and they vary to such an extent in each individual that there is no man who differs more from another man than from himself at different times. A man has other pleasures than a woman has; a rich man and a poor man have different pleasures; a prince, a warrior, a merchant, a citizen, a peasant, the old, the young, the well, the sick, all vary in this respect; the slightest accidents change them.

Pascal, Geometrical Demonstration

- 46 *Raphael*. Sense of pleasure we may well
Spare out of life perhaps, and not repine,
But live content, which is the calmest life:

But pain is perfect misery, the worst
Of evils, and excessive, overturns
All patience.

Milton, Paradise Lost, VI, 459

47 The pleasures of sense are really intellectual pleasures confusedly known. Music charms us, although its beauty consists only in the harmonies [*convenances*] of numbers and in the counting (of which we are unconscious but which nevertheless the soul does make) of the beats or vibrations of sounding bodies, which beats or vibrations come together at definite intervals. The pleasure which sight finds in good proportions is of the same nature; and the pleasures caused by the other senses will be found to amount to much the same thing, although we may not be able to explain it so distinctly.

Leibniz, Principles of Nature and of Grace, 17

48 Attention and repetition help much to the fixing any ideas in the memory. But those which naturally at first make the deepest and most lasting impressions, are those which are accompanied with pleasure or pain. The great business of the senses being, to make us take notice of what hurts or advantages the body, it is wisely ordered by nature, as has been shown, that pain should accompany the reception of several ideas; which, supplying the place of consideration and reasoning in children, and acting quicker than consideration in grown men, makes both the old and young avoid painful objects with that haste which is necessary for their preservation; and in both settles in the memory a caution for the future.

49 Amongst the simple ideas which we receive both from sensation and reflection, pain and pleasure are two very considerable ones. For as in the body there is sensation barely in itself, or accompanied with pain or pleasure, so the thought or perception of the mind is simply so, or else accompanied also with pleasure or pain, delight or trouble, call it how you please. These, like other simple ideas, cannot be described, nor their names defined; the way of knowing them is, as of the simple ideas of the senses, only by experience. For, to define them by the presence of good or evil, is no otherwise to make them known to us than by making us reflect on what we feel in ourselves, upon the several and various operations of good and evil upon our minds, as they are differently applied to or considered by us....

Things then are good or evil, only in reference to pleasure or pain. ... By pleasure and pain, I must be understood to mean of body or mind, as they are commonly distinguished; though in truth they be only different constitutions of the mind, sometimes occasioned by disorder in the body, sometimes by thoughts of the mind....

Pleasure and pain and that which causes them,—good and evil, are the hinges on which our passions turn. And if we reflect on ourselves, and observe how these, under various considerations, operate in us; what modifications or tempers of mind, what internal sensations (if I may so call them) they produce in us we may thence form to ourselves the ideas of our passions.

50 Men may and should correct their palates, and give relish to what either has, or they suppose has none. The relish of the mind is as various as that of the body, and like that too may be altered; and it is a mistake to think that men cannot change the displeasingness or indifferency that is in actions into pleasure and desire, if they will do but what is in their power.

Locke, Concerning Human Understanding, Bk. II, XXI, 71

51 The senses have not only that advantage over conscience, which things necessary must always have over things chosen, but they have likewise a kind of prescription in their favour. we feared pain much earlier than we apprehended guilt, and were delighted with the sensations of pleasure before we had capacities to be charmed with the beauty of rectitude.

Johnson, Rambler No. 7

52 The armies of pain send their arrows against us on every side, the choice is only between those which are more or less sharp, or tinged with poison of greater or less malignity; and the strongest armour which reason can supply will only blunt their points, but cannot repel them.

The great remedy which heaven has put in our hands is patience, by which, though we cannot lessen the torments of the body, we can in a great measure procure the peace of the mind, and shall suffer only the natural and genuine force of an evil without heightening its acrimony or prolonging its effects.

Johnson, Rambler No. 32

53 *Johnson*. "When we talk of pleasure, we mean sensual pleasure. When a man says, he had pleasure with a woman, he does not mean conversation, but something of a very different nature. Philosophers tell you, that pleasure is *contrary* to happiness. Gross men prefer animal pleasure. So there are men who have preferred living among savages. Now what a wretch must he be, who is content with such conversation as can be had among savages! You may remember an officer at Fort Augustus, who had served in America, told us of a woman whom they were obliged to bind, in order to get her back from savage life." *Boswell*. "She must have been an animal, a beast." *Johnson*. "Sir, she was a speaking cat."

Boswell, Life of Johnson (Apr. 7, 1778)

54 The universal communicability of a pleasure involves in its very concept that the pleasure is not one of enjoyment arising out of mere sensation, but must be one of reflection.

Kant, Critique of Aesthetic Judgement, 44

55 Epicurus was not wide of the mark when he said that at bottom all gratification is bodily sensation, and only misunderstood himself in ranking intellectual and even practical delight under the head of gratification.

Kant, Critique of Aesthetic Judgement, 54

56 The value of life for us, measured simply by *what we enjoy* (by the natural end of the sum of all our inclinations, that is by happiness), is easy to decide. It is less than nothing. For who would enter life afresh under the same conditions? Who would even do so according to

a new, self-devised plan (which should, however, follow the course of nature), if it also were merely directed to enjoyment?

Kant, Critique of Teleological Judgement, 83, fn. 1

57 The superiority of intellectual to sensual pleasures consists rather in their filling up more time, in their having a larger range, and in their being less liable to satiety, than in their being more real and essential.

Malthus, Population, XI

58 In the pursuit of every enjoyment, whether sensual or intellectual, reason, that faculty which enables us to calculate consequences, is the proper corrective and guide. It is probable, therefore, that improved reason will always tend to prevent the abuse of sensual pleasures, though it by no means follows that it will extinguish them.

Malthus, Population, XI

59 *Emma*. One half of the world cannot understand the pleasures of the other.

Jane Austen, Emma, IX

60 And the small ripple spilt upon the beach
Scarcely o'erpass'd the cream of your champagne.
When o'er the brim the sparkling bumpers reach,
That spring-dew of the spirit! the heart's rain!
Few things surpass old wine; and they may preach
Who please,—the more because they preach in vain,—
Let us have wine and women, mirth and laughter,
Sermons and soda-water the day after.

Man, being reasonable, must get drunk;
The best of life is but intoxication:
Glory, the grape, love, gold, in these are sunk
The hopes of all men, and of every nation;
Without their sap, how branchless were the trunk
Of life's strange tree, so fruitful on occasion:
But to return,—Get very drunk; and when
You wake with headache, you shall see what then.

Byron, Don Juan, 11, 178-179

61 You will find,
Though sages may pour out their wisdom's treasure,
There is no sterner moralist than Pleasure.

Byron, Don Juan, III, 65

62 To enjoy bodily warmth, some small part of you must be cold, for there is no quality in this world that is not what it is merely by contrast. Nothing exists in itself. If you flatter yourself that you are all over comfortable, and have been so a long time, then you cannot be said to be comfortable any more.

Melville, Moby Dick, XI

63 I discovered, though unconsciously and insensibly, that the pleasure of observing and reasoning was a much higher one than that of skill and sport.

Darwin, Autobiography

64 Men lose their high aspirations as they lose their intellectual tastes, because they have not time or opportunity for indulging them; and they addict themselves to inferior pleasures, not because they

deliberately prefer them, but because they are either the only ones to which they have access, or the only ones which they are any longer capable of enjoying. It may be questioned whether any one who has remained equally susceptible to both classes of pleasures, ever knowingly and calmly preferred the lower; though many, in all ages, have broken down in an ineffectual attempt to combine both.

Mill, Utilitarianism, II

65 Now to decide whether this is really so; whether mankind do desire nothing for itself but that which is a pleasure to them, or of which the absence is a pain; we have evidently arrived at a question of fact and experience, dependent, like all similar questions, upon evidence. It can only be determined by practised self-consciousness and self-observation, assisted by observation of others. I believe that these sources of evidence, impartially consulted, will declare that desiring a thing and finding it pleasant, aversion to it and thinking of it as painful, are phenomena entirely inseparable, or rather parts of the same phenomenon; in strictness of language, two different modes of naming the same psychological fact: that to think of an object as desirable (unless for the sake of its consequences), and to think of it as pleasant, are one and the same thing; and that to desire anything, except in proportion as the idea of it is pleasant, is a physical and metaphysical impossibility.

Mill, Utilitarianism, IV

66 It is at the same time indubitable that the replacement of the pleasure-principle by the reality-principle can

account only for a small part, and that not the most intense, of painful experiences. Another and no less regular source of "pain" proceeds from the conflicts and dissociations in the psychic apparatus during the development of the ego towards a more highly coordinated organization. Nearly all the energy with which the apparatus is charged, comes from the inborn instincts, but not all of these are allowed to develop to the same stage. On the way, it over and over again happens that particular instincts, or portions of them, prove irreconcilable in their aims or demands with others which can be welded into the comprehensive unity of the ego. They are, thereupon, split off from this unity by the process of repression, retained on lower stages of psychic development, and for the time being cut off from all possibility of gratification. If they then succeed, as so easily happens with the repressed sex-impulses, in fighting their way through—along circuitous routes—to a direct or a substitutive gratification, this success, which might otherwise have brought pleasure, is experienced by the ego as "pain." In consequence of the old conflict which ended in repression, the pleasure-principle has been violated anew, just at the moment when certain impulses were at work on the achievement of fresh pleasure in pursuance of the principle. The details of the process by which repression changes a possibility of pleasure into a source of "pain" are not yet fully understood, or are not yet capable of clear presentation, but it is certain that all neurotic "pain" is of this kind, is pleasure which cannot be experienced as such.

Freud, Beyond the Pleasure Principle, I

67 The feeling of happiness produced by indulgence of a wild, untamed craving is incomparably more intense than is the satisfying of a curbed desire. The irresistibility of perverted impulses, perhaps the charm of forbidden things generally, may in this way be explained economically.

Freud, Civilization and Its Discontents, 11

4.8 Pity and Envy

1 Now Israel loved Joseph more than all his children, because he was the son of his old age; and he made him a coat of many colours.

And when his brethren saw that their father loved him more than all his brethren, they hated him, and could not speak peaceably unto him.

And Joseph dreamed a dream, and he told it his brethren: and they hated him yet the more.

And he said unto them, Hear, I pray you, this dream which I have dreamed:

For, behold, we were binding sheaves in the field, and, lo, my sheaf arose, and also stood upright; and, behold, your sheaves stood round about, and made obeisance to my sheaf.

And his brethren said to him, Shalt thou indeed reign over us? or shalt thou indeed have dominion over us? And they hated him yet the more for his dreams, and for his words.

And he dreamed yet another dream, and told it his brethren, and said, Behold, I have dreamed a dream

more; and, behold, the sun and the moon and the eleven stars made obeisance to me.

And he told it to his father, and to his brethren: and his father rebuked him, and said unto him. What is this dream that thou hast dreamed? Shall I and thy mother and thy brethren indeed come to bow down ourselves to thee to the earth?

And his brethren envied him; but his father observed the saying. . . ,

And when they saw him afar off, even before he came near unto them, they conspired against him to slay him.

And they said one to another. Behold, this dreamer cometh.

Come now therefore, and let us slay him, and cast him into some pit, and we will say. Some evil beast hath devoured him: and we shall see what will become of his dreams.

And Reuben heard it, and he delivered him out of their hands; and said. Let us not kill him.

And Reuben said unto them, Shed no blood, but cast him into this pit that is in the wilderness, and lay no hand upon him; that he might rid him out of their hands, to deliver him to his father again.

And it came to pass when Joseph was come unto his brethren, that they stript Joseph out of his coat, his coat of many colours that was on him;

And they took him, and cast him into a pit: and the pit was empty, there was no water in it.

And they sat down to eat bread; and they lifted up their eyes and looked, and, behold, a company of Ish-mee-lites came from Gil-e-ad with their camels bearing spicery and balm and myrrh, going to carry it down to Egypt.

And Judah said unto his brethren, What profit is it if we slay our brother, and conceal his blood?

Come, and let us sell him to the Ish-mee-lites, and let not our hand be upon him; for he is our brother and our flesh. And his brethren were content.

Then there passed by Midianites merchantmen; and they drew and lifted up Joseph out of the pit, and sold Joseph to the Ish-mee-lites for twenty pieces of silver: and they brought Joseph into Egypt.

Genesis 37:3-28

- 2 *Agamemnon*. In few men is it part of nature to respect a friend's prosperity without begrudging him, as envy's wicked poison settling to the heart piles up the pain in one sick with unhappiness, who, staggered under sufferings that are all his own, winces again to the vision of a neighbor's bliss.

Aeschylus, Agamemnon, 832

- 3 *Periander*. How much better a thing it is to be envied than pitied.

Herodotus, History, III, 52

- 4 *Pericles*. Men can endure to hear others praised only so long as they can severally persuade themselves of their own ability to equal the actions recounted: when this point is passed, envy comes in and with it incredulity.

Thucydides, Peloponnesian War, 11, 35

- 5 Pity may be defined as a feeling of pain caused by the sight of some evil, destructive or painful, which befalls one who does not deserve it, and which we might expect

to befall ourselves or some friend of ours, and moreover to befall us soon. In order to feel pity, we must obviously be capable of supposing that some evil may happen to us or some friend of ours.... It is therefore not felt by those completely ruined, who suppose that no further evil can befall them, since the worst has befallen them already; nor by those who imagine themselves immensely fortunate—their feeling is rather presumptuous insolence, for when they think they possess all the good things of life, it is clear that the impossibility of evil befalling them will be included, this being one of the good things in question. Those who think evil may befall them are such as have already had it befall them and have safely escaped from it; elderly men, owing to their good sense and their experience; weak men, especially men inclined to cowardice; and also educated people, since these can take long views. Also those who have parents living, or children, or wives; for these are our own, and the evils mentioned above may easily befall them. And those who are neither moved by any courageous emotion such as anger or confidence (these emotions take no account of the future), nor by a disposition to presumptuous insolence (insolent men, too, take no account of the possibility that something evil will happen to them), nor yet by great fear (panic-stricken people do not feel pity, because they are taken up with what is happening to themselves); only those feel pity who are between these two extremes. In order to feel pity we must also believe in the goodness of at least some people; if you think nobody good, you will believe that everybody deserves evil fortune. And, generally, we feel pity whenever we are in the condition of remembering that similar misfortunes

have happened to us or ours, or expecting them to happen in future.

Aristotle, Rhetoric, 1385b13

- 6 Envy is pain at the sight of such good fortune as consists of the good things already mentioned; we feel it towards our equals; not with the idea of getting something for ourselves, but because the other people have it. We shall feel it if we have, or think we have, equals; and by 'equals' I mean equals in birth, relationship, age, disposition, distinction, or wealth. We feel envy also if we fall but a little short of having everything; which is why people in high place and prosperity feel it—they think every one else is taking what belongs to themselves. Also if we are exceptionally distinguished for some particular thing, and especially if that thing is wisdom or good fortune. Ambitious men are more envious than those who are not. So also those who profess wisdom; they are ambitious—to be thought wise. Indeed, generally, those who aim at a reputation for anything are envious on this particular point. And small-minded men are envious, for everything seems great to them.

Aristotle, Rhetoric, 1387b22

- 7 We envy those who are near us in time, place, age, or reputation.... Also our fellow-competitors, who are indeed the people just mentioned— we do not compete with men who lived a hundred centuries ago, or those not yet born, or the dead, or those who dwell near the Pillars of Hercules, or those whom, in our opinion or that of others, we take to be far below us or far above us. So too we compete with those who follow the same ends as

ourselves: we compete with our rivals in sport or in love, and generally with those who are after the same things; and it is therefore these whom we are bound to envy beyond all others.... We also envy those whose possession of or success in a thing is a reproach to us; these are our neighbours and equals; for it is clear that it is our own fault we have missed the good thing in question; this annoys us, and excites envy in us. We also envy those who have what we ought to have, or have got what we did have once. Hence old men envy younger men, and those who have spent much envy those who have spent little on the same thing. And men who have not got a thing, or not got it yet, envy those who have got it quickly. We can also see what things and what persons give pleasure to envious people, and in what states of mind they feel it: the states of mind in which they feel pain are those under which they will feel pleasure in the contrary things. If therefore we ourselves with whom the decision rests are put into an envious state of mind, and those for whom our pity, or the award of something desirable, is claimed are such as have been described, it is obvious that they will win no pity from us.

Aristotle, Rhetoric, 1388a6

- 8 Emulation is pain caused by seeing the presence, in persons whose nature is like our own, of good things that are highly valued and are possible for ourselves to acquire; but it is felt not because others have these goods, but because we have not got them ourselves. It is therefore a good feeling felt by good persons, whereas envy is a bad feeling felt by bad persons.

Aristotle, Rhetoric, 1388a30

9 The envious person wastes at the thriving condition of another; Sicilian tyrants never invented a greater torment than envy.

Horace, Epistles, I, 2

10 When you hear the name of someone who has become famous on account of a particular merit or achievement, you yap like puppies when they encounter strangers.

Seneca, On the Happy Life, XIX

11 Folly has habituated us to live with a view to others rather than to ourselves, and our nature holds so much envy and malice that our pleasure in our own advantages is not so great as our distress at others.

Plutarch, Contentment

12 When a man has done thee any wrong, immediately consider with what opinion about good or evil he has done wrong. For when thou hast seen this, thou wilt pity him, and wilt neither wonder nor be angry,

Marcus Aurelius, Meditations, VII, 26

13 The proud are without pity, because they despise others, and think them wicked, so that they account them as suffering deservedly whatever they suffer.

Aquinas, Summa Theologica, II-II, 30, 2

14 *Falcon*. That pity wells up soon in gentle heart,
Feeling its likeness in all pains that smart.
Is proved, and day by day, as men may see,
As well by deeds as by authority;
For gentle heart can spy out gentleness.

Chaucer, Canterbury Tales: Squire's Tale

15 He who asks for pity without reason is a man not to be pitied when there is reason. To be always lamenting for ourselves is the way never to be lamented; by continually putting on a pitiful act, we become pitiable to no one. He who acts dead when still alive is subject to be thought alive when dying. I have seen it get some people's goat to be told that their color was good and their pulse even; I have seen them restrain their laughter because it betrayed their recovery, and hate health because it was not pitiable. What is more, they were not women.

Montaigne, Essays, III, 9, Of Vanity

16 *Caesar*. Let me have men about me that are fat;
Sleek-headed men and such as sleep o' nights;
Yond Cassius has a lean and hungry look;
He thinks too much; such men are dangerous;
 Antony. Fear him not, Caesar; he's not dangerous;
He is a noble Roman and well given.
 Caes. Would he were fatter! But I fear him not:
Yet if my name were liable to fear,
I do not know the man I should avoid
So soon as that spare Cassius. He reads much;
He is a great observer and he looks
Quite through the deeds of men; he loves no plays,
As thou dost, Antony; he hears no music;
Seldom he smiles, and smiles in such a sort
As if he mock'd himself and scorn'd his spirit
That could be moved to smile at anything.
Such men as he be never at heart's ease
Whiles they behold a greater than themselves,
And therefore are they very dangerous.

I rather tell thee what is to be fear'd
Than what I fear; for always I am Caesar.

Shakespeare, Caesar, I, ii, 192

17 *Othello*. Ay, let her rot, and perish, and be damned tonight; for she shall not live. No, my heart is turned to stone; I strike it, and it hurts my hand. O, the world hath not a sweeter creature! She might lie by an emperor's side and command him tasks.

Iago. Nay, that's not your way.

Oth. Hang her! I do but say what she is; so delicate with her needle; an admirable musician: O! she will sing the savageness out of a bear. Of so high and plenteous wit and invention—

Iago. She's the worse for all this.

Oth. O, a thousand thousand times. And then, of so gentle a condition!

Iago. Ay, too gentle.

Oth. Nay, that's certain; but yet the pity of it, Iago! O Iago, the pity of it, Iago!

Shakespeare, Othello, IV, i, 191

18 *Macbeth*. This Duncan
Hath borne his faculties so meek, hath been
So clear in his great office, that his virtues
Will plead like angels, trumpet-tongued, against
The deep damnation of his taking-off;
And pity, like a naked new-born babe,
Striding the blast, or heaven's cherubim, horsed
Upon the sightless couriers of the air,
Shall blow the horrid deed in every eye,
That tears shall drown the wind.

Shakespeare, Macbeth, I, vii, 16

19 Envy keeps no holidays.

Nothing but death can reconcile envy to virtue.

Bacon, Advancement of Learning, Bk. VI, III, 16

20 Deformed persons, and eunuchs, and old men, and bastards, are envious. For he that cannot possibly mend his outi case, will do what he can to impair another's.

Bacon, Of Envy

21 The consideration of the present good excites joy in us, and that of evil, sadness, when it is a good or an evil which is represented as belonging to us.... But when it is represented to us as pertaining to other men, we may esteem them either as worthy or unworthy of it; and when we esteem them worthy, that does not excite in us any other passion but joy, inasmuch as it is some satisfaction to us to see that things happen as they should. There is only this difference, that the joy that comes from what is good is serious, while what comes from evil is accompanied by laughter and mockery. But if we esteem them unworthy of it, the good excites envy and the evil pity, which are species of sadness.

Descartes, Passions of the Soul, LXI-LXII

22 Pity is a species of sadness, mingled with love or good-will towards those whom we see suffering some evil of which we consider them undeserving. It is thus contrary to envy by reason of its object, and to scorn because it considers its objects in another way.... Those who feel themselves very feeble and subject to the adversities of fortune appear to be more disposed to this passion than

others, because they represent the evil of others as possibly occurring to themselves; and then they are moved to pity more by the love that they bear to themselves than by that which they bear to others.

Descartes, Passions of the Soul, CLXXXV-GLXXXVI

- 23 Pity is imagination or fiction of future calamity to ourselves, proceeding from the sense of another man's calamity. But when it lighteth on such as we think have not deserved the same, the compassion is greater, because there then appeareth more probability that the same may happen to us; for the evil that happeneth to an innocent man may happen to every man.

Hobbes, Human Nature, IX

- 24 A man who lives according to the dictates of reason endeavours as much as possible to prevent himself from being touched by pity.

The man who has properly understood that everything follows from the necessity of the divine nature, and comes to pass according to the eternal law's and rules of nature, will in truth discover nothing which is worthy of hatred, laughter, or contempt, nor will he pity any one, but, so far as human virtue is able, he will endeavour to *do well*, as we say, and to *rejoice*. We must add also, that a man who is easily touched by the affect of pity, and is moved by the misery or tears of another, often does something of which he afterward repents, both because from an affect we do nothing which we certainly know to be good, and also because we are so easily deceived by false tears. But this I say expressly of the man who lives according to the guidance of reason. For he who is moved

neither by reason nor pity to be of any service to others is properly called inhuman; for he seems to be unlike a man.

Spinoza, Ethics, IV, Prop. 50, Corol; Schol.

- 25 It is a secret well known to great men, that, by conferring an obligation, they do not always procure a friend, but are certain of creating many enemies.

Fielding, Tom Jones, I, 9

- 26 It is good proverb which says that "it is better to be envious than to have pity." Let us be envious, therefore, as hard as we can.

Voltaire, Philosophical Dictionary: Envy

- 27 Most of the misery which the defamation of blameless actions, or the obstruction of honest endeavours brings upon the world, is inflicted by men that propose no advantage to themselves but the satisfaction of poisoning the banquet which they cannot taste, and blasting the harvest which they have no right to reap.

Johnson, Rambler No. 183

- 28 *Johnson.* Pity is not natural to man. Children are always cruel. Savages are always cruel. Pity is acquired and improved by the cultivation of reason.

Boswell, Life of Johnson (July 20, 1763)

- 29 *Johnson.* If a madman were to come into this room with a stick in his hand, no doubt we should pity the state of his mind; but our primary consideration would be to take

care of ourselves. We should knock him down first, and pity him afterwards.

Boswell, Life of Johnson (Apr. 3, 1776)

30 Once, when midnight smote the air,
Eunuchs ran through Hell and met
On every crowded street to stare
Upon great Juan riding by:
Even like these to rail and sweat
Staring upon his sinewy thigh.

Yeats, On Those That Hated 'The Playboy of the Western World,' 1907

31 True pity consists not so much in fearing suffering as in desiring it. The desire is a faint one and we should hardly wish to see it realized; yet we form it in spite of ourselves, as if Nature were committing some great injustice and it were necessary to get rid of all suspicion of complicity with her.

Bergson, Time and Free Will, I

4.9 Greed and Avarice

1 He that loveth silver shall not be satisfied with silver; nor he that loveth abundance with increase: this is also vanity.

Ecclesiastes 5:10

2 He who will be covetous, will also be anxious: but he that lives in a state of anxiety, will never in my estimation be

free.

Horace, Epistles, I, 16

3 And he said unto them. Take heed, and beware of covetousness: for a man's life consisteth not in the abundance of the things which he possesseth.. . . Therefore I say unto you, Take no thought for your life, what ye shall eat; neither for the body, what ye shall put on.

The life is more than meat, and the body is more than raiment....

Consider the lilies how they grow: they toil not, they spin not; and yet I say unto you, that Solomon in all his glory was not arrayed like one of these.

If then God so clothe the grass, which is to day in the field, and tomorrow is cast into the oven; how much more will he clothe you, O ye of little faith?

And seek not ye what ye shall eat, or what ye shall drink, neither be ye of doubtful mind.

For all these things do the nations of the world seek after: and your Father knoweth that ye have need of these things.

But rather seek ye the kingdom of God; and all these things shall be added unto you.

Fear not, little flock; for it is your Father's good pleasure to give you the kingdom.

Sell that ye have, and give alms; provide yourselves bags which wax not old, a treasure in the heavens that faileth not, where no thief approacheth, neither moth corrupteth.

For where your treasure is, there will your heart be also.

Luke 12:15-34

4 Here saw I too many more than elsewhere, both on the one side and on the other, with loud howlings, rolling weights by force of chests;

they smote against each other, and then each wheeled round just there, rolling aback, shouting "Why boldest thou?" and "Why throwest thou away?"

Thus they returned along the gloomy circle, on either hand, to the opposite point, [again] shouting [at each other] their reproachful measure.

Then every one, when he had reached it, turned through his half-circle towards the other joust. And I, who felt my heart as it were stung,

said: "My Master, now shew me what people these are; and whether all those tonsured on our left were of the clergy."

And he to me: "In their first life, all were so squint-eyed in mind, that they made no expenditure in it with moderation.

Most clearly do their voices bark out this, when they come to the two points of the circle, where contrary guilt divides them.

These were Priests, that have not hairy covering on their heads, and Popes and Cardinals, in whom avarice does its utmost."

And I: "Master, among this set, I surely ought to recognise some that were defiled by these evils."

And he to me; "Vain thoughts combinest thou; their undiscerning life, which made them sordid, now makes them too obscure for any recognition.

To all eternity they shall continue butting one another; these shall arise from their graves with closed fists; and

these with hair shorn off.

Ill-giving, and ill-keeping, has deprived them of the bright world, and put them to this conflict; what a conflict it is, I adorn no words to tell."

Dante, Inferno, VII, 25

5 I stand up like a scholar in pulpit.

And when the ignorant people all do sit,
I preach, as you have heard me say before.
And tell a hundred false japes, less or more.
I am at pains, then, to stretch forth my neck,
And cast and west upon the folk I beck.
As does a dove that's sitting on a barn.
With hands and swift tongue, then, do I so yarn
That it's a joy to see my busyness.
Of avarice and of all such wickedness
Is all my preaching, thus to make them free
With offered pence, the which pence come to me.
For my intent is only pence to win,
And not at all for punishment of sin.

Chaucer, Canterbury Tales: Pardoner's Tale, Prologue

6 I preach no sermon, save for covetousness.

For that my theme is yet, and ever was,
'*Radix malorum est cupiditas.*'
Thus can I preach against that self-same vice
Which I indulge, and that is avarice.

Chaucer, Canterbury Tales: Pardoner's Tale, Prologue

7 The wish to acquire is in truth very natural and common,
and men always do so when they can, and for this they
will be praised not blamed; but when they cannot do so,

yet wish to do so by any means, then there is folly and blame.

Machiavelli, Prince, III

8 *Shylock*. How now. Tubal! what news from Genoa? hast thou found my daughter?

Tubal. I often came where I did hear of her, but cannot find her.

Shy. Why, there, there, there, there! a diamond gone, cost me two thousand ducats in Frankfort! The curse never fell upon our nation till now; I never felt it till now: two thousand ducats in that; and other precious, precious jewels. I would my daughter were dead at my foot, and the jewels in her ear! would she were hearsed at my foot, and the ducats in her coffin! No news of them? Why, so: and I know not what's spent in the search: why, thou loss upon loss! the thief gone with so much, and so much to find the thief; and no satisfaction, no revenge: nor no ill luck stirring but what lights on my shoulders; no sighs but of my breathing; no tears but of my shedding.

Tub. Yes, other men have ill luck too: Antonio, as I heard in Genoa—

Shy. What, what, what? ill luck, ill luck?

Tub. Hath an argosy cast away, coming from Tripolis.

Shy. I thank God, I thank God. Is't true, is't true?

Tub. I spoke with some of the sailors that escaped the wreck.

Shy. I thank thee, good Tubal: good new's, good new's! ha, ha! where? in Genoa?

Tub. Your daughter spent in Genoa, as I heard, in one night fourscore ducats.

Shy. Thou stickest a dagger in me: I shall never see my gold again: fourscore ducats at a sitting! fourscore

ducats.

Tub. There came divers of Antonio's creditors in my company to Venice, that swear he cannot choose but break.

Shy. I am very glad of it: I'll plague him; I'll torture him: I am glad of it.

Tub. One of them showed me a ring that he had of your daughter for a monkey.

Sky. Out upon her! Thou torturest me. Tubal: it was my turquoise; I had it of Leah when I was a bachelor: I would not have given it for a wilderness of monkeys.

Shakespeare, Merchant of Venice, III, i, 85

9 *Brutus.* Let me tell you, Cassius, you yourself Are much condemn'd to have an itching palm.

Shakespeare, Julius Caesar, IV, iii, 9

10 It almost always happens that the man who grows rich changes his notions of poverty, states his wants by some new measure, and from Hying the enemy that pursued him bends his endeavours to overtake those whom he sees before him. The power of gratifying his appetites increases their demands; a thousand wishes crowd in upon him, importunate to be satisfied, and vanity and ambition open prospects to desire, which still grow wider as they are more contemplated.

Johnson, Rambler No. 38

11 Many there are who openly and almost professedly regulate all their conduct by their love of money, who have no reason for action or forbearance, for compliance or refusal, than that they hope to gain more by one than

by the other. These are indeed the meanest and cruellest of human beings, a race with whom, as with some pestiferous animals, the whole creation seems to be at war, but who, however detested or scorned, long continue to add heap to heap, and when they have reduced one to beggary are still permitted to fasten on another.

Johnson, Rambler No. 175

- 12 *Johnson*. No man was born a miser, because no man was born to possession. Every man is born *cupidus* —desirous of getting; but not *avarus* —desirous of keeping.

Boswell, Life of Johnson (Apr. 25, 1778)

- 13 All for ourselves and nothing for other people, seems, in every age of the world, to have been the vile maxim of the masters of mankind.

Adam Smith, Wealth of Nations, III, 4

- 14 Avarice is an insatiate and universal passion; since the enjoyment of almost every object that can afford pleasure to the different tastes and tempers of mankind may be procured by the possession of wealth.

Gibbon, Decline and Fall of the Roman Empire, XXXI

- 15 Oh! But he was a tight-fisted hand at the grindstone, Scrooge! a squeezing, wrenching, grasping, scraping, clutching, covetous old sinner! Hard and sharp as flint, from which no steel had ever struck out generous fire; secret, and self-contained, and solitary as an oyster.

Dickens, A Christmas Carol, I

16 With the very earliest development of the circulation of commodities, there is also developed the necessity, and the passionate desire, to hold fast the product of the first metamorphosis. This product is the transformed shape of the commodity, or its gold chrysalis. Commodities are thus sold not for the purpose of buying others, but in order to replace their commodity form by their money form. From being the mere means of effecting the circulation of commodities, this change of form becomes the end and aim. The changed form of the commodity is thus prevented from functioning as its unconditionally alienable form, or as its merely transient money form. The money becomes petrified into a hoard, and the seller becomes a hoarder of money.

Marx, Capital, Vol. I, I, 3

17 With the possibility of holding and storing up exchange value in the shape of a particular commodity arises also the greed for gold. Along with the extension of circulation, increases the power of money, that absolutely social form of wealth ever ready for use. "Gold is a wonderful thing! Whoever possesses it is lord of all he wants. By means of gold one can even get souls into Paradise." (Columbus in his letter from Jamaica, 1503.) Since gold does not disclose what has been transformed into it, everything, commodity or not, is convertible into gold. Everything becomes saleable and buyable. Circulation becomes the great social retort into which everything is thrown, to come out again as crystallized gold. Not even are the bones of Saints, and still less are more delicate *red sacrosancta extra commercium hominum* able to withstand this alchemy. Just as every qualitative difference between commodities is

extinguished in money, so money, on its side, like the radical leveller that it is, does away with all distinctions. But money itself is a commodity, an external object, capable of becoming the private property of any individual. Thus social power becomes the private power of private persons. The ancients therefore denounced money as subversive of the economic and moral order of things. Modern society, which, soon after its birth, pulled Plutus by the hair of his head from the bowels of the earth, greets gold as its Holy Grail, as the glittering incarnation of the very principle of its own life.

Marx, Capital, Vol. 1, I, 3

- 18 Capital has not invented surplus labour. Wherever a part of society possesses the monopoly of the means of production, the labourer, free or not free, must add to the working time necessary for his own maintenance an extra working time in order to produce the means of subsistence for the owners of the means of production, whether this proprietor be the Athenian [nobleman], Etruscan theocrat, [Roman citizen], Norman baron, American slave owner, Wallachian boyard, modern landlord or capitalist. It is, however, clear that in any given economic formation of society, where not the exchange value but the use-value of the product predominates, surplus labour will be limited by a given set of wants which may be greater or less, and that here no boundless thirst for surplus labour arises from the nature of the production itself. Hence, in antiquity overwork becomes horrible only when the object is to obtain exchange value in its specific independent money form; in the production of gold and silver. Compulsory working to death is here the recognized form of overwork.

Only read Diodorus Siculus. Still, these are exceptions in antiquity. But as soon as people, whose production still moves within the lower forms of slave-labour, corvee-labour, etc., are drawn into the whirlpool of an international market dominated by the capitalistic mode of production, the sale of their products for export becoming their principal interest, the civilized horrors of overwork are grafted on the barbaric horrors of slavery, serfdom, etc. Hence, the negro labour in the Southern States of the American Union preserved something of a patriarchal character, so long as production was chiefly directed to immediate local consumption. But in proportion, as the export of cotton became of vital interest to these states, the overworking of the negro and sometimes the using up of his life in seven years' of labour became a factor in a calculated and calculating system. It was no longer a question of obtaining from him a certain quantity of useful products. It was now a question of production of surplus labour itself.

Marx, Capital, Vol. I, III, 10

- 19 It is self-evident that the labourer is nothing else, his whole life through, but labour power, that, therefore, all his disposable time is by nature and law labour time, to be devoted to the self-expansion of capital. Time for education, for intellectual development, for the fulfilling of social functions and for social intercourse, for the free play of his bodily and mental activity, even the rest time of Sunday (and that in a country of Sabbatarians!)--moonshine! But in its blind unrestrainable passion, its werewolf hunger for surplus labour, capital oversteps not only the moral, but even the merely physical maximum bounds of the working day. It usurps the time for growth,

development, and healthy maintenance of the body. It steals the time required for the consumption of fresh air and sunlight. It higgles over a meal time, incorporating it where possible with the process of production itself, so that food is given to the labourer as to a mere means of production, as coal is supplied to the boiler, grease and oil to the machinery. It reduces the sound sleep needed for the restoration, reparation, refreshment of the bodily powers to just so many hours of torpor as the revival of an organism, absolutely exhausted, renders essential. It is not the normal maintenance of the labour power which is to determine the limits of the working day; it is the greatest possible daily expenditure of labour power, no matter how diseased, compulsory, and painful it may be, which is to determine the limits of the labourers' period of repose. Capital cares nothing for the length of life of labour power. All that concerns it is simply and solely the maximum of labour power that can be rendered fluent in a working day. It attains this end by shortening the extent of the labourer's life, as a greedy farmer snatches increased produce from the soil by robbing it of its fertility.

Marx, Capital, Vol. I, III, 10

20 From its first day to this, sheer greed was the driving spirit of civilization; wealth and again wealth and once more wealth, wealth, not of society, but of the single scurvy individual—here was its one and final aim.

Engels, Origin of the Family, IX

4.10 Jealousy

- 1 Jealousy is cruel as the grave: the coals thereof are coals of fire, which hath a most vehement flame.

Song of Solomon 8:6

- 2 With ambitious natures, otherwise not ill qualified for command, the feeling of jealousy of those near them in reputation continually stands in the way of the performance of noble actions; they make those their rivals in virtue, whom they ought to use as their helpers to it.

Plutarch, Lysander

- 3 *Cressida*. "Another shame is this, that folk abuse True love and say, 'Yea, jealousy is love!' A bushel of venom such folk will excuse If but a grain of love therein they shove. But God knows this, who lives and reigns above, If it be liker love or liker hate, And by its name we should it designate.

"Some sorts of jealousy, I will confess,
Are more excusable than other kinds,
As when there's cause, or when folk long repress
Some harsh fantastic notion in their minds,
Which in expression no free outlet finds,
And on itself it thus doth grow and feed;
For such repression is a gentle deed.

"And some are filled with fury and despite
So full that it surpasses all restraint—
But, sweetheart, you are not in such plight,
Thank God, and all your grieving and your plaint,

I call it an illusive lover's taint
From love's excess, and from anxiety."

Chaucer, Troilus and Cressida, III, 147-149

- 4 Whatever justice there may be in jealousy, it still remains to be seen whether its agitation is really useful. Is there someone who thinks to shackle women by his ingenuity?... What occasion will not be enough for them in so knowing an age?

Curiosity is vicious in all things, but here it is pernicious. It is folly to want to be enlightened about a disease for which there is no medicine that does not make it worse and aggravate it; the shame of which is increased and made public principally by jealousy; revenge for which wounds our children more than it cures us. You dry up and die in quest of a proof so obscure,

Montaigne, Essays, III, 5, On Some Verses of Virgil

- 5 *Iago*. O, beware, my lord, of jealousy;
It is the green-eyed monster which doth mock
The meat it feeds on. That cuckold lives in bliss
Who, certain of his fate, loves not his wronger;
But, O, what damned minutes tells he o'er
Who dotes, yet doubts, suspects, yet strongly loves!

Othello. O misery!

Iago. Poor and content is rich and rich enough,
But riches fineless is as poor as winter
To him that ever fears he shall be poor.
Good heaven, the souls of all my tribe defend
From jealous!

Oth. Why, why is this?

Think'st thou I'd make a life of jealousy,

To follow still the changes of the moon
With fresh suspicions? No; to be once in doubt
Is once to be resolved. Exchange me for a goat,
When I shall turn the business of my soul
To such exsufflicate and blown surmises,
Matching thy inference. 'Tis not to make me jealous
To say my wife is fair, feeds well, loves company,
Is free of speech, sings, plays, and dances well;
Where virtue is, these are more virtuous.
Nor from mine own weak merits will I draw
The smallest fear or doubt of her revolt;
For she had eyes, and chose me. No, Iago;
I'll see before I doubt; when I doubt, prove;
And on the proof, there is no more but this—
Away at once with love or jealousy!

Shakespeare, Othello, III, iii, 165

- 6 *Iago*. Not poppy, nor mandragora,
Nor all the drowsy syrups of the world,
Shall ever medicine thee to that sweet sleep
Which thou owedst yesterday.
Othello. Ha! ha! false to me?
Iago. Why, how now, general! no more of that.
Oth. Avaunt! be gone! thou hast set me on the rack.
I swear 'tis better to be much abused
Than but to know 't a little.
Iago. How now, my lord!
Oth. What sense had I of her stol'n hours of lust?
I saw't not, thought it not, it harm'd not me.
I slept the next night well, was free and merry;
I found not Cassio's kisses on her lips.
He that is robb'd, not wanting what is stol'n,
Let him not know 't, and he's not robb'd at all.

Iago. I am sorry to hear this.

Oth. I had been happy, if the general camp,
Pioners and all, had tasted her sweet body,
So I had nothing known. O, now, for ever
Farewell the tranquil mind! farewell content!
Farewell the plumed troop, and the big wars,
That make ambition virtue! O, farewell!
Farewell the neighing steed, and the shrill trump,
The spirit-stirring drum, the ear-piercing fife,
The royal banner, and all quality,
Pride, pomp, and circumstance of glorious war!
And, O you mortal engines, whose rude throats
The immortal Jove's dread clamours counterfeit,
Farewell! Othello's occupation's gone!

Iago. Is't possible, my lord?

Oth. Villain, be sure thou prove my love a whore,
Be sure of it; give me the ocular proof;
Or, by the worth of man's eternal soul.
Thou hadst been better have been born a dog
Than answer my waked wrath!

Iago. Is't come to this?

Oth. Make me to see't; or, at the least, so prove it
That the probation bear no hinge nor loop
To hang a doubt on; or woe upon thy life!

Iago. My noble lord—

Oth. If thou dost slander her and torture me,
Never pray more; abandon all remorse;
On horror's head horrors accumulate;
Do deeds to make heaven weep, all earth amazed;
For nothing canst thou to damnation add
Greater than that.

Shakespeare, Othello, III, iii, 330

7 *Desdemona*. Alas the day! I never gave him cause.

Emilia. But jealous souls will not be answer'd so;
They are not ever jealous for the cause,
But jealous for they are jealous, 'Tis a monster
Begot upon itself, born on itself.

Shakespeare, Othello, III, iv, 158

8 *Leontes*. Ha' not you seen, Camillo—

But that's past doubt, you have, or your eyeglass
Is thicker than a cuckold's horn—or heard—
For to a vision so apparent rumour
Cannot be mute—or thought—for cogitation
Resides not in that man that does not think—
My wife is slippery? If thou wilt confess.
Or else be impudently negative,
To have nor eyes nor cars nor thought, then say
My wife's a hobby-horse, deserves a name
As rank as any flax-wench that puts to
Before her troth-plight; sayt and justify!.

Camillo. I would not be a stander-by to hear
My sovereign mistress clouded so, without
My present vengeance taken. 'Shrew my heart,
You never spoke what did become you less
Than this; which to reiterate were sin
As deep as that, though true.

Leon. Is whispering nothing?
Is leaning cheek to cheek? is meeting noses?
Kissing with inside lip? stopping the career
Of laughter with a sigh?—a note infallible
Of breaking honesty—horsing foot on foot?
Skulking in corners? wishing clocks more swift?
Hours, minutes? noon, midnight? and all eyes
Blind with the pin and web but theirs, theirs only,

That would unseen be wicked? Is this nothing?
Why, then the world and all that's in't is nothing;
The covering sky is nothing; Bohemia nothing;
My wife is nothing; nor nothing have these nothings,
If this be nothing.

Cam. Good my lord, be cured
Of this diseased opinion, and betimes;
For 'tis most dangerous.

Leon. Say it be, 'tis true.

Cam. No, no, my lord.

Leon. It is; you lie, you lie,

Shakespeare, Winters Tale, I, ii, 267

- 9 Jealousy is a species of fear which is related to the desire we have to preserve to ourselves the possession of some thing; and it does not so much proceed from the strength of the reasons that suggest the possibility of our losing that good, as from the high estimation in which we hold it, and which is the cause of our examining even the minutest subjects of suspicion, and taking them to be very considerable reasons for anxiety.

Descartes, Passions of the Soul, CLXVII

- 10 It is, indeed, very possible for Jealous persons to kill the objects of their jealousy, but not to hate them.

Fielding, Tom Jones, VII, 4

- 11 It is hard to imagine what some jealous men can make up their mind to and overlook, and what they can forgive! The jealous are the readiest of all to forgive, and all women know it. The jealous man can forgive extraordinarily quickly (though, of course, after a violent

scene), and he is able to forgive infidelity almost conclusively proved, the very kisses and embraces he has seen, if only he can somehow be convinced that it has all been "for the last time," and that his rival will vanish from that day forward, will depart to the ends of the earth, or that he himself will carry her away somewhere, where that dreaded rival will not get near her. Of course the reconciliation is only for an hour. For, even if the rival did disappear next day, he would invent another one and would be jealous of him. And one might wonder what there was in a love that had to be so watched over, what a love could be worth that needed such strenuous guarding. But that the jealous will never understand. And yet among them are men of noble hearts. It is remarkable, too, that those very men of noble hearts, standing hidden in some cupboard, listening and spying, never feel the stings of conscience at that moment, anyway, though they understand clearly enough with their "noble hearts" the shameful depths to which they have voluntarily sunk.

Dostoevsky, Brothers Karamazov, Ft. III, VIII, 3

4.11 Pride and Humility

- 1 Pride goeth before destruction, and an haughty spirit before a fall.

Proverbs 16:18

- 2 *Chorus.* The curse on great daring shines clear; it wrings atonement from those high hearts that drive to evil,

from houses blossoming to pride
and peril.

Aeschylus, Agamemnon, 374

- 3 *Creon*. The rigid spirits are the first to fall.
The strongest iron, hardened in the fire,
most often ends in scraps and shatterings.

Sophocles, Antigone, 473

- 4 *Athena*. The gods
Love men of steady sense and hate the proud.

Sophocles, Ajax, 132

- 5 *Messenger*. Whenever men forget their mere man's nature,
Thinking a thought too high, they have no use
Of their huge bulk and boldness, but they fall
On most untoward disasters sent by Heaven.
Ajax, even when he first set out from home,
Proved himself foolish, when his father gave him
His good advice at parting. 'Child,' he said,
'Resolve to win, but always with God's help.'
But Ajax answered with a senseless boast:
'Father, with God's help even a worthless man
Could triumph. I propose, without that help,
To win my prize of fame.'

Sophocles, Ajax, 758

- 6 *Hecuba*. We boast, are proud, we plume our confidence—
the rich man in his insolence of wealth,
the public man's conceit of office or success—
and we are nothing; our ambition, greatness, pride,
all vanity.

Euripides, Hecuba, 623

7 *Electra*. There is no form of anguish with a name—
no suffering, no fate, no fall
inflicted by heaven, however terrible—
whose tortures human nature could not bear
or might not have to bear.

I think of Tantalus,
born—or so they say—the son of Zeus himself
and blessed by birth and luck as few men are:
happy Tantalus....

I do not mock his fall,
and yet that same Tantalus now writhes and trembles
in terror of the rock that overhangs his head,
though even as a man he sat as honored equal
at the table of the gods, but could not hold his tongue,
being sick with pride.

Euripides, Orestes, 1

8 *Syracusan generals and Gylippus*. When men are once
checked in what they consider their special excellence,
their whole opinion of themselves suffers more than if
they had not at first believed in their superiority, the
unexpected shock to their pride causing them to give
way more than their real strength warrants.

Thucydides, Peloponnesian War, VII, 66

9 *Socrates*. The three kinds of vain conceit... the vain
conceit of beauty, of wisdom, and of wealth, are
ridiculous if they are weak, and detestable when they are
powerful.

Plato, Philebus, 49B

10 Pride seems even from its name to be concerned with great things; what sort of great things, is the first question we must try to answer. It makes no difference whether we consider the state of character or the man characterized by it. Now the man is thought to be proud who thinks himself worthy of great things, being worthy of them; for he who does so beyond his deserts is a fool, but no virtuous man is foolish or silly. The proud man, then, is the man we have described. For he who is worthy of little and thinks himself worthy of little is temperate, but not proud; for pride implies greatness, as beauty implies a good-sized body, and little people may be neat and well-proportioned but cannot be beautiful. On the other hand, he who thinks himself worthy of great things, being unworthy of them, is vain; though not every one who thinks himself worthy of more than he really is worthy of is vain. The man who thinks himself worthy of less than he is really worthy of is unduly humble, whether his deserts be great or moderate, or his deserts be small but his claims yet smaller. And the man whose deserts are great would seem most unduly humble; for what would he have done if they had been less? The proud man, then, is an extreme in respect of the greatness of his claims, but a mean in respect of the rightness of them; for he claims what is in accordance with his merits, while the others go to excess or fall short.

If, then, he deserves and claims great things, and above all the great things, he will be concerned with one thing in particular. Desert is relative to external goods; and the greatest of these, we should say, is that which we render to the gods, and which people of position most aim at, and which is the prize appointed for the noblest deeds; and this is honour; that is surely the greatest of

external goods. Honours and dishonours, therefore, are the objects with respect to which the proud man is as he should be. And even apart from argument it is with honour that proud men appear to be concerned; for it is honour that they chiefly claim, but in accordance with their deserts, The unduly humble man falls short both in comparison with his own merits and in comparison with the proud man's claims. The vain man goes to excess in comparison with his own merits, but does not exceed the proud man's claims.

Now the proud man, since he deserves most, must be good in the highest degree; for the better man always deserves more, and the best man most. Therefore the truly proud man must be good. And greatness in every virtue would seem to be characteristic of a proud man. And it would be most unbecoming for a proud man to fly from danger, swinging his arms by his sides, or to wrong another; for to what end should he do disgraceful acts, he to whom nothing is great? If we consider him point by point we shall see the utter absurdity of a proud man who is not good. Nor, again, would he be worthy of honour if he were bad; for honour is the prize of virtue, and it is to the good that it is rendered. Pride, then, seems to be a sort of crown of the virtues; for it makes them greater, and it is not found without them. Therefore it is hard to be truly proud; for it is impossible without nobility and goodness of character.

Aristotle, Ethics, 1123b34

- 11 A slow step is thought proper to the proud man, a deep voice, and a level utterance; for the man who takes few things seriously is not likely to be hurried, nor the man who thinks nothing great to be excited, while a shrill

voice and a rapid gait are the results of hurry and excitement.

Such, then, is the proud man; the man who falls short of him is unduly humble, and the man who goes beyond him is vain. Now even these are not thought to be bad (for they are not malicious), but only mistaken. For the unduly humble man, being worthy of good things, robs himself of what he deserves, and seems to have something bad about him from the fact that he does not think himself worthy of good things, and seems also not to know himself; else he would have desired the things he was worthy of, since these were good.... Vain people, on the other hand, are fools and ignorant of themselves, and that manifestly; for, not being worthy of them, they attempt honourable undertakings, and then are found out; and they adorn themselves with clothing and outward show and such things, and wish their strokes of good fortune to be made public, and speak about them as if they would be honoured for them.

Aristotle, Ethics, 1125a13

- 12 We do not expect a vine to bear figs or an olive grapes, but when it comes to ourselves, if we do not possess the combined advantages of millionaire and scholar and general and philosopher, of the flatterer and the plain speaker, of the frugal and the extravagant, we calumniate ourselves and are irked with ourselves and despise ourselves as leading a drab and curtailed life.

Plutarch, Contentment

- 13 Consider what men are when they are eating, sleeping, generating, casing themselves and so forth. Then what

kind of men they are when they are imperious and arrogant, or angry and scolding from their elevated place. But a short time ago to how many they were slaves and for what things; and after a little time consider in what a condition they will be.

Marcus Aurelius, Meditations, X, 19

- 14 The pride which is proud of its want of pride is the most intolerable of all.

Marcus Aurelius, Meditations, XII, 27

- 15 "Your might," said she (Cecilia), "is scarce a tiling to dread;
For power of every mortal man but is
Like to a bladder full of wind, ywis.
For with a needle's point, when it is blown,
Prick it, and all the pride of it comes down."

Chaucer, Canterbury Tales: Second Nun's Tale

- 16 I hold that a man should be cautious in making an estimate of himself, and equally conscientious in testifying about himself—whether he rates himself high or low makes no difference. If I seemed to myself good and wise or nearly so, I would shout it out at the top of my voice. To say less of yourself than is true is stupidity, not modesty. To pay yourself less than you are worth is cowardice and pusillanimity, according to Aristotle. No virtue is helped by falsehood, and truth is never subject to error. To say more of yourself than is true is not always presumption; it too is often stupidity. To be immoderately pleased with what you are, to fall therefore into an undiscerning self-love, is in my opinion the substance of

this vice. The supreme remedy to cure it is to do just the opposite of what those people prescribe who, by prohibiting talking about oneself, even more strongly prohibit thinking about oneself. The pride lies in the thought; the tongue can have only a very slight share in it.

Montaigne, Essays, II, 6, Of Practice

17 *Ajax*. Why should a man be proud? How doth pride grow? I know not what pride is.

Agamemnon. Your mind is the dearer, Ajax, and your virtues the fairer. He that is proud cats up himself; pride is his own glass, his own trumpet, his own chronicle; and whatever praises itself but in the deed, devours the deed in the praise.

Ajax. I do hate a proud man, as I hate the engendering of toads.

Nestor. [Aside.] Yet he loves himself. Is't not strange?

Shakespeare, Troilus and Cressida, II, iii, 161

18 *Fool*. There was never yet fair woman but she made mouths in a glass.

Shakespeare, Lear, III, ii, 35

19 All those who form a good opinion of themselves for some other reason, whatever it may be, have not a true generosity, but merely a pride which always very vicious, although it is all the mote so, the more the cause for which we esteem ourselves is unjust. And the most unjust cause of all is when we are proud without any reason, that is to say, without our thinking so far as this goes that there is in us any merit for which we ought to be

esteemed, simply taking the view that merit is not taken into consideration at all, and that as glory is regarded as nothing but usurpation, those who ascribe most of it to themselves really possess the greatest amount of it. This vice is so unreasonable and absurd, that I should scarcely have believed that there were men who could allow themselves to give way to it, if no one were ever unjustly praised; but flattery is everywhere so common that there is no man so defective that he does not often see himself esteemed for things that do not merit any praise, or even that merit blame; and this give occasion to the most ignorant and stupid to fall into this species of pride.

Descartes, Passions of the Soul, CLVII

20 The passion whose violence or continuance maketh madness is either great vainglory, which is commonly called *pride* and *self-conceit*, or great dejection of mind.

Pride subjecteth a man to anger, the excess whereof is the madness called *rage*, and *fury*. And thus it comes to pass that excessive desire of revenge, when it becomes habitual, hurteth the organs, and becomes rage: that excessive love, with jealousy, becomes also rage: excessive opinion of a man's own self, for divine inspiration, for wisdom, learning, form, and the like, becomes distraction and giddiness: the same, joined with envy, rage: vehement opinion of the truth of anything, contradicted by others, rage.

Hobbes, Leviathan, I, 8

21 I thank God, amongst those millions of Vices I do inherit and hold from Adam, 1 have escaped one, and that a

mortal enemy to Charity, the first and father-sin, not onely of man, but of the devil. Pride.

Sir Thomas Browne, Religio Medici, II, 8

22 Vanity is so anchored in the heart of man that a soldier, a soldier's servant, a cook, a porter brags and wishes to have his admirers. Even philosophers wish for them. Those who write against it want to have the glory of having written well; and those who read it desire the glory of having read it. I who write this have perhaps this desire, and perhaps those who will read it.

Pascal, Pensées, II, 150

23 He who will know fully the vanity of man has only to consider the causes and effects of love. The cause is a *je ne sais quoi*, and the effects are dreadful. This *je ne sais quoi*, so small an object that we cannot recognise it, agitates a whole country, princes, armies, the entire world.

Cleopatra's nose; had it been shorter, the whole aspect of the world would have been altered.

Pascal, Pensées, II, 162

24 *Contradiction.*—Pride counterbalancing all miseries. Man either hides his miseries, or, if he disclose them, glories in knowing them.

Pride counterbalances and takes away all miseries. Here is a strange monster and a very plain aberration. He is fallen from his place and is anxiously seeking it. This is what all men do. Let us see who will have found it.

Pascal, Pensées, VI, 405-406

25 When a man thinks too much of himself, this imagination is called *pride*, and is a kind of delirium, because he dreams with his eyes open, that he is able to do all those things to which he attains in imagination alone, regarding them therefore as realities, and rejoicing in them so long as he cannot imagine anything to exclude their existence and limit his power of action. Pride, therefore, is that joy which arises from a man's thinking too much of himself.

Spinoza, Ethics, III, Prop. 26, Schol.

26 Then I saw in my dream, that when they were got out of the wilderness, they presently saw a town before them, and the name of that town is Vanity; and at the town there is a fair kept, called Vanity Fair; it is kept all the year long; it beareth the name of Vanity Fair because the town where it is kept is lighter than vanity; and also because all that is there sold, or that cometh thither, is vanity.... This fair is no new-erected business, but a thing of ancient standing.

Bunyan, Pilgrim's Progress, I

27 Pride is a sin that sticks close to nature, and is one of the first follies wherein it shows itself to be polluted. For even in childhood, even in little children, pride will first of all show itself; it is a hasty, an early appearance of the sin of the soul.

Bunyan, Life and Death of Mr. Badman

28 My reconciliation to the Yahoo-kind in general might not be so difficult, if they would be content with those vices and follies only which nature hath entitled them to. I am

not in the least provoked at the sight of a lawyer, a pickpocket, a colonel, a fool, a lord, a gamester, a politician, a whoremonger, a physician, an evidence, a suborner, an attorney, a tray tor, or the like; this is all according to the due course of things: but, when I behold a lump of deformity, and diseases both in body and mind, smitten with *pride*, it immediately breaks all the measures of my patience; neither shall I be ever able to comprehend how such an animal and such a vice could tally together. The wise and virtuous Houyhnhnms, who abound in all excellencies that can adorn a rational creature, have no name for this vice in their language, which hath no terms to express any thing that is evil, except those whereby they describe the detestable qualities of their Yahoos; among which they were not able to distinguish this of pride, for want of thoroughly understanding human nature, as it sheweth it self in other countries, where that animal presides. But I, who had more experience, could plainly observe some rudiments of it among the wild Yahoos.

But the Houyhnhnms, who live under the government of reason, are no more proud of the good qualities they possess, than I should be for not wanting a leg or an arm, which no man in his wits would boast of, although he must be miserable without them. I dwell the longer upon this subject from the desire I have to make the society of an English Yahoo by any means not insupportable; and therefore, I here intreat those who have any tincture of this absurd vice, that they will not presume to appear in my sight.

Swift, Gulliver's Travels, IV, 12

29 To be vain, is rather a Mark of Humility than Pride. Vain Men delight in telling what Honours have been done them, what great Company they have kept, and the like; by which they plainly confess, that these Honours were more than their Due, and such as their Friends would not believe if they had not been told: Whereas a Man truly proud, thinks the greatest Honours below his Merit, and consequently scorns to boast. I therefore deliver it as a Maxim, that whoever desires the Character of a proud Man, ought to conceal his Vanity.

Swift, Thoughts on Various Subjects

30 Of all the causes which conspire to blind
Man's erring judgement, and misguide the mind,
What the weak head with strongest bias rules.
Is pride, the never-failing vice of fools.

Pope, Essay on Criticism, II, 201

31 Vanity is as advantageous to a government as pride is dangerous. To be convinced of this we need only represent, on the one hand, the numberless benefits which result from vanity, as industry, the arts, fashions, politeness, and taste; on the other, the infinite evils which spring from the pride of certain nations, as laziness, poverty, a total neglect of everything—in fine, the destruction of the nations which have happened to fall under their government, as well as of their own. Laziness is the effect of pride; labour, a consequence of vanity.

Montesquieu, Spirit of Laws, XIX, 9

32 *Johnson*. He that stands to contemplate the crouds that fill the streets of a populous city, will see many passengers whose air and motion it will be difficult to behold without contempt and laughter; but if he examine what are the appearances that thus powerfully excite his risibility, he will find among them neither poverty nor disease, nor any involuntary or painful defect. The disposition to derision and insult, is awakened by the softness of foppery, the swell of insolence, the liveliness of levity, or the solemnity of grandeur; by the sprightly trip, the stately stalk, the formal strut, and the lofty mien; by gestures intended to catch the eye, and by looks elaborately formed as evidences of importance.

Boswell, Life of Johnson (!750)

33 *Johnson*. Scarce any man dies in publick, but with apparent resolution; from that desire of praise which never quits us.

Boswell, Life of Johnson (Sept. 15, 1777)

34 With the greater part of rich people, the chief enjoyment of riches consists in the parade of riches, which in their eye is never so complete as when they appear to possess those decisive marks of opulence which nobody can possess but themselves. In their eyes the merit of an object which is in any degree either useful or beautiful is greatly enhanced by its scarcity, or by the great labour which it requires to collect any considerable quantity of it, a labour which nobody can afford to pay but themselves. Such objects they are willing to purchase at a higher price than things much more beautiful and useful, but more common.

Adam Smith, Wealth of Nations, 1,11

35 The virtues are economists, but some of the vices are also. Thus, next to humility, I have noticed that pride is a pretty good husband. A good pride is, as I reckon it, worth from five hundred to fifteen hundred a year. Pride is handsome, economical; pride eradicates so many vices, letting none subsist but itself, that it seems as if it were a great gain to exchange vanity for pride. Pride can go without domestics, without fine clothes, can live in a house with two rooms, can eat potato, purslain, beans, lyed corn, can work on the soil, can travel afoot, can talk with poor men, or sit silent well contented in fine saloons. But vanity costs money, labor, horses, men, women, health and peace, and is still nothing at last; a long way leading nowhere. Only one drawback; proud people are intolerably selfish, and the vain are gentle and giving.

Emerson, Wealth

36 If one has no vanity in this life of ours, there is no sufficient reason for living.

Tolstoy, The Kreutzer Sonata, XXIII

Chapter 5

MIND

Chapter 5 is divided into seven sections: 5.1 Intelligence and Understanding, 5.2 The Senses and Sense Perception, 5.3 Memory, 5.4 Imagination, 5.5 Dreams, 5.6 Madness, and 5.7 Will: Free Choice.

We are employing the term "mind," as indeed it is often used, to cover a wide variety of human powers and functions. Understanding, sense perception, memory, and imagination all contribute in one way or another to the processes of thinking, problem-solving, learning, and knowing. In the sphere of human thought and in man's acquirement of knowledge, each not only makes a distinctive contribution, but all work together in an integrated fashion. Hence the reader should bear in mind that the contents of the first four sections are closely related and, to some extent, overlapping. He should also be aware that many points discussed in these sections recur, either explicitly or by implication, in Chapter 6 on Knowledge, especially Section 6.7 on Reasoning, Demonstration, and Disputation.

The remaining three sections are included in this chapter each for a special reason. Dreaming involves memory and imagination and is a specifically mental phenomenon, even though it does not, in a strict sense, contribute to thought or knowledge, and involves emotions and desires as well as cognitive processes. As included here, madness covers all

forms of mental disorder, not merely aberrations of thought or fancy. Though will, like emotion and desire, is not a cognitive power, it is usually distinguished from emotion and desire by its close relation to intellect or reason. This is especially true for those authors who affirm the will's freedom in its acts of choice. That is why the discussion of volition, and particularly of free will or free choice, is included here. Other discussions of freedom will be found in Chapter 13 on Liberty and Equality, and in Chapter 9 on Ethics, Section 9.4 on Moral Freedom. Some matters discussed in this chapter, are more fully considered in Chapter 4 on Emotion, especially Section 4.1 on The Passions: The Range of the Emotions.

...

5.1 Intelligence and Understanding

There are a large number of names for the human faculty, ability, or power that is the subject of this section. Sometimes it is simply called "mind," sometimes "intellect," sometimes "reason," sometimes "wit." The two names in the title of this section are also used. Each of these words has a somewhat different connotation; certain authors are at pains to distinguish reason from understanding, or intellect from intelligence; but all of these words have this common thread of meaning: they designate the power or ability by which men solve problems, make judgments, engage in reasoning or in deliberation, and make practical decisions.

Some modern writers use “mind” or “understanding” more broadly to include man’s sensitive abilities as well—his powers of sense perception, memory, and imagination. However, since Sections 5.2, 5.3, and 5.4 are specifically devoted to the consideration of sense, memory, and imagination, we have restricted the materials included in this section to discussions of mind as the power of thought, judgment, insight, and reasoning. The reader will find related matters treated in Section 6.7 on Reasoning, Demonstration, and Disputation.

The quotations collected here deal with questions about the relation of mind and body; about the immateriality or spirituality of mind or intellect; about the different acts of the intellect and how they are related; about the role of reason or intelligence in the sphere of action as well as in the sphere of thought; about wit, sagacity, and cunning as aspects of intelligence; and about human speech as indicative and expressive of the power and processes of human rationality. In this last connection, the reader is referred to related material in Section 7.1 on The Nature of Language.

■ ■ ■

1 For as he thinketh in his heart, so is he.

Proverbs 23:7

2 The earthy tabernacle weigheth down the mind that
museth upon many things.

Wisdom of Solomon 9:15

3 *Socrates*. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

Theaetetus. Of the body, certainly.

Soc. And you would admit that what you perceive through one faculty you cannot perceive through another; the objects of hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

Theaet. Of course not.

Soc. If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

Theaet. It cannot.

Soc. How about sounds and colours: in the first place you would admit that they both exist?

Theaet. Yes.

Soc. And that either of them is different from the other, and the same with itself?

Theaet. Certainly.

Soc. And that both are two and each of them one?

Theaet. Yes.

Soc. You can further observe whether they are like or unlike one another?

Theat. I dare say.

Soc. But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration of the point at issue:—If there were any meaning in asking whether sounds and colours are saline or not, you would be able to tell me what faculty would consider the question. It would not be sight or hearing, but some other.

Theaet. Certainly; the faculty of taste.

Soc. Very good; and now tell me what is the power which discerns, not only in sensible objects, but in all things, universal notions, such as those which are called being and not-being, and those others about which we were just asking—what organs will you assign for the perception of these notions?

Theaet. You are thinking of being and not-being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical conceptions.

Soc. You follow me excellently, Theaetetus; that is precisely what I am asking.

Theaet. Indeed, Socrates, I cannot answer; my only notion is, that these, unlike objects of sense, have no separate organ, but that the mind, by a power of her own, contemplates the universals in all things.

Plato, Theaetetus, 184B

- 4 Quick wit is a faculty of hitting upon the middle term instantaneously. It would be exemplified by a man who saw that the moon has her bright side always turned towards the sun, and quickly grasped the cause of this, namely that she borrows her light from him; or observed somebody in conversation with a man of wealth and divined that he was borrowing money, or that the friendship of these people sprang from a common enmity. In all these instances he has seen the major and minor terms and then grasped the causes, the middle terms.

Aristotle, Posterior Analytics, 89b10

5 If thinking is like perceiving, it must be either a process in which the soul is acted upon by what is capable of being thought, or a process different from but analogous to that. The thinking part of the soul must therefore be, while impassible, capable of receiving the form of an object; that is, must be potentially identical in character with its object without being the object. Mind must be related to what is thinkable, as sense is to what is sensible.

Therefore, since everything is a possible object of thought, mind in order, as Anaxagoras says, to dominate, that is, to know, must be pure from all admixture; for the copresence of what is alien to its nature is a hindrance and a block: it follows that it too, like the sensitive part, can have no nature of its own, other than that of having a certain capacity. Thus that in the soul which is called mind (by mind I mean that whereby the soul thinks and judges) is, before it thinks, not actually any real thing. For this reason it cannot reasonably be regarded as blended with the body: if so, it would acquire some quality, e.g. warmth or cold, or even have an organ like the sensitive faculty: as it is, it has none. It was a good idea to call the soul 'the place of forms', though (1) this description holds only of the intellective soul, and (2) even this is the forms only potentially, not actually,...

Once the mind has become each set of its possible objects, as a man of science has, when this phrase is used of one who is actually a man of science (this happens when he is now able to exercise the power on his own initiative), its condition is still one of potentiality, but in a different sense from the potentiality which preceded the acquisition of knowledge by learning or discovery: the mind too is then able to think itself.

Aristotle, On the Soul, 429a13

6 Mind is in a sense potentially whatever is thinkable, though actually it is nothing until it has thought. What it thinks must be in it just as characters may be said to be on a writing-tablet on which as yet nothing actually stands written: this is exactly what happens with mind.

Mind is itself thinkable in exactly the same way as its objects are. For (a) in the case of objects which involve no matter, what thinks and what is thought are identical; for speculative knowledge and its object are identical,...

Since in every class of things, as in nature as a whole, we find two factors involved, (1) a matter which is potentially all the particulars included in the class, (2) a cause which is productive in the sense that it makes them all (the latter standing to the former, as e.g., an art to its material), these distinct elements must likewise be found within the soul.

And in fact mind as we have described it is what it is by virtue of becoming all things, while there is another which is what it is by virtue of making all things: this is a sort of positive state like light; for in a sense light makes potential colours into actual colours.

Mind in this sense of it is separable, impassible, unmixed, since it is in its essential nature activity (for always the active is superior to the passive factor, the originating force to the matter which it forms).

Actual knowledge is identical with its object: in the individual, potential knowledge is in time prior to actual knowledge, but in the universe as a whole it is not prior even in time. Mind is not at one time knowing and at another not. When mind is set free from its present conditions it appears as just what it is and nothing more:

this alone is immortal and eternal (we do not, however, remember its former activity because, while mind in this sense is impassible, mind as passive is destructible), and without it nothing thinks.

Aristotle, On the Soul, 429b30

7 The nature of the mind and soul is bodily; for when it is seen to push the limbs, rouse the body from sleep, and alter the countenance and guide and turn about the whole man, and when we see that none of these effects can take place without touch nor touch without body, must we not admit that the mind and the soul are of a bodily nature?...

I will now go on to explain in my verses of what kind of body the mind consists and out of what it is formed. First of all I say that it is extremely fine and formed of exceedingly minute bodies. That this is so you may, if you please to attend, clearly perceive from what follows: nothing that is seen takes place with a velocity equal to that of the mind when it starts some suggestion and actually sets it agoing; the mind therefore is stirred with greater rapidity than any of the things whose nature stands out visible to sight. But that which is so passing nimble, must consist of seeds exceedingly round and exceedingly minute, in order to be stirred and set in motion by a small moving power.... The following fact too likewise demonstrates how fine the texture is of which its nature is composed, and how small the room is in which it can be contained, could it only be collected into one mass: soon as the untroubled sleep of death has gotten hold of a man and the nature of the mind and soul has withdrawn, you can perceive then no diminution of the entire body either in appearance or weight: death makes

all good save the vital sense and heat. Therefore the whole soul must consist of very small seeds and be inwoven through veins and flesh and sinews; inasmuch as, after it has all withdrawn from the whole body, the exterior contour of the limbs preserves itself entire and not a tittle of the weight is lost. Just in the same way when the flavour of wine is gone or when the delicious aroma of a perfume has been dispersed into the air or when the savour has left some body, yet the thing itself does not therefore look smaller.

Lucretius, Nature of Things, III

8 In so far as the mind is stronger than the body, so are the ills contracted by the mind more severe than those contracted by the body.

Cicero, Philippics, XI, 4

9 Which of you by taking thought can add one cubit unto his stature?

Matthew 6:27

10 But still, just for the sake of asking. For the sake of something to give to the chapels, ritual entrails.

The consecrated meat of a little white pig, pray for one thing,

Pray for a healthy mind in a healthy body, a spirit

Unafraid of death, but reconciled to it, and able To bear up, to endure whatever troubles afflict it. Free from hate and desire, preferring Hercules' labors

To the cushions and loves and feasts of Sardana-pallus.

Juvenal, Satire X

11 Indeed, for the power of seeing and hearing, and indeed for life itself, and for the things which contribute to support it, for the fruits which are dry, and for wine and oil give thanks to God: but remember that he has given you something else better than all these, I mean the power of using them, proving them and estimating the value of each. For what is that which gives information about each of these powers, what each of them is worth? Is it each faculty itself? Did you ever hear the faculty of vision saying anything about itself? or the faculty of hearing? or wheat, or barley, or a horse or a dog? No; but they are appointed as ministers and slaves to serve the faculty which has the power of making use of the appearances of things. And if you inquire what is the value of each thing, of whom do you inquire? who answers you? How then can any other faculty be more powerful than this, which uses the rest as ministers and itself proves each and pronounces about them? for which of them knows what itself is, and what is its own value? which of them knows when it ought to employ itself and when not? what faculty is it which opens and closes the eyes, and turns them away from objects to which it ought not to apply them and does apply them to other objects? No; but it is the faculty of the will.

Epictetus, Discourses, II, 23

12 It must necessarily be allowed that the principle of intellectual operation which we call the soul is a principle both incorporeal and subsistent. For it is clear that by means of the intellect man can know the natures of all corporeal things. Now whatever knows certain things cannot have any of them in its own nature because that which is in it naturally would impede the knowledge of

anything else. Thus we observe that a sick man's tongue being vitiated by a feverish and bitter humour, cannot perceive anything sweet, and everything seems bitter to it. Therefore, if the intellectual principle contained the nature of any body it would be unable to know all bodies. Now every body has some determinate nature. Therefore it is impossible for the intellectual principle to be a body. It is likewise impossible for it to understand by means of a bodily organ, since the determinate nature of that bodily organ would prevent the knowledge of all bodies; as when a certain determinate colour is not only in the pupil of the eye, but also in a glass vase, the liquid in the vase seems to be of that same colour.

Therefore the intellectual principle which we call the mind or the intellect has an operation *per se* apart from the body. Now only that which subsists can have an operation *per se*. For nothing can operate except a being in act; hence a thing operates according as it is. For this reason we do not say that heat imparts heat, but that what is hot gives heat. We must conclude, therefore, that the human soul, which is called the intellect or the mind, is something incorporeal and subsistent.

Aquinas, Summa Theologica, I, 75, 2

- 13 The intellectual soul, because it can comprehend universal, has a power extending to the infinite; therefore it cannot be limited by nature either to certain fixed natural judgments, or to certain fixed means whether of defence or of clothing, as is the case with other animals, the souls of which have knowledge and power in regard to fixed particular things. Instead of all these, man has by nature his reason and his hands, which are the organs of organs, since by their means man can make for himself

instruments of an infinite variety, and for any number of purposes.

Aquinas, Summa Theologica, I, 76, 5

- 14 To say that a thing is understood more by one than by another may be taken in two senses. First, so that the word more be taken as determining the act of understanding as regards the thing understood; and thus, one cannot understand the same thing more than another, because to understand it otherwise than as it is, either better or worse, would entail being deceived, and such a one would not understand it. . . . In another sense the word more can be taken as determining the act of understanding on the part of him who understands; and so one may understand the same thing better than someone else, through having a greater power of understanding, just as a man may see a thing better with his bodily sight, whose power is greater, and whose sight is more perfect. The same applies to the intellect in two ways. First, as regards the intellect itself, which is more perfect. For it is plain that the better the disposition of a body, the better the soul allotted to it, which clearly appears in things of different species. And the reason for this is that act and form are received into matter according to matter's capacity, Hence because some men have bodies of better disposition, their souls have a greater power of understanding. Thus it is said that we see that those who have delicate flesh are of apt mind. Secondly, this occurs in regard to the lower powers of which the intellect has need in its operation, for those in whom the imaginative, cogitative and remembering powers are of better disposition are better disposed to understand.

Aquinas, Summa Theologica, I, 85, 7

- 15 There are three classes of intellects; one which comprehends by itself; another which appreciates what others comprehend; and a third which neither comprehends by itself nor by the showing of others; the first is the most excellent, the second is good, the third is useless.

Machiavelli, Prince, XXII

- 16 Heavy thoughts bring on physical maladies; when the soul is oppressed, so is the body.

Luther, Table Talk, H645

- 17 Whenever ... we meet with heathen writers, let us learn from that light of truth which is admirably displayed in their works, that the human mind, fallen as it is, and corrupted from its integrity, is yet invested and adorned by God with excellent talents.

Calvin, Institutes of the Christian Religion, II, 2

- 18 Meditation is a powerful and full study for anyone who knows how to examine and exercise himself vigorously: I would rather fashion my mind than furnish it. There is no occupation that is either weaker or stronger, according to the mind involved, than entertaining one's own thoughts. The greatest minds make it their profession, *to whom living is thinking* (Cicero]. Thus nature has favored it with this privilege, that there is nothing we can do so long, and no action to which we can devote ourselves more commonly and easily. It is The occupation of the gods, says Aristotle, from which springs their happiness and ours.

Montaigne, Essays, III, 3, Three Kinds of Association

19 *Hamlet*. What is a man,
If his chief good and market of his time
Be but to sleep and feed? a beast, no more.
Sure, he that made us with such large discourse,
Looking before and after, gave us not
That capability and god-like reason
To fust in us unused.

Shakespeare, Hamlet, IV, iv, 33

20 *1st Gentleman*. But I much marvel that your lordship,
having
Rich tire about you, should at these early hours
Shake off the golden slumber of repose,
'Tis most strange
Nature should be so conversant with pain,
Being thereto not compell'd.

Cerimon. I hold it ever
Virtue and cunning were endowments greater
Than nobleness and riches. Careless heirs
May the two latter darken and expend;
But immortality attends the former,
Making a man a god. 'Tis known, I ever
Have studied physic, through which secret art,
By turning o'er authorities, I have,
Together with my practice, made familiar
To me and to my aid the blest infusions
That dwell in vegetives, in metals, stones;
And I can speak of the disturbances
That nature works, and of her cures; which doth give me
A more content in course of true delight
Than to be thirsty after tottering honour,

Or tie my treasure up in silken bags,
To please the fool and Death.

Shakespeare, Pericles, III, ii, 21

- 21 The mind of man is far from the nature of a clear and equal glass, wherein the beams of things should reflect according to their true incidence; nay, it is rather like an enchanted glass, full of superstition and imposture, if it be not delivered and reduced.

Bacon, Advancement of Learning, Bk. 11, XIV, 9

- 22 Our method, though difficult in its operation, is easily explained. It consists in determining the degrees of certainty, whilst we, as it were, restore the senses to their former rank, but generally reject that operation of the mind which follows close upon the senses, and open and establish a new and certain course for the mind from the first actual perceptions of the senses themselves. This, no doubt, was the view taken by those who have assigned so much to logic; showing clearly thereby that they sought some support for the mind, and suspected its natural and spontaneous mode of action. But this is now employed too late as a remedy, when all is clearly lost, and after the mind, by the daily habit and intercourse of life, has come prepossessed with corrupted doctrines, and filled with the vainest idols. The art of logic, therefore, being (as we have mentioned), too late a precaution, and in no way remedying the matter, has tended more to confirm errors, than to disclose truth. Our only remaining hope and salvation is to begin the whole labor of the mind again.

Bacon, Novum Organum, Pref.

- 23 The human understanding, from its peculiar nature, easily supposes a greater degree of order and equality in things than it really finds.

Bacon, Novum Organum, I, 45

- 24 The greatest and, perhaps, most radical distinction between different men's dispositions for philosophy and the sciences is this, that some are more vigorous and active in observing the differences of things, others in observing their resemblances; for a steady and acute disposition can fix its thoughts, and dwell upon and adhere to a point, through all the refinements of differences, but those that are sublime and discursive recognize and compare even the most delicate and general resemblances; each of them readily falls into excess, by catching either at nice distinctions or shadows of resemblance.

Bacon, Novum Organum, I, 55

- 25 Examining attentively that which I was, I saw that I could conceive that I had no body, and that there was no world nor place where I might be; but yet that I could not for all that conceive that I was not. On the contrary, I saw from the very fact that I thought of doubting the truth of other things, it very evidently and certainly followed that I was; on the other hand if I had only ceased from thinking, even if all the rest of what I had ever imagined had really existed, I should have no reason for thinking that I had existed. From that I knew that I was a substance the whole essence or nature of which is to think, and that for its existence there is no need of any place, nor does it depend on any material thing; so that

this "me," that is to say, the soul by which I am what I am, is entirely distinct from body, and is even more easy to know than is the latter; and even if body would not, the soul would not cease to be what it is.

Descartes, Discourse on Method, IV

26 What of thinking? I find here that thought is an attribute that belongs to me; it alone cannot be separated from me. I am, I exist, that is certain. But how often? Just when I think; for it might possibly be the ease if I ceased entirely to think, that I should likewise cease altogether to exist. I do not now admit anything which is not necessarily true: to speak accurately I am not more than a thing which thinks, that is to say a mind or a soul, or an understanding, or a reason, which are terms whose significance was formerly unknown to me. I am, however, a real thing and really exist; but what thing? I have answered: a thing which thinks.

Descartes, Meditations on First Philosophy, II

27 By *virtues intellectual* are always understood such abilities of the mind as men praise, value, and desire should be in themselves; and go commonly under the name of a *good wit*; though the same word, *wit*, be used also to distinguish one certain ability from the rest.

These virtues are of two sorts; *natural* and *acquired*. By *natural*, I mean not that which a man hath from his birth: for that is nothing else but sense; wherein men differ so little one from another, and from brute beasts, as it is not to be reckoned amongst virtues. But I mean that wit which is gotten by use only, and experience, without method, culture, or instruction. This *natural wit*

consisteth principally in two things: *celerity of imagining* (that this, swift succession of one thought to another); and *steady direction* to some approved end. On the contrary, a slow imagination maketh that defect or fault of the mind which is commonly called *dullness, stupidity*, and sometimes by other names that signify slowness of motion, or difficulty to be moved.

And this difference of quickness is caused by the difference of men's passions; that love and dislike, some one thing, some another: and therefore some men's thoughts run one way, some another, and are held to, and observe differently the things that pass through their imagination. And whereas in this succession of men's thoughts there is nothing to observe in the things they think on, but either in what they be like one another, or in what they be unlike, or what they serve for, or how they serve to such a purpose; those that observe their similitudes, in case they be such as are but rarely observed by others, are said to have a *good wit*; by which, in this occasion, is meant a *good fancy*. But they that observe their differences, and dissimilitudes, which is called *distinguishing*, and *discerning*, and *judging* between thing and thing, in case such discerning be not easy, are said to have a *good judgement*: and particularly in matter of conversation and business, wherein times, places, and persons are to be discerned, this virtue is called *discretion*.

Hobbes, Leviathan, I, 8

28 The secret thoughts of a man run over all things holy, prophane, clean, obscene, grave, and light, without shame, or blame; which verbal discourse cannot do,

farther than the judgement shall approve of the time, place, and persons.

Hobbes, Leviathan, I, 8

29 There are then two kinds of intellect: the one able to penetrate acutely and deeply into the conclusions of given premises, and this is the precise intellect; the other able to comprehend a great number of premises without confusing them, and this is the mathematical intellect. The one has force and exactness, the other comprehension. Now the one quality can exist without the other; the intellect can be strong and narrow, and can also be comprehensive and weak.

Pascal, Pensées, I, 2

30 I can well conceive a man without hands, feet, head (for it is only experience which teaches us that the head is more necessary than feet). But I cannot conceive man without thought; he would be a stone or a brute.

Pascal, Pensées, VI, 339

31 All our dignity consists ... in thought. By it we must elevate ourselves, and not by space and time which we cannot fill. Let us endeavour, then, to think well; this is the principle of morality.

Pascal, Pensées, VI, 347

32 *A thinking reed.* —It is not from space that I must seek my dignity, but from the government of my thought. I shall have no more if I possess worlds. By space the universe encompasses and swallows me up like an atom; by thought I comprehend the world.

Pascal, Pensées, VI, 348

33 *Satan*. The mind is its own place, and in it self Can make
a Heav'n of Hell, a Hell of Heav'n.

Milton, Paradise Lost, I, 254

34 *Belial*. For who would loose,
Though full of pain, this intellectual being,
Those thoughts that wander through Eternity,
To perish rather, swallowd up and lost
In the wide womb of uncreated night,
Devoid of sense and motion?

Milton, Paradise Lost, II, 146

35 Man thinks.

Spinoza, Ethics, II, Axiom 2

36 The body cannot determine the mind to thought, neither
can the mind determine the body to motion nor rest, nor
to anything else, if there be anything else.... That is to
say, that the mind and the body are one and the same
thing, conceived at one time under the attribute of
thought, and at another under that of extension. For this
reason, the order or concatenation of things is one,
whether nature be conceived under this or under that
attribute, and consequently the order of the actions and
passions of our body is coincident in nature with the
order of the actions and passions of the mind....

Although these things are so, and no ground for
doubting remains, I scarcely believe, nevertheless, that,
without a proof derived from experience, men will be
induced calmly to weigh what has been said, so firmly are
they persuaded that, solely at the bidding of the mind,

the body moves or rests, and does a number of things which depend upon the will of the mind alone, and upon the power of thought.

Spinoza, Ethics, III, Prop. 2; Schol.

37 The more perfect a thing is, the more reality it possesses,...

Hence it follows that that part of the mind which abides, whether great or small, is more perfect than the other part. For the part of the mind which is eternal is the intellect, through which alone we are said to act, but that part which, as we have shown, perishes, is the imagination itself, through which alone we are said to suffer. Therefore that part which abides, whether great or small, is more perfect than the latter.

These are the things I proposed to prove concerning the mind, insofar as it is considered without relation to the existence of the body, and from these ... it is evident that our mind, insofar as it understands, is an eternal mode of thought, which is determined by another eternal mode of thought, and this again by another, and so on *ad infinitum*, so that all taken together form the eternal and infinite intellect of God.

Spinoza, Ethics, V, Prop. 40

38 Dim as the borrow'd beams of moon and stars
To lonely, weary, wand'ring travel en,
Is Reason to the soul.

Dryden, Religio Laici, 1

39 Insofar as the concatenation of their perceptions is due to the principle of memory alone, men act like the lower

animals, resembling the empirical physicians whose methods are those of mere practice without theory. Indeed, in three-fourths of our actions we are nothing but empirics. For instance, when we expect that there will be daylight tomorrow, we do so empirically, because it has always so happened until now. It is only the astronomer who thinks it on rational grounds.

But it is the knowledge of necessary and eternal truths that distinguishes us from the mere animals and gives us *Reason* and the sciences, raising as to the knowledge of ourselves and of God. And it is this in us that is called the rational soul or mind.

It is also through the knowledge of necessary truths, and through their abstract expression, that we rise to *acts of reflexion*, which make us think of what is called I, and observe that this or that is within us: and thus, thinking of ourselves, we think of being, of substance, of the simple and the compound, of the immaterial, and of God Himself, conceiving that what is limited in us is in Him without limits. And these acts of reflexion furnish the chief objects of our reasonings.

Leibniz. Monadology, 28-30

- 40 The other fountain from which experience furnisheth the understanding with ideas is,—the perception of the operations of our own mind within us, as it is employed about the ideas it has got;— which operations, when the soul comes to reflect on and consider, do furnish the understanding with another set of ideas, which could not be had from things without. And such are *perception, thinking, doubting, believing, reasoning, knowing, willing*, and all the different actings of our own minds;—which we being conscious of, and observing in ourselves, do from

these receive into our understandings as distinct ideas as we do from bodies affecting our senses. This source of ideas every man has wholly himself; and though it be not sense, as having nothing to do with external objects, yet it is very like it, and might properly enough be called internal sense. But as I call the other *sensation*, so I call this *reflection*, the ideas it affords being such only as the mind gets by reflecting on its own operations within itself. By reflection then, in the following part of this discourse, I would be understood to mean, that notice which the mind takes of its own operations, and the manner of them, by reason whereof there conic to be ideas of these operations in the understanding. These two, I say, viz. external material things, as the objects of *sensation*, and the operations of our own minds within, as the objects of *reflection*, are to me the only originals from whence all our ideas take their beginnings.

Locke, Concerning Human Understanding, Bk. II, I, 4

- 41 Follow a child from its birth, and observe the alterations that time makes, and you shall find, as the mind by the senses comes more and more to be furnished with ideas, it comes to be more and more awake; thinks more, the more it has matter to think on. After some time it begins to know the objects which, being most familiar with it, have made lasting impressions. Thus it comes by degrees to know the persons it daily converses with, and distinguishes them from strangers; which are instances and effects of its coining to retain and distinguish the ideas the senses convey to it. And so we may observe how the mind, by *degrees*, improves in these; and *advances* to the exercise of those other faculties of

enlarging, compounding, and abstracting its ideas, and of reasoning about them, and reflecting upon all these....

In time the mind comes to reflect on its own operations about the ideas got by sensation, and thereby stores itself with a new set of ideas, which I call ideas of reflection. These are the impressions that are made on our senses by outward objects that are extrinsical to the mind; and its own operations, proceeding from powers intrinsical and proper to itself, which, when reflected on by itself, become also objects of its contemplation—*and*, as I have said, the original of all knowledge. Thus the first capacity of human intellect is,—that the mind is fitted to receive the impressions made on it; either through the senses by outward objects, or by its own operations when it reflects on them. This is the first step a man makes towards the discovery of anything, and the groundwork whereon to build all those notions which ever he shall have naturally in this world. All those sublime thoughts which tower above the clouds, and reach as high as heaven itself, take their rise and footing here; in all that great extent wherein the mind wanders, in those remote speculations it may seem to be elevated with, it stirs not one jot beyond those ideas which *sense or reflection* have offered for its contemplation.

Locke, Concerning Human Understanding, Bk. II, I, 22-24

- 42 The power of perception is that which we call the *Understanding*. Perception, which we make the act of the understanding, is of three sorts:—1. The perception of ideas in our minds. 2. The perception of the signification of signs. 3. The perception of the connexion or repugnancy, agreement or disagreement, that there is between any of our ideas. All these are attributed to the

understanding, or perceptive power, though it be the two latter only that use allows us to say we understand.

Locke, Concerning Human Understanding, Bk. II, XXI, 5

- 43 The thoughts that come often unsought, and, as it were, drop into the mind, are the most valuable of any we have, and therefore should be secured, because they seldom return again.

Locke, Letter to Samuel Bold (May 16, 1699)

- 44 Some truths there are so near and obvious to the mind that a man need only open his eyes to see them. Such I take this important one to be, viz., that all the choir of heaven and furniture of the earth, in a word all those bodies which compose the mighty frame of the world, have not any subsistence without a mind, that their being is to be perceived or known; that consequently so long as they are not actually perceived by me, or do not exist in my mind or that of any other created spirit, they must either have no existence at all, or else subsist in the mind of some Eternal Spirit—it being perfectly unintelligible, and involving all the absurdity of abstraction, to attribute to any single part of them an existence independent of a spirit. To be convinced of which, the reader need only reflect, and try to separate in his own thoughts the being of a sensible thing from its being *perceived*.

Berkeley, Principles of Human Knowledge, 6

- 45 Far as Creation's ample range extends.
The scale of sensual, mental pow'rs ascends:
Mark how it mounts, to Man's imperial race.

From the green myriads in the peopled grass:
What modes of sight betwixt each wide extreme.
The mole's dim curtain, and the lynx's beam:
Of smell, the headlong lioness between.
And hound sagacious on the tainted green;
Of hearing, from the life that fills the flood,
To that which warbles thro' the vernal wood;
The spider's touch, how exquisitely fine!
Feels at each thread, and lives along the line:
In the nice bee, what sense so subtly true
From pois'nous herbs extracts the healing dew:
How Instinct varies in the grov'ling swine,
Compar'd, half-reas'ning elephant, with thine:
'Twixt that, and Reason, what a nice barrier;
For ever sep'rate, yet for ever near
I Remembrance and Reflection how ally'd;
What thin partitions Sense from Thought divide:
And Middle natures, how they long to join,
Yet never pass th' insuperable line!
Without this just gradation, could they be
Subjected these to those, or all to thee?
The pow'rs of all subdu'd by thee alone.
Is not thy Reason all these pow'rs in one?

Pope, Essay on Man, Epistle I, 207

46 Love, Hope, and Joy, fair pleasure's smiling train.
Hate, Fear, and Grief, the family of pain;
These mix'd with art, and to due bounds confin'd,
Make and maintain the balance of the mind.

Pope, Essay on Man, Epistle II, 117

47 We may divide all the perceptions of the mind into two classes or species, which are distinguished by their different degrees of force and vivacity. The less forcible and lively are commonly denominated *Thoughts* or *Ideas*. The other species want a name in our language, and in most others; I suppose, because it was not requisite for any, but philosophical purposes, to rank them under a general term or appellation. Let us, therefore, use a little freedom, and call them *Impressions*; employing that word in a sense somewhat different from the usual. By the term *impression*, then, I mean all our more lively perceptions, when we hear, or see, or feel, or love, or hate, or desire, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.

Hume, Concerning Human Understanding, 11, 12

48 Nothing, at first view, may seem more unbounded than the thought of man, which not only escapes all human power and authority, but is not even restrained within the limits of nature and reality. To form monsters, and join incongruous shapes and appearances, costs the imagination no more trouble than to conceive the most natural and familiar objects. And while the body is confined to one planet, along which it creeps with pain and difficulty; the thought can in an instant transport us into the most distant regions of the universe; or even beyond the universe, into the unbounded chaos, where nature is supposed to lie in total confusion. What never was seen, or heard of, may yet be conceived; nor is anything beyond the power of thought, except what implies an absolute contradiction.

But though our thought seems to possess this unbounded liberty, we shall find, upon a nearer examination, that it is really confined within very narrow limits, and that all this creative power of the mind amounts to no more than the faculty of compounding, transposing, augmenting, or diminishing the materials afforded us by the senses and experience. When we think of a golden mountain, we only join two consistent ideas, *gold*, and *mountain* with which we were formerly acquainted. A virtuous horse we can conceive; because, from our own feeling, we can conceive virtue; and this we may unite to the figure and shape of a horse, which is an animal familiar to us. In short, all the materials of thinking are derived either from our outward or inward sentiment: the mixture and composition of these belongs alone to the mind and will. Or, to express myself in philosophical language, all our ideas or more feeble perceptions are copies of our impressions or more lively ones.

Hume, Concerning Human Understanding, II, 13

- 49 It is the nature of an hypothesis, when once a man has conceived it, that it assimilates every thing to itself, as proper nourishment; and, from the first moment of your begetting it, it generally grows the stronger by every thing you see, hear, read, or understand. This is of great use.

Sterne, Tristram Shandy, 11, 19

- 50 A feeble body makes a feeble mind.

Rousseau, Emile, I

51 Such is the delight of mental superiority that none on whom nature or study have conferred it would purchase the gifts of fortune by its loss,

Johnson, Rambler No. 150

52 Reason never has an immediate relation to an object; it relates immediately to the understanding alone. It is only through the understanding that it can be employed in the field of experience. It does not form conceptions of objects, it merely *arranges* them and gives to them that unity which they are capable of possessing when the sphere of their application has been extended as widely as possible. Reason avails itself of the conception of the undemanding for the sole purpose of producing totality in the different series, This totality the undemanding does not concern itself with; its only occupation is the connection of experiences, by which series of conditions in accordance with conceptions are established. the object of reason is, therefore, the understanding and its proper destination. As the latter brings unity into the diversity of objects by means of its conceptions, so the former brings unity into the diversity of conceptions by means of ideas; as it sets the final aim of a collective unity to the operations of the understanding, which without this occupies itself with a distributive unity alone,

Kant, Critique of Pure Reason, Transcendental Dialectic

53 Reason is not to be considered as an indefinitely extended plane, of the bounds of which we have only a general knowledge; it ought rather to be compared to a sphere, the radius of which may be found from the

curvature of its surface—that is, the nature of a *priori* synthetical propositions— and, consequently, its circumference and extent, Beyond the sphere of experience there are no objects which it can cognize; nay, even questions regarding such supposititious objects relate only to the subjective principles of a complete determination of the relations which exist between the understanding-conceptions which lie within this sphere.

Kant, Critique of Pure Reason, Transcendental Method

54 I should be inclined ... to consider the world and this life as the mighty process of God, not for the trial, but for the creation and formation of mind, a process necessary to awaken inert, chaotic matter into spirit, to sublimate the dust of the earth into soul, to elicit an ethereal spark from the clod of clay.

Malthus, Population, XVIII

55 He gave man speech, and speech created thought,
Which is the measure of the universe;
And Science struck the thrones of earth and heaven.
Which shook, but fell not; and the harmonious mind
Poured itself forth in all-prophetic song;
And music lifted up the listening spirit
Until it walked, exempt from mortal care,
Godlike, o'er the clear billows of sweet sound.

Shelley, Prometheus Unbound, 11, 72

56 What Exile from himself can flee?
To zones, though more and more remote.

Still, still pursues, where-e'er I be,
The blight of life—the demon Thought.

Byron, Childe Harold's Pilgrimage, I, To Inez

57 the history of mind is its own act. Mind is only what it does, and its act is to make itself the object of its own consciousness. In history its act is to gain consciousness of itself as mind, to apprehend itself in its interpretation of itself to itself. This apprehension is its being and its principle, and the completion of apprehension at one stage is at the same time the rejection of that stage and its transition to a higher. To use abstract phraseology, the mind apprehending this apprehension anew, or in other words returning to itself again out of its rejection of this lower stage of apprehension, is the mind of the stage higher than that on which it stood in its earlier apprehension.

The question of the perfectibility and *Education of the Human Race* arises here. Those who have maintained this perfectibility have divined something of the nature of mind, something of the fact that it is its nature to have self-knowledge as the law of its being, and, since it apprehends that which it is, to have a form higher than that which constituted its mere being. But to those who reject this doctrine, mind has remained an empty word, and history a superficial play of casual, so-called "merely human," strivings and passions. Even if, in connexion with history, they speak of Providence and the plan of Providence, and so express a faith in a higher power, their ideas remain empty because they expressly declare that for them the plan of Providence is inscrutable and incomprehensible.

Hegel, Philosophy of Right, 343

58 In the course of this work of the world mind, states, nations, and individuals arise animated by their particular determinate principle which has its interpretation and actuality in their constitutions and in the whole range of their life and condition. While their consciousness is limited to these and they are absorbed in their mundane interests, they are all the time the unconscious tools and organs of the world mind at work within them. The shapes which they take pass away, while the absolute mind prepares and works out its transition to its next higher stage.

Hegel, Philosophy of Right, 344

59 Will without freedom is an empty word, while freedom is actual only as will, as subject. . . , Mind is in principle thinking, and man is distinguished from beast in virtue of thinking. But it must not be imagined that man is half thought and half will, and that he keeps thought in one pocket and will in another, for this would be a foolish idea. The distinction between thought and will is only that between the theoretical attitude and the practical. These, however, are surely not two faculties; the will is rather a special way of thinking, thinking translating itself into existence, thinking as the urge to give itself existence.

Hegel, Philosophy of Right, Additions, Par. 4

60 When a hypothesis has once come to birth in the mind, or gained a footing there, it leads a life so far comparable with the life of an organism, as that it assimilates matter from the outer world only when it is like in kind with it

and beneficial; and when, contrarily, such matter is not like in kind but hurtful, the hypothesis, equally with the organism, throws it off, or, if forced to take it, gets rid of it again entire.

Schopenhauer, Some Forms of Literature

- 61 Great intellectual gifts mean an activity pre-eminently nervous in its character, and consequently a very high degree of susceptibility to pain in every form.

Schopenhauer, Personality

- 62 Thought, true labour of any kind, highest virtue itself, is it not the daughter of Pain? Born as out of the black whirlwind;—true *effort*, in fact, as a captive struggling to free himself: that is Thought.

Carlyle, The Hero as Poet

- 63 One should not think slightly of the paradoxical; for the paradox is the source of the thinker's passion, and the thinker without a paradox is like a lover without feeling: a paltry mediocrity. But the highest pitch of every passion is always to will its own downfall; and so it is also the supreme passion of the Reason to seek a collision, though this collision must in one way or another prove its undoing. The supreme paradox of all thought is the attempt to discover something that thought cannot think.

Kierkegaard, Philosophical Fragments, III

- 64 How can we speak of the action of the mind under any divisions, as of its knowledge, of its ethics, of its works, and so forth, since it melts will into perception,

knowledge into act? Each becomes the other. Itself alone is.

Emerson, Intellect

65 What is the hardest task in the world? To think.

Emerson, Intellect

66 There is one mind common to all individual men. Every man is an inlet to the same and to all of the same. He that is once admitted to the right of reason is made a freeman of the whole estate. What Plato has thought, he may think; what a saint has felt, he may feel; what at any time has befallen any man, he can understand. Who hath access to this universal mind is a party to all that is or can be done, for this is the only and sovereign agent.

Emerson, History

67 The brain is only one condition out of many on which intellectual manifestations depend; the others being, chiefly, the organs of the senses and the motor apparatuses, especially those which are concerned in prehension and in the production of articulate speech.

T. H. Huxley, Relations of Man to the Lower Animals

68 The spontaneous process which goes on within the mind itself is higher and choicer than that which is logical; for the latter, being scientific, is common property, and can be taken and made use of by minds who are personally strangers, in any true sense, both to the ideas in question and to their development.

Newman, Essay on the Development of Christian Doctrine, Pt. II, V, 4

69 The action of thinking may incidentally have other results; it may serve to amuse us, for example, and among *dilettanti* it is not rare to find those who have so perverted thought to the purposes of pleasure that it seems to vex them to think that the questions upon which they delight to exercise it may ever get finally settled; and a positive discovery which takes a favorite subject out of the arena of literary debate is met with ill-concealed dislike.

C. S. Peirce, How to Make Our Ideas Clear

70 Consciousness... does not appear to itself chopped up in bits. Such words as "chain" or "train" do not describe it fitly as it presents itself in the first instance. It is nothing jointed; it flows. A "river" or a "stream" is the metaphor by which it is most naturally described. *In talking of it hereafter, let us call it the stream of thought, of consciousness, or of subjective life.*

William James, Psychology, IX

71 The mind is at every stage a theatre of simultaneous possibilities. Consciousness consists in the comparison of these with each other, the selection of some, and the suppression of the rest by the reinforcing and inhibiting agency of attention. The highest and most elaborated mental products are filtered from the data chosen by the faculty next beneath, out of the mass offered by the faculty below that, which mass in turn was sifted from a still larger amount of yet simpler material, and so on. The mind, in short, works on the data it receives very much as a sculptor works on his block of stone. In a sense the statue stood there from eternity. But there were a

thousand different ones beside it, and the sculptor alone is to thank for having extricated this one from the rest. Just so the world of each of us, howsoever different our several views of it may be, all lay embedded in the primordial chaos of sensations, which gave the mere *matter* to the thought of all of us indifferently. We may, if we like, by our reasonings unwind things back to that black and jointless continuity of space and moving clouds of swarming atoms which science calls the only real world. But all the while the world *we* feel and live in will be that which our ancestors and we, by slowly cumulative strokes of choice, have extricated out of this, like sculptors, by simply rejecting certain portions of the given stuff. Other sculptors, other statues from the same stone! Other minds, other worlds from the same monotonous and inexpressive chaos! My world is but one in a million alike embedded, alike real to those who may abstract them. How different must be the worlds in the consciousness of ant, cuttle-fish, or crab!

William James, Psychology, IX

72 What happens in the brain after experience has done its utmost is what happens in every material mass which has been fashioned by an outward force,—in every pudding or mortar, for example, which I may make with my hands. The fashioning from without brings the elements into collocations which set new internal forces free to exert their effects in turn. And the random irradiations and resettlements of our ideas, which *supervene upon experience*, and constitute our free mental play, are due entirely to these secondary internal processes, which vary enormously from brain to brain, even though the brains be exposed to exactly the same "outer relations,"

The higher thought-processes owe their being to causes which correspond far more to the sourings and fermentations of dough, the setting of mortar, or the subsidence of sediments in mixtures, than to the manipulations by which these physical aggregates came to be compounded.

William James, Psychology, XXVIII

73 The causes of our mental structure are doubtless natural, and connected, like all our other peculiarities, with those of our nervous structure. Our interests, our tendencies of attention, our motor impulses, the aesthetic, moral, and theoretic combinations we delight in, the extent of our power of apprehending schemes of relation, just like the elementary relations themselves, time, space, difference and similarity and the elementary kinds of feeling, have all grown up in ways of which at present we can give no account.... And the more sincerely one seeks to trace the actual course of *psychogenesis*, the steps by which as a race we may have come by the peculiar mental attributes which we possess, the more clearly one perceives "the slowly gathering twilight close in utter night."

William James, Psychology, XXVIII

74 The man who listens to Reason is lost: Reason enslaves all whose minds are not strong enough to master her.

Shaw, Man and Superman, Maxims for Revolutionists

75 Real life is, to most men, a long second-best, a perpetual compromise between the ideal and the possible; but the world of pure reason knows no compromise, no practical limitations, no barrier to the creative activity embodying

in splendid edifices the passionate aspiration after the perfect from which all great work springs. Remote from human passions, remote even from the pitiful facts of Nature, the generations have gradually created an ordered cosmos, where pure thought can dwell as in its natural home, and where one, at least, of our nobler impulses can escape from the dreary exile of the actual world.

Russell, Study of Mathematics

76 The power of reason is thought small in these days, but I remain an unrepentant rationalist. Reason may be a small force, but is constant, and works always in one direction, while the forces of unreason destroy one another in futile strife. Therefore every orgy of unreason in the end strengthens the friends of reason, and shows afresh that they are the only true friends of humanity.

Russell, Sceptical Essays, IX

77 Mental activity, which works its way from the memory-image to the production of identity of perception via the outer world, merely represents a *roundabout way to wish-fulfilment* made necessary by experience. Thinking is indeed nothing but a substitute for the hallucinatory wish; and if the dream is called a wish-fulfilment, this becomes something self-evident, since nothing but a wish can impel our psychic apparatus to activity. The dream, which fulfils its wishes by following the short regressive path, has thereby simply preserved for us a specimen of the *primary* method of operation of the psychic apparatus, which has been abandoned as inappropriate. What once prevailed in the waking state,

when our psychic life was still young and inefficient, seems to have been banished into our nocturnal life; just as we still find in the nursery those discarded primitive weapons of adult humanity, the bow and arrow.

Freud, Interpretation of Dreams, VII, C

78 The first of these displeasing propositions of psycho-analysis is this: that mental processes are essentially unconscious, and that those which are conscious are merely isolated acts and parts of the whole psychic entity. Now I must ask you to remember that, on the contrary, we are accustomed to identify the mental with the conscious. Consciousness appears to us as positively the characteristic that defines mental life, and we regard psychology as the study of the content of consciousness. This even appears so evident that any contradiction of it seems obvious nonsense to us, and yet it is impossible for psycho-analysis to avoid this contradiction, or to accept the identity between the conscious and the psychic. The psycho-analytical definition of the mind is that it comprises processes of the nature of feeling, thinking, and wishing, and it maintains that there are such things as unconscious thinking and unconscious wishing. But in doing so psycho-analysis has forfeited at the outset the sympathy of the sober and scientifically minded, and incurred the suspicion of being a phantastic cult occupied with dark and unfathomable mysteries. You yourselves must find it difficult to understand why I should stigmatize an abstract proposition, such as "The psychic is the conscious," as a prejudice; nor can you guess yet what evolutionary process could have led to the denial of the unconscious, if it does indeed exist, nor what advantage could have been achieved by this denial.

It seems like an empty wrangle over words to argue whether mental life is to be regarded as co-extensive with consciousness or whether it may be said to stretch beyond this limit, and yet I can assure you that the acceptance of unconscious mental processes represents a decisive step towards a new orientation in the world and in science.

Freud, General Introduction to Psycho-Analysis, I

79 Our best hope for the future is that the intellect— the scientific spirit, reason—should in time establish a dictatorship over the human mind. The very nature of reason is a guarantee that it would not fail to concede to human emotions, and to all that is determined by them, the position to which they are entitled. But the common pressure exercised by such a domination of reason would prove to be the strongest unifying force among men, and would prepare the way for further unifications. Whatever, like the ban laid upon thought by religion, opposes such a development is a danger for the future of mankind.

Freud, New Introductory Lectures on Psycho-Analysis, XXXV

80 *Demand for the solution of a perplexity is the steady and guiding factor in the entire process of reflection.* Where there is no question of a problem to be solved or a difficulty to be surmounted, the course of suggestions flows on at random; we have the first type of thought described. If the stream of suggestions is controlled simply by their emotional congruity, their fitting agreeably into a single picture or story, we have the second type. But a question to be answered, an

ambiguity to be resolved, sets up an end and holds the current of ideas to a definite channel. Every suggested conclusion is tested by its reference to this regulating end, by its pertinence to the problem in hand. This need of straightening out a perplexity also controls the kind of inquiry undertaken. A traveler whose end is the most beautiful path will look for other considerations and will test suggestions occurring to him on another principle than if he wishes to discover the way to a given city. *The problem fixes the end of thought and the end controls the process of thinking.*

Dewey, How We Think, Pt. I, I, 3

- 81 Thinking is stoppage of the immediate manifestation of impulse until that impulse has been brought into connection with other possible tendencies to action so that a more comprehensive and coherent plan of activity is formed. Some of the other tendencies to action lead to use of eye, ear, and hand to observe objective conditions; others result in recall of what has happened in the past. Thinking is thus a postponement of immediate action, while it effects internal control of impulse through a union of observation and memory, this union being the heart of reflection.

Dewey, Experience and Education, V

- 82 Reason is experimental intelligence, conceived after the pattern of science, and used in the creation of social arts; it has something to do. It liberates man from the bondage of the past, due to ignorance and accident hardened into custom. It projects a better future and assists man in its realization. And its operation is always subject to test in

experience. The plans which are formed, the principles which man projects as guides of reconstructive action, are not dogmas. They are hypotheses to be worked out in practice, and to be rejected, corrected and expanded as they fail or succeed in giving our present experience the guidance it requires. We may call them programmes of action, but since they are to be used in making our future acts less blind, more directed, they are flexible. Intelligence is not something possessed once for all. It is in constant process of forming, and its retention requires constant alertness in observing consequences, an open-minded will to learn and courage in re-adjustment.

Dewey, Reconstruction in Philosophy, IV

- 83 If we could rid ourselves of all pride, if, to define our species, we kept strictly to what the historic and the prehistoric periods show us to be the constant characteristic of man and of intelligence, we should say not *Homo sapiens*, but *Homo faber*. In short, *intelligence, considered in what seems to be its original feature, is the faculty of manufacturing artificial objects, especially tools to make tools, and of indefinitely varying the manufacture.*

Bergson, Creative Evolution, II

- 84 Knowledge and action are... only two aspects of one and the same faculty....

If instinct is, above all, the faculty of using an organized natural instrument, it must involve innate knowledge (potential or unconscious, it is true), both of this instrument and of the object to which it is applied. Instinct is therefore innate knowledge of a *thing*. But

intelligence is the faculty of constructing unorganized—that is to say artificial—instruments. If, on its account, nature gives up endowing the living being with the instruments that may serve him, it is in order that the living being may be able to vary his construction according to circumstances. The essential function of intelligence is therefore to see the way out of a difficulty in any circumstances whatever, to find what is most suitable, what answers best the question asked. Hence it bears essentially on the relations between a given situation and the means of utilizing it. What is innate in intellect, therefore, IS the tendency to establish relations, and this tendency implies the natural knowledge of certain very general relations, a kind of stuff that the activity of each particular intellect will cut up into more special relations. Where activity is directed toward manufacture, therefore, knowledge necessarily bears on relations. But this entirely *formal* knowledge of intelligence has an immense advantage over the *material* knowledge of instinct. A form, just because it is empty, may be filled at will with any number of things in turn, even with those that are of no use. So that a formal knowledge is not limited to what is practically useful, although it is in view of practical utility that it has made its appearance in the world. An intelligent being bears within himself the means to transcend his own nature.

He transcends himself, however, less than he wishes, less also than he imagines himself to do. The purely formal character of intelligence deprives it of the ballast necessary to enable it to settle itself on the objects that are of the most powerful interest to speculation. Instinct, on the contrary, has the desired materiality, but it is incapable of going so far in quest of its object; it does not

speculate. Here we reach the point that most concerns our present inquiry. The difference that we shall now proceed to denote between instinct and intelligence is what the whole of this analysis was meant to bring out. We formulate it thus: *There are things that intelligence alone is able to seek, but which, by itself, it will never find. These things instinct alone could find; but it will never seek them.*

Bergson, Creative Evolution, II

85 In the higher reaches of human nature, as much as in the lower, rationality depends on distinguishing the excellent; and that distinction can be made, in the last analysis, only by an irrational impulse. As life is a better form given to force, by which the universal flux is subdued to create and serve a somewhat permanent interest, so reason is a better form given to interest itself, by which it is fortified and propagated, and ultimately, perhaps, assured of satisfaction. The substance to which this form is given remains irrational; so that rationality, like all excellence, is something secondary and relative, requiring a natural being to possess or to impute it. When definite interests are recognised and the values of things are estimated by that standard, action at the same time veering in harmony with that estimation, then reason has been born and a moral world has arisen.

Santayana, Life of Reason, I, 1

86 Reason, as Hume said with profound truth, is an unintelligible instinct. It could not be otherwise if reason is to remain something transitive and existential; for transition is unintelligible, and yet is the deepest

characteristic of existence. Philosophers, however, having perceived that the function of thought is to fix static terms and reveal eternal relations, have inadvertently transferred to the living act what is true only of its ideal object; and they have expected to find in the process, treated psychologically, that luminous deductive clearness which belongs to the ideal world it tends to reveal. The intelligible, however, lies at the periphery of experience, the surd at its core; and intelligence is but one centrifugal ray darting from the slime to the stars. Thought must execute a metamorphosis; and while this is of course mysterious, it is one of those familiar mysteries, like motion and will, which are more natural than dialectical lucidity itself; for dialectic grows cogent by fulfilling intent, but intent or meaning is itself vital and inexplicable.

Santayana, Life of Reason, I, 3

5.2 The Senses and Sense Perception

Whether mind, intellect, or the rational faculty is material or immaterial has long been debated and is still an issue in dispute. The reader will find indications of this controversy in Section 5.1. In contrast, he will find no disagreement here about the bodily or corporeal character of the senses.

From the very beginning of Western psychology, special sense-organs have been the recognized seats of man's power to see, hear, touch, taste, and smell. Modern anatomical and physiological investigations have discovered additional sense-organs and increased our knowledge of such organs as the eye and the ear. In consequence, the

traditional enumeration of the five senses has been enlarged to include other modes of sensitivity. But while the study of the senses thus fails within the sphere of anatomy and physiology, the discussion of sensation and sense perception deals with questions that are psychological or philosophical in their basic terms.

For example, all the knowledge we have of the structure and functioning of the sense-organs does not fully explain how sensation takes place; nor does it help us to decide which of several competing theories of sense perception is the best account of that process. The reader will find these matters disputed in the quotations below. He will also find the consideration of such questions as the difference between sense-knowledge and intellectual knowledge, the relation of percepts to concepts, and the distinction between primary and secondary qualities; or between such things as size and motion which are perceptible by two or more senses and such things as color which is perceptible by the eye alone, or sound which is perceptible only by the ear.

Another problem that is discussed in a number of quotations is the problem of the trustworthiness and fallibility of the senses and of sense perception. Sensory deceptions, illusions, and hallucinations are often cited by the skeptic to support his case. On the other hand, it is said that the senses themselves make no mistakes; the errors attributed to the senses are errors of judgment, not of sense perception. For the discussion of related matters, the reader is referred to several sections in Chapter 6 on Knowledge, Section 6.2 on Experience, Section 6.4 on Error, Ignorance, and the Limits of Human Knowledge, and Section 6.6 on Doubt and Skepticism.

■ ■ ■

- 1 *Timaeus*. Sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe; and from this source we have derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary' man if he were deprived of them would bewail his loss, but in vain. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing: they have been given by the gods to the same end and for a like reason. For this is the principal end of speech, whereto it most contributes.

Plato, Timaeus, 47A

- 2 *Socrates*. The simple sensations which reach the soul through the body are given at birth to men and animals by nature, but their reflections on the being and use of

them are slowly and hardly gained, if they are ever gained, by education and long experience.

Theaetetus. Assuredly.

Soc. And can a man attain truth who fails of attaining being?

Theaet. Impossible.

Soc. And can he who misses the truth of anything, have a knowledge of that thing?

Theaet. He cannot.

Soc. Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

Theaet. Clearly.

Soc. And would you call the two processes by the same name, when there is so great a difference between them?

Theaet. That would certainly not be right.

Soc. And what name would you give to seeing, hearing, smelling, being cold and being hot?

Theaet. I should call all of them perceiving— what other name could be given to them?

Soc. Perception would be the collective name of them?

Theaet. Certainly.

Soc. Which, as we say, has no part in the attainment of truth any more than of being?

Theaet. Certainly not.

Soc. And therefore not in science or knowledge?

Theaet. No.

Soc. Then perception, Theaetetus, can never be the same as knowledge or science.

Plato, Theaetetus, 186A

3 Scientific knowledge is not possible through the act of perception. Even if perception as a faculty is of 'the such' and not merely of a 'this somewhat', yet one must at any rate actually perceive a 'this somewhat', and at a definite present place and time: but that which is commensurately universal and true in all cases one cannot perceive, since it is not 'this' and it is not 'now'; if it were, it would not be commensurately universal—the term we apply to what is always and everywhere. Seeing, therefore, that demonstrations are commensurately universal and universals imperceptible, we clearly cannot obtain scientific knowledge by the act of perception: nay, it is obvious that even if it were possible to perceive that a triangle has its angles equal to two right angles, we should still be looking for a demonstration—we should not (as some say) possess knowledge of it; for perception must be of a particular, whereas scientific knowledge involves the recognition of the commensurate universal. So if we were on the moon, and saw the earth shutting out the sun's light, we should not know the cause of the eclipse: we should perceive the present fact of the eclipse, but not the reasoned fact at all, since the act of perception is not of the commensurate universal, I do not, of course, deny that by watching the frequent recurrence of this event we might, after tracking the commensurate universal, possess a demonstration for the commensurate universal is elicited from the several groups of singulars.

The commensurate universal is precious because it makes clear the cause; so that in the case of facts like these which have a cause other than themselves universal knowledge is more precious than sense-perceptions and than intuition. (As regards primary truths there is of course a different account to be given.) Hence

it is clear that knowledge of things demonstrable cannot be acquired by perception, unless the term perception is applied to the possession of scientific knowledge through demonstration. Nevertheless certain points do arise with regard to connexions to be proved which are referred for their explanation to a failure in sense-perception: there are cases when an act of vision would terminate our inquiry, not because in seeing we should be knowing, but because we should have elicited the universal from seeing; if, for example, we saw the pores in the glass and the light passing through, the reason of the kindling would be clear to us because we should at the same time see it in each instance and intuit that it must be so in all instances.

Aristotle, Posterior Analytics, 87b27

4 The following results applying to any and every sense may now be formulated.

(A) By a 'sense' is meant what has the power of receiving into itself the sensible forms of things without the matter. This must be conceived of as taking place in the way in which a piece of wax takes on the impress of a signet-ring without the iron or gold; we say that what produces the impression is a signet of bronze or gold, but its particular matter the constitution makes no difference: in a similar way the sense is affected by what is coloured or flavoured or sounding, but it is indifferent what in each case the *substance* is; what alone matters is what *quality* it has, i.e. in what ratio its constituents are combined.

(B) By 'an organ of sense' is meant that in which ultimately such a power is seated.

The sense and its organ are the same in fact, but their essence is not the same. What perceives is, of course, a

spatial magnitude, but we must not admit that either the having the power to perceive or the sense itself is a magnitude; what they are is a certain ratio or power in a magnitude. This enables us to explain why objects of sense which possess one of two opposite sensible qualities in a degree largely in excess of the other opposite destroy the organs of sense; if the movement set up by an object is too strong for the organ, the equipoise of contrary qualities in the organ, which just is its sensory power, is disturbed; it is precisely as concord and tone are destroyed by too violently twanging the strings of a lyre. This explains also why plants cannot perceive, in spite of their having a portion of soul in them and obviously being affected by tangible objects themselves; for undoubtedly their temperature can be lowered or raised. The explanation is that they have no mean of contrary qualities, and so no principle in them capable of taking on the forms of sensible objects without their matter; in the case of plants the affection is an affection by form-and-matter together. The problem might be raised: Can what cannot smell be said to be affected by smells or what cannot see by colours, and so on? It might be said that a smell is just what can be smelt, and if it produces any effect it can only be so as to make something smell it, and it might be argued that what cannot smell cannot be affected by smells and further that what can smell can be affected by it only in so far as it has in it the power to smell (similarly with the proper objects of all the other senses). Indeed that this is so is made quite evident as follows. Light or darkness, sounds and smells leave bodies quite unaffected; what does affect bodies is not these but the bodies which are their vehicles, e.g. what splits the trunk of a tree is not

the sound of the thunder but the air which accompanies thunder. Yes, but, it may be objected, bodies are affected by what is tangible and by flavours. If not, by what are things that are without soul affected, i.e, altered in quality? Must we not, then, admit that the objects of the other senses also may affect them? Is not the true account this, that all bodies are capable of being affected by smells and sounds, but that some on being acted upon, having no boundaries of their own, disintegrate, as in the instance of air, which does become odorous, showing that some effect is produced on it by what is odorous? But smelling is more than such an affection by what is odorous— what more? Is not the answer that, while the air owing to the momentary duration of the action upon it of what is odorous does itself become perceptible to the sense of smell, smelling is an observing of the result produced?

Aristotle, On the Soul, 424a16

- 5 Without touch there can be no other sense, and the organ of touch cannot consist of earth or of any other single element.

It is evident, therefore, that the loss of this one sense alone must bring about the death of an animal. For as on the one hand nothing which is not an animal can have this sense, so on the other it is the only one which is indispensably necessary to what is an animal. This explains, further, the following difference between the other senses and touch. In the case of all the others excess of intensity in the qualities which they apprehend, i.e. excess of intensity in colour, sound, and smell, destroys not the animal but only the organs of the sense (except incidentally, as when the sound is accompanied

by an impact or shock, or where through the objects of sight or of smell certain other things are set in motion, which destroy by contact); flavour also destroys only in so far as it is at the same time tangible. But excess of intensity in tangible qualities, e.g. heat, cold, or hardness, destroys the animal itself. As in the case of every sensible quality excess destroys the organ, so here what is tangible destroys touch, which is the essential mark of life; for it has been shown that without touch it is impossible for an animal to be. That is why excess in intensity of tangible qualities destroys not merely the organ, but the animal itself, because this is the only sense which it must have.

All the other senses are necessary to animals, as we have said, not for their being, but for their well-being. Such, e.g. is sight, which, since it lives in air or water, or generally in what is pellucid, it must have in order to see, and taste because of what is pleasant or painful to it, in order that it may perceive these qualities in its nutriment and so may desire to be set in motion, and hearing that it may have communication made to it, and a tongue that it may communicate with its fellows.

Aristotle, On the Soul, 435b2

- 6 Since a particular figure felt by the hands in the dark is known to be the same which is seen in the bright light of day, touch and sight must be excited by a quite similar cause. Well then if we handle a square thing and it excites our attention in the dark, in the daylight what square thing will be able to fall on our sight, except the image of that thing? Therefore the cause of seeing, it is plain, lies in images and no thing can be perceived without them.

Well the idols of things I speak of are borne along all round and are discharged and transmitted in all directions; but because we can see with the eyes alone, the consequence is that, to whatever point we turn our sight, there all the several things meet and strike it with their shape and colour. And the image gives the power to see and the means to distinguish how far each thing is distant from us; for as soon as ever it is discharged, it pushes before it and impels all the air which lies between it and the eyes; and thus that air all streams through our eyes and brushes so to say the pupils and so passes through. The consequence is that we see how far distant each thing is. And the greater the quantity of air which is driven on before it and the larger the current which brushes our eyes, the more distant each different thing is seen to be. You must know these processes go on with extreme rapidity, so that at one and the same moment we see what like a thing is and how far distant it is. And this must by no means be deemed strange herein that, while the idols which strike the eyes cannot be seen one at a time, the things themselves are seen. For thus when the wind too beats us with successive strokes and when piercing cold streams, we are not wont to feel each single particle of that wind and cold, but rather the whole result; and then we perceive blows take effect on our body just as if something or other were beating it and giving us a sensation of its body outside. Again when we thump a stone with a finger, we touch merely the outermost colour on the surface of the stone, and yet we do not feel that colour by our touch, but rather we feel the very hardness of the stone seated in its inmost depths.

Lucretius, Nature of Things, IV

7 You will find that from the senses first has proceeded the knowledge of the true and that the senses cannot be refuted. For that which is of itself to be able to refute things false by true things must from the nature of the case be proved to have the higher certainty. Well then what must fairly be accounted of higher certainty than sense? Shall reason founded on false sense be able to contradict them, wholly founded as it is on the senses? And if they are not true, then all reason as well is rendered false. Or shall the ears be able to take the eyes to task, or the touch the ears? Again shall the taste call in question this touch, or the nostrils refute or the eyes controvert it? Not so, I guess; for each apart has its own distinct office, each its own power; and therefore we must perceive what is soft and cold or hot by one distinct faculty, by another perceive the different colours of things and thus see all objects which are conjoined with colour. Taste too has its faculty apart; smells spring from one source, sounds from another. It must follow therefore that any one sense cannot confute any other. No nor can any sense take itself to task, since equal credit must be assigned to it at all times. What therefore has at any time appeared true to each sense, is true. And if reason shall be unable to explain away the cause why things which close at hand were square, at a distance looked round, it yet is better, if you are at a loss for the reason, to state erroneously the causes of each shape, than to let slip from your grasp on any side things manifest and ruin the groundwork of belief and wrench up all the foundations on which rest life and existence. For not only would all reason give way, life itself would at once fall to the ground, unless you choose to trust the senses and shun precipices and all things else of this sort that are to be

avoided, and to pursue the opposite things. All that host of words then be sure is quite unmeaning, which has been drawn out in array against the senses.

Lucretius, Nature of Things, IV

- 8 When therefore we force these voices forth from the depths of our body and discharge them straight out at the mouth, the pliant tongue deft fashioner of words gives them articulate utterance and the structure of the lips does its part in shaping them. Therefore when the distance is not long between the point from which each several voice has started and that at which it arrives, the very words too must be plainly heard and distinguished syllable by syllable; for each voice retains its structure and retains its shape. But if the space between be more than is suitable, the words must be huddled together in passing through much air and the voice be disorganised in its flight through the same. Therefore it is that you can hear a sound, yet cannot distinguish what the meaning of the words is: so huddled and hampered is the voice when it comes.

Lucretius, Nature of Things, IV

- 9 Now mark me, and I will discuss the way in which the contact of smell affects the nostrils: and first there must be many things from which a varied flow of smells streams and rolls on; and we must suppose that they thus stream and discharge and disperse themselves among all things alike; but one smell fits itself better to one creature, another to another on account of their unlike shapes; and therefore bees are drawn on by the smell of

honey through the air to a very great distance, and so are vultures by carcasses,

Lucretius, Nature of Things, IV

- 10 All sense-perception can occur only through the medium of some bodily substance, since in the absence of body the soul is utterly absorbed in the Intellectual Sphere. Sense-perception being the gripping not of the Intellectual but of the sensible alone, the soul, if it is to form any relationship of knowledge, or of impression, with objects of sense, must be brought in some kind of contact with them by means of whatever may bridge the gap.

The knowledge, then, is realized by means of bodily organs.

Plotinus, Fourth Ennead, V, 1

- 11 Our fleshly sense is slow because it is fleshly sense: and that is the limit of its being. It can do what it was made to do; but it has no power to hold things transient as they run their course from their due beginning to their due end. For in Your word, by which they are created, they hear their law: "From this point: not beyond that."

Augustine, Confessions, IV, 10

- 12 Whatever things you perceive by fleshly sense you perceive only in part, not knowing the whole of which those things are but parts and yet they delight you so much. For if fleshly sense had been capable of grasping the whole—and had not for your punishment received part only of the whole as its just limit—you would wish that whatever exists in the present might pass on, that the whole might be perceived by you for your delight.

What we speak, you hear by a bodily sense: and certainly you do not wish the same syllable to go on sounding but to pass away that other syllables may come and you may hear the whole speech. It is always so with all things that go to make up one whole: all that goes to make up the whole does not exist at one moment. If all could be perceived in one act of perception, it would obviously give more delight than any of the individual parts.

Augustine, Confessions, IV, 11

- 13 As far as regards the doctrine which treats of. . . rational philosophy, far be it from us to compare them [the Platonists] with those who attributed to the bodily senses the faculty of discriminating truth, and thought, that all we learn is to be measured by their untrustworthy and fallacious rules. . . . Such... were the Stoics, who ascribed to the bodily senses that expertness in disputation which they so ardently love, called by them dialectic, asserting that from the senses the mind conceives the notions of those things which they explicate by definition. And hence is developed the whole plan and connection of their learning and teaching. I often wonder, with respect to this, how they can say that none are beautiful but the wise; for by what bodily sense have they perceived that beauty, by what eyes of the flesh have they seen wisdom's comeliness of form? Those, however, whom we justly rank before all others, have distinguished those things which are conceived by the mind from those which are perceived by the senses, neither taking away from the senses anything to which they are competent, nor attributing to them anything beyond their competency.

Augustine, City of God, VIII, 7

14 The intellectual soul ... in the order of nature, holds the lowest place among intellectual substances; for it is not naturally gifted with the knowledge of truth, as the angels are, but has to gather knowledge from individual things by way of the senses,... But nature never fails in necessary things; therefore the intellectual soul had to be endowed not only with the power of understanding, but also with the power of feeling. Now the action of the senses is not performed without a corporeal instrument. Therefore the intellectual soul had to be united to a body which could be an adequate organ of sense.

Now all the other senses are based on the sense of touch. But the organ of touch has to be a medium between contraries, such as hot and cold, wet and dry, and the like, of which the sense of touch has the perception; thus it is in potency with regard to contraries, and is able to perceive them. Therefore the more the organ of touch is reduced to an even temperament, the more sensitive will be the touch. But the intellectual soul has the power of sense in all its completeness, because what belongs to the inferior nature pre-exists more perfectly in the superior.. . . Therefore the body to which the intellectual soul is united should be a mixed body, above all others reduced to the most even temperament. For this reason among animals man has the best sense of touch. And among men, those who have the best sense of touch have the best intellect. A sign of this is that we observe *those who are refined in body are well endowed in mind*, as stated in the book on the Soul.

Aquinas, Summa Theologica, I, 76, 5

15 The proper sense judges of the proper sensible by discerning it from other things which come under the

same sense; for instance, by discerning white from black or green. But neither sight nor taste can discern white from sweet, because what discerns between two things must know both. Therefore the discerning judgment must be assigned to the common sense, to which, as to a common term, all apprehensions of the senses must be referred, and by which, again, all the intentions of the senses are perceived; as when someone sees that he sees. For this cannot be done by the proper sense, which only knows the form of the sensible by which it is changed, in which change the action of sight is completed, and from which change follows another in the common sense which perceives the act of vision.

Aquinas, Summa Theologica, I, 78, 4

- 16 Although the operation of the intellect has its origin in the senses, yet, in the thing apprehended through the senses, the intellect knows many things which the senses cannot perceive.

Aquinas, Summa Theologica, I, 78, 4

- 17 Our intellect's proper and proportionate object is the nature of a sensible thing. Now a perfect judgment concerning anything cannot be formed, unless all that pertains to that thing is known; especially if that which is the term and end of judgment is not known. . . . Now it is clear that a smith cannot judge perfectly of a knife unless he knows the work that must be done, and in like manner the natural philosopher cannot judge perfectly of natural things unless he knows sensible things. But in the present state of life whatever we understand we know by comparison to natural sensible things. Consequently it is

not possible for our intellect to form a perfect judgment while the senses are suspended, through which sensible things are known to us.

Aquinas, Summa Theologica, I, 84, 8

- 18 This same deception that the senses convey to our understanding they receive in their turn. Our soul at times takes a like revenge; they compete in lying and deceiving each other. What we see and hear when stirred with anger, we do not hear as it is.... The object that we love seems to us more beautiful than it is... and uglier the one that we loathe. To a man vexed and-afflicted the brightness of the day seems darkened and gloomy. Our senses are not only altered, but often completely stupefied by the passions of the soul. How many things we see which we do not notice if our mind is occupied elsewhere! ... It seems as though the soul draws the powers of the senses inward and occupiw them. Thus both the inside and the outside of man is full of weakness and falsehood.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 19 To judge the appearances that we receive of objects, we would need a judicatory instrument; to verify this instrument, we need a demonstration; to verify the demonstration, an instrument: there we are in a circle.

Since the senses cannot decide our dispute, being themselves full of uncertainty, it must be reason that does so. No reason can be established without another reason: there we go retreating back to infinity.

Our conception is not itself applied to foreign objects, but is conceived through the mediation of the senses;

and the senses do not comprehend the foreign object, but only their own impressions. And thus the conception and semblance w'c form IS not of the object, but only of the impression and effect made on the sense; which impression and the object are different things. Wherefore whoever judges by appearances judges by something other than the object.

And for saying that the impressions of the senses convey to the soul the quality of the foreign objects by resemblance, how can the soul and understanding make sure of this resemblance, having of itself no communication with foreign objects? Just as a man who does not know Socrates, seeing his portrait, cannot say that it resembles him.

Now if anyone should want to judge by appearances anyway, to judge by all appearances is impossible, for they clash with one another by their contradictions and discrepancies, as we see by experience. Shall some selected appearances rule the others? We shall have to verify this selection by another selection, the second by a third; and thus it will never be finished....

Finally, there is no existence that is constant, either of our being or of that of objects. And we, and our judgment, and all mortal things go on flowing and rolling unceasingly. Thus nothing certain can be established about one thing by another, both the judging and the judged being in continual change and motion,

Montaigne, Essays, II, 12, Apology for Raymond Sebond

20 The senses... are very sufficient to certify and report truth, though not always immediately, yet by comparison, by help of instrument, and by producing and

urging such things as are too subtile for the sense to some effect comprehensible by the sense.

Bacon, Advancement of Learning, Bk. II, XIII, 4

21 Many experiences little by little destroyed all the faith which I had rested in my senses; for I from time to time observed that those towers which from afar appeared to me to be round, more closely observed seemed square, and that colossal statues raised on the summit of these towers, appeared as quite tiny statues when viewed from the bottom; and so in an infinitude of other cases I found error in judgments founded on the external senses. And not only in those founded on the external senses, but even in those founded on the internal as well; for is there anything more intimate or more internal than pain? And yet I have learned from some persons whose arms or legs have been cut off, that they sometimes seemed to feel pain in the part which had been amputated, which made me think that I could not be quite certain that it was a certain member which pained me, even although I felt pain in it. And to those grounds of doubt I have lately added two others, which are very general; the first is that I never have believed myself to feel anything in waking moments which I cannot also sometimes believe myself to feel when I sleep, and as I do not think that these things which I seem to feel in sleep, proceed from objects outside of me, I do not see any reason why I should have this belief regarding objects which I seem to perceive while awake. The other was that being still ignorant, or rather supposing myself to be ignorant, of the author of my being, I saw nothing to prevent me from having been so constituted by nature that I might be deceived even in matters which seemed to me to be most certain. And as

to the grounds on which I was formerly persuaded of the truth of sensible objects, I had not much trouble in replying to them. For since nature seemed to cause me to lean towards many things from which reason repelled me, I did not believe that I should trust much to the teachings of nature. And although the ideas which I receive by the senses do not depend on my will, I did not think that one should for that reason conclude that they proceeded from things different from myself, since possibly some faculty might be discovered in me—though hitherto unknown to me—which produced them.

But now that I begin to know myself better, and to discover more clearly the author of my being, I do not in truth think that I should rashly admit all the matters which the senses seem to teach us, but, on the other hand, I do not think that I should doubt them all universally.

Descartes, Meditations on First Philosophy, VI

- 22 In order rightly to see what amount of certainty belongs to sense we must distinguish three grades as falling within it. To the first belongs the immediate affection of the bodily organ by external objects; and this can be nothing else than the motion of the particles of the sensory organs and the change of figure and position due to that motion. The second comprises the immediate mental result, due to the mind's union with the corporeal organ affected; such are the perceptions of pain, of pleasurable stimulation, of thirst, of hunger, of colours, of sound, savour, odour, cold, heat, and the like, which... arise from the union and, as it were, the intermixture of mind and body. Finally, the third contains all those judgments which, on the occasion of motions occurring in

the corporeal organ, we have from our earliest years been accustomed to pass about things external to us.

For example, when I see a staff, it is not to be thought that *intentional species* fly off from it and reach the eye, by merely that rays of light reflected from the staff excite certain motions in the optic nerve and, but its mediation, in the brain as well. ... It is in this cerebral motion, which is common to us and to the brutes, that the first grade of perception consists. But from this the second grade of perception results; and that merely extends to the perception of the colour or light reflected from the stick, and is due to the fact that the mind is so intimately conjoined with the brain as to be affected by the motions arising in it. Nothing more than this should be assigned to sense, if we wish to distinguish it accurately from the intellect. For though my judgment that there is a staff situated without me, which judgment results from the sensation of colour by which I am affected, and likewise my reasoning from the extension of that colour, its boundaries, and its position relatively to the parts of my brain, to the size, the shape, and the distance of the said staff, are vulgarly assigned to sense, and are consequently here referred to the third grade of sensation, they clearly depend upon the understanding alone.... Magnitude, distance and figure can be perceived by reasoning alone, which deduces them one from another....

From this it is clear that when we say that *the certitude obtainable by the understanding is much greater than that attacking to the senses* the meaning of those words is, that those judgments which when we are in full maturity new observations have led us to make, are surer than those we have formed in early infancy and

apart from all reflection; and this is certainly true. For it is clear that here there is no question of the first or second grade of sense-perception, because in them no falsity can reside. When, therefore, it is alleged that refraction makes a staff appear broken in the water, it is the same as if it were said that it appears to us in the same way as it would to an infant who judged that it was broken, and as it does even to us who, owing to the prejudices to which we from our earliest years have grown accustomed, judge in the same way.... Hence, in this instance, it is the understanding solely which corrects the error of sense; and no case can ever be adduced in which error results from our trusting the operation of the mind more than sense.

Descartes, Objections and Replies, VI

23 There is no conception in a man's mind which hath not at first, totally or by parts, been begotten upon the organs of sense. The rest are derived from that original....

The cause of sense is the external body, or object, which presseth the organ proper to each sense, either immediately, as in the taste and touch; or mediately, as in seeing, hearing, and smelling: which pressure, by the mediation of nerves and other strings and membranes of the body, continued inwards to the brain and heart, causeth there a resistance, or counter-pressure, or endeavour of the heart to deliver itself: which endeavour, because outward, seemeth to be some matter without. And this seeming, or fancy, is that which men call *sense*; and consisteth, as to the eye, in a light, or colour figured; to the ear, in a sound; to the nostril, in an odour; to the tongue and palate, in a savour; and to the rest of the body, in heat, cold, hardness, softness, and such other

qualities as we discern by feeling. All which qualities called *sensible* are in the object that causeth them but so many several motions of the matter, by which it presseth our organs diversely. Neither in us that are pressed are they anything else but diverse motions (for motion produceth nothing but motion). But their appearance to us is fancy, the same waking that dreaming. And as pressing, rubbing, or striking the eye makes us fancy a light, and pressing the car produceth a din; so do the bodies also we see, or hear, produce the same by their strong, though unobserved action. For if those colours and sounds were in the bodies or objects that cause them, they could not be severed from them, as by glasses and in echoes by reflection we see they are: where we know the thing we see is in one place; the appearance, in another. And though at some certain distance the real and very object seem invested with the fancy it begets in us; yet still the object is one thing, the image or fancy is another. So that sense in all eases is nothing else but original fancy caused (as I have said) by the pressure that is, by the motion of external things upon our eyes, cars, and other organs, thereunto ordained.

Hobbes, Leviathan, I, 1

- 24 The homogeneal light and rays which appear red, or rather make objects appear so, I call rubrific or red-making; those which make objects appear yellow, green, blue, and violet, I call yellow-making, green-making, blue-making, violet-making, and so of the rest. And if at any time I speak of light and rays as coloured or endued with colours, I would be understood to speak not philosophically and properly, but grossly, and accordingly to such conceptions as v'ulgar people in seeing all these

experiments would be apt to frame. For the rays, to speak properly, are not coloured. In them there is nothing else than a certain power and disposition to stir up a sensation of this or that colour. For as sound in a bell or musical siring, or other sounding body, is nothing but a trembling motion, and in the air nothing but that motion propagated from the object, and in the sensorium 'tis a sense of that motion under the form of sound; so colours in the object are nothing but a disposition to reflect this or that sort of rays more copiously than the rest; in the rays they are nothing but their dispositions to propagate this or that motion into the sensorium, and in the sensorium they are sensations of those motions under the forms of colours.

Newton, Optics, I, 2

- 25 We might get to know the beauty of the universe in each soul, if we could unfold all that is enfolded in it and that is perceptibly developed only through time. But as each distinct perception of the soul includes an infinite number of confused perceptions, which involve the whole universe, the soul itself knows the things of which it has perception, only in so far as it has distinct and heightened [or unveiled] perceptions of them; and it has perfection in proportion to its distinct perceptions. Each soul knows the infinite, knows all, but confusedly; as when I walk on the sea-shore and hear the great noise the sea makes, I hear the particular sounds which come from the particular waves and which make up the total sound, but I do not discriminate them from one another. Our confused perceptions are the result of the impressions which the whole universe makes upon us.

26 The next thing to be considered is, how' bodies produce ideas in us; and that is manifestly by impulse, the only way which we can conceive bodies to operate in.

If then external objects be not united to our minds when they produce ideas therein; and yet we perceive these *original* qualities in such of them as singly fall under our senses, it is evident that some motion must be thence continued by our nerves, or animal spirits, by some parts of our bodies, to the brains or the seat of sensation, there to produce in our minds the particular ideas we have of them. And since the extension, figure, number, and motion of bodies of an observable bigness, may be perceived at a distance by the sight, it is evident some singly imperceptible bodies must come from them to the eyes, and thereby convey to the brain some motion; which produces these ideas which we have of them in us.

After the same manner that the ideas of these original qualities are produced in us, we may conceive that the ideas of secondary qualities are also produced, viz. by the operation of insensible particles on our senses. For, it being manifest that there are bodies and good store of bodies, each whereof are so small, that we cannot by any of our senses discover either their bulk, figure, or motion,—as is evident in the particles of the air and water, and others extremely smaller than those; perhaps as much smaller than the particles of air and water, as the particles of air and water are smaller than peas or hail-stones;—let us suppose at present that the different motions and figures, bulk and number, of such particles, affecting the several organs of our senses, produce in us

those different sensations which we have from the colours and smells of bodies; v.g. that a violet, by the impulse of such insensible particles of matter, of peculiar figures and bulks, and in different degrees and modifications of their motions, causes the ideas of the blue colour, and sweet scent of that flower to be produced in our minds- It being no more impossible to conceive that God should annex such ideas to such motions, with which they have no similitude, than that he should annex the idea of pain to the motion of a piece of steel dividing our flesh, with which that idea hath no resemblance.

What I have said concerning colours and smells may be understood also of tastes and sounds, and other the like sensible qualities; which, whatever reality we by mistake attribute to them, are in truth nothing in the objects themselves, but powers to produce various sensations in us; and depend on those primary qualities, viz, bulk, figure, texture, and motion of parts as I have said.

Locke, Concerning Human Understanding, Bk, II, VIII, 11-14

- 27 It is for want of reflection that we are apt to think that our senses show us nothing but material things. Every act of sensation, when duly considered, gives us an equal view of both parts of nature, the corporeal and spiritual. For whilst I know, by seeing or hearing, etc., that there is some corporeal being without me, the object of that sensation, I do more certainly know, that there is some spiritual being within me that sees and hears. This, I must be convinced, cannot be the action of bare

insensible matter; nor ever could be, without an immaterial thinking being.

*Locke, Concerning Human Understanding, Bk. II, XXIII,
15*

28 I find I can excite ideas in my mind at pleasure, and vary and shift the scene as oft as I think fit. It is no more than willing, and straightway this or that idea arises in my fancy; and by the same power it is obliterated and makes way for another. This making and unmaking of ideas doth very properly denominate the mind active. Thus much is certain and grounded on experience; but when we think of unthinking agents or of exciting ideas exclusive of volition, we only amuse ourselves with words.

But, whatever power I may have over my own thoughts, I find the ideas actually perceived by Sense have not a like dependence on my will. When in broad daylight I open my eyes, it is not in my power to choose whether I shall see or no, or to determine what particular objects shall present themselves to my view; and so likewise as to the hearing and other senses; the ideas imprinted on them are not creatures of my will. There is therefore some *other* Will or Spirit that produces them.

Berkeley, Principles of Human Knowledge, 28-29

29 The ideas imprinted on the Senses by the Author of nature are called *real things*; and those excited in the imagination being less regular, vivid, and constant, are more properly termed *ideas*, or *images of things*, which they copy and represent. But then our sensations, be they never so vivid and distinct, are nevertheless ideas, that is, they exist in the mind, or are perceived by it, as

truly as the ideas of its own framing. The ideas of Sense are allowed to have more reality in them, that is, to be more strong, orderly, and coherent than the creatures of the mind; but this is no argument that they exist without the mind. They are also less dependent on the spirit, or thinking substance which perceives them, in that they are excited by the will of another and more powerful spirit; yet still they are ideas, and certainly no idea, whether faint or strong, can exist otherwise than in a mind perceiving it....

I do not argue against the existence of any one thing that we can apprehend either by sense or reflexion. That the things I see with my eyes and touch with my hands do exist, really exist, I make not the least question. The only thing whose existence we deny is that which *philosophers* call Matter or corporeal substance. And in doing of this there is no damage done to the rest of mankind, who, I dare say, will never miss it,. . . If the word substance be taken in the vulgar sense—for a combination of sensible qualities, such as extension, solidity, weight, and the like—this we cannot be accused of taking away: but if it be taken in a philosophic sense—for the support of accidents or qualities without the mind—then indeed I acknowledge that we take it away, if one may be said to take away that which never had any existence, not even in the imagination.... Since therefore the objects of sense exist only in the mind, and are without thoughtless and inactive, I chose to mark them by the word *idea*, which implies those properties.

But, say what we can, some one perhaps may be apt to reply, he will still believe his senses, and never suffer any arguments, how plausible soever, to prevail over the certainty of them. Be it so; assert the evidence of sense

as high as you please, we are willing to do the same. That what I see, hear, and feel doth exist, that is to say, is perceived by me, I no more doubt than I do of my own being. But I do not see how the testimony of sense can be alleged as a proof for the existence of anything which is not perceived by sense. We are not for having any man turn sceptic and disbelieve his senses; on the contrary, we give them all the stress and assurance imaginable....

Secondly, it will be objected that there is a great difference betwixt real fire for instance, and the idea of fire, betwixt dreaming or imagining oneself burnt, and actually being so: if you suspect it to be only the idea of fire which you see, do but put your hand into it and you will be convinced with a witness. This and the like may be urged in opposition to our tenets. To all which the answer is evident from what hath been already said; and I shall only add in this place, that if real fire be very different from the idea of fire, so also is the real pain that it occasions very different from the idea of the same pain, and yet nobody will pretend that real pain either is, or can possibly be, in an unperceiving thing, or without the mind, any more than its idea.

Berkeley, Principles of Human Knowledge, 33-41

- 30 It seems evident, that men are carried, by a natural instinct or prepossession, to repose faith in their senses; and that, without any reasoning, or even almost before the use of reason, we always suppose an external universe, which depends not on our perception, but would exist, though we and every sensible creature were absent or annihilated. Even the animal creation are governed by a like opinion, and preserve this belief of

external objects, in all their thoughts, designs, and actions.

It seems also evident, that, when men follow this blind and powerful instinct of nature, they always suppose the very images, presented by the senses, to be the external objects, and never entertain any suspicion, that the one are nothing but representations of the other. This very table which we see while, and which we feel hard, is believed to exist, independent of our perception, and to be something external to our mind, which perceives it. Our presence bestows not being on it: our absence does not annihilate it. It preserves its existence uniform and entire, independent of the situation of intelligent beings, who perceive or contemplate it.

But this universal and primary opinion of all men is soon destroyed by the slightest philosophy, which teaches us, that nothing can ever be present to the mind but an image or perception, and that the senses are only the inlets, through which these images are conveyed, without being able to produce any immediate intercourse between the mind and the object. The table, which we see, seems to diminish, as we remove farther from it: but the real table, which exists independent of us, suffers no alteration: it was, therefore, nothing but its image, which was present to the mind. These are the obvious dictates of reason; and no man, who reflects, ever doubted, that the existences, which we consider, when we say, *this house* and *that tree*, are nothing but perceptions in the mind, and fleeting copies or representations of other existences, which remain uniform and independent.

So far, then, are we necessitated by reasoning to contradict or depart from the primary instincts of nature, and to embrace a new system with regard to the

evidence of our senses. But here philosophy finds herself extremely embarrassed, when she would justify this new system, and obviate the cavils and objections of the sceptics. She can no longer plead the infallible and irresistible instinct of nature: for that led us to a quite different system, which is acknowledged fallible and even erroneous. And to justify this pretended philosophical system, by a chain of clear and convincing argument, or even any appearance of argument, exceeds the power of all human capacity.

By what argument can it be proved, that the perceptions of the mind must be caused by external objects, entirely different from them, though resembling them (if that be possible) and could not arise either from the energy of the mind itself, or from the suggestion of some invisible and unknown spirit, or from some other cause still more unknown to us? It is acknowledged, that, in fact, many of these perceptions arise not from anything external, as in dreams, madness, and other diseases. And nothing can be more inexplicable than the manner, in which body should so operate upon mind as ever to convey an image of itself to a substance, supposed of so different, and even contrary a nature.

It is a question of fact, whether the perceptions of the senses be produced by external objects, resembling them: how shall this question be determined? By experience surely; as all other questions of a like nature. But here experience is, and must be entirely silent. The mind has never anything present to it but the perceptions, and cannot possibly reach any experience of their connexion with objects. The supposition of such a connexion is, therefore, without any foundation in reasoning.

Hume, Concerning Human Understanding, XII, 118-119

31 As we have no immediate experience of what other men feel, we can form no idea of the manner in which they are affected, but by conceiving what we ourselves should feel in the like situation. Though our brother is upon the rack, as long as we ourselves are at our ease, our senses will never inform us of what he suffers. They never did and never can carry us beyond our own person, and it is by the imagination only that we can form any conception of what are his sensations.

Adam Smith, Theory of Moral Sentiments, I, 1

32 In whatsoever mode, or by whatsoever means, our knowledge may relate to objects, it is at least quite clear that the only manner in which it immediately relates to them is by means of an intuition. To this as the indispensable groundwork, all thought points. But an intuition can take place only in so far as the object is given to us. This, again, is only possible, to man at least, on condition that the object affect the mind in a certain manner. The capacity for receiving representations (receptivity) through the mode in which we are affected by objects, is called sensibility. By means of sensibility, therefore, objects are given to us, and it alone furnishes us with intuitions; by the understanding they are thought, and from it arise conceptions. But all thought must directly, or indirectly, by means of certain signs, relate ultimately to intuitions; consequently, with us, to sensibility, because in no other way can an object be given to us.

The effect of an object upon the faculty of representation, so far as we are affected by the said

object, is sensation. That sort of intuition which relates to an object by means of sensation is called an empirical intuition. The undetermined object of an empirical intuition is called *phenomenon*, That which in the phenomenon corresponds to the sensation, I term its *matter*; but that which effects that the content of the phenomenon can be arranged under certain relations, I call its *form*. But that in which our sensations are merely arranged, and by which they are susceptible of assuming a certain form, cannot be itself sensation. It is, then, the matter of all phenomena that is given to us *a posteriori*; the form must lie ready *a priori* for them in the mind, and consequently can be regarded separately from all sensation.

I call all representations *pure*, in the transcendental meaning of the word, wherein nothing is met with that belongs to sensation. And accordingly we find existing in the mind *a priori*, the pure form of sensuous intuitions in general, in which all the manifold content of the phenomenal world is arranged and viewed under certain relations. This pure form of sensibility I shall call *pure intuition*. Thus, if I take away from our representation of a body all that the understanding thinks as belonging to it, as substance, force, divisibility, etc., and also whatever belongs to sensation, as impenetrability, hardness, colour, etc.; yet there is still something left us from this empirical intuition, namely, extension and shape. These belong to pure intuition, which exists *a priori* in the mind, as a mere form of sensibility, and without any real object of the senses or any sensation.

Kant, Critique of Pure Reason, Transcendental Aesthetic

33 In general, we receive impressions only in consequence of motion, and we might establish it as an axiom that, *without motion, there is no sensation*. This general principle applies very accurately to the sensations of heat and cold: when we touch a cold body, the caloric which always tends to become *in equilibrio* in all bodies, passes from our hand into the body we touch, which gives us the feeling or sensation of cold. The direct contrary happens, when we touch a warm body, the caloric then passing from the body into our hand produces the sensation of heat. If the hand and the body touched be of the same temperature, or very nearly so, we receive no impression, either of heat or cold, because there is no motion or passage of caloric; and thus no sensation can take place without some correspondent motion to occasion it.

Lavoisier, Elements of Chemistry, I, 1

34 The eye—it cannot choose but see;
We cannot bid the ear be still;
Our bodies feel, where'er they be,
Against or with our will.

Wordsworth, Expostulation and Reply

35 O for a life of Sensations rather than of Thoughts!

Keats, Letter to Benjamin Bailey, (Nov. 22, 1817)

36 Only one absolute certainty is possible to man, namely, that at any given moment the feeling which he has exists.

T. H. Huxley, Letter to J. G. T. Sinclair (July 21, 1890)

37 Are not the sensations we get from the same object, for example, always the same? Does not the same piano-key, struck with the same force, make us hear in the same way? Does not the same grass give us the same feeling of green, the same sky the same feeling of blue, and do we not get the same olfactory sensation no matter how many times we put our nose to the same flask of cologne? It seems a piece of metaphysical sophistry to suggest that we do not; and yet a close attention to the matter shows that *there is no proof that the same bodily sensation is ever got by us twice.*

What is got twice is the same object. we hear the same note over and over again; we see the same of green, or smell the same objective perfume, or experience the same *species* of pain. The realities, concrete and abstract, physical and ideal, whose permanent existence we believe in, seem to be constantly coming up again before our thought, and lead us, in our carelessness, to suppose that our "ideas" of them are the same ideas. When we come, some time later, to the chapter on Perception, we shall see how inveterate is our habit of not attending to sensations as subjective facts, but of simply using them as stepping-stones to pass over to the recognition of the realities whose presence they reveal. The grass out of the window now looks to me of the same green in the sun as in the shade, and yet a painter would have to paint one part of it dark brown, another part bright yellow, to give its real sensational effect. We take no heed, as a rule, of the different way in which the same things look and sound and smell at different distances and under different circumstances. The sameness of the *things* is what we are concerned to ascertain; and any sensations that assure

us of that will probably be considered in a rough way to be the same with each other. This is what makes off-hand testimony about the subjective identity of different sensations well-nigh worthless as a proof of the fact. The entire history of Sensation is a commentary on our inability to tell whether two sensations received apart are exactly alike.

William James, Psychology, IX

38 Nature ... is frugal in her operations, and will not be at the expense of a particular instinct to give us that knowledge which experience and habit will soon produce. Reproduced sights and contacts tied together with the present sensation in the unity of a *thing* with a name, these are the complex objective stuff out of which my actually perceived table is made. Infants must go through a long education of the eye and ear before they can perceive the realities which adults perceive. *Every perception is an acquired perception.*

William James, Psychology, XIX

39 A sensation is rather like a client who has given his case to a lawyer and then has passively to listen in the courtroom to whatever account of his affairs, pleasant or unpleasant, the lawyer finds it most expedient to give.

William James, Pragmatism, VII

40 The state of becoming conscious is a special psychic act, different from and independent of the process of becoming fixed or represented, and consciousness appears to us as a sensory organ which perceives a content proceeding from another source.

5.3 Memory

The two most famous metaphors that have been used to say what memory is—one, that it is the storehouse of ideas; the other, that it is decaying sense—may give us some grasp of the subject, but upon closer examination they are more misleading than instructive. Something must be experienced or learned before it can be remembered, and that which is remembered must somehow be retained between the time of acquisition and the time of recall or recollection; but after we have acknowledged these two points, we are left with many difficult questions about the objects of memory, about the kind of knowledge that memory is, about the difference between immediate memory and memory after a long interval of time, about the related processes of reminiscence, recollection, and recognition, about the gradual fading away of memories, and forgetfulness and forgetting.

The quotations collected here touch on all these matters as well as others, and represent the fascination of memory not only for psychologists and philosophers, but also for the poets and the historians, who are concerned with our sense of time and our knowledge of the past. That fascination is, perhaps, most eloquently expressed in the passages taken from Augustine's *Confessions*. The modern scientific and the psychoanalytical interest in the subject are represented here in the quotations from William James and Sigmund Freud.

■ ■ ■

- 1 Cebes added: Your favourite doctrine, Socrates, that knowledge is simply recollection, if true, also necessarily implies a previous time in which we have learned that which we now recollect. But this would be impossible unless our soul had been in some place before existing in the form of man; here then is another proof of the soul's immortality.

But tell me, Cebes, said Simmias, interposing, what arguments are urged in favour of this doctrine of recollection. I am not very sure at the moment that I remember them.

One excellent proof, said Cebes, is afforded by questions. If you put a question to a person in a right way, he will give a true answer of himself, but how could he do this unless there were knowledge and right reason already in him? And this is most clearly shown when he is taken to a diagram or to anything of that sort....

And if we acquired this knowledge before we were born, and were born having the use of it, then we also knew before we were born and at the instant of birth not only the equal or the greater or the less, but all other ideas; for we are not speaking only of equality, but of beauty, goodness, justice, holiness, and of all which we stamp with the name of essence in the dialectical process, both when we ask and when we answer questions. Of all this we may certainly affirm that we acquired the knowledge before birth?

We may.

But if, after having acquired, we have not forgotten what in each case we acquired, then we must always have come into life having knowledge, and shall always continue to know as long as life lasts—for knowing is the acquiring and retaining knowledge and not forgetting. Is not forgetting, Simmias, just the losing of knowledge?

Quite true, Socrates,

But if the knowledge which we acquired before birth was lost by us at birth, and if afterwards by the use of the senses we recovered what we previously knew, will not the process which we call learning be a recovering of the knowledge which is natural to us, and may not this be rightly termed recollection?

Very true.

So much is clear—that when we perceive something, either by the help of sight, or hearing, or some other sense, from that perception we are able to obtain a notion of some other thing like or unlike which is associated with it. but has been forgotten. Whence, as I was saying, one of two alternatives follows:—either we had this knowledge at birth, and continued to know through life; or, after birth, those who are said to learn only remember, and learning is simply recollection.

Plato, Phaedo, 72B

2 *Socrates*. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

Theaetetus. Certainly you may.

Soc. And another and another?

Theaet. Yes.

Soc. I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different

sizes in different men; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

Theaet. I see.

Soc. Let us say that this tablet is a gift of Memory, the mother of the Muses; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that material receive the impression of them as from the seal of a ring; and that we remember and know what is imprinted as long as the image lasts; but when the image is effaced, or cannot be taken, then we forget and do not know.

Plato, Theaetetus, 191A

3 Acts of recollection, as they occur in experience, are due to the fact that one movement has by nature another that succeeds it in regular order.

If this order be necessary, whenever a subject experiences the former of two movements thus connected, it will [invariably], experience the latter; if, however, the order be not necessary, but customary, only in the majority of cases will the subject experience the latter of the two movements. But it is a fact that there are some movements, by a single experience of which persons take the impress of custom more deeply than they do by experiencing others many times; hence upon seeing some things but once we remember them better than others which we may have seen frequently.

Whenever, therefore, we are recollecting, we are experiencing certain of the antecedent movements until finally we experience the one after which customarily comes that which we seek. This explains why we hunt up

the series, having started in thought either from a present intuition or some other, and from something either similar, or contrary, to what we seek, or else from that which is contiguous with it. Such is the empirical ground of the process of recollection.

Aristotle, Memory and Reminiscence, 451b10

- 4 Many animals have memory, and are capable of instruction; but no other creature except man can recall the past at will.

Aristotle, History of Animals, 488b25

- 5 Men of fine genius are readily reminded of things, but those who receive with most pains and difficulty, remember best; every new thing they learn, being, as it were, burnt and branded in on their minds.

Plutarch, Cato the Younger

- 6 A memory has to do with something brought into ken from without, something learned or something experienced; the Memory-Principle, therefore, cannot belong to such beings as are immune from experience and from time.

No memory, therefore, can be ascribed to any divine being, or to the Authentic-Existent or the Intellectual-Principle: these are intangibly immune; time does not approach them; they possess eternity centred around Being; they know nothing of past and sequent; all is an unbroken state of identity, not receptive of change.

Plotinus, Fourth Ennead, III, 25

- 7 Memory, in point of fact, is impeded by the body: even as things are, addition often brings forgetfulness; with

thinning and clearing away, memory will often revive. The soul is a stability; the shifting and fleeting thing which body is can be a cause only of Us forgetting not of its remembering—Lethe stream may be understood in this sense—and memory is a fact of the soul.

Plotinus, Fourth Enneady III, 26

8 I shall mount beyond this power of my nature, still rising by degrees towards Him who made me. And so I come to the fields and vast palaces of memory, where are stored the innumerable images of material things brought to it by the senses. Further there is stored in the memory the thoughts we think, by adding to or taking from or otherwise modifying the things that sense has made contact with, and all other things that have been entrusted to and laid up in memory, save such as forgetfulness has swallowed in its grave. When I turn to memory, I ask it to bring forth what I want: and some things are produced immediately, some take longer as if they had to be brought out from some more secret place of storage; some pour out in a heap, and while we are actually wanting and looking for something quite different, they hurl themselves upon us in masses as though to say: "May it not be we that you want?" I brush them from the face of my memory with the hand of my heart, until at last the thing I want is brought to light as from some hidden place. Some things are produced just as they are required, easily and in right order; and things that come first give place to those that follow, and giving place are stored up again to be produced when I want them. This is what happens, when I say anything by heart.

In the memory all the various things are kept distinct and in their right categories, though each came into the memory by its own gate. For example, light and all the colors and shapes of bodies come in by the eyes, all the kinds of sound by the ears, all scents by the nostrils, all tastes by the mouth; and by a sense that belongs to the whole body comes in what is hard and what is soft, what is hot or cold, rough or smooth, heavy or light, whether outside the body or inside. All these things the vast recesses, the hidden and unsearchable caverns, of memory receive and store up, to be available and brought to light when need arises: yet all enter by their own various gates to be stored up in memory. Nor indeed do the things themselves enter: only the images of the things perceived by the senses are there for thought to remember them.

And even though we know by which senses they were brought in and laid up in the memory, who can tell how these images were formed? Even when I am in darkness and in silence, I can if I will produce colors in my memory, and distinguish black from white and any other colors if I choose; and sounds do not break in and disturb the image I am considering that came in through the eye, since the sounds themselves were already there and He stored up apart. For I can summon them too, if I like, and they are immediately present; and though my tongue is at rest and my throat silent I can sing as I will; nor do the images of the colors, although they are as truly present, interfere or interrupt when I call from the storehouse some other thing which came in by the ear. Similarly all other things that were brought in by the other senses and stored up in the memory can be called up at my pleasure: I distinguish the scent of lilies from the scent of violets,

though at that instant I smell nothing; and I like honey better than wine, some smooth thing better than rough, though I am not tasting or handling but only remembering.

All this I do inside me. in the huge court of my memory. In my memory are sky and earth and sea, ready at hand along with all the things that I have ever been able to perceive in them and have not forgotten. And in my memory too I meet myself—I recall myself, what I have done, when and where and in what state of mind I was when I did it. In my memory are all the things I remember to have experienced myself or to have been told by others. From the same store I can weave into the past endless new likenesses of things either experienced by me or believed on the strength of things experienced; and from these again I can picture actions and events and hopes for the future; and upon them all I can meditate as if they were present, "I shall do this or that," I say to myself in the vast recess of my mind with its immeasurable store of images of things so great: and this or that follows. "O, if only this or that could be!" or again, "May God prevent this or that!" Such things I say within myself, and when I speak of them the images of all the things I mention are to hand from the same storehouse of memory, and if the images were not there I could not so much as speak of the things.

Great is this power of memory, exceedingly great, O my God, a spreading limitless room within me.

Augustine, Confessions, X, 8

9 Now when I hear that there are three kinds of questions: whether a thing is, what it is, of what sort it is: I do indeed retain the images of the sounds of which those

words are composed, and I know that they passed through the air with a certain noise and now no longer are. But the things themselves which the sounds signified I could not come at by any bodily sense nor see them at all save by my mind; and what I stored in my memory was not their images but the truths themselves. But how they got into me, it is for them to tell if they can. For I run my mind over all the doorways of my body, but I cannot find any door by which they could have come in. For my eyes say; "If they were coloured, we reported them to you"; the nostrils say: "If they had any smell, they went in through us"; the sense of taste says: "Unless there was any taste in them, there is no use in my being asked"; the sense of touch says: "If the thing is not a body, I did not handle it, and if I did not handle it, I did not report it to you." Very well then, whence and how did they get into my memory? I do not know. For when I first learned them I was not trusting some other man's mind, but recognized them in my own; and I saw them as true and committed them to my mind as if placing them where I could get at them again whenever I desired. Thus they must have been in my mind even before I learned them, though they were not in my memory. Then where were they, or how did it come that when I heard them spoken I recognized them and said: "It is so, it is true," unless they *were* in my memory already, but so far back, thrust away as it were in such remote recesses, that unless they had been drawn forth by some other man's teaching, I might perhaps never have managed to think of them at all?

Augustine, Confessions, X, 10

- 10 The memory also contains the innumerable principles and laws of numbers and dimensions; and none of these

have been impressed upon it by any bodily sense, seeing that they have neither colour nor sound nor scent nor taste nor feel. I have heard the sounds of the words by which they are expressed when we discuss them, but the sounds are not the same as the truths themselves. For the sounds are of one kind in Greek, quite different in Latin, but the things themselves are neither Greek nor Latin nor of any other language. I have seen the lines drawn by architects, some of them as fine as a spider's web; but the truths are different, they are not the images of such things as the eye of my body has shown me. To know them is to recognize them interiorly without any concept of any kind of body whatsoever. With all my bodily senses I have perceived the numbers we use in counting; but the basic numbers by which we count are not the same as these, nor images of these; but really are. Let whoever does not see these truths laugh at me for talking thus: while he laughs at me I shall be sorry for him.

Augustine, Confessions, X, 12

- 11 Assuredly, Lord, I toil with this, toil within myself: I have become to myself a soil laborious and of heavy sweat. For I am not now considering the parts of the heavens, or measuring the distances of the stars, or seeking how the earth is held in space; it is I who remember, I, my mind. It is not remarkable if things that I am not are far from my knowledge: but what could be closer to me than myself? Yet the power of memory in me I do not understand, though without memory I could not even name myself.

Augustine, Confessions, X, 16

- 12 For memory sets before us, not what we choose, but what it pleases. Indeed there is nothing that imprints a thing so vividly on our memory as the desire to forget it: a good way to give our mind something to guard, and to impress it on her, is to solicit her to lose it.

Montaigne, II, 12, Apology for Raymond Sebond

- 13 If souls came from anything but a natural succession, and had been something else outside of the body, they would have a memory of their first existence, considering the natural faculties that are proper to them, of reflecting, reasoning, and remembering....

For to value the condition of our souls as highly as we want to, we must presuppose them to be wholly knowing when they are in their natural simplicity and purity. Thus they would have been such, being free from the corporeal prison, as much before entering it as we hope they will be after they have gone out of it. And this knowledge they would have to remember still while in the body, as Plato said that what we learned was only a recollection of what we had known; a thing which each man by experience can maintain to be false. In the first place, because we recollect only precisely what we are taught, and if memory were doing its job purely, it would at least suggest to us some point beyond what we have learned. Second, what it knew when it was in its purity was a real knowledge, by its divine intelligence understanding things as they are, whereas here it is made to receive falsehood and vice, if it is instructed about them. In this it cannot use its power of reminiscence, this idea and conception never having lodged in it.

*Montaigne, Essays, 11, 12, Apology for Raymond
Sebond*

- 14 When to the sessions of sweet silent thought
I summon up remembrance of things past,
I sigh the lack of many a thing I sought,
And with old woes new wail my dear time's waste.
Then can I drown an eye, unused to flow,
For precious friends hid in death's dateless night.
And weep afresh love's long since cancell'd woe,
And moan the expense of many a vanish'd sight.

Shakespeare, Sonnet XXX

- 15 I make no more estimation of repeating a great number of names or words upon once hearing, or the pouring forth of a number of verses or rhymes *ex tempore*, or the making of a satirical simile of everything, or the turning of everything to a jest, or the falsifying or contradicting of everything by cavil, or the like (whereof in the faculties of the mind there is great copie, and such as by device and practice may be exalted to an extreme degree of wonder), than I do of the tricks of tumblers, funambuloes, baladines; the one being the same in the mind that the other is in the body, matters of strangeness without worthiness.

Bacon, Advancement of Learning, Bk. II, XV, 2

- 16 Let the required nature be memory, or that which excites and assists memory. The constitutive instances are order or distribution, which manifestly assists memory; topics or common-places in artificial memory, which may be either places in their literal sense, as a gate, a comer, a window, and the like, or familiar persons and marks, or

anything else (provided it be arranged in a determinate order), as animals, plants, and words, letters, characters, historical persons, and the like, of which, however, some are more convenient than others. All these common-places materially assist memory, and raise it far above its natural strength. Verse, too, is recollected and learnt more easily than prose. From this group of three instances—order, the common-places of artificial memory, and verses—is constituted one species of aid for the memory, which may be well termed a separation from infinity. For when a man strives to recollect or recall anything to memory, without a preconceived notion or perception of the object of his search, he inquires about, and labors, and turns from point to point, as if involved in infinity. But if he have any preconceived notion, this infinity is separated off, and the range of his memory is brought within closer limits. In the three instances given above, the preconceived notion is clear and determined. In the first, it must be something that agrees with order; in the second, an image which has some relation or agreement with the fixed common-places; in the third, words which fall into a verse: and thus infinity is divided off. Other instances will offer another species, namely, that whatever brings the intellect into contact with something that strikes the sense (the principal point of artificial memory), assists the memory. Others again offer another species, namely, whatever excites an impression by any powerful passion, as fear, wonder, shame, delight, assists the memory. Other instances will afford another species; thus those impressions remain most fixed in the memory which are taken from the mind when clear and least occupied by preceding or succeeding notions, such as the

things we learn in childhood, or imagine before sleep, and the first time of any circumstance happening.

Bacon, Novum Organum, II, 26

17 The things perceived by sense remain in some animals; in others they do not remain. Those in whom they do not remain, however, have either no knowledge at all, or at least none beyond the simple perception of the things which do not remain; others, again, when they perceive, retain a certain something in their soul. Now, as there are many animals of this description, there is already a distinction between one animal and another; and to this extent, that in some there is reason from the memory of things; and in others there is none. Memory, therefore, as is said, follows from sense; but from repeated recollection of the same thing springs experience (for repeated acts of memory constitute a single experience)....

Wherefore... there is no perfect knowledge which can be entitled ours, that is innate; none but what has been obtained from experience, or derived in some way from our senses; all knowledge, at all events, is examined by these, approved by them, and finally presents itself to us firmly grounded upon some preexisting knowledge which we possessed: because without memory there is no experience, which is nothing else than reiterated memory; in like manner memory cannot exist without endurance of the things perceived, and the thing perceived cannot remain where it has never been.

William Harvey, Animal Generation, Intro.

18 Sometimes a man seeks what he hath lost; and from that place, and time, wherein he misses it, his mind runs back,

from place to place, and time to time, to find where and when he had it; that is to say, to find some certain and limited time and place in which to begin a method of seeking. Again, from thence, his thoughts run over the same places and times to find what action or other occasion might make him lose it. This we call remembrance, or calling to mind.

Hobbes, Leviathan, I, 3

19 Time and Education begets experience; Experience begets Memory; Memory begets Judgment and Fancy: Judgment begets the strength and structure, and Fancy begets the ornaments of a Poem, The Ancients therefore fabled not absurdly, in making memory the mother of the Muses, For memory is the World (though not really, yet so as in a looking glass) in which the Judgment (the severer sister) busieth herself in a grave and rigid examination of all the parts of Nature, and in registering by Letters, their order, causes, uses, differences, and resemblances; Whereby the Fancy, when any work of Art is to be performed, findeth her materials at hand and prepared for use, and needs no more than a swift motion over them, that what she wants, and is there to be had, may not lye too long unespied. So that when she seemeth to fly from one Indies to the other, and from Heaven to Earth, and to penetrate into the hardest matter, and obscurest places, into the future and into her self, and all this in a point of time; the voyage is not very great, her self being all she seeks; and her wonderful celerity, consisteth not so much in motion, as in copious Imagery discreetly ordered, and perfectly registred in the memory.

*Hobbes, Answer to Sir Will. D'Avenant's Preface Before
Gondibert*

- 20 But the iniquity of oblivion blindly scattereth her poppy, and deals with the memory of men without distinction to merit of perpetuity.... Who knows whether the best of men be known, or whether there be not more remarkable persons forgot than any that stand remembered in the known account of time?

Sir Thomas Browne, Urn-Burial, V

- 21 Memory ... is nothing else than a certain concatenation of ideas, involving the nature of things which are outside the human body, a concatenation which corresponds in the mind to the order and concatenation of the affections of the human body. I say, firstly, that it is a concatenation of those ideas only which involve the nature of things which are outside the human body, and not of those ideas which explain the nature of those things, for there are in truth ideas of the affections of the human body, which involve its nature as well as the nature of external bodies. I say, in the second place, that this concatenation takes place according to the order and concatenation of the affections of the human body, that I may distinguish it from the concatenation of ideas which takes place according to the order of the intellect, and enables the mind to perceive things through their first causes, and is the same in all men. Hence we can clearly understand how it is that the mind from the thought of one thing at once turns to the thought of another thing which is not in any way like the first. ... In this manner each person will turn from one thought to another according to the manner in which the habit of each has arranged the

images of things in the body. The soldier, for instance, if he sees the footsteps of a horse in the sand, will immediately turn from the thought of a horse to the thought of a horseman, and so to the thought of war. The countryman, on the other hand, from the thought of a horse will turn to the thought of his plough, his field, etc.; and thus each person will turn from one thought to this or that thought, according to the manner in which he has been accustomed to connect and bind together the images of things in his mind.

Spinoza, Ethics, II, Prop. 18, Schol.

- 22 Retention is the power to revive again in our minds those ideas which, after imprinting, have disappeared, or have been as it were laid aside out of sight. And thus we do, when we conceive heat or light, yellow or sweet,—the object being removed. This is memory, which is as it were the store-house of our ideas. For, the narrow mind of man not being capable of having many ideas under view and consideration at once, it was necessary to have a repository, to lay up those ideas which, at another time, it might have use of. But, our ideas being nothing but actual perceptions in the mind, which cease to be anything when there is no perception of them; this laying up of our ideas in the repository of the memory signifies no more but this,—that the mind has a power in many cases to revive perceptions which it has once had, with this additional perception annexed to them, that *it has had them before*. And in this sense it is that our ideas are said to be in our memories, when indeed they are actually nowhere;—but only there is an ability in the mind when it will to revive them again, and as it were paint them anew on itself, though some with more, some

with less difficulty; some more lively, and others more obscurely. And thus it is, by the assistance of this faculty, that we are said to have all those ideas in our understandings which, though we do not actually contemplate, yet we can bring in sight, and make appear again, and be the objects of our thoughts, without the help of those sensible qualities which first imprinted them there.

Locke, Concerning Human Understanding, Bk. II, X, 2

- 23 The memory of some men, it is true, is very tenacious, even to a miracle. But yet there seems to be a constant decay of all our ideas, even of those which are struck deepest, and in minds the most retentive; so that if they be not sometimes renewed, by repeated exercise of the senses, or reflection on those kinds of objects which at first occasioned them, the print wears out, and at last there remains nothing to be seen. Thus the ideas, as well as children, of our youth, often die before us; and our minds represent to us those tombs to which we are approaching; where, though the brass and marble remain, yet the inscriptions are effaced by time, and the imagery moulders away. The pictures drawn in our minds are laid in fading colours; and if not sometimes refreshed, vanish and disappear. How much the constitution of our bodies and the make of our animal spirits are concerned in this; and whether the temper of the brain makes this difference, that in some it retains the characters drawn on it like marble, in others like freestone, and in others little better than sand, I shall not here inquire; though it may seem probable that the constitution of the body does sometimes influence the memory, since we oftentimes find a disease quite strip the mind of all its

ideas, and the flames of a fever in a few days calcine all those images to dust and confusion, which seemed to be as lasting as if graved in marble.

Locke, Concerning Human Understanding, Bk. II, X, 5

24 Music, when soft voices die,
Vibrates in the memory;
Odors, when sweet violets sicken,
Live within the sense they quicken.

Rose leaves, when the rose is dead,
Are heaped for the beloved's bed;
And so thy thoughts, when thou art gone,
Love itself shall slumber on.

Shelley, To —

25 Blessed are the forgetful: for they get over their stupidities, too.

Nietzsche, Beyond Good and Evil, VII, 217

26 Try ... to symbolize what goes on in a man who is racking his brains to remember a thought which occurred to him last week. The associates of the thought are there, many of them at least, but they refuse to awaken the thought itself. We cannot suppose that they do not irradiate at all into its brain-tract, because his mind quivers on the very edge of its recovery. Its actual rhythm sounds in his ears; the words seem on the imminent point of following, but fail. What it is that blocks the discharge and keeps the brain-excitement here from passing beyond the nascent into the vivid state cannot be guessed. But we see in the philosophy of desire and pleasure, that such nascent

excitements, spontaneously tending to a crescendo, but inhibited or checked by other causes, may become potent mental stimuli and determinants of desire. All questioning, wonder, emotion of curiosity, must be referred to cerebral causes of some such form as this. The great difference between the effort to recall things forgotten and the search after the means to a given end, is that the latter have not, whilst the former have, already formed a part of our experience....

The forgotten thing is felt by us as a gap in the midst of certain other things. If it is a thought, we possess a dim idea of where we were and what we were about when it occurred to us. We recollect the general subject to which it relates. But all these details refuse to shoot together into a solid whole, for the lack of the vivid traits of this missing thought, the relation whereof to each detail forms now the main interest of the latter. We keep running over the details in our mind, dissatisfied, craving something more. From each detail there radiate lines of association forming so many tentative guesses. Many of these are immediately seen to be irrelevant, are therefore void of interest, and lapse immediately from consciousness. Others are associated with the other details present, and with the missing thought as well. When *these* surge up, we have a peculiar feeling that we are "warm," as the children say when they play hide and seek; and such associates as these we clutch at and keep before the attention. Thus we recollect successively that when we had the thought in question we were at the dinner-table; then that our friend J. D. was there; then that the subject talked about was so and so; finally, that the thought came *a propos* of a certain anecdote, and then that it had something to do with a French quotation.

Now all these added associations arise *independently of the will*, by the spontaneous process we know so well.

All that the will does is to emphasize and linger over those which seem pertinent, and ignore the rest. Through this hovering of the attention in the neighborhood of the desired object, the accumulation of associates becomes so great that the combined tensions of their neural processes break through the bar, and the nervous wave pours into the tract which has so long been awaiting its advent. And as the expectant, sub-conscious itching there, bursts into the fulness of vivid feeling, the mind finds an inexpressible relief.

William James, Psychology, XIV

- 27 The stream of thought flows on; but most of its segments fall into the bottomless abyss of oblivion. Of some, no memory survives the instant of their passage. Of others, it is confined to a few moments, hours, or days. Others, again, leave vestiges which are indestructible, and by means of which they may be recalled as long as life endures.

William James, Psychology, XVI

- 28 Memory proper, or secondary memory as it might be styled, is the knowledge of a former state of mind after it has already once dropped from consciousness; or rather *it is the knowledge of an event, or fact*, of which meantime we have not been thinking, *with the additional consciousness that we have thought or experienced it before.*

The first element which such a knowledge involves would seem to be the revival in the mind of an image or

copy of the original event. And it is an assumption made by many writers that the revival of an image is all that is needed to constitute the memory of the original occurrence. But such a revival is obviously not a *memory*, whatever else it may be; it is simply a duplicate, a second event, having absolutely no connection with the first event except that it happens to resemble it. The clock strikes to-day; it struck yesterday; and may strike a million times ere it wears out. The rain pours through the gutter this week; it did so last week; and will do so *in soecula soeculorum*. But does the present clock-stroke become aware of the past ones, or the present stream recollect the past stream, because they repeat and resemble them? Assuredly not.... No memory is involved in the mere fact of recurrence. The successive editions of a feeling are so many independent events, each snug in its own skin. Yesterday's feeling is dead and buried; and the presence of to-day's is no reason why it should resuscitate. A farther condition is required before the present image can be held to stand for a *past original*.

That condition is that the fact imaged be *expressly referred to the past*, thought as *in the past*. But how can we think a thing as in the past, except by thinking of the past together with the thing, and of the relation of the two? And how can we think of the past? In the chapter on Time-perception we have seen that our intuitive or immediate consciousness of pastness hardly carries us more than a few seconds backward of the present instant of time. Remoter dates are conceived, not perceived; known symbolically by names, such as "last week," "1850"; or thought of by events which happened in them, as the year in which we attended such a school, or met with such a loss.—So that if we wish to think of a

particular past epoch, we must think of a name or other symbol, or else of certain concrete events, associated therewithal. Both must thought of, to think the past epoch adequately. And to "refer" any special fact to the past epoch is to think that fact *with* the names and events which characterize its date, to think it, in short, with a lot of contiguous associates.

But even this would not be memory. Memory requires more than mere dating of a fact in the past. It must be dated in my past. In other words, I must think that I directly experienced its occurrence. It must have that "warmth and intimacy" which... characteriz[es] all experiences "appropriated" by the thinker as his own.

William James, Psychology, XVI

29 In the practical use of our intellect, forgetting is as important a function as recollecting....

This peculiar mixture of forgetting with our remembering is but one instance of our mind's selective activity. Selection is the very keel on which our mental ship is built. And in this case of memory its utility is obvious. If we remembered everything, we should on most occasions be as ill off as if we remembered nothing. It would take as long for us to recall a space of time as it took the original time to elapse, and we should never get ahead with our thinking. All recollected times undergo, accordingly, what M. Ribot calls foreshortening; and this foreshortening is due to the omission of an enormous number of the facts which filled them.

William James, Psychology, XVI

30 In human experience, the most compelling example of non-sensuous perception is our knowledge of our own immediate past. I am not referring to our memories of a day past, or of an hour past, or of a minute past. Such memories are blurred and confused by the intervening occasions of our personal existence. But our immediate past is constituted by that occasion, or by that group of fused occasions, which enters into experience devoid of any perceptible medium intervening between it and the present immediate fact. Roughly speaking, it is that portion of our past lying between a tenth of a second and half a second ago. It is gone, and yet it is here. It is our indubitable self, the foundation of our present existence. Yet the present occasion while claiming self-identity, while sharing the very nature of the bygone occasion in all its living activities, nevertheless is engaged in modifying it, in adjusting it to *other* influences, in completing it with *other* values, in deflecting it to other purposes. The present moment is constituted by the influx of *the other* into that self-identity which is the continued life of the immediate past within the immediacy of the present.

Whitehead, Adventures of Ideas, XI, 12

31 Memory is the purest example of mirror knowledge. When I remember a piece of music or a friend's face, my state of mind resembles, though with a difference, what it was when I heard the music or saw the face. If I have sufficient skill, I can play the music or paint the face from memory, and then compare my playing or painting with the original, or rather with something which I have reason to believe closely similar to the original. But we trust our memory, up to a point, even if it does not pass this test. If

our friend appears with a black eye, we say, "How did you get that injury?" not "I had forgotten that you had a black eye." The tests of memory, as we have already had occasion to notice, are only confirmations; a considerable degree of credibility attaches to a memory on its own account, particularly if it is vivid and recent.

A memory is accurate, not in proportion to the help it gives in handling present and future facts, but in proportion to its resemblance to a past fact. When Herbert Spencer, after fifty years, saw again the lady he had loved as a young man, whom he had imagined still young, it was the very accuracy of his memory which incapacitated him from handling the present fact. In regard to memory, the definition of "truth," and therefore of "knowledge," lies in the resemblance of present imagining to past sensible experience. Capacity for handling present and future facts may be confirmatory in certain circumstances, but can never *define* what we mean when we say that a certain memory is "knowledge."

Russell, Human Knowledge, VI, 1

32 When I had reached in my procedure with [my patients] a point at which they declared that they knew nothing more, I would assure them that they did know, that they must just tell it out, and I would venture the assertion that the memory which would emerge at the moment that I laid my hand on the patient's forehead would be the right one. In this way I succeeded, without hypnosis, in learning from the patient all that was necessary for a construction of the connection between the forgotten pathogenic scenes and the symptoms which they had left behind. This was a troublesome and in its length an exhausting proceeding, and did not lend itself to a

finished technique. But I did not give it up without drawing definite conclusions from the data which I had gained. I had substantiated the fact that the forgotten memories were not lost. They were in the possession of the patient, ready to emerge and form associations with his other mental content, but hindered from becoming conscious, and forced to remain in the unconscious by some sort of a force. The existence of this force could be assumed with certainty, for in attempting to drag up the unconscious memories into the consciousness of the patient, in opposition to this force, one got the sensation of his own personal effort striving to overcome it. One could get an idea of this force, which maintained the pathological situation, from the resistance of the patient.

It is on this idea of *resistance* that I based my theory of the psychic processes of hystericals. It had been found that in order to cure the patient it was necessary that this force should be overcome. Now with the mechanism of the cure as a starting point, quite a definite theory could be constructed. These same forces, which in the present situation as resistances opposed the emergence of the forgotten ideas into consciousness, must themselves have caused the forgetting, and repressed from consciousness the pathogenic experiences. I called this hypothetical process repression, and considered that it was proved by the undeniable existence of resistance.

Freud, Origin and Development of Psycho-Analysis, II

- 33 It is quite true that the unconscious wishes are always active. They represent paths which are always practicable, whenever a quantum of excitation makes use of them. It is indeed an outstanding peculiarity of the unconscious processes that they are indestructible.

Nothing can be brought to an end in the unconscious; nothing is past or forgotten. . . . Indeed, the fading of memories and the weak affect of impressions which are no longer recent, which we are apt to take as self-evident, and to explain as a primary effect of time on our psychic memory-residues, are in reality secondary changes brought about by laborious work.

Freud, Interpretation of Dreams, VII, D

34 The process of repression is not to be regarded as something which takes place once for all, the results of which are permanent, as when some living thing has been killed and from that time onward is dead; on the contrary, repression demands a constant expenditure of energy, and if this were discontinued the success of the repression would be jeopardized, so that a fresh act of repression would be necessary. We may imagine that what is repressed exercises a continuous straining in the direction of consciousness, so that the balance has to be kept by means of a steady counter-pressure. A constant expenditure of energy, therefore, is entailed in maintaining a repression, and economically its abrogation denotes a saving.

Freud, Repression

5.4 Imagination

Imagination is the faculty of poetry and fiction—of imaginative literature in all its forms. The poets express their appreciation of its resources and of its gifts. Fancy and fantasy not only create realms that cannot be explored by

sense; imagination also exercises a magic touch on sensible reality, reshaping and enlivening it in a variety of ways.

Imagination like memory is thought of by the philosophers and psychologists as a residue or by-product of sense and sense perception, Yet the products of imagination often go beyond the world of things perceived and remembered. The fictions or constructions of the imagination—such as mermaids, centaurs, unicorns, and golden mountains— may involve elements derived from sense perception, but they also represent compositions that have never been experienced. What mode of being, if any, is possessed by such objects of imagination? Or, for that matter, by the imaginary persons who are the characters in plays and novels?

The word "ideas" is used by some writers—Hume, for example—for the images that are derived from sense impressions. Other writers make a sharp distinction between images or phantasms—the products of imagination—and ideas or concepts which are the elements of thought and are attributed to the mind or intellect rather than to the imagination. When images and ideas or concepts are distinguished, problems arise concerning their interdependence. Can we conceive things that we cannot imagine? Is there a difference between the unimaginable and the inconceivable?

For the discussion of related matters, the reader is referred to Section 6.2 on Experience, and to Section 16.3 on Poetry and Poets; and also to Section 5.1 on Intelligence and Understanding.

■ ■ ■

1 Imagination is different from either perceiving or discursive thinking, though it is not found without sensation, or judgement without it. That this activity is not the same kind of thinking as judgement is obvious. For imagining lies within our own power whenever we wish (e.g. we can call up a picture, as in the practice of mnemonics by the use of mental images), but in forming opinions we are not free: we cannot escape the alternative of falsehood or truth. Further, when we think something to be fearful or threatening, emotion is immediately produced, and so too with what is encouraging; but when we merely imagine we remain as unaffected as persons who are looking at a painting of some dreadful or encouraging scene. Again within the field of judgement itself we find varieties—knowledge, opinion, prudence, and their opposites; of the differences between these I must speak elsewhere.

Thinking is different from perceiving and is held to be in part imagination, in part judgement: we must therefore first mark off the sphere of imagination and then speak of judgement. If then imagination is that in virtue of which an image arises for us, excluding metaphorical uses of the term, is it a single faculty or disposition relative to images, in virtue of which we discriminate and are either in error or not? The faculties in virtue of which we do this are sense, opinion, science, intelligence.

That imagination is not sense is clear from the following considerations: Sense is either a faculty or an activity, e.g. sight or seeing: imagination takes place in the absence of both, as e.g. in dreams. (2) Again, sense is always present, imagination not. If actual imagination and actual sensation were the same, imagination would be found in all the brutes: this is held not to be the case;

e.g. it is not found in ants or bees or grubs. (3) Again, sensations are always true, imaginations are for the most part false. (4) Once more, even in ordinary speech, we do not, when sense functions precisely with regard to its object, say that we imagine it to be a man, but rather when there is some failure of accuracy in its exercise. And (5), as we were saying before, visions appear to us even when our eyes are shut. Neither is imagination any of the things that are never in error: e.g. knowledge or intelligence; for imagination may be false.

It remains therefore to see if it is opinion, for opinion may be either true or false.

But opinion involves belief (for without belief in what we opine we cannot have an opinion), and in the brutes though we often find imagination we never find belief. Further, every opinion is accompanied by belief, belief by conviction, and conviction by discourse of reason: while there are some of the brutes in which we find imagination, without discourse of reason. It is clear then that imagination cannot, again, be (1) opinion plus sensation, or (2) opinion mediated by sensation, or (3) a blend of opinion and sensation; this is impossible both for these reasons and because the content of the supposed opinion cannot be different from that of the sensation (I mean that imagination must be the blending of the perception of white with the opinion that it is white: it could scarcely be a blend of the opinion that it is good with the perception that it is white); to imagine is therefore (on this view) identical with the thinking of exactly the same as what one in the strictest sense perceives. But what we imagine is sometimes false though our contemporaneous judgement about it is true; e.g. we imagine the sun to be a foot in diameter though

we are convinced that it is larger than the inhabited part of the earth, and the following dilemma presents itself. Either (a) while the fact has not changed and the observer has neither forgotten nor lost belief in the true opinion which he had, that opinion has disappeared, or {b') if he retains it then his opinion is at once true and false. A true opinion, however, becomes false only when the fact alters without being noticed.

Imagination is therefore neither any one of the states enumerated, nor compounded out of them.

But since when one thing has been set in motion another thing may be moved by it, and imagination is held to be a movement and to be impossible without sensation, i.e. to occur in beings that are percipient and to have for its content what can be perceived, and since movement may be produced by actual sensation and that movement is necessarily similar in character to the sensation itself, this movement must be (1) necessarily (a) incapable of existing apart from sensation, (6) incapable of existing except when we perceive, (2) such that in virtue of its possession that in which it is found may present various phenomena both active and passive, and (3) such that it may be either true or false.

The reason of the last characteristic is as follows. Perception (1) of the special objects of sense is never in error or admits the least possible amount of falsehood, (2) That of the concomitance of the objects concomitant with the sensible qualities comes next: in this case certainly we may be deceived; for while the perception that there is white before us cannot be false, the perception that what is white is this or that may be false. (3) Third comes the perception of the universal attributes which accompany the concomitant objects to which the special

sensibles attach (I mean c.g. of movement and magnitude); it is in respect of these that the greatest amount of sense-illusion is possible.

The motion which is due to the activity of sense in these three modes of its exercise will differ from the activity of sense; (1) the first kind of derived motion is free from error while the sensation is present; (2) and (3) the others may be erroneous whether it is present or absent, especially when the object of perception is far off. If then imagination presents no other features than those enumerated and is what we have described, then imagination must be a movement resulting from an actual exercise of a power of sense.

As sight is the most highly developed sense . . . imagination has been formed from light because it is not possible to see without light.

And because imaginations remain in the organs of sense and resemble sensations, animals in their actions are largely guided by them, some (i.e. the brutes) because of the non-existence in them of mind, others (i.e. men) because of the temporary eclipse in them of mind by feeling or disease or sleep.

About imagination, what it is and why it exists, let so much suffice.

Aristotle, On the Soul, 427b14

- 2 And now that I have taught what the nature of the mind is and out of what things it is formed into one quickened being with the body, and how it is dissevered and returns into its first-beginnings, I will attempt to lay before you a truth which most nearly concerns these questions, the existence of things which we call idols of things: these, like films peeled off from the surface of things, fly to and

fro through the air, and do likewise frighten our minds when they present themselves to us awake as well as in sleep, what time we behold strange shapes and idols of the light-bereaved, which have often startled us in appalling wise as we lay relaxed in sleep: this I will essay, that we may not haply believe that souls break loose from Acheron or that shades fly about among the living or that something of us is left behind after death, when the body and the nature of the mind destroyed together have taken their departure into their several first-beginnings.

Lucretius, Nature of Things, IV

- 3 In the present state of life in which the soul is united to a passible body, it is impossible for our intellect to understand anything actually except by turning to the phantasms. And of this there are two indications. First of all because the intellect, being a power that does not make use of a corporeal organ, would in no way be hindered in its act through the lesion of a corporeal organ if for its act there were not required the act of some power that does make use of a corporeal organ. Now sense, imagination and the other powers belonging to the sensitive part, make use of a corporeal organ. Therefore it is clear that for the intellect to understand actually, not only when it acquires fresh knowledge, but also when it uses knowledge already acquired, there is need for the act of the imagination and of the other powers. For when the act of the imagination is hindered by a lesion of the corporeal organ, for instance, in a case of frenzy, or when the act of the memory is hindered, as in the case of lethargy, we see that a man is hindered from actually understanding things of which he had a previous knowledge. Secondly, anyone can experience this of

himself, that when he tries to understand something, he forms certain phantasms to serve him by way of examples, in which as it were he examines what he is striving to understand. It is for this reason that when we wish to make someone understand something, we lay examples before him, from which he can form phantasms for the purpose of understanding.

Now the reason of this is that the power of knowledge is proportioned to the thing known. Thus... the proper object of the human intellect, which is united to a body, is a quiddity or nature existing in corporeal matter, and through such natures of visible things it rises even to some knowledge of things invisible. Now it belongs to such a nature to exist in an individual, and this cannot be apart from corporeal matter. . . . And so the nature of a stone or any material thing cannot be known completely and truly, except according as it is known as existing in the individual. Now we apprehend the individual through the senses and the imagination. And, therefore, for the intellect to understand actually its proper object, it must of necessity turn to the phantasms in order to examine the universal nature existing in the individual.

Aquinas, Summa Theologica, I, 84, 7

- 4 O fantasy, that at times dost so snatch us out of ourselves
that we are conscious of naught, even though a thousand
trumpets sound about us,
who moves thee, if the senses set naught before thee?
A light moves thee which takes its form in heaven, of
itself, or by a will that sendeth it down.

Dante, Purgatorio, XVII, 13

5 And I, who to the goal of all my longings was drawing nigh,
even as was meet the ardour of the yearning quenched
within me.

Bernard gave me the sign and smiled to me that I
should look on high, but I already of myself was such as
he would have me;

because my sight, becoming purged, now more and
more was entering through the ray of the deep light
which in itself is true.

Thenceforward was my vision mightier than our
discourse, which faileth at such sight, and fail-cth
memory at so great outrage.

As is he who dreaming seeth, and when the dream is
gone the passion stamped remaineth, and naught else
cometh to the mind again;

even such am I; for almost wholly faileth me my vision,
yet doth the sweetness that was born of it still drop
within my heart.

So doth the snow unstamp it to the sun, so to the wind
on the light leaves was lost the Sibyl's wisdom.

Dante, Paradiso, XXXIII, 46

6 So it is with minds. Unless you keep them busy with some
definite subject that will bridle and control them, they
throw themselves in disorder hither and yon in the vague
field of imagination.

... And there is no mad or idle fancy that they do not
bring forth in this agitation.

Montaigne, Essays, I, 8, Of Idleness

7 How many men have been made sick by the mere power of
imagination?

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 8 *Holofernes*. This is a gift that I have, simple, simple; a foolish extravagant spirit, full of forms, figures, shapes, objects, ideas, apprehensions, motions, revolutions: these are begot in the ventricle of memory, nourished in the womb of *pia mater*, and delivered upon the mellowing of occasion.

Shakespeare, Love's Labour's Lost, IV, ii, 67

- 9 *Theseus*. Such tricks hath strong imagination,
That, if it would but apprehend some joy,
It comprehends some bringer of that joy;
Or in the night, imagining some fear.
How easy is a bush supposed a bear!

Shakespeare, Midsummer-Night's Dream, V, i, 18

- 10 Tell me where is fancy bred,
Or in the heart or in the head?
How begot, how nourished?
Reply, reply.
It is engender'd in the eyes,
With gazing fed; and fancy dies
In the cradle where it lies.
Let us all ring fancy's knell:
I'll begin it—Ding, dong, bell.

Shakespeare, Merchant of Venice, III, ii, 63

- 11 *Chorus*. O for a Muse of fire, that would ascend
The brightest heaven of invention
A kingdom for a stage, princes to act
And monarchs to behold the swelling scene!
Then should the warlike Harry, like himself,

Assume the port of Mars; and at his heels,
Leash'd in like hounds, should famine, sword, and fire
Crouch for employment. But pardon, gentles all,
The flat unraised spirits that have dared
On this unworthy scaffold to bring forth
So great an object: can this cockpit hold
The vasty fields of France? or may we cram
Within this wooden O the very casques
That did affright the air at Agincourt?
O, pardon! since a crooked figure may
Attest in little place a million;
And let us, ciphers to this great accompt,
On your Imaginary forces work.
Suppose within the girdle of these walls
Are now confined two mighty monarchies,
Whose high upreared and abutting fronts
The perilous narrow ocean parts asunder:
Piece out our imperfections with your thoughts;
Into a thousand parts divide one man,
And make imaginary puissance:
Think, when we talk of horses, that you see them
Printing their proud hoofs i' the receiving earth;
For 'tis your thoughts that now must deck our kings,
Carry them here and there; jumping o'er times,
Turning the accomplishment of many years
Into an hour-glass; for the which supply.
Admit me Chorus to this history.

Shakespeare, Henry V, Prologue

12 *Chorus.* Thus with imagined wing our swift scene flies
In motion of no less celerity
Than that of thought. Suppose that you have seen
The well-appointed king at Hampton pier

Embark his royalty; and his brave fleet
With silken streamers the young Phoebus fanning:
Play with your fancies, and in them behold
Upon the hempen tackle ship-boys climbing;
Hear the shrill whistle which doth order give
To sounds confused; behold the threaden sails.
Borne with the invisible and creeping wind,
Draw' the huge bottoms through the furrow'd sea,
Breasting the lofty surge: O, do but think
You stand upon the rivage and behold
A city on the inconstant billows dancing;
For so appears this fleet majestic.
Holding due course to Harfleur. Follow, follow:
Grapple your minds to sternage of this navy.
And leave your England, as dead midnight still,
Guarded with grandsires, babies, and old women
Either past or not arrived to pith and puissance;
For who is he, whose chin is but enrich'd
With one appearing hair, that will not follow
These cull'd and choice-drawn cavaliers to France?
Work, work your thoughts, and therein see a siege;
Behold the ordnance on their carriages,
With fatal mouths gaping on girded Harfleur.
Suppose the ambassador from the French comes back;
Tells Harry that the King doth offer him
Katharine his daughter, and with her, to dowry,
Some petty and unprofitable dukedoms.
The offer likes not: and the nimble gunner
With linstock now the devilish cannon touches,
 Alarum, and chambers go off.
And down goes all before them. Still be kind.
And eke out our performance with your mind.

Shakespeare, Henry V, III, Prologue

- 13 *Macbeth*. Why do I yield to that suggestion
Whose horrid image doth unfix my hair
And make my seated heart knock at my ribs,
Against the use of nature? Present fears
Are less than horrible imaginings.

Shakespeare, Macbeth, I, iii, 134

- 14 So, *Sancho*, as to the Use which I make of the Lady *Dulcinea*, she is equal to the greatest Princesses in the World. Pr'ythee tell me. Dost thou think the Poets, who every one of 'em celebrate the Praises of some Lady or other, had all real Mistresses? Or that the *Amaryllis's*, the *Phyllis's*, the *Sylvia's* the *Diana's*, the *Galatea's*, the *Alida's*, and the like, which you shall find in so many Poems, Romances, Songs and Ballads, upon ever Stage, and even in every Barber's Shop, were Creatures of Flesh and Blood, and Mistresses to those that did and do celebrate 'em? No, no, never think it; for I dare assure thee, the greatest Part of 'em were nothing but the meer Imaginations of the Poets, for a Ground-work to exercise their Wits upon, and give to the World Occasion to look on the Authors as Men of an amorous and gallant Disposition: And so 'tis sufficient for me to imagine, that *Aldonza Lorenzo* is beautiful and chaste; as for her Birth and Parentage, they concern me but little; for there's no need to make an Enquiry about a Woman's Pedigree, as there is of us Men, when some Badge of Honour is bestowed on us; and so she's to me the greatest Princess in the World: For thou ought'st to know, *Sancho*, if thou know'st it not already, that there are but two things that chiefly excite us to love a Woman, an attractive Beauty,

and unspotted Fame. Now these two Endowments are happily reconcil'd in *Dulcinea*; for as for the one, she has not her Equal, and few can vie with her in the other: But to cut off all Objections at once, I imagine, that All I say of her is really so, without the least Addition or Diminution: I fancy her to be just such as I would have her for Beauty and Quality. *Helen* cannot stand in Competition with her; *Lucretia* cannot rival her; and all the Heroines which Antiquity has to boast, whether *Greeks*, *Romans* or *Barbarians*, are at once out-done by her incomparable Perfections. Therefore let the World say what it will; should the Ignorant Vulgar foolishly censure me, I please my self with the Assurances I have of the Approbation of Men of the strictest Morals, and the nicest Judgment.

Cervantes, Don Quixote, I, 25

- 15 *Sancho*. Heaven defend me, said he to himself, what a Heart of a Chicken have I! This now, which to me is a sad Disaster, to my Master, *Don Quixote*, would be a rare Adventure. He would look upon these Caves and Dungeons as lovely Gardens, and glorious Palaces, and hope to be led out of these dark narrow Cells into some fine Meadow; while I, luckless, helpless, heartless Wretch that I am, every Step I take, expect to sink into some deeper Pit than this, and go down I don't know whither.

Cervantes, Don Quixote, II, 55

- 16 That power by which we are properly said to know things, is purely spiritual, and not less distinct from every part of the body than blood from bone, or hand from eye. It is a single agency, whether it receives impressions from the common sense simultaneously with the fancy, or applies

itself to those that are preserved in the memory, or forms new ones. Often the imagination is so beset by these impressions that it is unable at the same time to receive ideas from the common sense, or to transfer them to the motor mechanism in the way befitting its purely corporeal character. In all these operations this cognitive power is at one time passive, at another active, and resembles now the seal and now the wax. But the resemblance on this occasion is only one of analogy, for among corporeal things there is nothing wholly similar to this faculty. It is one and the same agency which, when applying itself along with the imagination to the common sense, is said to see, touch, etc.; if applying itself to the imagination alone in so far as that is endowed with diverse impressions, it is said to remember; if it turn to the imagination in order to create fresh impressions, it is said to imagine or conceive; finally if it act alone it is said to understand.... Now it is the same faculty that in correspondence with those various functions is called either pure understanding, or imagination, or memory, or sense. It is properly called mind when it either forms new ideas in the fancy, or attends to those already formed., . . But after having grasped these facts the attentive reader will gather what help is to be expected from each particular faculty, and discover how far human effort can assail to supplement the deficiencies of our mental powers.

Descartes, Rules for Direction of the Mind, XII

- 17 When a body is once in motion, it moveth (unless something else hinder it) eternally; and whatsoever hindreth it, cannot in an instant, but in time, and by degrees, quite extinguish it: and as we see in the water,

though the wind cease, the waves give not over rolling for a long time after; so also it happeneth in that motion which is made in the internal parts of a man, then, when he sees, dreams, etc. For after the object is removed, or the eye shut, we still retain an image of the thing seen, though more obscure than when we see it. And this is it the Latins call imagination, from the image made in seeing.... Imagination, therefore, is nothing but deeming sense; and is found in men and many other living creatures, as well sleeping as waking.

The decay of sense in men waking is not the decay of the motion made in sense, but an obscuring of it, in such manner as the light of the sun obscureth the light of the stars; which stars do no less exercise their virtue by which they are visible in the day than in the night.... This *decaying sense*, when we would express the thing itself (I mean *fancy* itself), we call *imagination*, as I said before. But when we would express the *decay*, and signify that the sense is fading, old, and past, it is called *memory*. So that imagination and memory are but one thing, which for diverse considerations hath diverse names.

Hobbes, Leviathan, I, 2

- 18 It is that deceitful part in man, that mistress of error and falsity, the more deceptive that she is not always so; for she would be an infallible rule of truth, if she were an infallible rule of falsehood. But being most generally false, she gives no sign of her nature, impressing the same character on the true and the false.

I do not speak of fools, I speak of the wisest men; and it is among them that the imagination has the great gift of persuasion. Reason protests in vain; it cannot set a true value on things.

This arrogant power, the enemy of reason, who likes to rule and dominate it, has established in man a second nature to show how all-powerful she is. She makes men happy and sad, healthy and sick, rich and poor; she compels reason to believe, doubt, and deny; she blunts the senses, or quickens them; she has her fools and sages; and nothing vexes us more than to see that she fills her devotees with a satisfaction far more full and entire than does reason. Those who have a lively imagination are a great deal more pleased with themselves than the wise can reasonably be. They look down upon men with haughtiness; they argue with boldness and confidence, others with fear and diffidence; and this gaiety of countenance often gives them the advantage in the opinion of the hearers, such favour have the imaginary wise in the eyes of judges of like nature. Imagination cannot make fools wise; but she can make them happy, to the envy of reason which can only make its friends miserable; the one covers them with glory, the other with shame.

What but this faculty of imagination dispenses reputation, awards respect and veneration to persons, works, laws, and the great? How insufficient are all the riches of the earth without her consent!

Would you not say that this magistrate, whose venerable age commands the respect of a whole people, is governed by pure and lofty reason, and that he judges causes according to their true nature without considering those mere trifles which only affect the imagination of the weak? See him go to sermon, full of devout zeal, strengthening his reason with the ardour of his love. He is ready to listen with exemplary respect. Let the preacher appear, and let nature have given him a hoarse voice or a

comical cast of countenance, or let his barber have given him a bad shave, or let by chance his dress be more dirtied than usual, then, however great the truths he announces, I wager our senator loses his gravity.

If the greatest philosopher in the world find himself upon a plank wider than actually necessary, but hanging over a precipice, his imagination will prevail, though his reason convince him of his safety. Many cannot bear the thought without a cold sweat. I will not state all its effects.

Pascal, Pansees, 11, 82

- 19 Imagination has this peculiarity that it produces the greatest things with as little time and trouble as little things.

Pascal, Concerning the Vacuum

- 20 An imagination is an idea which indicates the present constitution of the human body rather than the nature of an external body, not indeed distinctly but confusedly, so that the mind is said to err. For example, when we look at the sun, we imagine his distance from us to be about 200 feet, and in this we are deceived so long as we remain in ignorance of the true distance, When this is known, the error is removed, but not the imagination, that is to say, the idea of the sun which manifests his nature in so far only as the body is affected by him; so that although we know his true distance, we nevertheless imagine him close to us. For it is not because we are ignorant of the sun's true distance that we imagine him to be so close to us, but because the mind conceives the magnitude of the sun just in so far as the body is affected by him. So when

the rays of the sun falling upon a surface of water are reflected to our eyes, we imagine him to be in the water, although his true place is known to us. So with the other imaginations by which the mind is deceived; whether they indicate the natural constitution of the body or an increase or diminution in its power of action, they are not opposed to the truth, nor do they disappear with the presence of the truth. We know that when we groundlessly fear any evil, the fear vanishes when we hear correct intelligence; but we also know, on the other hand, that when we fear an evil which will actually come upon us, the fear vanishes when we hear false intelligence, so that the imaginations do not disappear with the presence of the truth, in so far as it is true, but because other imaginations arise which are stronger, and which exclude the present existence of the objects we imagine.

Spinoza, Ethics, IV, Prop. 1, Schol.

- 21 The composition of all poems is, or ought to be, of wit; and wit in the poet, or wit writing (if you will give me leave to use a school-distinction) is no other than the faculty of imagination in the writer, which like a nimble spaniel, beats over and ranges thro' the field of memory, till it springs the quarry it hunted after; or, without metaphor, which searches over all the memory for the species or ideas of those things which it designs to represent. Wit written is that which is well defin'd, the happy result of thought, or product of imagination.

Dryden, Annus Mirabilis, Pref.

22 True wit is Nature to advantage dressed,
What oft was thought, but ne'er so well expressed;
Something whose truth convinced at sight we find,
That gives us back the image of our mind.

Pope, Essay on Criticism, II, 297

23 It is evident that there is a principle of connexion between the different thoughts or ideas of the mind, and that, in their appearance to the memory or imagination, they introduce each other with a certain degree of method and regularity. In our more serious thinking or discourse this is so observable that any particular thought, which breaks in upon the regular tract or chain of ideas, is immediately remarked and rejected. And even in our wildest and most wandering reveries, nay in our very dreams, we shall find, if we reflect, that the imagination ran not altogether at adventures, but that there was still a connexion upheld among the different ideas, which succeeded each other. Were the loosest and freest conversation to be transcribed, there would immediately be observed something which connected it in all its transitions. Or where this is wanting, the person who broke the thread of discourse might still inform you, that there had secretly revolved in his mind a succession of thought, which had gradually led him from the subject of conversation. Among different languages, even where we cannot suspect the least connexion or communication, it is found, that the words, expressive of ideas, the most compounded, do yet nearly correspond to each other: a certain proof that the simple ideas, comprehended in the compound ones, were bound together by some universal principle, which had an equal influence on all mankind.

Though it be too obvious to escape observation, that different ideas are connected together; I do not find that any philosopher has attempted to enumerate or class all the principles of association; a subject, however, that seems worthy of curiosity. To me, there appear to be only three principles of connexion among ideas, namely, *Resemblance*, *Contiguity* in time or place, and *Cause* or *Effect*.

Hume, Concerning Human Understanding, III, 18—19

- 24 Nothing is more free than the imagination of man; and though it cannot exceed that original stock of ideas furnished by the internal and external senses, it has unlimited power of mixing, compounding, separating, and dividing these ideas, in all the varieties of fiction and vision. It can feign a train of events, with all the appearance of reality, ascribe to them a particular time and place, conceive them as existent, and paint them out to itself with every circumstance, that belongs to any historical fact, which it believes with the greatest certainty.

Hume, Concerning Human Understanding, V, 39

- 25 The *imagination* of man is naturally sublime, delighted with whatever is remote and extraordinary, and running, without control, into the most distant parts of space and time in order to avoid the objects, which custom has rendered too familiar to it.

Hume, Concerning Human Understanding, XII, 130

- 26 The world of reality has its bounds, the world of imagination is boundless; as we cannot enlarge the one,

let us restrict the other; for all the sufferings which really make us miserable arise from the difference between the real and the imaginary.

Rousseau, Emile, II

27 Our conversation to-day, I know not how, turned, (I think for the only time at any length, during our long acquaintance,) upon the sensual intercourse between the sexes, the delight of which he [Johnson] ascribed chiefly to imagination. "Were it not for imagination, Sir, (said he,) a man would be as happy in the arms of a chambermaid as of a Duchess. But such is the adventitious charm of fancy, that we find men who have violated the best principles of society, and ruined their fame and their fortune, that they might possess a woman of rank."

Boswell, Life of Johnson (May 9, 1778)

28 In truth, it is not images of objects, but schemata, which lie at the foundation of our pure sensuous conceptions. No image could ever be adequate to our conception of a triangle in general. For the generalness of the conception it never could attain to, as this includes under itself all triangles, whether right-angled, acute-angled, etc., whilst the image would always be limited to a single part of this sphere. The schema of the triangle can exist nowhere else than in thought, and it indicates a rule of the synthesis of the imagination in regard to pure figures in space. Still less is an object of experience, or an image of the object, ever adequate to the empirical conception. On the contrary', the conception always relates immediately to the schema of the imagination, as a rule for the determination of our intuition, in conformity with a

certain general conception. The conception of a dog indicates a rule, according to which my imagination can delineate the figure of a four-footed animal in general, without being limited to any particular individual form which experience presents to me, or indeed to any possible image that I can represent to myself *in concreto*. This schematism of our understanding in regard to phenomena and their mere form, is an art, hidden in the depths of the human soul, whose true modes of action we shall only with difficulty discover and unveil. Thus much only can we say: "The *image* is a product of the empirical faculty of the productive imagination—the *schema* of sensuous conceptions (of figures in space, for example) is a product, and, as it were, a monogram of the pure imagination *a priori*, whereby and according to which images first become possible, which, however, can be connected with the conception only mediately by means of the schema which they indicate, and are in themselves never fully adequate to it." On the other hand, the schema of a pure conception of the understanding is something that cannot be reduced into any image—it is nothing else than the pure synthesis expressed by the category, conformably to a rule of unity according to conceptions. It is a transcendental product of the imagination, a product which concerns the determination of the internal sense, according to conditions of its form (time) in respect to all representations, in so far as these representations must be conjoined *a priori* in one conception, conformably to the unity of apperception.

Kant, Critique of Pure Reason, Transcendental Analytic

- 29 The imagination (as a productive faculty of cognition) is a powerful agent for creating, as it were, a second nature

out of the material supplied to it by actual nature. It affords us entertainment where experience proves too commonplace; and we even use it to remodel experience, always following, no doubt, laws that are based on analogy, but still also following principles which have a higher seat in reason (and which are every whit as natural to us as those followed by the understanding in laying hold of empirical nature). By this means we get a sense of our freedom from the law of association (which attaches to the empirical employment of the imagination), with the result that the material can be borrowed by us from nature in accordance with that law, but be worked up by us into something else—namely, what surpasses nature.

Such representations of the imagination may be termed *ideas*. This is partly because they at least strain after something lying out beyond the confines of experience, and so seek to approximate to a presentation of rational concepts (i.e., intellectual ideas), thus giving to these concepts the semblance of an objective reality. But, on the other hand, there is this most important reason, that no concept can be wholly adequate to them as internal intuitions. The poet essays the task of interpreting to sense the rational ideas of invisible beings, the kingdom of the blessed, hell, eternity, creation, etc. Or, again, as to things of which examples occur in experience, e.g., death, envy, and all vices, as also love, fame, and the like, transgressing the limits of experience he attempts with the aid of an imagination which emulates the display of reason in its attainment of a maximum, to body them forth to sense with a completeness of which nature affords no parallel; and it is in fact precisely in the poetic art that the faculty of

aesthetic ideas can show itself to full advantage. This faculty, however, regarded solely on its own account, is properly no more than a talent (of the imagination).

Kant, Critique of Aesthetic Judgement, 49

30 The *imagination* then, I consider either as primary, or secondary. The primary *imagination* I hold to be the living Power and prime Agent of all human Perception, and as a repetition in the finite mind of the eternal act of creation in the infinite I AM. The secondary Imagination I consider as an echo of the former, co-existing with the conscious will, yet still as identical with the primary in the *kind* of its agency, and differing only in degree, and in the *mode* of its operation. It dissolves, diffuses, dissipates, in order to re-create; or where this process is rendered impossible, yet still at all events it struggles to idealize and to unify. It is essentially *vital*, even as all objects (as objects) are essentially fixed and dead.

Fancy, on the contrary, has no other counters to play with, but fixities and definites. The Fancy is indeed no other than a mode of Memory emancipated from the order of time and space; while it is blended with, and modified by that empirical phenomenon of the will, which we express by the word *choice*. But equally with the ordinary memory the Fancy must receive all its materials ready made from the law of association.

Coleridge, Biographia Literaria, XIII

31 We want the creative faculty to imagine that which we know; we want the generous impulse to act that which we imagine; we want the poetry of life; our calculations have outrun conception; we have eaten more than we can

digest. The cultivation of those sciences which have enlarged the limits of the empire of man over the external world has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave.

Shelley, Defence of Poetry

32 Ever let the Fancy roam,
Pleasure never is at home:
At a touch sweet Pleasure melteth,
Like to bubbles when rain pelteth;
Then let winged Fancy wander
Through the thought still spread beyond her:
Open wide the mind's cage-door,
She'll dart forth, and cloudward soar....

Oh, sweet Fancy! let her loose;
Every thing is spoilt by use;
Where's the check that doth not fade,
Too much gazed at? Where's the maid
Whose lip mature is ever new?
Where's the eye, however blue.
Doth not weary? Where's the face
One would meet in every place?
Where's the voice, however soft.
One would hear so very oft?
At a touch sweet Pleasure melteth
Like to bubbles when rain pelteth.
Let, then, winged Fancy find
Thee a mistress to thy mind:
Dulcet-eyed as Ceres' daughter
Ere the God of Torment taught her
How to frown and how to chide;

With a waist and with a side
While as Hebe's, when her zone
Slipt its golden clasp, and down
Fell her kirtle to her feet,
While she held the goblet sweet.
And Jove grew languid.—Break the mesh
Of the Fancy's silken leash;
Quickly break her prison-string.
And such joys as these she'll bring,—
Let the winged Fancy roam,
Pleasure never is at home.

Keats, Fancy

33 Adieu! the fancy cannot cheat so well
As she is famed to do, deceiving elf.

Keats, Ode to a Nightingale

34 I am certain of nothing but of the holiness of the Heart's affections, and the truth of Imagination. What the Imagination seizes as Beauty must be truth—whether it existed before or not,—for I have the same idea of all our passions as of Love: they are all, in their sublime, creative of essential Beauty. In a Word, you may know my favourite speculation by my first Book, and the little Song I sent in my last, which is a representation from the fancy of the probable mode of operating in these Matters. The Imagination may be compared to Adam's dream,—he awoke and found it truth.

Keats, Letter to Benjamin Bailey, (Nov. 22, 1817)

35 Fancy is a wilful, imagination a spontaneous act; fancy, a play as with dolls and puppets which we choose to call

men and women; imagination, a perception and affirming of a real relation between a thought and some material fact. Fancy amuses; imagination expands and exalts us.

Emerson, Poetry and Imagination

36 There is a Catskill eagle in some souls that can alike dive down into the blackest gorges, and soar out of them again and become invisible in the sunny spaces. And even if he for ever flies within the gorge, that gorge is in the mountains; so that even in his lowest swoop the mountain eagle is still higher than other birds upon the plain, even though they soar.

Melville, Moby Dick, XCVI

37 What a faculty must that be which can paint the most barren landscape and humblest life in glorious colors! It is pure and invigorated senses reacting on a sound and strong imagination. Is not that the poet's ease? The intellect of most men is barren. They neither fertilize nor are fertilized. It is the marriage of the soul with Nature that makes the intellect fruitful, that gives birth to imagination. When we were dead and dry as the highway, some sense which has been healthily fed will put us in relation with Nature, in sympathy with her; some grains of fertilizing pollen, floating in the air, fall on us, and suddenly the sky is all one rainbow, is full of music and fragrance and flavor. The man of intellect only, the prosaic man, is a barren, staminiferous flower; the poet is a fertile and perfect flower.

Thoreau, Journal (Aug. 20, 1851)

38 The *Imagination* is one of the highest prerogatives of man. By this faculty he unites former images and ideas, independently of the will, and thus creates brilliant and novel results. A poet, as Jean Paul Richter remarks, "who must reflect whether he shall make a character say yes or no—to the devil with him; he is only a stupid corpse." Dreaming gives us the best notion of this power; as Jean Paul again says, "The dream is an involuntary art of poetry." The value of the products of our imagination depends of course on the number, accuracy, and clearness of our impressions, on our judgment and taste in selecting or rejecting the involuntary combinations, and to a certain extent on our power of voluntarily combining them. As dogs, cats, horses, and probably all the higher animals, even birds have vivid dreams, and this is shewn by their movements and the sounds uttered, we must admit that they possess some power of imagination. There must be something special, which causes dogs to howl in the night, and especially during moonlight, in that remarkable and melancholy manner called baying.

Darwin, Descent of Man, I, 3

39 *Sensations, once experienced, modify the nervous organism, so that copies of them arise again in the mind after the original outward stimulus is gone.* No mental copy, however, can arise in the mind, of any kind of sensation which has never been directly excited from without.

The blind may dream of sights, the deaf of sounds, for years after they have lost their vision or hearing; but the man *born* deaf can never be made to imagine what sound is like, nor can the man *born* blind ever have a mental

vision. In Locke's words... "the mind can frame unto itself no one new simple idea." The originals of them all must have been given from without. Fantasy, or Imagination, are the names given to the faculty of reproducing copies of originals once felt. The imagination is called "reproductive" when the copies are literal; "productive" when elements from different originals are recombined so as to make new wholes.

After-images belong to sensation rather than to imagination; so that the most immediate phenomena of imagination would seem to be those tardier images... coercive hauntings of the mind by echoes of unusual experiences for hours after the latter have taken place. The phenomena ordinarily ascribed to imagination, however, are those mental pictures of possible sensible experiences, to which the ordinary processes of associative thought give rise.

When represented with surroundings concrete enough to constitute a *date*, these pictures, when they revive, form *recollections*, . . . When the mental pictures are of data freely combined, and reproducing no past combination exactly, we have acts of imagination properly so called.

William James, Psychology, XVIII

40 Renunciation of pleasure has always been very hard to man; he cannot accomplish it without some kind of compensation. Accordingly he has evolved for himself a mental activity in which all these relinquished sources of pleasure and abandoned paths of gratification are permitted to continue their existence, a form of existence in which they are free from the demands of reality and from what we call the exercise of *testing reality*. Every

longing is soon transformed into the idea of its fulfilment; there is no doubt that dwelling upon a wish-fulfilment in phantasy brings satisfaction, although the knowledge that it is not reality remains thereby unobscured. In phantasy, therefore, man can continue to enjoy a freedom from the grip of the external world, one which he has long relinquished in actuality.

Freud, General Introduction to Psycho-Analysis, XXIII

41 In imagination, not in perception, lies the substance of experience, while knowledge and reason are but its chastened and ultimate form.

Santayana, Life of Reason, I, 2

5.5 Dreams

Long before dreams and dreaming became the subject of psychological investigation and psychoanalytical theory, the occurrence and content of dreams were objects of wonder, fear, and speculation. The quotations drawn from the Old Testament and from the poets, historians, and biographers of antiquity bear witness to the influence of dreams and to the importance of the role played by soothsayers and prophets as interpreters of their content. Famous dreams and famous interpretations of dreams are here reported, along with discussions by the philosophers of antiquity concerning the art of divination through dreams. The ancients were not without their skeptical doubts about the supernatural origin of dreams or about their trustworthiness as forecasters of the future. Aristotle, for example, offers some purely naturalistic explanations of dreaming and dream content.

The modern treatment of dreams stresses the relation of dreaming to the powers of the imagination, and the reader is, therefore, advised to relate this section to the preceding one on the imagination. What is ordinarily called day-dreaming or fantasy is, of course, nothing but the imagination at work under more or less conscious control or with some directive purpose. In contrast, the dreams that take place during sleep, or in the process of awakening, manifest no such control or direction. It is precisely this fact that lies at the heart of Freud's unique contribution—his interpretation of dreams as an expression of the unconscious, revealing to the interpreter wishes, emotions,

or tendencies of which the dreamer was himself unaware. The significance of dreams for the diagnosis and treatment of psychic disorders connects this section with the one that follows on madness.

■ ■ ■

1 And Jacob went out from Beersheba, and went toward Haran.

And he lighted upon a certain place, and tarried there all night, because the sun was set; and he took of the stones of that place, and put them for his pillows, and lay down in that place to sleep.

And he dreamed, and behold a ladder set up on the earth, and the top of it reached to heaven: and behold the angels of God ascending and descending on it.

And, behold, the Lord stood above it, and said, I am the Lord God of Abraham thy father, and the God of Isaac: the land whereon thou best, to thee will I give it, and to thy seed;

And thy seed shall be as the dust of the earth, and thou shalt spread abroad to the west, and to the east, and to the north, and to the south: and in thee and in thy seed shall all the families of the earth be blessed.

And, behold, I am with thee, and will keep thee in all places whither thou goest, and will bring thee again into this land; for I will not leave thee, until I have done that which I have spoken to thee of.

And Jacob awaked out of his sleep, and he said, Surely the Lord is in this place; and I knew it not.

Genesis 28:10-16

- 2 Your old men shall dream dreams, your young men shall see visions.

Joel 2:28

- 3 *Penelope*. Two gates for ghostly dreams there are: one gateway
of honest horn, and one of ivory.
Issuing by the ivory gate are dreams
of glimmering illusion, fantasies,
but those that come through solid polished horn
may be borne out, if mortals only know them.

Homer, Odyssey, XIX, 562

- 4 *Chorus*. It is vain, to dream and to see splendors, and the
image slipping from the arms' embrace escapes, not to
return again, on wings drifting down the ways of sleep.

Aeschylus, Agamemnon, 423

- 5 *Clytaemestra*. Eyes illuminate the sleeping brain, but in
the daylight man's future cannot be seen.

Aeschylus, Eumenides, 104

- 6 *Jocasta*. As to your mother's marriage bed,—don't fear it.
Before this, in dreams too, as well as oracles,
many a man has lain with his own mother.

Sophocles, Oedipus the King, 980

- 7 *The Second Maiden*. Oh! to set foot, if only in a dream, in
my father's home and city, a luxury sweet sleep affords, a
pleasure shared by us with wealth!

Euripides, Iphigenia in Tauris, 453

- 8 *Socrates*. Let me feast my mind with the dream as day dreamers are in the habit of feasting themselves when they are walking alone; for before they have discovered any means of effecting their wishes—that is a matter which never troubles them—they would rather not tire themselves by thinking about possibilities; but assuming that what they desire is already granted to them, they proceed with their plan, and delight in detailing what they mean to do when their wish has come true—that is a way which they have of not doing much good to a capacity which was never good for much.

Plato, Republic, V, 457B

- 9 *Socrates*. When the reasoning and human and ruling power is asleep; then the wild beast within us, gorged with meat or drink, starts up and having shaken off sleep, goes forth to satisfy his desires; and there is no conceivable folly or crime—not excepting incest or any other unnatural union, or parricide, or the eating of forbidden food—which at such a time, when he has parted company with all shame and sense, a man may not be ready to commit.

Most true, he [Glaucón] said.

But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments and pains from interfering with the higher principle—which he leaves in the solitude of pure

abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against anyone—I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fantastic and lawless visions.

I quite agree.

In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good men, there is a lawless wild-beast nature, which peers out in sleep.

Plato, Republic, IX, 571B

- 10 It is not improbable that some of the presentations which come before the mind in sleep may even be causes of the actions cognate to each of them. For as when we are about to act [in waking hours], or are engaged in any course of action, or have already performed certain actions, we often find ourselves concerned with these actions, or performing them, in a vivid dream; the cause whereof is that the dream-movement has had a way paved for it from the original movements set up in the daytime; exactly so, but conversely, it must happen that the movements set up first in sleep should also prove to be starting-points of actions to be performed in the daytime, since the recurrence by day of the thought of these actions also has had its way paved for it in the images before the mind at night. Thus then it is quite conceivable that some dreams may be tokens and causes [of future events].

Aristotle, Prophesying by Dreams, 463a22

- 11 On the whole, forasmuch as certain of the lower animals also dream, it may be concluded that dreams are not sent by God, nor are they designed for this purpose [to reveal the future]. They have a divine aspect, however, for Nature [their cause] is divinely planned, though not itself divine. A special proof [of their not being sent by God] is this: the power of foreseeing the future and of having vivid dreams is found in persons of inferior type, which implies that God does not send their dreams; but merely that all those whose physical temperament is, as it were, garrulous and excitable, see sights of all descriptions; for, inasmuch as they experience many movements of every kind, they just chance to have visions resembling objective facts, their luck in these matters being merely like that of persons who play at even and odd. For the principle which is expressed in the gambler's maxim: 'If you make many throws your luck must change,' holds good in their case also.

Aristotle, Prophesying by Dreams, 463b11

- 12 Of all animals man is most given to dreaming. Children and infants do not dream, but in most cases dreaming comes on at the age of four or five years. Instances have been known of full-grown men and women that have never dreamed at all; in exceptional cases of this kind, it has been observed that when a dream occurs in advanced life it prognosticates either actual dissolution or a general break-up of the system.

Aristotle, History of Animals, 537b14

13 To whatever pursuit a man is closely tied down and strongly attached, on whatever subject we have previously much dwelt, the mind having been put to a more than usual strain in it, during sleep we for the most part fancy that we are engaged in the same; lawyers think they plead causes and draw up covenants of sale, generals that they fight and engage in battle, sailors that they wage and carry on war with the winds, we think we pursue our task and investigate the nature of things constantly and consign it when discovered to writings in our native tongue. So all other pursuits and arts are seen for the most part during sleep to occupy and mock the minds of men.

Lucretius, Nature of Things, IV

14 Two gates the silent house of Sleep adorn;
Of polish'd iv'ry this, that of transparent horn:
True visions thro' transparent horn arise;
Thro' polish'd iv'ry pass deluding lies.

Virgil, Aeneid, VI

15 Darius was by this time upon his march from Susa, very confident, not only in the number of his men, which amounted to six hundred thousand, but likewise in a dream, which the Persian soothsayers interpreted rather in flattery to him than according to the natural probability. He dreamed that he saw the Macedonian phalanx all on fire, and Alexander waiting on him, clad in the same dress which he himself had been used to wear when he was courier to the late king; after which, going into the temple of Belus, he vanished out of his sight. The dream would appear to have supernaturally signified to

him the illustrious actions the Macedonians were to perform, and that as he, from a courier's place, had risen to the throne, so Alexander should come to be master of Asia, and not long surviving his conquests, conclude his life with glory.

Plutarch, Alexander

- 16 The senses are suspended in the sleeper through certain evaporations and the escape of certain exhalations, as we read in the book on *Sleep*, And, therefore, according to the disposition of such evaporation, the senses are more or less suspended. For when the motion of the vapors is considerable, not only are the senses suspended, but also the imagination, so that there are no phantasms; and this happens especially when a man falls asleep after eating and drinking copiously. If, however, the motion of the vapors be somewhat less, phantasms appear, but distorted and without order; thus it happens in a case of fever. And if the motion be still more attenuated, the phantasms will have a certain order; thus especially does it happen towards the end of sleep, in sober men and those who are gifted with a strong imagination. If the motion of the vapors is very slight, not only does the imagination retain its freedom, but also the common sense is partly freed, so that sometimes while asleep a man may judge that what he sees is a dream, discerning, as it were, between things and their likenesses. Nevertheless, the common sense remains partly suspended, and therefore, although it discriminates some likenesses from the reality, yet is it always deceived in some particular. Therefore, while man is asleep, according as sense and imagination are free, so the judgment of his intellect is unfettered, though not entirely. Consequently,

if a man syllogizes while asleep, when he wakes up he invariably recognizes a flaw in some respect.

Aquinas, Summa Theologica, I, 84, 8

17 *Pandar*. And all your dreams and other such like folly.
To deep oblivion let them be consigned;
For they arise but from your melancholy,
By which your health is being undermined.
A straw for all the meaning you can find
In dreams! They aren't worth a hill of beans,
For no one knows what dreaming really means.

Priests in the temples sometimes choose to say
That dreams come from the Gods as revelations;
But other times they speak another way,
And call them hellish false hallucinations!
And doctors say they come from complications,
Or fast or surfeit, or any other lie,
For who knows truly what they signify?

And others say that through impressions deep,
As when one has a purpose firm in mind,
There come these visions in one's sleep;
And others say that they in old books find.
That every season hath its special kind
Of dream, and all depends upon the moon;
But all such folk are crazy as a loon!

Dreams are the proper business of old wives,
Who draw their auguries from birds and fowls,
For which men often fear to lose their lives,
The raven's croak or mournful shriek of owls!
O why put trust in bestial shrieks and howls!

Alas, that noble man should be so brash
To implicate his mind in such like trash!

Chaucer, Troilus and Cressida, V, 52—55

18 Let us bend our course another way, and try a new sort of divination. Of what kind? asked Panurge. Of a good ancient and authentic fashion, answered Pantagruel; it is by dreams. For in dreaming, such circumstances and conditions being thereto adhibited, as are clearly enough described by Hippocrates ... by Plato, Plotin, Iamblicus, Synesius, Aristotle, Xenophon, Galen, Plutarch, Artemidorus, Daldianus, Herophilus, Q. Calaber, Theocritus, Pliny, Athenaeus, and others, the soul doth oftentimes foresee what is to come. How true this is, you may conceive by a very vulgar and familiar example; as when you see that at such a time as suckling babes, well nourished, fed and fostered with good milk, sleep soundly and profoundly, the nurses in the interim get leave to sport themselves, and are licentiated to recreate their fancies at what range to them shall seem most fitting and expedient, their presence, sedulity, and attendance on the cradle being, during all that space, held unnecessary. Even just so, when our body is at rest, that the concoction is every where accomplished, and that, till it awake, it lacks for nothing, our soul delighteth to disport itself, and is well pleased in that frolic to take a review of its native country, which is the heavens, where it receiveth a most notable participation of its first beginning, with an imbuement from its divine source, and in contemplation of that infinite and intellectual sphere, whereof the centre is every where, and the circumference in no place of the universal world, (to wit, God, according to the doctrine of Hermes Trismegistus,) to whom no new thing happeneth,

whom nothing that is past escapeth, and unto whom all things are alike present; it remarketh not only what is *preterit* and gone, in the inferior course and agitation of sublunary matters, but withal taketh notice what is to come; then bringing a relation of those future events unto the body by the outward senses and exterior organs, it is divulged abroad unto the hearing of others.

Whereupon the owner of that soul deserveth to be termed a vaticinator, or prophet. Nevertheless, the truth is, that the soul is seldom able to report those things in such sincerity as it hath seen them, by reason of the imperfection and frailty of the corporeal senses, which obstruct the effectuating of that office; even as the moon doth not communicate unto this earth of ours that light which she receiveth from the sun with so much splendour, heat, vigour, purity, and liveliness as it was given her. Hence it is requisite for the better reading, explaining, and unfolding of these somniatory vaticinations, and predictions, of that nature that a dexterous, learned, skilful, wise, industrious, expert, rational, and peremptory expounder or interpreter be pitched upon.

Rabelais, Gargantua and Pantagruel, III, 13

- 19 Those who have compared our life to a dream were perhaps more right than they thought. When we dream, our soul lives, acts, exercises all her faculties, neither more nor less than when she is awake; but if more loosely and obscurely, still surely not so much so that the difference is as between night and bright daylight; rather as between night and shade. There she sleeps, here she slumbers: more and less. It is always darkness, and Cimmerian darkness.

Sleeping we are awake, and waking asleep. I do not see so clearly in sleep; but my wakefulness I never find pure and cloudless enough. Moreover sleep in its depth sometimes puts dreams to sleep. But our wakefulness is never so awake as to purge and properly dissipate reveries, which are the dreams of the waking, and worse than dreams.

Since our reason and our soul accept the fancies and opinions which arise in it while sleeping, and authorise the actions of our dreams with the same approbation as they do those of the day, why do we not consider the possibility that our thinking, our acting, may be another sort of dreaming, and our waking another kind of sleep?

Montaigne, Essays, II, 12, Apology for Raymond Sebond

20 I have no cause to complain of my imagination. I have had few thoughts in my life that have even interrupted the course of my sleep, unless they have been those of desire, which awakened me without afflicting me. I seldom dream, and then it is about fantastic things and chimeras usually produced by amusing thoughts, more ridiculous than sad. And I hold that it is true that dreams are faithful interpreters of our inclinations; but there is an art to sorting and understanding them.. . .

Plato says, moreover, that it is the function of wisdom to draw from them instructions for divining the future. I see nothing in that, except for the marvelous experiences related by Socrates, Xenophon, and Aristotle, personages of irreproachable authority.

Montaigne, Essays, III, 13, Of Experience

21 *Mercutio*. O, then, I see Queen Mab hath been with you.

She is the fairies' midwife, and she comes
In shape no bigger than an agate-stone
On the fore-finger of an alderman,
Drawn with a team of little atomies
Athwart men's noses as they lie asleep;
Her waggon-spokes made of long spinners, legs,
The cover of the wings of grasshoppers,
The traces of the smallest spider's web,
The collars of the moonshine's watery beams,
Her whip of cricket's bone, the lash of film,
Her waggoner a small grey-coated gnat.
Not half so big as a round little worm
Prick'd from the lazy finger of a maid;
Her chariot is an empty hazel-nut
Made by the joiner squirrel or old grub,
Time out o' mind the fairies' coachmakers.
And in this state she gallops night by night
Through lovers' brains, and then they dream of love;
O'er courtiers' knees, that dream on court'sies
straight.
O'er lawyers' fingers, who straight dream on fees,
O'er ladies' lips, who straight on kisses dream,
Which oft the angry Mab with blisters plagues.
Because their breaths with sweetmeats tainted are:
Sometime she gallops o'er a courtier's nose,
And then dreams he of smelling out a suit;
And sometime comes she with a tithe-pig's tail
Tickling a parson's nose as a' lies asleep,
Then dreams he of another benefice:
Sometime she driveth o'er a soldier's neck,
And then dreams he of cutting foreign throats,
Of breaches, ambuscadoes, Spanish blades,

Of healths five-fathom deep; and then anon
Drums in his ear, at which he starts and wakes,
And being thus frighted swears a prayer or two
And sleeps again. This is that very Mab
That plats the manes of horses in the night,
And bakes the elf-locks in foul sluttish hairs,
Which once untangled much misfortune bodes;
This is the hag, when maids lie on their backs,
That presses them and learns them first to bear,
Making them women of good carriage;
This is she—

Romeo. Peace, peace, Mercutio, peace!
Thou talk'st of nothing.

Mer. True, I talk of dreams,
Which are the children of an idle brain,
Begot of nothing but vain fantasy,
Which is as thin of substance as the air
And more inconstant than the wind, who woos
Even now the frozen bosom of the north,
And, being anger'd, puffs away from thence,
Turning his face to the dew-dropping south.

Shakespeare, Romeo and Juliet, I, iv, 54

22 *Brutus.* Between the acting of a dreadful thing
And the first motion, all the interim is
Like a phantasma or a hideous dream.

Shakespeare, Caesar, II, i, 02

23 *Hamlet.* O God, I could be bounded in a nutshell and
count myself a king of infinite space, were it not that I
have bad dreams.

Shakespeare, Hamlet, II, ii, 260

24 The imaginations of them that sleep are those we call dreams. And these also (as all other imaginations) have been before, either totally or by parcels, in the sense. And because in sense, the brain and nerves, which are the necessary' organs of sense, are so benumbed in sleep as not easily to be moved by the action of external objects, there can happen in sleep no imagination, and therefore no dream, but what proceeds from the agitation of the inward parts of man's body; which inward parts, for the connexion they have with the brain and other organs, when they be distempered do keep the same in motion; whereby the imaginations there formerly made, appear as if a man were waking; saving that the organs of sense being now benumbed, so as there is no new object which can master and obscure them with a more vigorous impression, a dream must needs be more clear, in this silence of sense, than are our waking thoughts....

And seeing dreams are caused by the distemper of some of the inward parts of the body, diverse distempers must needs cause different dreams. And hence it is that lying cold breedeth dreams of fear, and raiseth the thought and image of some fearful object, the motion from the brain to .the inner parts, and from the inner parts to the brain being reciprocal. ... In sum, our dreams are the reverse of our waking imaginations; the motion when we are awake beginning at one end, and when we dream, at another.

Hobbes, Leviathan, I, 2

25 To say He hath spoken to him in a dream is no more than to say he dreamed that God spake to him; which is not of force to win belief from any man that knows dreams are for the most part natural, and may proceed from former

thoughts; and such dreams as that, from self-conceit, and foolish arrogance, and false opinion of a man's own goodliness, or other virtue, by which he thinks he hath merited the favour of extraordinary revelation. To say he hath seen a vision, or heard a voice, is to say that he dreamed between sleeping and waking: for in such manner a man doth many times naturally take his dream for a vision, as not having well observed his own slumbering.

Hobbs, Leviathan, III, 32

26 Half our days we paw in the shadow of the earth, and the brother of death exacteth a third part of our lives. A good part of our sleeps is peered out with visions, and phantastical objects wherin we are confessedly deceived. The day supplyeth us with truths, the night with fictions and falsehoods, which uncomfortably divide the natural account of our beings. And therefore having passed the day in sober labours and rational enquiries of truth, we are fain to betake ourselves unto such a state of being, wherin the soberest heads have acted all the monstrosities of melancholy, and which unto open eyes are no better than folly and madness.

Sir Thomas Browne, On Dreams

27 If we dreamt the same thing every night, it would affect us as much as the objects we see every day. And if an artisan were sure to dream every night for twelve hours' duration that he was a king, I believe he would be almost as happy as a king, who should dream every night for twelve hours on end that he was an artisan.

If we were to dream every night that we were pursued by enemies and harassed by these painful phantoms, or that we passed every day in different occupations, as in making a voyage, we should suffer almost as much as if it were real, and should fear to sleep, as we fear to wake when we dread in fact to enter on such mishaps. And, indeed, it would cause pretty nearly the same discomforts as the reality.

But since dreams are all different, and each single one is diversified, what is seen in them affects us much less. That what we see when awake, because of its continuity, which is not, however, so continuous and level as not to change too; but it changes less abruptly, except rarely, as when we travel, and then we say, "It seems to me I am dreaming." For life is a dream a little less inconstant.

Pascal, Pensees, VI, 386

28 Methought I saw my late espoused Saint
Brought to me like *Alcestis* from the grave.
Whom *Joves* great Son to her glad Husband gave.
Rescu'd from death by force though pale and faint.
Mine as whom washt from spot of child-bed taint,
Purification in the old Law did save.
And such, as yet once more I trust to have
Full sight of her in Heaven without restraint,
Came vested all in white, pure as her mind;
Her face was vail'd, yet to my fancied sight,
Love, sweetness, goodness, in her person shin'd
So clear, as in no face with more delight.
But O as to embrace me she inclin'd
I wak'd, she fled, and day brought back my night.

Milton, Methought I saw my late espoused Saint

29 He [Johnson] related, that he had once in a dream a contest of wit with some other person, and that he was very much mortified by imagining that his opponent had the better of him. 'Now, (said he,) one may mark here the effect of sleep in weakening the power of reflection; for had not my judgement failed me, I should have seen, that the wit of this supposed antagonist, by whose superiority I felt myself depressed, was as much furnished by me, as that which I thought I had been uttering in my own character,'

Boswell, Life of Johnson (1730)

30 I would ask if dreams (from which our sleep is never free, although we rarely remember what we have dreamed), may not be a regulation of nature adapted to ends. For, when all the muscular forces of the body are relaxed, dreams serve the purpose of internally stimulating the vital organs by means of the imagination and the great activity which it exerts—an activity that in this state generally rises to psycho-physical agitation. This seems to be why imagination is usually more actively at work in the sleep of those who have gone to bed at night with a loaded stomach, just when this stimulation is most needed. Hence, I would suggest that without this internal stimulating force and fatiguing unrest that makes us complain of our dreams, which in fact, however, are probably curative, sleep, even in a sound state of health, would amount to a complete extinction of life.

Kant, Critique of Teleological Judgement, 67

31 *Her* lips were red, *her* looks were free,
Her locks were yellow as gold:

Her skin was as white as leprosy.
The Night-mare Life-in-Death was she,
Who thicks man's blood with cold.

Coleridge, The Rime of the Ancient Mariner, 190

32 Our life is twofold: Sleep hath its own world,
A boundary between the things misnamed
Death and existence; Sleep hath its own world,
And a wide realm of wild reality.

Byron, The Dream, I

33 Was it a vision, or a waking dream?
Fled is that music :--do I wake or sleep?

Keats, Ode to a Nightingale

34 When I was a child, I well remember a somewhat similar circumstance that befell me; whether it was a reality or a dream, I never could entirely settle. The circumstance was this. I had been cutting up some caper or other—I think it was trying to crawl up the chimney, as I had seen a little sweep do a few days previous; and my stepmother who, somehow or other, was all the time whipping me, or sending me to bed supperless,—my stepmother dragged me by the legs out of the chimney and packed me off to bed, though it was only two o'clock in the afternoon of the 21st June, the longest day in the year in our hemisphere. I felt dreadfully. But there was no help for it, so upstairs I went to my little room in the third floor, undressed myself as slowly as possible so as to kill time, and with a bitter sigh got between the sheets,

I lay there dismally calculating that sixteen entire hours must elapse before I could hope to get out of bed

again. Sixteen hours in bed! the small of my back ached to think of it. And it was so light too; the sun shining in at the window, and a great rattling of coaches in the streets, and the sound of gay voices all over the house. I felt worse and worse—at last I got up, dressed, and softly going down in my stockinged feet, sought out my stepmother, and suddenly threw myself at her feet, beseeching her as a particular favour to give me a good slippering for my misbehaviour; anything indeed but condemning me to lie abed such an unendurable length of time. But she was the best and most conscientious of stepmothers, and back I had to go to my room. For several hours I lay there broad awake, feeling a great deal worse than I have ever done since, even from the greatest subsequent misfortunes. At last I must have fallen into a troubled nightmare of a doze; and slowly waking from it—half steeped in dreams—I opened my eyes, and the before sunlit room was now wrapped in outer darkness. Instantly I felt a shock running through all my frame; nothing was to be seen, and nothing was to be heard; but a supernatural hand seemed placed in mine. My arm hung over the counterpane, and the nameless, unimaginable, silent form or phantom, to which the hand belonged, seemed closely seated by my bedside. For what seemed ages piled on ages, I lay there, frozen with the most awful fears, not daring to drag away my hand; yet ever thinking that if I could but stir it one single inch, the horrid spell would be broken. I knew not how this consciousness at last glided away from me; but waking in the morning, I shudderingly remembered it all, and for day's and weeks and months afterwards I lost myself in confounding attempts to explain the mystery. Nay, to this very hour, I often puzzle myself with it.

Melville, Moby Dick, IV

35 In a morbid condition of the brain, dreams often have a singular actuality, vividness, and extraordinary semblance of reality. At times monstrous images are created, but the setting and the whole picture are so truthlike and filled with details so delicate, so unexpectedly, but so artistically consistent, that the dreamer, were he an artist like Pushkin or Turgenev even, could never have invented them in the waking state. Such sick dreams always remain long in the memory and make a powerful impression on the overwrought and deranged nervous system.

Dostoevsky, Crime and Punishment, 1, 5

36 The world of dreams is our real world whilst we are sleeping, because our attention then lapses from the sensible world. Conversely, when we wake the attention usually lapses from the dreamworld and that becomes unreal. But if a dream haunts us and compels our attention during the day it is very apt to remain figuring in our consciousness as a sort of sub-universe alongside of the waking world. Most people have probably had dreams which it is hard to imagine not to have been glimpses into an actually existing region of being, perhaps a corner of the "spiritual world." And dreams have accordingly in all ages been regarded as revelations, and have played a large part in furnishing forth mythologies and creating themes for faith to lay hold upon. The "larger universe" here, which helps us to believe both in the dream and in the waking reality which is its immediate reductive, is the *total* universe, of Nature *plus* the Supernatural. The dream holds true, namely, in

one half of That universe; the waking perceptions in the other half.

William James, Psychology, XXI

37 In the dream life, the child, as it were, continues his existence in the man, with a retention of all his traits and wishes, including those which he was obliged to allow to fall into disuse in his later years. With irresistible might it will be impressed on you by what processes of development, of repression, sublimation, and reaction there arises out of the child, with its peculiar gifts and tendencies, the so-called normal man, the bearer and partly the victim of our painfully acquired civilization.

Freud, Origin and Development of Psycho-Analysis, III

38 That all the material composing the content of a dream is somehow derived from experience, that it is reproduced or remembered in the dream—this at least may be accepted as an incontestable fact. Yet it would be wrong to assume that such a connection between the dream-content and reality will be easily obvious from a comparison between the two. On the contrary, the connection must be carefully sought, and in quite a number of cases it may for a long while elude discovery.

Freud, Interpretation of Dreams, I, B

39 The dream represents a certain state of affairs, such as I might wish to exist; *the content of the dream is thus the fulfilment of a wish; its motive a wish.*

Freud, Interpretation of Dreams, II

40 The dream is not comparable to the irregular sounds of a musical instrument, which, instead of being played by the hand of a musician, is struck by some external force; the dream is not meaningless, not absurd, does not presuppose that one part of our store of ideas is dormant while another part begins to awake. It is a perfectly valid psychic phenomenon, actually a wish-fulfilment; it may be enrolled in the continuity of the intelligible psychic activities of the waking state; it is built up by a highly complicated intellectual activity.

Freud, Interpretation of Dreams, III

41 The dream often appears to have several meanings; not only may several wish-fulfilments be combined in it... but one meaning or one wish-fulfilment may conceal another, until in the lowest stratum one comes upon the fulfilment of a wish from the earliest period of childhood.

Freud, Interpretation of Dreams, V, B

42 In a certain sense, all dreams are *convenience-dreams*; they serve the purpose of continuing to sleep instead of waking. *The dream is the guardian of sleep, not its disturber. ... The wish to sleep, to which the conscious ego has adjusted itself, and which... represents the ego's contribution to the dream, must thus always be taken into account as a motive of dream-formation, and every successful dream is a fulfilment of this wish.*

Freud, Interpretation of Dreams, V, C

43 It has been my experience—and to this I have found no exception—that every dream treats of oneself. Dreams are absolutely egoistic.

Freud, Interpretation of Dreams, VI, C

- 44 The inclusion of a certain content in *a dream within a dream* is, therefore, equivalent to the wish that what has been characterized as a dream had never occurred. In other words; when a particular incident is represented by the dream-work in a dream, it signifies the strongest confirmation of the reality of this incident, the most emphatic *affirmation* of it. The dream-work utilizes the dream itself as a form of repudiation, and thereby confirms the theory that a dream is a wish-fulfilment.

Freud, Interpretation of Dreams, VI, C

- 45 The investigation of day-dreams might really have afforded the shortest and best approach to the understanding of nocturnal dreams.

Like dreams, they are wish-fulfilments; like dreams, they are largely based upon the impressions of childish experiences; like dreams, they obtain a certain indulgence from the censorship in respect of their creations. If we trace their formation, we become aware how the wish-motive which has been operative in their production has taken the material of which they are built, mixed it together, rearranged it, and fitted it together into a new whole. They bear very much the same relation to the childish memories to which they refer as many of the baroque palaces of Rome bear to the ancient ruins, whose hewn stones and columns have furnished the material for the structures built in the modern style.

Freud, Interpretation of Dreams, VI, I

- 46 Dreaming is on the whole an act of regression to the earliest relationships of the dreamer, a resuscitation of his

childhood, of the impulses which were then dominant and the modes of expression which were then available. Behind this childhood of the individual we are then promised an insight into the phylogenetic childhood, into the evolution of the human race, of which the development of the individual is only an abridged repetition influenced by the fortuitous circumstances of life... and we are encouraged to expect, from the analysis of dreams, a knowledge of the archaic inheritance of man, a knowledge of psychical things in him that are innate. It would seem that dreams and neuroses have preserved for us more of the psychical antiquities than we suspected; so that psycho-analysis may claim a high rank among those sciences which endeavour to reconstruct the oldest and darkest phases of the beginnings of mankind.

Freud, Interpretation of Dreams, VII, B

- 47 And what of the value of dreams in regard to our knowledge of the future? That, of course, is quite out of the question. One would like to substitute the words: *in regard to our knowledge of the past*. For in every sense a dream has its origin in the past. The ancient belief that dreams reveal the future is not indeed entirely devoid of the truth. By representing a wish as fulfilled the dream certainly leads us into the future; but this future, which the dreamer accepts as his present, has been shaped in the likeness of the past by the indestructible wish.

Freud, Interpretation of Dreams, VII, F

- 48 Had I the heavens' embroidered cloths,
Enwrought with golden and silver light,

The blue and the dim and the dark cloths
Of night and light and the half-light,
I would spread the cloths under your feet:
But I, being poor, have only my dreams;
I have spread my dreams under your feet;
Tread softly because you tread on my dreams,

Yeats, He Wishes for the Cloths of Heaven

5.6 Madness

Irrationality is peculiar to the so-called "rational animal." Though we sometimes refer to other animals as "mad," we do not do so in the sense in which human madness is understood as loss or disorder of mind. It is that sense of the term which runs through the quotations below, even when the word itself does not appear, but some other word—such as "frenzy," "lunacy," "melancholy," or "insanity"—takes its place. Only in quotations drawn from comparatively recent writers do such technical terms as "neurosis," "psychosis," or "hysteria" occur, together with the medical names for the symptoms or other manifestations of mental disease. The clinical picture of one mental disorder—epilepsy—was known to the ancients. Regarded popularly as "the sacred disease," it was treated in a scientific manner by Hippocrates.

The reader will find in the quotations from the poets, the historians, and the biographers a wide variety of examples of human madness, together with expressions of the awe or wonder that its manifestations inspire in those who behold it. There are, in addition, observations about the role of the emotions or passions in frenzy or lunacy, about the effect of

madness on the rational processes and on the exercise of choice, and about the difference between the cogency of the insane and the lucidity of the sane. One special form of madness is often exemplified and commented on, and that is the madness of the lover—the divine madness.

The modern approach to mental disease, with its distinction between the symptoms of the illness and the disease process itself, and with its classification of neuroses and psychoses, is represented here in the quotations drawn from William James and Sigmund Freud.

■ ■ ■

1 *Orestes*. I go, an outcast wanderer from this land, and leave
behind, in life, in death, the name of what I did.

Chorus. No, what you did was well done. Do not therefore bind
your mouth to foul speech. Keep no evil on your lips.
You liberated all the Argive city when
you lopped the heads of these two snakes with one clean stroke.

Or. No!
Women who serve this house, they come like gorgons,
they
wear robes of black, and they are wreathed in a tangle
of snakes. I can no longer stay.

Ch. Orestes, dearest to your father of all men
what fancies whirl you? Hold, do not give way to fear.

Or. These are no fancies of affliction. They are clear,
and real, and here; the bloodhounds of my mother's hate.

Ch. It is the blood still wet upon your hands, that makes this shaken turbulence be thrown upon your sense.

Or. Ah, Lord Apollo, how they grow and multiply, repulsive for the blood drops of their dripping eyes.

Ch. There is one way to make you clean: let Loxias touch you, and set you free from these disturbances.

Or. You can not see them, but I see them. I am driven from this place. I can stay here no longer.

Aeschylus, Libation Bearers, 1042

2 Towards this tongue of land . . . the men to whom the business was assigned carried out a double bridge from Abydos; and while the Phoenicians constructed one line with cables of white flax, the Egyptians in the other used ropes made of papyrus. Now it is seven furlongs across from Abydos to the opposite coast. When, therefore, the channel had been bridged successfully, it happened that a great storm arising broke the whole work to pieces, and destroyed all that had been done.

So when Xerxes heard of it he was full of wrath, and straightway gave orders that the Hellespont should receive three hundred lashes, and that a pair of fetters should be cast into it. Nay, I have even heard it said that he bade the branders take their irons and therewith brand the Hellespont. It is certain that he commanded those who scourged the waters to utter, as they lashed them, these barbarian and wicked words: "Thou bitter water, thy lord lays on thee this punishment because thou heist wronged him without a cause, having suffered no evil at his hands. Verily King Xerxes will cross thee, whether thou wilt or no. Well dost thou deserve that no man should honour thee with sacrifice; for thou art of a

truth a treacherous and unsavoury river." While the sea was thus punished by his orders, he likewise commanded that the overseers of the work should lose their heads.

Herodotus, History, VII, 34—35

3 *Tecmessa*. In the depth of night, after the evening flares
Had all gone out, Ajax, with sword in hand.
Went slowly groping toward the door, intent
Upon some pointless errand. I objected.
And said, "Ajax, what are you doing? Why
Do you stir? No messenger has summoned you:
You have heard no trumpet. Why, the whole army now's
asleep!"
He answered briefly in a well-worn phrase, "Woman, a
woman's decency is silence."
I heard, and said no more; he issued forth alone.
I don't know what horrors occurred outside,
But when he came back in, he brought with him
A mass of hobbled bulls and shepherd dogs
And woolly captives. He struck the heads off some;
Others' he severed with an upward cut;
And some, held fast in bonds, he kept abusing
With words and blows, as though they were human
beings—
And all the while he was vexing poor dumb beasts.
At length he darted out the door and spoke
Wild, rending words, directed toward some phantom,
Exulting with a harsh laugh how he'd paid them,
Odysseus and the sons of Atreus. Then
He sprang back in again, and somehow, slowly,
By painful stages came to his right mind.

Sophocles, Ajax, 285

4 *Messenger*. Offerings to Zeus were set before the hearth
to purify the house, for Heracles
had cast the body of the king outside.
There the children stood, in lovely cluster,
with Megara and the old man. In holy hush
the basket made the circle of the hearth.
And then, as Heracles reached out his hand
to take the torch and dip it in the water,
he stood stockstill. There he stood, not moving,
while the children stared. Suddenly he changed:
his eyes rolled and bulged from their sockets,
and the veins stood out, gorged with blood, and froth
began to trickle down his bearded chin.
Then he spoke, laughing like a maniac:
"Why hallow fire, Father, to cleanse the house
before I kill Eurystheus? Why double work,
when at one blow I might complete my task?
I'll go and fetch Eurystheus' head, add it
to that other corpse, then purify my hands.
Empty your water out! Drop those baskets!
Someone fetch my bow. Put weapons in my hands:
I march against Mycenae! Let me have
crowbars and picks: the Cyclopes built well,
cramping stone on stone with plumb and mallet,
but with my pick I'll rip them down again."
Then he fancied that his chariot stood there;
he made as though to leap its rails, and rode off,
prodding with his hand as though it held a goad.
Whether to laugh or shudder, we could not tell.
We stared at one another. Then one man asked,
"Is the master playing, or is he... mad?"
Up and down, throughout the house, he drove,
and riding through the great hall, claimed it was

Nisus' city, though it was, in fact, his house.
He threw himself to the floor, and acted out
a feast. He tarried there a while, then said
he was approaching Isthmus' wooded valley.
He unstrapped his buckles and stripped himself bare,
and wrestled with no one; then called for silence
and crowned himself the victor of a match
that never was. Then raged against Eurystheus,
and said he'd come to Mycenae. His father
caught him by that muscled hand and said:
"What do you mean, my son? What is this journey
that you make? Or has the blood of those you've slain
made you mad?" He thought Eurystheus' father
had come, trembling, to supplicate his hand;
pushed him away, and set his bow and arrows
against his sons. He thought he was killing
Eurystheus' children. Trembling with terror,
they rushed here and there; one hid beneath
his mother's robes, one ran to the shadow
of a pillar, and the last crouched like a bird
below the altar. Their mother shrieked:
"You are their father! Will you kill your sons?"
And shouts broke from the old man and the slaves.
Around the pillar he pursued his son
in dreadful circles, then caught up with him
and pierced him to the heart. Backward he fell,
dying, and stained the flagstones with his blood.
His father shouted in triumph, exulting,
"Here is the first of Eurystheus' youngsters dead;
his death repays me for his father's hate."
He aimed his bow at the second, who crouched
below the altar's base, trying to hide.
The boy leaped first, fell at his father's knees

and held his hand up to his father's chin.
"Dearest Father," he cried, "do not murder me.
I am your own son, yours, not Eurystheus'!"
But he stared from stony gorgon eyes,
found his son too close to draw the bow,
and brought his club down on that golden head,
and smashed the skull, as though a blacksmith
smiting steel. Now that his second son lay dead,
he rushed to kill the single victim left.
But before he drew the bow, the mother
seized her child, ran within and locked the doors.
And, as though these were the Cyclopean walls,
he pried the panels up, ripped out the jambs,
and with one arrow brought down son and wife.
And then he rushed to kill his father too,
but look! a phantom came—or so it seemed to us—
Pallas, with plumed helm, brandishing a spear.
She hurled a rock; it struck him on the chest,
stopped short his murderous rage and knocked him
into sleep. He slumped to the floor and hit
his back against a pillar which had fallen there,
snapped in two pieces when the roof collapsed.
Delivered from the fear that made us run,
we helped the old man lash him down with ropes
against the pillar, lest when he awakes
still greater grief be added to the rest.
He sleeps now, wretched man, no happy sleep,
killer of his wife and sons. I do not know
one man alive more miserable than this.

Euripides, Heracles, 922

5 *Messenger.* And now the stranger worked a miracle.
Reaching for the highest branch of a great fir,

he bent it down, down, down to the dark earth,
till it was curved the way a taut bow bends
or like a rim of wood when forced about the circle
of a wheel. Like that he forced that mountain fir
down to the ground. No mortal could have done it.
Then he seated Pentheus at the highest tip
and with his hands let the trunk rise straightly up,
slowly and gently, lest it throw its rider.
And the tree rose, towering to heaven, with my master
huddled at the top. And now the Maenads saw him
more clearly than he saw them. But barely had they seen,
when the stranger vanished and there came a great voice
out of heaven—Dionysus', it must have been—
crying: "Women, I bring you the man who has mocked
at you and me and at our holy mysteries.
Take vengeance upon him." And as he spoke
a flash of awful fire bound earth and heaven.
The high air hushed, and along the forest glen
the leaves hung still; you could hear no cry of beasts.
The Bacchae heard that voice but missed its words,
and leaping up, they stared, peering everywhere.
Again that voice. And now they knew his cry,
the clear command of god. And breaking loose
like startled doves, through grove and torrent,
over jagged rocks, they flew, their feet maddened
by the breath of god. And when they saw my master
perching in his tree, they climbed a great stone
that towered opposite his perch and showered him
with stones and javelins of fir, while the others
hurled their wands. And yet they missed their target,
poor Pentheus in his perch, barely out of reach
of their eager hands, treed, unable to escape.
Finally they splintered branches from the oaks

and with those bars of wood tried to lever up the tree the roots. But every effort failed.

Agave cried out: "Maenads, make a circle about the trunk and grip it with your hands.

Unless we take this climbing beast, he will reveal the secrets of the god." With that, thousands of hands tore the fir tree from the earth, and down, down from his high perch fell Pentheus, tumbling to the ground, sobbing and screaming as he fell, for he knew his end was near. His own mother, like a priestess with her victim, fell upon him first. But snatching off his wig and snood so she would recognize his face, he touched her checks, screaming, *"No, no, Mother! I am Pentheus, your own son, the child you bore to Echion! Pity me, spare me, Mother! I have done a wrong, but do not kill your own son for my offense!"*

But she was foaming at the mouth, and her crazed eyes rolling with frenzy. She was mad, stark mad, possessed by Bacchus. Ignoring his cries of pity, she seized his left arm at the wrist; then, planting her foot upon his chest, she pulled, wrenching away the arm at the shoulder—not by her own strength, for the god had put inhuman power in her hands. Ino, meanwhile, on the other side, was scratching off his flesh. Then Autonoe and the whole horde of Bacchae swarmed upon him. Shouts everywhere, he screaming with what little breath was left, they shrieking in triumph. One tore off an arm, another a foot still warm in its shoe. His ribs were clawed clean of flesh and every hand was smeared with blood as they played ball with scraps of Pentheus' body.

The pitiful remains lie scattered,
one piece among the sharp rocks, others
lying lost among the leaves in the depths
of the forest. His mother, picking up his head,
impaled it on her wand. She seems to think it is
some mountain lion's head which she carries in triumph
through the thick of Cithaeron. Leaving her sisters
at the Maenad dances, she is coming here, gloating
over her grisly prize. She calls upon Bacchus:
he is her "fellow-huntsman," "comrade of the chase,
crowned with victory." But all the victory
she carries home is her own grief.

Euripides, Bacchae, 1063

- 6 *Socrates*. Of madness there were two kinds; one produced by human infirmity, the other ... a divine release of the soul from the yoke of custom and convention.

Phaedrus. True.

Soc. The divine madness was subdivided into four kinds, prophetic, initiatory, poetic, erotic, having four gods presiding over them; the first was the inspiration of Apollo, the second that of Dionysus, the third that of the Muses, the fourth that of Aphrodite and Eros. In the description of the last kind of madness, which was also said to be the best, we spoke of the affection of love in a figure, into which we introduced a tolerably credible and possibly true though partly erring myth, which was also a hymn in honour of Love, who is your lord and also mine, *Phaedrus*, and the guardian of fair children, and to him we sung the hymn in measured and solemn strain.

Plato, Phaedrus, 265A

7 A disaster followed, whether accidental or treacherously contrived by the emperor, is uncertain, as authors have given both accounts, worse, however, and more dreadful than any which have ever happened to this city by the violence of fire. It had its beginning in that part of the circus which adjoins the Palatine and Caelian hills, where, amid the shops containing inflammable wares, the conflagration both broke out and instantly became so fierce and so rapid from the wind that it seized in its grasp the entire length of the circus. For here there were no houses fenced in by solid masonry, or temples surrounded by walls, or any other obstacle to interpose delay. The blaze in its fury ran first through the level portions of the city, then rising to the hills, while it again devastated every place below them, it outstripped all preventive measures; so rapid was the mischief and so completely at its mercy the city, with those narrow winding passages and irregular streets, which characterised old Rome.... And no one dared to stop the mischief, because of incessant menaces from a number of persons who forbade the extinguishing of the flames, because again others openly hurled brands, and kept shouting that there was one who gave them authority, either seeking to plunder more freely, or obeying orders.

Nero at this time was at Antium, and did not return to Rome until the fire approached his house, which he had built to connect the palace with the gardens of Maecenas. It could not, however, be stopped from devouring the palace, the house, and everything around it. However, to relieve the people, driven out homeless as they were, he threw open to them the Campus Martius and the public buildings of Agrippa, and even his own gardens, and raised temporary structures to receive the destitute

multitude. Supplies of food were brought up from Ostia and the neighbouring towns, and the price of com was reduced to three sesterces a peck. These acts, though popular, produced no effect, since a rumour had gone forth everywhere that, at the very time when the city was in flames, the emperor appeared on a private stage and sang of the destruction of Troy, comparing present misfortunes with the calamities of antiquity.

Tacitus, Annals, XV, 38-39

- 8 Every man prefers to grieve in a sane mind, rather than to be glad in madness.

Augustine, City of God, XI, 27

- 9 To suffer ecstasy means to be placed outside oneself. This happens as to the apprehensive power and as to the appetitive power. As to the apprehensive power, a man is said to be placed outside himself when he is placed outside the knowledge proper to him. This may be due to his being raised to a higher knowledge; thus, a man is said to suffer ecstasy because he is placed outside the connatural apprehension of his sense and reason, when he is raised up so as to comprehend things that surpass sense and reason. Or it may be due to his being cast down into a state of debasement; thus a man may be said to suffer ecstasy when he is overcome by violent passion or madness. As to the appetitive part, a man is said to suffer ecstasy when the appetite is borne towards something else, so that it goes forth out from itself, as it were.

The first of these ecstasies is caused by love by way of disposition, in so far, namely, as love makes the beloved

to dwell in the lover's mind; and the more we give our mind to one thing, the less we think of others. The second ecstasy is caused by love directly; by love of friendship, absolutely, by love of concupiscence, not absolutely but in a relative sense. Because in love of concupiscence, the lover is taken out from himself, in a certain sense; in so far, namely, as not being satisfied with enjoying the good that he has, he seeks to enjoy something outside himself. But since he seeks to have this extrinsic good for himself, he does not go out from himself absolutely, and this affection remains finally within him. On the other hand, in the love of friendship, a man's affection goes out from itself absolutely, because he wishes and does good to his friend, as it were, caring and providing for him, for his sake.

Aquinas, Summa Theologica, I-II, 28, 3

- 10 Of what is the subtlest madness made, but the subtlest wisdom? As great enmities are born of great friendships, and mortal maladies of vigorous health, so are the greatest and wildest manias born of the rare and lively stirrings of our soul; it is only a half turn of the peg to pass from the one to the other. In the actions of the insane we see how neatly madness combines with the most vigorous operations of our soul. Who does not know how imperceptibly near is madness to the lusty flights of a free mind and the effects of supreme and extraordinary virtue?

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 11 Is there not some rashness in philosophy to consider that men produce their greatest deeds and those most closely

approaching divinity when they are out of their minds and frenzied and mad? We improve by the privation and deadening of our reason. The two natural ways to enter the cabinet of the gods and there foresee the course of destinies are madness and sleep. This is amusing to think about: by the dislocation that the passions bring about in our reason, we become virtuous; by the extirpation of reason that is brought about by madness or the semblance of death, we become prophets and soothsayers. I never was more willing to believe philosophy. It is a pure transport that the sacred truth inspired in the philosophical spirit, which wrests from it, against its intention, the admission that the tranquil state of our soul, the sedate state, the healthiest state that philosophy can acquire for her, is not her best state. Our waking is more asleep than sleep; our wisdom less wise than madness. Our dreams are worth more than our reasonings. The worst position we can take is in ourselves.

But does not philosophy think that we have enough sense to notice that the voice which makes the spirit when it is detached from man so clairvoyant, so great, so perfect, and while it is in man so earthly, ignorant, and shadowed, is a voice coming from the spirit which is a part of earthly, ignorant, and shadowed man, and for that reason a voice not to be trusted or believed?

Montaigne, Essays, II, 12, Apology for Raymond Sebond

12 *Malvolio*. I am not mad, Sir Topas: I say to you, this house is dark.

Clown. Madman, thou errest: I say, there is no darkness but ignorance; in which thou art more puzzled than the Egyptians in their fog.

Mal. I say, this house is as dark as ignorance, though ignorance were as dark as hell; and I say, there was never man thus abused.

Shakespeare, Twelfth Night, IV, ii, 44

13 *Polonius.* How now, Ophelia! What's the matter?

Ophelia. O, my lord, my lord, I have been so affrighted!

Pol. With what, i' the name of God?

Oph. My lord, as I was sewing in my closet,
Lord Hamlet, with his doublet all unbraced;
No hat upon his head; his stockings foul'd,
Ungarter'd, and down-gyved to his ancle;
Pale as his shirt; his knees knocking each other;
And with a look so piteous in purport
As if he had been loosed out of hell
To speak of horrors—he comes before me.

Pol. Mad for thy love?

Oph. My lord, I do not know;
But truly, I do fear it.

Pol. What said he?

Oph. He took me by the wrist and held me hard;
Then goes he to the length of all his arm;
And, with his other hand thus o'er his brow.
He falls to such perusal of my face
As he would draw it. Long stay'd he so;
At last, a little shaking of mine arm
And thrice his head thus waving up and down,
He raised a sigh so piteous and profound
As it did seem to shatter all his bulk
And end his being. That done, he lets me go;
And, with his head over his shoulder turn'd.
He seem'd to find his way without his eyes;

For out o'doors he went without their helps,
And, to the last, bended their light on me,

Pol. Come, go with me: I will go seek the King.

This is the very ecstasy of love,
Whose violent property fordoes itself
And leads the will to desperate undertakings
As oft as any passion under heaven
That does afflict our natures. I am sorry.

What, have you given him any hard words of late?

Oph. No, my good lord, but, as you did command,
I did repel his letters and denied His access to me.

Pol. That hath made him mad.

Shakespeare, Hamlet, II, i, 74

14 *Hamlet*. I am but mad north-north-west. When the wind is
southerly I know a hawk from a handsaw.

Shakespeare, Hamlet, II, ii, 396

15 *Ophelia*. O, what a noble mind is here o'erthrown!
The courtier's, soldier's, scholar's, eye, tongue, sword.
The expectancy and rose of the fair state.
The glass of fashion and the mould of form.
The observed of all observers, quite, quite down!
And I, of ladies most deject and wretched,
That suck'd the honey of his music vows.
Now see that noble and most sovereign reason,
Like sweet bells jangled, out of tune and harsh;
That unmatched'd form and feature of blown youth
Blasted with ecstasy: O, woe is me,
To have seen what I have seen, see what I see!

Shakespeare, Hamlet, II, i, 158

16 *Queen*. To whom do you speak this?

Hamlet. Do you see nothing there?

Queen. Nothing at all; yet all that is I see.

Ham. Nor did you nothing hear?

Queen. No, nothing but ourselves.

Ham. Why, look you there! look, how it steals away!

My father, in his habit as he lived!

Look, where he goes, even now, out at the portal!

[Exit Ghost]

Queen. This is the very coinage of your brain.

This bodiless creation ecstasy

Is very cunning in.

Ham. Ecstasy!

My pulse, as yours, doth temperately keep time,

And makes as healthful music. It is not madness

That I have utter'd. Bring me to the test,

And I the matter will re-word; which madness

Would gambol from. Mother, for love of grace,

Lay not that flattering unction to your soul,

That not your trespass, but my madness speaks.

Shakespeare, Hamlet, III, iv, 131

17 *Laertes*. O heat, dry up my brains! tears seven times salt,

Burn out the sense and virtue of mine eye!

By heaven, thy madness shall be paid with weight.

Till our scale turn the beam. O rose of May!

Dear maid, kind sister, sweet Ophelia!

O heavens! is't possible, a young maid's wits

Should be as mortal as an old man's life?

Nature is fine in love, and where 'tis fine.

It sends some precious instance of itself

After the thing it loves.

Ophelia. [Sings]

"They bore him barefaced on the bier;
Hey non nonny, nonny, hey nonny;
And in his grave rain'd many a tear"—
Fare you well, my dove!

Laer. Hadst thou thy wits, and didst persuade revenge,
It could not move thus.

Oph. [sings] "You must sing a-down a-down,
An you call him a-down-a."
O, how the wheel becomes it! It is the false steward, that
stole his master's daughter.

Laer. This nothing's more than matter.

Oph. There's rosemary, that's for remembrance, pray,
love, remember; and there is pansies, that's for thoughts.

Laer. A document in madness, thoughts and
remembrance fitted.

Shakespeare, Hamlet, IV, v, 155

- 18 *Lear.* You see me here, you gods, a poor old man.
As full of grief as age; wretched in both!
If it be you that stir these daughters' hearts
Against their father, fool me not so much
To bear it tamely; touch me with noble anger,
And let not women's weapons, water-drops,
Stain my man's cheeks! No, you unnatural hags,
I will have such revenges on you both,
That all the world shall—I will do such things—
What they are, yet I know not; but they shall be
The terrors of the earth. You think I'll weep;
No, I'll not weep.
I have full cause of weeping; but this heart
Shall break into a hundred thousand flaws,
Or ere I'll weep. O Fool, I shall go mad!

Shakespeare, Lear, II, iv, 275

19 *Lear*. Pray? do not mock me.

I am a very foolish fond old man.

Fourscore and upward, not an hour more nor less;

And, to deal plainly,

I fear I am not in my perfect mind.

Shakespeare, Lear, IV, vii, 60

20 *Doctor*. I have two nights watched with you, but can perceive no truth in your report. When was it she last walked?

Gentlewoman. Since his Majesty went into the field, I have seen her rise from her bed, throw her nightgown upon her, unlock her closet, take forth paper, fold it, write upon't, read it, afterwards seal it, and again return to bed; yet all this while in a most fast sleep.

Doct. A great perturbation in nature, to receive at once the benefit of sleep, and do the effects of watching! In this slumbry agitation, besides her walking and other actual performances, what, at any time, have you heard her say?

Gent. That, sir, which I will not report after her.

Doct. You may to me; and 'tis most meet you should.

Gent. Neither to you nor any one; having no witness to confirm my speech.

Enter Lady Macbeth, with a taper.

Lo you, here she comes! This is her very guise; and, upon my life, fast asleep. Observe her; stand close.

Doct. How came she by that light?

Gent. Why, it stood by her. She has light by her continually; 'tis her command.

Doct. You see, her eyes are open.

Gent. Ay, but their sense is shut.

Doct. What is it she does now? Look, how she rubs her hands.

Gent. It is an accustomed action with her, to seem thus washing her hands. I have known her continue in this a quarter of an hour.

Lady Macbeth. Yet here's a spot.

Doct. Hark! she speaks. I will set down what comes from her, to satisfy my remembrance the more strongly.

Lady M. Out, damned spot! out, I say! One; two. Why, then 'tis time to do't. Hell is murky! Fie, my lord, fie! a soldier, and afeard? What need we fear who knows it, when none can call our power to account? Yet who would have thought the old man to have had so much blood in him.

Doct. Do you mark that?

Lady M. The thane of Fife had a wife. Where is she now? What, will these hands ne'er be clean? No more o' that, my lord, no more o' that! You mar all with this starting.

Doct. Go to, go to; you have known what you should not.

Gent. She has spoke what she should not, I am sure of that. Heaven knows what she has known.

Lady M. Here's the smell of the blood still. All the perfumes of Arabia will not sweeten this little hand. Oh, oh, oh!

Doct. What a sigh is there! The heart is sorely charged,

Gent. I would not have such a heart in my bosom for the dignity of the whole body.

Doct. Well, well, well—

Gent. Pray God it be, sir.

Doct. This disease is beyond my practice, Yet I have known those which have walked in their sleep who have died holily in their beds.

Lady M. Wash your hands, put on your night-gown; look not so pale. I tell you yet again, Banquo's buried; he cannot come out on's grave.

Doct. Even so?

Lady M. To bed, to bed! there's knocking at the gate. Come, come, come, come, give me your hand. What's done cannot be undone. To bed, to bed, to bed! [*Exit*]

Doct. Will she go now to bed?

Gent. Directly.

Shakespeare. Macbeth, V, i, I

21 *Macbeth*, How does your patient, doctor?

Doctor. Not so sick, my lord.

As she is troubled with thick-coming fancies,
That keep her from her rest.

Macb. Cure her of that.

Canst thou not minister to a mind diseased.
Pluck from the memory a rooted sorrow,
Rare out the written troubles of the brain.
And with some sweet oblivious antidote
Cleanse the stuff'd bosom of that perilous stuff
Which weighs upon the heart?

Doct. Therein the patient
Must minister to himself.

Mach. Throw physic to the dogs; I'll none of it.

Shakespeare, Macbeth, V, iii, 37

22 Having thus lost his Understanding, lie unluckily
stumbled upon the oddest Fancy that ever enter'd into a

Madman's Brain; for now he thought it convenient and necessary, as well for the Increase of his own Honour, as the Service of the Publick, to turn Knight-Errant, and roam through the whole World arm'd Cap-a-pee, and mounted on his Steed, in quest of Adventures; that thus imitating those Knight-Errants of whom he had read, and following their Course of Life, redressing all manner of Grievances, and exposing himself to Danger on all Occasions, at last, after a happy Conclusion of his Enterprizes, he might purchase everlasting Honour and Renown.

Cervantes, Don Quixote, I, I

23 As they were thus discoursing, they discover'd some thirty or forty Wind-mills, that are in that Plain; and as soon as the Knight had spy'd them. Fortune, cry'd he, directs our Affairs better than we our selves could have wish'd: Look yonder, Friend *Sancho*, there are at least thirty outrageous Giants, whom I intend to encounter; and having depriv'd them of Life, we will begin to enrich our selves with their Spoils: For they are lawful Prize; and the Extirpation of that cursed Brood will be an acceptable Service to Heaven. What Giants? quoth *Sancho Panza*. Those whom thou see'st yonder, answer'd Don *Quixote*, with their long-extended Arms; some of that detested Race have Arms of so immense a Size, that sometimes they reach two leagues in length. Pray look better, Sir, quoth *Sancho*; those things yonder are no Giants, but Wind-mills, and the Arms you fancy, are their Sails, which being whirl'd about by the Wind, make the Mill go. 'Tis a Sign, cry'd Don *Quixote*, thou art but little acquainted with Adventures! I tell thee, they are Giants; and therefore if thou art afraid, go aside and say thy Prayers,

for I am resolv'd to engage in a dreadful unequal Combat against them all. This said, he clapp'd Spurs to his Horse *Rozinante*, without giving Ear to his Squire *Sancho*, who bawl'd out to him, and assur'd him, that they were Wind-mills, and no Giants. But he was so fully possess'd with a strong Conceit of the contrary, that he did not to much as hear his Squire's Outcry, nor was he sensible of what they were, although he was already very near them: Far from that, Stand, Cowards, cry'd he as loud as he could; stand your Ground, ignoble Creatures, and fly not basely from a single Knight, who darest encounter you all. At the same Time the Wind rising, the Mill-Sails began to move, which, when Don *Quixote* spy'd, Base Miscreants, cry'd he, though you move more Arms than the Giant *Briareus*, you shall pay for your Arrogance. He most devoutly recommended himself to his Lady *Dulcinea*, imploring her Assistance in this perilous Adventure; and so covering himself with his Shield, and couching his Lance, he rush'd with *Rozinante*'s utmost Speed upon the first Wind-mill he could come at, and running his Lance into the Sail, the Wind whirl'd it about with such Swiftmess, that the Rapidity of the Motion presently broke the Lance into Shivers, and hurl'd away both Knight and Horse along with it, till down he fell rolling a good Way off in the Field. *Sancho Panza* ran as fast as his Ass could drive to help his Master, whom he found lying, and not able to stir, such a Blow he and *Rozinante* had receiv'd. Mercy o'me! cry'd *Sancho*, did not I give your Worship fair Warning? Did not I tell you they were Wind-mills, and that no Body could think otherwise, unless he had also Wind-mills in his Head? Peace, Friend *Sancho*, reply'd Don Quixote: There is nothing so subject to the Inconstancy of Fortune as War. I am verily persuaded, that cursed Necromancer

Freston, who carry'd away my Study and my Books, has transform'd these Giants into Wind-mills, to deprive me of the Honour of the Victory, such is his inveterate Malice against me: But in the End, all his pernicious Wiles and Stratagems shall prove ineffectual against the prevailing Edge of my Sword. *Amen*, say I, reply'd *Sancho*; and so heaving him up again upon his Legs, once more the Knight mounted poor Rozinante, that was half Shoulder-slipp'd with his Fall.

Cervantes, Don Quixote, I, 8

24 Know then, my most faithful Squire, that *Amadis de Gaul* was one of the most accomplish'd Knights-Errant, nay, I should not have said, he was one of them, but the most perfect, the chief, and Prince of them all. And let not the *Belianises*, nor any others, pretend to stand in Competition with him for the Honour of Priority; for, to my Knowledge, should they attempt it, they would be egregiously in the wrong, I must also inform thee, that when a Painter studies to excel and grow famous in his Art, he takes care to imitate the best Originals; which Rule ought likewise to be observ'd in all other Arts and Sciences that serve for the Ornament of well-regulated Commonwealths.... Now, *Sancho*, I find that among the things which most display'd that Champion's Prudence and Fortitude, his Constancy and Love, and his other Heroick Virtues, none was more remarkable than his retiring from his disdainful *Oriana*, to do Penance on the *Poor Rock*, changing his Name into that of Belte nebros, or *The Lovely Obscure*, a Title certainly most significant, and adapted to the Life which he then intended to lead. So I am resolv'd to imitate him in this, the rather because I think it a more easy Task than it would be to copy his

other Atchievements, such as cleaving the Bodies of Giants, cutting off the Heads of Dragons, killing dreadful Monsters, routing whole Armies, dispersing Navies, and breaking the Force of Magick Spells. And since these Mountainous Wilds offer me so fair an Opportunity, I see no Reason why I should neglect it, and therefore I'll lay hold on it now. Very well, quoth Sancho; but pray. Sir, what is it that you mean to do in this Fag-end of the World? Have I not already told thee, ansu'er'd Don *Quixote*, that I intend to copy Amadis in his Madness, Despair, and Fury? Nay, at the same time I imitate the valiant *Orlando Furioso's* Extravagance, when he ran mad, after he had found the unhappy Tokens of the fair *Angelica's* dishonourable Commerce with *Medoro* at the Fountain; at which time, in his f ran tick Despair, he tore up Trees by the Roots, troubled the Waters of the clear Fountains, slew the Shepherds, destroy'd their Flocks, fir'd their Huts, demolish'd Houses, drove their Horses before him, and committed a hundred thousand other Extravagancies worthy to be recorded in the eternal Register of Fame.... Sir, quoth *Sancho*, I dare say the Knights who did these Penances had some Reason to be mad; but what need have You to be mad too? What Lady has sent you a packing, or so much as slighted you? When did you ever find that my Lady *Dulcinea del Toboso* did otherwise than she should do, with either *Moor* or *Christian*? Why, there's the Point, cry'd Don *Quixote*; in this consists the singular Perfection of my Undertaking; For, mark me, *Sancho*, for a Knight-Errant to run mad upon any just Occasion, is neither strange nor meritorious; no, the Rarity is to run mad without a Cause, without the least Constraint or Necessity,

Cervantes, Don Quixote, I, 25

23 At length he wak'd, and with a loud Voice, Blessed be the Almighty, cry'd he, for this great Benefit he has vouchsafed to do me! Infinite are his Mercies; they are greater, and more in Number than the Sins of Men. The Niece hearkening very attentively to these Words of her Uncle, and finding more Sense in them than there was in his usual Talk, at least since he had fallen ill; What do you say. Sir, said she, has any Thing extraordinary happen'd? What Mercies are these you mention? Mercies, answer'd he, that Heaven has this Moment vouchsafed to shew me, in spite of all my Iniquities. My Judgment is return'd clear and undisturb'd, and that Cloud of Ignorance is now remov'd, which the continual Reading of those damnable Books of Knight-Errantry had cast over my Understanding. Now I perceive their Nonsense and Impertinence, and am only sorry the Discovery happens so late, when I want Time to make Amends by those Studies that shou'd enlighten my Soul, and prepare me for Futurity. I find. Niece, my End approaches; but I wou'd have it such, that though my Life has got me the Character of a Mad-man, I may deserve a better at my Death. Dear Child, continu'd he, send for my honest Friend the Curate, the Batchelor Carrasco, and Master Nicholas the Barber, for I intend to make my Confession, and my Will. His Niece was sav'd the Trouble of sending, for presently they all three came in; which Don Quixote perceiving, My good Friends, said he, I have happy News to tell you; I am no longer *Don Quixote de la Mancha*, but *Alonso Quixano*, the same whom the World for his fair Behaviour has been formerly pleas'd to call *the Good*. I now declare my self an Enemy to *Amadis de Gaul*, and his

whole Generation; all profane Stories of Knight-Errantry, all Romances I detest. I have a true Sense of the Danger of reading them, and of all my pass'd Follies, and through Heaven's Mercy, and my own Experience, I abhor them. His three Friends were not a little surprized to hear him talk at this rate, and concluded some new Frenzy had possess'd him. What now', said Sampson to him? What's all this to the Purpose, Signor Don *Quixote*? we have just had the News that the Lady *Dulcinea* is disenchanted; and now we are upon the point of turning Shepherds, to sing, and live like Princes, you are dwindl'd down to a Hermit.

Cervantes, Don Quixote, 11, 74

26 If men were all to become even uniformly mad, they might agree tolerably well with each other.

Bacon, Novum Organum, I, 27

27 That madness is nothing else but too much appearing passion may be gathered out of the effects of wine, which are the same with those of the evil disposition of the organs. . . . For the effect of the wine does but remove dissimulation, and take from them the sight of the deformity of their passions. For, I believe, the most sober men, when they walk alone without care and employment of the mind, would be unwilling the vanity and extravagance of their thoughts at that time should be publicly seen, which is a confession that passions unguided are for the most part mere madness.

Hobbes, Leviathan, I, 8

28 Men are so necessarily mad that not to be mad would amount to another form of madness.

Pascal. Pensees, VI, 414

29 A daring pilot in extremity;
Pleas'd with the danger, when the waves went high.
He sought the storms; hut. for a calm unfit.
Would steer too nigh the sands to boast his wit
Great wits are sure to madness near allied,
And thin partitions do their bounds divide.

Dryden, Absalom and Achitophel, 159

30 Madmen ... do not appear to me to have lost the faculty of reasoning, but having joined together some ideas very wrongly, they mistake them for truths; and they err as men do that argue right from wrong principles. For, by the violence of their imaginations, having taken their fancies for realities, they make right deductions from them. Thus you shall find a distracted man fancying himself a king, with a right inference require suitable attendance, respect, and obedience. others who base thought themselves made of glass, base used the caution necessary to preserve such brittle bodies. Hence it comes to pass that a man who is very sober, and of a right understanding in all other things, may in one particular be as frantic as any in Bedlam; if either by any sudden very strong impression, or long fixing his fancy upon one sort of thoughts, incoherent ideas have been cemented together so powerfully, as to remain united. But there are degrees of madness, as of folly; the disorderly jumbling ideas together is in some more, and some less. In short, herein seems to lie the difference between idiots and madmen: that madmen put wrong ideas together, and so make wrong propositions, but argue and reason right

from them; but idiots make very few or no propositions, and reason scarce at all.

Locke, Concerning Human Understanding, Bk. II, XI, 13

- 31 The diseases of the mind do in almost every particular imitate those of the body. For which reason, we hope, that learned faculty, for whom we have so profound a respect, will pardon us the violent hands we have been necessitated to lay on several words and phrases, which of right belong to them, and without which our descriptions must have been often unintelligible.

Now there is no one circumstance in which the distempers of the mind bear a more exact analogy to those which are called bodily, than that aptness which body have to a relapse. This is plain in the violent diseases of ambition and avarice. I have known ambition, when cured at court by frequent disappointments (which are the only physic for it), to break out again in a contest for foreman of the grand jury at an assizes; and have heard of a man who had so far conquered avarice, as to give away many a sixpence, that comforted himself, at last, on his deathbed, by making a crafty and advantageous bargain concerning his ensuing funeral, with an undertaker who had married his only child.

In the affair of love, which, out of strict conformity with the Stoic philosophy, we shall here treat as a disease, this proneness to relapse is no less conspiruous.

Fielding, Tom Jones, IV, 12

- 32 Johnson, upon the first violent attack of this disorder, strove in overcome it by forcible exertions. He frequently walked to Birmingham and back again, and tried many

other expedients, but all in vain. His expression concerning it to me was "I did not then know how to manage it." His distress became so intolerable, that he applied to Dr. Swinfen, physician in Lichfield, his godfather, and put into his hands a state of his ease, written in Latin. Or Swinfen was so much struck with the extraordinary acuteness, research, and eloquence of this paper, that in his zeal for his godson he shewed it to several people. His daughter, Mrs. Desmoulins. who was many years humanely supported in Dr. Johnson's house in London, told me, that upon his discovering that Dr. Swinfen had communicated his case, he was so much offended, that he was never afterwards fully reconciled to him. He indeed had good reason to be offended; for though Dr. Swinfen's motive was good, he inconsiderately betrayed a matter deeply interesting and of great delicacy, which had been entrusted to him in confidence; and exposed a complaint of young friend and patient, which, in the superficial opinion of the generality of mankind, is attended with contempt and disgrace.

But let not little men triumph upon knowing that Johnson was an Hypochondriack, was subject to what the learned, philosophical, and pious Dr. Cheyne has so well treated under the title of "The English Malady." Though he suffered severely from it, he was not therefore degraded. The powers of his great mind might be troubled, and their full exercise suspended at times; but the mind itself was ever entire. As a proof of this, it is only necessary to consider, that, when he was at the very worst, he composed that state of his own ease, which shelved an uncommon vigour, not only of fancy and taste, but of judgement. I am aware that he himself was too ready to call such a complaint by the name of

madness; in conformity with which notion, he has traced its gradations, with exquisite nicety, in one of the chapters of his *Rasselas*. But there is surely a clear distinction between a disorder which affects only the imagination and spirits, while the judgement is sound, and a disorder by which the judgement itself is impaired. This distinction was made to me by the late Professor Gaubius of Leyden, physician to the Prince of Orange, in a conversation which I had with him several years ago, and he expanded it thus: "If (said he) a man tells me that he is grievously disturbed, for that he *imagines* he sees a ruffian coming against him with a drawn sword, though at the same time he is *conscious* it is a delusion, I pronounce him to have a disordered imagination; but if a man tells me that he *sees* this, and in consternation calls to me to look at it, I pronounce him to be *mad*."

Boswell, Life of Johnson (1729)

- 33 Dr. Johnson and I had a serious conversation by ourselves on melancholy and madness; which he was, I always thought, erroneously inclined to confound together. Melancholy, like "great wit," may be "near allied to madness"; but there is, in my opinion, a distinct separation between them. When he talked of madness, he was to be understood as speaking of those who were in any great degree disturbed, or as it is commonly expressed, "troubled in mind." Some of the ancient philosophers held, that all deviations from right reason were madness....

Johnson said, "A madman loves to be with people whom he fears; not as a dog fears the lash; but of whom he stands in awe." I was struck with the justice of this observation. To be with those of whom a person, whose

mind is wavering and dejected, stands in awe, represses and composes an uneasy tumult of spirits, and consoles him with the contemplation of something steady, and at least comparatively great.

He added, "Madmen are all sensual in the lower stages of the distemper. They are eager for gratifications to sooth their minds, and divert their attention from the misery which they suffer: but when they grow very ill, pleasure is too weak for them, and they seek for pain. Employment, Sir, and hardships, prevent melancholy. I suppose in all our army in America there was not one man who went mad."

Boswell, Life of Johnson (Sept. 20, 1777)

- 34 Who in the rainbow can draw the line where the violet tint ends and the orange tint begins? Distinctly we see the difference of the colors, but where exactly does the one first blendingly enter into the other? So with sanity and insanity.

Melville, Billy Budd

- 35 Human madness is oftentimes a cunning and most feline thing. When you think it fled, it may have but become transfigured into still subtler form. Ahab's full lunacy subsided not, but deepeningly contracted; like the unabated Hudson, when that noble Northman flows narrowly, but unfathomably through the Highland gorge. But, as in his narrow-flowing monomania, not one jot of Ahab's broad madness had been left behind; so in that broad madness, not one jot of his great natural intellect had perished. That before living agent, now became the living instrument. If such a furious trope may stand, his

special lunacy stormed his general sanity, and carried it, and turned all its concentrated cannon upon its own mad mark; so that far from having lost his strength, Ahab, to that one end, did now possess a thousand-fold more potency than ever he had sanely brought to bear upon any one reasonable object.

Melville, Moby Dick, XLI

36 Often, when forced from his hammock by exhausting and intolerably vivid dreams of the night, which, resuming his own intense thoughts through the day, carried them on amid a clashing of frenzies, and whirled them round and round in his blazing brain, till the very throbbing of his life-spot became insufferable anguish; and when, as was sometimes the case, these spiritual throes in him heaved his being up from its base, and a chasm seemed opening in him, from which forked flames and lightnings shot up, and accursed fiends beckoned him to leap down among them; when this hell in himself yawned beneath him, a wild cry would be heard through the ship; and with glaring eyes Ahab would burst from his stateroom, as though escaping from a bed that was on fire. Yet these, perhaps, instead of being the unsuppressable symptoms of some latent weakness, of fright at his own resolve, were but the plainest tokens of its intensity. For, at such times, Ahab, the scheming, unappeasedly steadfast hunter of the White Whale; this Ahab that had gone to his hammock, was not the agent that so caused him to burst from it in horror again. The latter was the eternal, living principle or soul in him; and in sleep, being for the time dissociated from the characterising mind, which at other times employed it for its outer vehicle or agent, it spontaneously sought escape from the scorching

contiguity of the frantic thing, of which, for the time, it was no longer an integral. But as the mind does not exist unless leagued with the soul, therefore it must have been that, in Ahab's case, yielding up all his thoughts and fancies to his one supreme purpose; that purpose, by its own sheer inveteracy of will, forced itself against gods and devils into a kind of self-assumed, independent being of its own; nay, could grimly live and burn, while the common vitality to which it was conjoined, fled horror-stricken from the unbidden and unfeathered birth. Therefore, the tormented spirit that glared out of bodily eyes, when what seemed Ahab rushed from his room, was, for the time but a vacated thing, a formless somnambulistic being, a ray of living light, to be sure, but without an object to colour, and therefore a blankness in itself. God help thee, old man, thy thoughts have created a creature in thee; and he whose intense thinking thus makes him a Prometheus; a vulture feeds upon that heart for ever; that vulture the very creature he creates.

Melville, Moby Dick, XLIV

- 37 Man's insanity is heaven's sense; and wandering from all mortal reason, man comes at last to that celestial thought, which, to reason, is absurd and frantic; and weal or woe, feels then uncompromised, indifferent as his God.

Melville, Moby Dick, XCIII

- 38 There is something both contemptible and frightful in the sort of evidence on which, of late years, any person can be judicially declared unfit for the management of his affairs; and after his death, his disposal of his property can be set aside, if there is enough of it to pay the

expenses of litigation— which are charged on the property itself. All the minute details of his daily life are pried into, and whatever is found which, seen through the medium of the perceiving and describing faculties of the lowest of the low, bears an appearance unlike absolute commonplace, is laid before the jury as evidence of insanity, and often with success; the jurors being little, if at all, less vulgar and ignorant than the witnesses; while the judges, with that extraordinary want of knowledge of human nature and life which continually astonishes us in English lawyers, often help to mislead them. These trials speak volumes as to the state of feeling and opinion among the vulgar with regard to human liberty. So far from setting any value on individuality—so far from respecting the right of each individual to act, in things indifferent, as seems good to his own judgment and inclinations, judges and juries cannot even conceive that a person in a state of sanity can desire such freedom. In former days, when it was proposed to bum atheists, charitable people used to suggest putting them in a madhouse instead: it would be nothing surprising now-a-days were we to see this done, and the doers applauding themselves, because, instead of persecuting for religion, they had adopted so humane and Christian a mode of treating these unfortunates, not without a silent satisfaction at their having thereby obtained their deserts.

Mill, On Liberty, III

- 39 His mind was not in a normal state. A healthy man usually thinks of, feels, and remembers innumerable things simultaneously, but has the power and will to select one sequence of thoughts or events on which to fix

his whole attention. A healthy man can tear himself away from the deepest reflections to say a civil word to someone who comes in and can then return again to his own thoughts. But Prince Andrew's mind was not in a normal state in that respect. All the powers of his mind were more active and clearer than ever, but they acted apart from his will. Most diverse thoughts and images occupied him simultaneously. At times his brain suddenly began to work with a vigor, clearness, and depth it had never reached when he was in health, but suddenly in the midst of its work it would turn to some unexpected idea and he had not the strength to turn it back again.

Tolstoy, War and Peace, XI, 32

40 Madness is rare in individuals—but in groups, parties, nations, and ages it is the rule.

Nietzsche, Beyond Good and Evil, IV, 156

41 In the eyes of the general public, the symptoms are the essence of a disease, and to them a cure means the removal of the symptoms. In medicine, however, we find it important to differentiate between symptoms and disease, and state that the disappearance of the symptoms is by no means the same as the cure of the disease. The only tangible element of the disease that remains after the removal of the symptoms, however, is the capacity to form new symptoms. Therefore for the moment let us adopt the lay point of view and regard a knowledge of the foundation of the symptoms as equivalent to understanding the disease.

The symptoms—of course we are here dealing with mental (or psychogenic) symptoms, and mental disease—

are activities which are detrimental, or at least useless, to life as a whole; the person concerned frequently complains of them as obnoxious to him or they involve distress and suffering for him. The principal injury they inflict lies in the expense of mental energy they entail and, besides this, in the energy needed to combat them. Where the symptoms are extensively developed, these two kinds of effort may exact such a price that the person suffers a very serious impoverishment in available mental energy, which consequently disables him for all the important tasks of life. This result depends principally upon the amount of energy taken up in this way, therefore you will see that illness is essentially a practical conception. But if you look at the matter from a theoretical point of view and ignore this question of degree you can very well say that we are all ill, i.e., neurotic; for the conditions required for symptom-formation are demonstrable also in normal persons.

Freud, General Introduction to Psycho-Analysis, XXIII

- 42 If we throw a crystal to the ground, it breaks, but it does not break haphazard; in accordance with the lines of cleavage it falls into fragments, whose limits were already determined by the structure of the crystal, although they were invisible. Psychotics are fissured and splintered structures such as these. We cannot deny them a measure of that awe with which madmen were regarded by the peoples of ancient times. They have turned away from external reality, but for that very reason they know more of internal psychic reality and can tell us much that would otherwise be inaccessible to us.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXI*

43 Every actual animal is somewhat dull and somewhat mad. He will at times miss his signals and stare vacantly when he might well act, while at other times he will run off into convulsions and raise a dust in his own brain to no purpose. These imperfections are so human that we should hardly recognise ourselves if we could shake them off altogether. Not to retain any dulness would mean to possess untiring attention and universal interests, thus realising the boast about deeming nothing human alien to us; while to be absolutely without folly would involve perfect self-knowledge and self-control. The intelligent man known to history flourishes within a dullard and holds a lunatic in leash. He is encased in a protective shell of ignorance and insensibility which keeps him from being exhausted and confused by this too complicated world; but that integument blinds him at the same time to many of his nearest and highest interests. He is amused by the antics of the brute dreaming within his breast; he gloats on his passionate reveries, an amusement which sometimes costs him very dear. Thus the best human intelligence is still decidedly barbarous; it fights in heavy armour and keeps a fool at court.

Santayana, Life of Reason, I, 2

44 Philosophers have sometimes said that all ideas come from experience; they never could have been poets and must have forgotten that they were ever children. The great difficulty in education is to get experience out of ideas. Shame, conscience, and reason continually disallow and ignore what consciousness presents; and

what are they but habit and latent instinct asserting themselves and forcing us to disregard our midsummer madness? Idiocy and lunacy are merely reversions to a condition in which present consciousness is in the ascendant and has escaped the control of unconscious forces. we speak of people being "out of their senses," when they have in fact fallen back into them; or of those who have "lost their mind," when they have lost merely that habitual control over consciousness which prevented it from flaring into all sorts of obsessions and agonies. Their bodies having become deranged, their minds, far from correcting that derangement, instantly share and betray it. A dream is always simmering below the conventional surface of speech and reflection. Even in the highest reaches and serenest meditations of science it sometimes breaks through. Even there we are seldom constant enough to conceive a truly natural world; somewhere passionate, fanciful, or magic elements will slip into the scheme and baffle rational ambition.

A body seriously out of equilibrium, either with itself or with its environment, perishes outright. Not so a mind. Madness and suffering can set themselves no limit; they lapse only when the corporeal frame that sustains them yields to circumstances and changes its habit. If they are unstable at all, it is because they ordinarily correspond to strains and conjunctions which a vigorous body overcomes, or which dissolve the body altogether. A pain not incidental to the play of practical instincts may easily be recurrent, and it might be perpetual if even the worst habits were not intermittent and the most useless agitations exhausting. Some respite will therefore ensue upon pain, but no magic cure. Madness, in like manner, if pronounced, is precarious, but when speculative enough

to be harmless or not strong enough to be debilitating, it too may last for ever.

Santayana, Life of Reason, I, 2

5.7 Will Free Choice

To the question, why a section on will occurs in a chapter on mind, the answer is that overwhelming preponderance of the authors who discuss the subject conceive the will as a mental faculty closely associated with intellect or reason. In the mediaeval tradition, the will was referred to as the “intellectual” or “rational appetite.” Other animals as well as man exhibit the phenomena of the passions; other animals manifest something akin to voluntary behavior; but in the predominant opinion only man exercises willpower and acts voluntarily through free choice, after deliberation and decision.

In addition to considering the nature of the will as a faculty, relating it to reason or intellect on the one hand, and to the passions or emotions on the other, and distinguishing between voluntary and involuntary behavior, the quotations below represent a fair sampling of the opposite voices in the great debate on the freedom of the will or man’s freedom of choice. Ranged on the affirmative side, and advancing different arguments in support of their affirmation, are Lucretius, the Stoics, Aquinas, Descartes, Dr. Johnson, Locke, Kant, Hegel, Bergson, William James, and Sartre. On the opposite side are the denials of free choice by Hobbes, Spinoza, Hume, and Rousseau. Tolstoy straddles the fence. The moot question is whether, in the absence of free choice, there can be any basis for morality, for moral

responsibility, and praise or blame. The opponents of free will claim there can be and Hume even goes so far as to maintain that, since a freely chosen act would be like a chance event, free will is incompatible with moral responsibility and praise or blame.

The introduction of an omnipotent and omniscient deity into the picture complicates the matter. The theologians, from Augustine to Luther and Calvin, attempt to reconcile free choice on man's part with predestination and providence. They are also concerned with the effect of original sin upon man's freedom of choice, as well as with the indispensability of such freedom as prerequisite to man's responsibility for sin. The reader will find related discussions in Section 20.13 on Sin and Temptation and in Section 20.14 on Redemption and Salvation. For the treatment of other forms of freedom, the reader should turn to Section 9.4 on Moral Freedom, to Section 12.3 on Rights Natural and Civil, and to Section 13.1 on Freedom in Society.

■ ■ ■

- 1 *Socrates*. When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of lives, and having mounted a high pulpit, spoke as follows: "Hear the word of Lachesis, the daughter of Necessity. Mortal souls, behold a new cycle of life and mortality. Your genius will not be allotted to you, but you will choose your genius; and let him who draws the first lot have the first choice, and the life which he chooses shall be his destiny. Virtue

is free, and as a man honours or dishonours her he will have more or less of her; the responsibility is with the chooser—God is justified." When the Interpreter had thus spoken he scattered lots indifferently among them all, and each of them took up the lot which fell near him, all but Er himself (he was not allowed), and each as he took his lot perceived the number which he had obtained. Then the Interpreter placed on the ground before them the samples of lives; and there were many more lives than the souls present, and they were of all sorts. There were lives of every animal and of man in every condition. And there were tyrannies among them, some lasting out the tyrant's life, others which broke off in the middle and came to an end in poverty and exile and beggary; and there were lives of famous men, some who were famous for their form and beauty as well as for their strength and success in games, or, again, for their birth and the qualities of their ancestors; and some who were the reverse of famous for the opposite qualities. And of women likewise; there was not, however, any definite character in them, because the soul, when choosing a new life, must of necessity become different. But there was every other quality, and they all mingled with one another, and also with elements of wealth and poverty, and disease and health; and there were mean states also. And here, my dear Glaucon, is the supreme peril of our human state; and therefore the utmost care should be taken. Let each one of us leave every other kind of knowledge and seek and follow one thing only, if peradventure he may be able to learn and may find some one who will make him able to learn and discern between good and evil, and so to choose always and everywhere the better life as he has opportunity. He should consider

the bearing of all these things which have been mentioned severally and collectively upon virtue; he should know what the effect of beauty is when combined with poverty or wealth in a particular soul, and what are the good and evil consequences of noble and humble birth, of private and public station, of strength and weakness, of cleverness and dullness, and of all the natural and acquired gifts of the soul, and the operation of them when conjoined; he will then look at the nature of the soul, and from the consideration of all these qualities he will be able to determine which is the better and which is the worse; and so he will choose, giving the name of evil to the life which will make his soul more unjust, and good to the life which will make his soul more just; all else he will disregard. For we have seen and know that this is the best choice both in life and after death. A man must take with him into the world below an adamantine faith in truth and right, that there too he may be undazzled by the desire of wealth or the other allurements of evil, lest, coming upon tyrannies and similar villainies, he do irremediable wrongs to others and suffer yet worse himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

And according to the report of the messenger from the other world this was what the prophet said at the time: "Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair."

Plato, Republic, X, 617B

2 We deliberate about things that are in our power and can be done. . . For nature, necessity, and chance are thought to be causes, and also reason and everything that depends on man. Now every class of men deliberates about the things that can be done by their own efforts....

We deliberate not about ends but about means. For a doctor does not deliberate whether he shall heal, nor an orator whether he shall persuade, nor a statesman whether he shall produce law and order, nor does any one else deliberate about his end. They assume the end and consider how and by what means it is to be attained; and if it seems to be produced by several means they consider by which it is most easily and best produced, while if it is achieved by one only they consider how it will be achieved by this and by what means this will be achieved, till they come to the first cause, which in the order of discovery is last. . . ,

The same thing is deliberated upon and is chosen, except that the object of choice is already determinate, since it is that which has been decided upon as a result of deliberation that is the object of choice. For every one ceases to inquire how he is to act when he has brought the moving principle back to himself and to the ruling part of himself; for this is what chooses. . . , The object of choice being one of the things in our own power which is desired after deliberation, choice will be deliberate desire of things in our own power; for when we have decided as a result of deliberation, we desire in accordance with our deliberation.

We may take it, then, that we have described choice in outline, and stated the nature of its objects and the fact that it is concerned with means.

Aristotle, Ethics, 1112a30

3 Men make themselves responsible for being unjust or self-indulgent, in the one case by cheating and in the other by spending their time in drinking bouts and the like; for it is activities exercised on particular objects that make the corresponding character. This is plain from the case of people training for any contest or action; they practise the activity the whole time. Now not to know that it is from the exercise of activities on particular objects that states of character are produced is the mark of a thoroughly senseless person. Again, it is irrational to suppose that a man who acts unjustly does not wish to be unjust or a man who acts self-indulgently to be self-indulgent. But if without being ignorant a man does the things which will make him unjust, he will be unjust voluntarily. Yet it does not follow that if he wishes he will cease to be unjust and will be just. For neither does the man who is ill become well on those terms. We may suppose a case in which he is ill voluntarily, through living incontinently and disobeying his doctors. In that case it was then open to him not to be ill, but not now, when he has thrown away his chance, just as when you have let a stone go it is too late to recover it; but yet it was in your power to throw it, since the moving principle was in you. So, too, to the unjust and to the self-indulgent man it was open at the beginning not to become men of this kind, and so they are unjust and self-indulgent voluntarily; but now that they have become so it is not possible for them not to be so.

Aristotle, Ethics, 1114a4

- 4 The origin of action—its efficient, not its final cause—is choice, and that of choice is desire and reasoning with a view to an end. This is why choice cannot exist either without reason and intellect or without a moral state; for good action and its opposite cannot exist without a combination of intellect and character. Intellect itself, however, moves nothing, but only the intellect which aims at an end and is practical; for this rules the productive intellect, as well, since every one who makes makes for an end, and that which is made is not an end in the unqualified sense (but only an end in a particular relation, and the end of a particular operation)—only that which is done is that; for good action is an end, and desire aims at this. Hence choice is either desiderative reason or ratiocinative desire, and such an origin of action is a man.

Aristotle, Ethics, 1139a31

- 5 There are things which are within our power, and there are things which are beyond our power. Within our power are opinion, aim, desire, aversion, and, in one word, whatever affairs are our own. Beyond our power are body, property, reputation, office, and, in one word, whatever are not properly our own affairs.

Now the things within our power are by nature free, unrestricted, unhindered; but those beyond our power are weak, dependent, restricted, alien. Remember, then, that if you attribute freedom to things by nature dependent and take what belongs to others for your own, you will be hindered, you will lament, you will be disturbed, you will find fault both with gods and men. But if you take for your own only that which is your own and view what belongs to others just as it really is, then no

one will ever compel you, no one will restrict you; you will find fault with no one, you will accuse no one, you will do nothing against your will; no one will hurt you, you will not have an enemy, nor will you suffer any harm.

Aiming, therefore, at such great things, remember that you must not allow yourself any inclination, however slight, toward the attainment of the others; but that you must entirely quit some of them, and for the present postpone the rest. But if you would have these, and possess power and wealth likewise, you may miss the latter in seeking the former; and you will certainly fail of that by which alone happiness and freedom are procured.

Epictetus, Encheiridion, I

- 6 You can be unconquerable if you enter into no combat in which it is not in your own power to conquer. When, therefore, you see anyone eminent in honors or power, or in high esteem on any other account, take heed not to be bewildered by appearances and to pronounce him happy; for if the essence of good consists in things within our own power, there will be no room for envy or emulation. But, for your part, do not desire to be a general, or a senator, or a consul, but to be free; and the only way to this is a disregard of things which lie not within our own power.

Epictetus, Encheiridion, XIX

- 7 What then do we mean when we speak of freedom in ourselves,...

My own reading is that, moving as we do amid adverse fortunes, compulsions, violent assaults of passion crushing the soul, feeling ourselves mastered by these

experiences, playing slave to them, going where they lead, we have been brought by all this to doubt whether we are anything at all and dispose of ourselves in any particular.

This would indicate that we think of our free act as one which we execute of our own choice, in no servitude to chance or necessity or overmastering passion, nothing thwarting our will; the voluntary is conceived as an event amenable to will and occurring or not as our will dictates. Everything will be voluntary that is produced under no compulsion and with knowledge; our free act is what we are masters to perform.

Plotinus, Sixth Ennead, VIII, 1

8 So I set myself to examine an idea I had heard— namely that our free-will is the cause of our doing evil, and Your just judgment the cause of our suffering evil. I could not clearly discern this. I endeavoured to draw the eye of my mind from the pit, but I was again plunged into it; and as often as I tried, so often was I plunged back. But it raised me a little towards Your light that I now was as much aware that I had a will as that I had a life. And when I willed to do or not do anything, I was quite certain that it was myself and no other who willed, and I came to see that the cause of my sin lay there.

But what I did unwillingly, it still seemed to me that I rather suffered than did, and I judged it to be not my fault but my punishment: though as I held You most just, I was quite ready to admit that I was being justly punished.

But I asked further: "Who made me? Was it not my God, who is not only Good but Goodness Itself? What root reason is there for my willing evil and failing to will good, which would make it just for me to be punished? Who was

it that set and ingrafted in me this root of bitterness, since I was wholly made by my most loving God? If the devil is the author, where does the devil come from? And if by his own perverse will he was turned from a good angel into a devil, what was the origin in him of the perverse will by which he became a devil, since by the all-good Creator he was made wholly angel?" By such thoughts I was cast down again and almost stifled; yet I was not brought down so far as the hell of that error, where no man confesses unto You, the error which holds rather that You suffer evil than that man does it.

Augustine, Confessions, VII, 3

- 9 Let. . . perplexing debates and disputations of the philosophers go on as they may, we, in order that we may confess the most high and true God Himself, do confess His will, supreme power, and prescience. Neither let us be afraid lest, after all, we do not do by will that which we do by will, because He, Whose foreknowledge is infallible, foreknew that we would do it. It was this which Cicero was afraid of, and therefore opposed foreknowledge. The Stoics also maintained that all things do not come to pass by necessity, although they contended that all things happen according to destiny. What is it, then, that Cicero feared in the prescience of future things? Doubtless it was this—that if all future things have been foreknown, they will happen in the order in which they have been foreknown; and if they come to pass in this order, there is a certain order of things foreknown by God; and if a certain order of things, then a certain order of causes, for nothing can happen which is not preceded by some efficient cause. But if there is a certain order of causes according to which everything happens which does

happen, then by fate, says he, all things happen which do happen. But if this be so, then is there nothing in our own power, and there is no such thing as freedom of will.

Augustine, City of God, V, 9

- 10 There are some things which act not from any choice, but, as it were, moved and made to act by others; just as the arrow is directed to the target by the archer. Others act from some kind of choice, but not from free choice, such as irrational animals, for the sheep flies from the wolf by a kind of judgment whereby it considers it to be hurtful to itself; such a judgment is not a free one, but implanted by nature. Only an agent endowed with an intellect can act with a judgment which is free in so far as it apprehends the common notion of good, from which it can judge this or the other thing to be good. Consequently, wherever there is intellect, there is free choice,

Aquinas, Summa Theologica, I, 59, 3

- 11 Man has free choice. Otherwise counsels, exhortations, commands, prohibitions, rewards and punishments would be in vain....

Free choice is the cause of its own movement, because by his free choice man moves himself to act. But it does not of necessity belong to liberty that what is free should be the first cause of itself, as neither for one thing to be cause of another need it be the first cause. God, therefore, is the first cause. Who moves causes both natural and voluntary. And just as by moving natural causes He does not prevent their acts being natural, so by moving voluntary causes He does not deprive their

actions of being voluntary, but rather is He the cause of this very thing in them; for He operates in each thing according to its own nature.

Aquinas, Summa Theologica, I, 83,1

- 12 Man does not choose of necessity. And this is because that which is possible not to be, is not of necessity. Now the reason why it is possible not to choose, or to choose, may be gathered from a twofold power in man. For man can will and not will, act and not act; again, he can will this or that, and do this or that. The reason of this is seated in the very power of the reason. For the will can tend to whatever the reason can apprehend as good. Now the reason can apprehend as good, not only this, namely, to will or to act, but also this, namely, not to will or not to act. Again, in all particular goods, the reason can consider an aspect of some good and the lack of some good, which has the aspect of evil; and in this respect, it can apprehend any single one of such goods as to be chosen or to be avoided. The perfect good alone, which is Happiness, cannot be apprehended by the reason under the aspect of evil, or as lacking in any way. Consequently man wills Happiness of necessity, nor can he will not to be happy, or to be unhappy. Now since choice is not of the end, but of the means ... it is not of the perfect good, which is Happiness, but of other particular goods. Therefore man chooses not of necessity but freely.

Aquinas, Summa Theologica, I-II, 13, 6

- 13 Commands and prohibitions should be imposed only upon one who can do or not do; otherwise they would be imposed in vain. But prohibitions and commands are

divinely imposed upon man. It is therefore in man's power to do or not to do; and so he is endowed with free choice.

No one should be punished or rewarded for something which it is not in his power to do or not to do. But man is justly punished and rewarded by God for his deeds. Therefore man can do and not do; and so he is endowed with free choice,

Aquinas, On Truths, XXIV, 1

14 "The world is indeed so wholly desert of every virtue, even as thy words sound to me, and heavy and covered with sin;

but I pray that thou point the cause out to me, so that I may see it, and that I may show it to others; for one places it in the heavens and another here below."

A deep sigh, which grief compressed to "Alas!" he [Marco] first gave forth, and then began: "Brother, the world is blind, and verily thou comest from it.

Ye who are living refer every cause up to the heavens alone, even as if they swept all with them of necessity.

Were it thus, Freewill in you would be destroyed, and it were not just to have joy for good and mourning for evil.

The heavens set your impulses in motion; I say not all, but suppose I said it, a light is given you to know good and evil,

and Freewill, which, if it endure the strain in its first battlings with the heavens, at length gains the whole victory, if it be well nurtured.

Ye lie subject, in your freedom, to a greater power and to a better nature; and that creates in you mind which the heavens have not in their charge.

Therefore, if the world to-day goeth astray, in you is the cause, in you be it sought."

Dante, Purgatorio, XVI, 58

15 "Every substantial form, which is distinct from matter and is in union with it, has a specific virtue contained within itself

which is not perceived save in operation, nor is manifested except by its effects, just as life in a plant by the green leaves.

Therefore man knows not whence the understanding of the first cognitions may come, nor the inclination to the prime objects of appetite,

which are in you, even as the instinct in bees to make honey; and this prime will admits no desert of praise or of blame.

Now in order that to this will every other may be related, innate with you is the virtue which giveth counsel, and ought to guard the threshold of assent.

This is the principle whence is derived the reason of desert in you, according as it garners and winnows good and evil loves.

Those who in their reasoning went to the foundation, perceived this innate freedom, therefore they left ethics to the world.

Wherefore suppose that every love which is kindled within you arise of necessity, the power to arrest it is within you.

By the noble virtue Beatrice understands Freewill, and therefore, look that thou have this in mind, if she betake her to speak with thee thereof."

Dante, Purgatorio, XVIII, 49

- 16 The greatest gift God of his largess made at the creation,
and the most conformed to his own excellence, and which
he most prizeth,
 was the will's liberty, wherewith creatures intelligent,
both all and alone, were and are endowed.

Dante, Paradiso, V, 19

- 17 Mankind is at its best when it is most free. This will be
clear if we grasp the principle of liberty. We must realize
that the basic principle of our freedom is freedom to
choose, which saying many have on their lips but few in
their minds.

Dante, De Monarchia, I, 12

- 18 For if we believe it to be true that God foreknows and
foreordains all things; that He can not be deceived or
obstructed in His foreknowledge and predestination; and
that nothing happens but at His will (which reason itself
is compelled to grant), then on reason's own testimony,
there can be no free will in man, or angel, or in any
creature.

Luther, Bondage of the Will

- 19 *Hortensio*. There's small choice in rotten apples.

Shakespeare, Taming of the Shrew, I, i, 138

- 20 *Cassius*. Men at some time are masters of their fates:
The fault, dear Brutus, is not in our stars,
But in ourselves, that we are underlings.

Shakespeare, Julius Caesar, I, ii, 139

21 The faculty of will consists alone in our having the power of choosing to do a thing or choosing not to do it (that is, to affirm or deny, to pursue or to shun it), or rather it consists alone in the fact that in order to affirm or deny, pursue or shun those things placed before us by the understanding, we act so that we are unconscious that any outside force constrains us in doing so. For in order that I should be free it is not necessary that I should be indifferent as to the choice of one or the other of two contraries; but contrariwise the more I lean to the one—whether I recognise clearly that the reasons of the good and true are to be found in it, or whether God so disposes my inward thought—the more freely do I choose and embrace it. And undoubtedly both divine grace and natural knowledge, far from diminishing my liberty, rather increase it and strengthen it. Hence this indifference which I feel, when I am not swayed to one side rather than to the other by lack of reason, is the lowest grade of liberty, and rather evinces a lack or negation in knowledge than a perfection of will: for if I always recognised clearly what was true and good, I should never have trouble in deliberating as to what judgment or choice I should make, and then I should be entirely free without ever being indifferent.

Descartes, Meditations on First Philosophy, IV

22 As to the freedom of the will, a very different account must be given of it as it exists in God and as it exists in us. For it is self-contradictory that the will of God should not have been from eternity indifferent to all that has come to pass or that ever will occur, because we can form no conception of anything good or true, of anything to be believed or to be performed or to be omitted, the idea of

which existed in the divine understanding before God's will determined Him so to act as to bring it to pass. Nor do I here speak of priority of time; I mean that it was not even prior in order, or in nature, or in reasoned relation, as they say [in the schools], so that that idea of good impelled God to choose one thing rather than another. . . . Thus that supreme indifference in God is the supreme proof of his omnipotence. But as to man, since he finds the nature of all goodness and truth already determined by God, and his will cannot bear upon anything else, it is evident that he embraces the true and the good the more willingly and hence the more freely in proportion as he sees the true and the good the more clearly, and that he is never indifferent save when he does not know what is the more true or the better, or at least when he does not see clearly enough to prevent him from doubting about it. Thus the indifference which attaches to human liberty is very different from that which belongs to the divine. Neither does it here matter that the essences of things are said to be indivisible: for firstly no essence can belong in a univocal sense both to God and His creature; and finally indifference does not belong to the essence of human liberty, since we are free not only when our ignorance of the right renders us indifferent, but also, and chiefly, when a clear perception impels us to prosecute some definite course.

Descartes, Objections and Replies, VI

- 23 Liberty and necessity are consistent: as in the water that hath not only liberty, but a necessity of descending by the channel; so likewise in the actions which men voluntarily do, which, because they proceed from their will, proceed from liberty, and yet because every act of

man's will and every desire and inclination proceedeth from some cause, and that from another cause, in a continual chain (whose first link is in the hand of God, the first of all causes), proceed from necessity. So that to him that could see the connexion of those causes, the necessity of all men's voluntary actions would appear manifest. And therefore God, that seeth and disposeth all things, seeth also that the liberty of man in doing what he will is accompanied with the necessity of doing that which God will, and no more, nor less. For though men may do many things which God does not command, nor is therefore author of them; yet they can have no passion, nor appetite to anything, of which appetite God's will is not the cause. And did not His will assure the necessity of man's will, and consequently of all that on man's will dependeth, the liberty of men would be a contradiction and impediment to the omnipotence and liberty of God. And this shall suffice, as to the matter in hand, of that natural liberty, which only is properly called liberty.

Hobbes, Leviathan, II, 21

24 It is not good to have too much liberty. It is not good to have all one wants.

Pascal, Pensées, VI, 379

25 Burden not the back of *Aries*, *Leo*, or *Taurus*, with thy faults; nor make *Saturn*, *Mars*, or *Venus*, guilty of thy Follies. Think not to fasten thy imperfections on the Stars, and so despairingly conceive thy self under a fatality of being evil. Calculate thy self within, seek not thy self in the Moon, but in thine own Orb or Microcosmical

Circumference. Let celestial aspects admonish and advertise, not conclude and determine thy ways.

Sir Thomas Browne, Christian Morals, III, 7

26 *God*. I made him [man] just and right,
Sufficient to have stood, though free to fall.
Such I created all th' Ethereal Powers
And Spirits, both them who stood & them who faild;
Freely they stood who stood, and fell who fell.
Not free, what proof could they have givn sincere
Of true allegiance, constant Faith or Love,
Where onely what they needs must do, appeard,
Not what they would? what praise could they receive?
What pleasure I from such obedience paid,
When Will and Reason (Reason also is choice) Useless
and vain, of freedom both despoild.
Made passive both, had servd necessitie,
Not mee. They therefore as to right belongd,
So were created, nor can justly accuse
Thir maker, or thir making, or thir Fate;
As if Predestination over-rul'd
Thir will, dispos'd by absolute Decree
Or high foreknowledge; they themselves decreed
Thir own revolt, not I: if I foreknew,
Foreknowledge had no influence on their fault.
Which had no less prov'd certain unforeknown.

Milton, Paradise Lost, III, 98

27 I should say that human affairs would be much more happily conducted if it were equally in the power of men to be silent and to speak; but experience shows over and over again that there is nothing which men have less

power over than the tongue, and that there is nothing which they are less able to do than to govern their appetites, so that many persons believe that we do those things only with freedom which we seek indifferently; as the desire for such things can easily be lessened by the recollection of another thing which we frequently call to mind; it being impossible, on the other hand, to do those things with freedom which we seek with such ardour that the recollection of another thing is unable to mitigate it. But if, however, we had not found out that we do many things which we afterwards repent, and that when agitated by conflicting affects we see that which is better and follow that which is worse, nothing would hinder us from believing that we do everything with freedom. Thus the infant believes that it is by free will that it seeks the breast; the angry boy believes that by free will he wishes vengeance; the timid man thinks it is with free will he seeks flight; the drunkard believes that by a free command of his mind he speaks the things which when sober he wishes he had left unsaid. Thus the madman, the chatterer, the boy, and others of the same kind, all believe that they speak by a free command of the mind, whilst, in truth, they have no power to restrain the impulse which they have to speak, so that experience itself, no less than reason, clearly teaches that men believe themselves to be free simply because they are conscious of their own actions, knowing nothing of the causes by which they are determined: it teaches, too, that the decrees of the mind are nothing but the appetites themselves, which differ, therefore, according to the different temper of the body. For every man determines all things from his affect; those who are agitated by contrary affects do not know what they want,

whilst those who are agitated by no affect are easily driven hither and thither. All this plainly shows that the decree of the mind, the appetite, and determination of the body are coincident in nature, or rather that they are one and the same thing, which, when it is considered under the attribute of thought and manifested by that, is called a decree, and when it is considered under the attribute of extension and is deduced from the laws of motion and rest, is called a determination.

Spinoza, Ethics, III, Prop. 2, Schol.

28 There being in us a great many uneasinesses, always soliciting and ready to determine the will, it is natural, as I have said, that the greatest and most pressing should determine the will to the next action; and so it does for the most part, but not always. For, the mind having in most cases, as is evident in experience, a power to suspend the execution and satisfaction of any of its desires; and so all, one after another; is at liberty to consider the objects of them, examine them on all sides, and weigh them with others. In this lies the liberty man has; and from the not using of it right comes all that variety of mistakes, errors, and faults which we run into in the conduct of our lives, and our endeavours after happiness; whilst we precipitate the determination of our wills, and engage too soon, before due examination. To prevent this, we have a power to suspend the prosecution of this or that desire; as every one daily may experiment in himself. This seems to me the source of all liberty; in this seems to consist that which is (as I think improperly) called free-will. For, during this suspension of any desire, before the will be determined to action, and the action (which follows that determination) done, we have

opportunity to examine, view, and judge of the good or evil of what we are going to do; and when, upon due examination, we have judged, we have done our duty, all that we can, or ought to do, in pursuit of our happiness; and it is not a fault, but a perfection of our nature, to desire, will, and act according to the last result of a fair examination.... This is so far from being a restraint or diminution of freedom, that it is the very improvement and benefit of it; it is not an abridgment, it is the end and use of our liberty; and the further we are removed from such a determination, the nearer we are to misery and slavery.

Locke, Concerning Human Understanding, Bk. II, XXI, 4a-49

- 29 Philosophic liberty consists in the free exercise of the will; or at least, if we must speak agreeably to all systems, in an opinion that we have the free exercise of our will. Political liberty consists in security, or, at least, in the opinion that we enjoy security.

This security is never more dangerously attacked than in public or private accusations. It is, therefore, on the goodness of criminal laws that the liberty of the subject principally depends.

Montesquieu, Spirit of Laws, XII, 2

- 30 It will not require many words to prove, that all mankind have ever agreed in the doctrine of liberty as well as in that of necessity, and that the whole dispute, in this respect also, has been hitherto merely verbal. For what is meant by liberty, when applied to voluntary actions? We cannot surely mean that actions have so little connexion

with motives, inclinations, and circumstances, that one does not follow with a certain degree of uniformity from the other, and that one affords no inference by which we can conclude the existence of the other. For these are plain and acknowledged matters of fact. By liberty, then, we can only mean a power of acting or not acting, according to the determinations of the will; that is, if we choose to remain at rest, we may; if we choose to move, we also may. Now this hypothetical liberty is universally allowed to belong to every one who is not a prisoner and in chains. Here, then, is no subject of dispute.

Whatever definition we may give of liberty, we should be careful to observe two requisite circumstances; first, that it be consistent with plain matter of fact; secondly, that it be consistent with itself. If we observe these circumstances, and render our definition intelligible, I am persuaded that all mankind will be found of one opinion with regard to it.

It is universally allowed that nothing exists without a cause of its existence, and that chance, when strictly examined, is a mere negative word, and means not any real power which has anywhere a being in nature. But it is pretended that some causes are necessary, some not necessary. Here then is the advantage of definitions. Let any one define a cause, without comprehending, as a part of the definition, a necessary connexion with its effect; and let him show distinctly the origin of the idea, expressed by the definition; and I shall readily give up the whole controversy. But if the foregoing explication of the matter be received, this must be absolutely impracticable. Had not objects a regular conjunction with each other, we should never have entertained any notion of cause and effect; and this regular conjunction

produces that inference of the understanding, which is the only connexion, that we can have any comprehension of. Whoever attempts a definition of cause, exclusive of these circumstances, will be obliged either to employ unintelligible terms or such as are synonymous to the term which he endeavours to define. And if the definition above mentioned be admitted; liberty, when opposed to necessity, not to constraint, is the same thing with chance; which is universally allowed to have no existence.

Hume, Concerning Human Understanding, VIII, 73-74

- 31 What is the meaning of this phrase "to be free"? it means "to be able," or assuredly it has no sense. For the will "to be able " is as ridiculous at bottom as to say that the will is yellow or blue, round or square. To will is to wish, and to be free is to be able. Let us note step by step the chain of what passes in us, without obfuscating our minds by any terms of the schools or any antecedent principle.

It is proposed to you that you mount a horse, you must absolutely make a choice, for it is quite clear that you either will go or that you will not go. There is no middle way. It is therefore of absolute necessity that you wish yes or no. Up to there it is demonstrated that the will is not free. You wish to mount the horse; why? The reason, an ignoramus will say, is because I wish it. This answer is idiotic, nothing happens or can happen without a reason, a cause; there is one therefore for your wish! What is it? the agreeable idea of going on horseback which presents itself in your brain, the dominant idea, the determinant idea. But, you will say, can

I not resist an idea which dominates me? No, for what would be the cause of your resistance? None. By your will

you can obey only an idea which will dominate you more.

Now you receive all your ideas; therefore you receive your wish, you wish therefore necessarily. The word "liberty" does not therefore belong in any way to your will.

You ask me how thought and wish are formed in us, I answer you that I have not the remotest idea. I do not know how ideas are made any more than how the world was made. All that is given to us is to grope for what passes in our incomprehensible machine.

The will, therefore, is not a faculty that one can call free, A free will is an expression absolutely void of sense, and what the scholastics have called will of indifference, that is to say willing without cause, is a chimera unworthy of being combated.

Where will be liberty then? in the power to do what one wills. I wish to leave my study, the door is open, I am free to leave it.

But, say you, if the door is closed, and I wish to stay at home, I stay there freely. Let us be explicit. You exercise then the power that you have of staying; you have this power, but you have not that of going out.

The liberty about which so many volumes have been written is, therefore, reduced to its accurate terms, only the power of acting.

In what sense then must one utter the phrase— "Man is free"? in the same sense that one utters the words, health, strength, happiness, Man is not always strong, always healthy, always happy.

A great passion, a great obstacle, deprive him of his liberty', his power of action.

The word "liberty," "free-will," is therefore an abstract word, a general word, like beauty', goodness, justice,

These terms do not state that all men are always beautiful, good and just; similarly, they are not always free.

Voltaire, Philosophical Dictionary: Free-Will

- 32 Dr. Johnson shunned to-night any discussion of the preplexed question of fate and free will, which I attempted to agitate. "Sir, (said he,) we *know* our will is free, and *there's* an end on't."

Boswell, Life of Johnson (Oct. 10, 1769)

- 33 *Dr. Mayo.* (to Dr. Johnson,) "Pray, Sir, have you read Edwards, of New England, on Grace!" *Johnson.* "No, Sir." *Boswell.* "It puzzled me so much as to the freedom of the human will, by stating, with wonderful acute ingenuity', our being actuated by a series of motives which we cannot resist, that the only relief I had was to forget it." *Mayo.* "But he makes the proper distinction between moral and physical necessity'." *Boswell.* "Alas, Sir, they come both to the same thing. You may be bound as hard by chains when covered by leather, as when the iron appears. The argument for the moral necessity of human actions is always, I observe, fortified by supposing universal prescience to be one of the attributes of the Deity." *Johnson.* "You are surer that you are free, than you are of prescience; you are surer that you can lift up your finger or not as you please, than you are of any conclusion from a deduction of reasoning. But let us consider a little the objection from prescience. It is certain I am either to go home to-night or not; that does not prevent my freedom." *Boswell.* "That it is certain you are either to go home or not, does not prevent your

freedom; because the liberty of choice between the two is compatible with that certainty. But if one of these events be certain now you have no future power of volition. If it be certain you are to go home to-night, you must go home." *Johnson*. "If I am well acquainted with a man, I can judge with great probability how he will act in any case, without his being restrained by my judging. God may have this probability increased to certainty." *Boswell* "When it is increased to certainty, freedom ceases, because that cannot be certainly foreknown, which is not certain at the time; but if it be certain at the time, it is a contradiction in terms to maintain that there can be afterwards any *contingency* dependent upon the exercise of will or any thing clsc." *Johnson*. "All theory is against the freedom of the will; all experience for it."—I did not push the subject any farther. I was glad to find him so mild in discussing a question of the most abstract nature, involved with theological tenets, which he generally would not suffer to be in any degree opposed,

Boswell, Life of Johnson (Apr. 15, 1778)

- 34 A free will and a will subject to moral laws are one and the same.

Kant, Fundamental Principles of the Metaphysic of Morals, III

- 35 If it were possible to have so profound an insight into a man's mental character as shown by internal as well as external actions as to know all its motives, even the smallest, and likewise all the external occasions that can influence them, we could calculate a man's conduct for the future with as great certainty as a lunar or solar

eclipse; and nevertheless we may maintain that the man is free.

Kant, Critique of Practical Reason, Pt. I, I, 3

36 If we grant freedom to man, there is an end to the omniscience of God; for if the Divinity knows how I shall act, I must act so perforce.

Goethe, Conversations with Eckermann (Oct. 12, 1825)

37 The absolute goal, or, if you like, the absolute impulse, of free mind is to make its freedom its object, i.e., to make freedom objective as much in the sense that freedom shall be the rational system of mind, as in the sense that this system shall be the world of immediate actuality. In making freedom its object, mind's purpose is to be explicitly, as Idea, what the will is implicitly. The definition of the concept of the will in abstraction from the Idea of the will is "the free will which wills the free will."

Hegel, Philosophy of Right, Introduction, 27

38 In... the will is rooted my ability to free myself from everything, abandon every aim, abstract from everything. Man alone can sacrifice everything, his life included; he can commit suicide. An animal cannot; it always remains merely negative, in an alien destiny to which it merely accustoms itself.

Hegel, Philosophy of Right, Additions, Par. 5

39 A will which resolves on nothing is no actual will; a characterless man never reaches a decision.

Hegel, Philosophy of Right, Additions, Par, 13

40 Every man, being what he is and placed in the circumstances which for the moment obtain, but which on their part also arise by strict necessity, can absolutely never do anything else than just what at that moment he does do. Accordingly, the whole course of a man's life, in all its incidents great and small, is as necessarily predetermined as the course of a clock.

Schopenhauer, Free-Will and Fatalism

41 Chance, freewill, and necessity—nowise incompatible—all interweavingly working together. The straight warp of necessity, not to be swerved from its ultimate course—its every alternating vibration, indeed, only tending to that; freewill still free to ply her shuttle between given threads; and chance, though restrained in its play within the right lines of necessity, and sideways in its motions modified by freewill, though thus prescribed to by both, chance by turns rules either, and has the last featuring blow at events.

Melville, Moby Dick, XLVII

42 We are conscious automata, endowed with free will in the only intelligible sense of that much-abused term—inasmuch as in many respects we are able to do as we like—but none the less parts of the great series of causes and effects which, in unbroken continuity, composes that which is, and has been, and shall be—the sum of existence.

T. H. Huxley, Animal Automatism

43 Correctly conceived, the doctrine called Philosophical Necessity is simply this: that, given the motives which

are present to an individual's mind, and given likewise the character and disposition of the individual, the manner in which he will act might be unerringly inferred; that if we knew the person thoroughly, and knew all the inducements which are acting upon him, we could foretell his conduct with as much certainty as we can predict any physical event. This proposition I take to be a mere interpretation of universal experience, a statement in words of what every one is internally convinced of. No one who believed that he knew thoroughly the circumstances of any case, and the characters of the different persons concerned, would hesitate to foretell how all of them would act. Whatever degree of doubt he may in fact feel arises from the uncertainty whether he really knows the circumstances, or the character of some one or other of the persons, with the degree of accuracy required; but by no means from thinking that if he did know these things, there could be any uncertainty what the conduct would be. Nor does this full assurance conflict in the smallest degree with what is called our feeling of freedom. We do not feel ourselves the less free because those to whom we are intimately known are well assured how we shall will to act in a particular case. We often, on the contrary, regard the doubt what our conduct will be as a mark of ignorance of our character, and sometimes even resent it as an imputation. The religious metaphysicians who have asserted the freedom of the will have always maintained it to be consistent with divine foreknowledge of our actions; and if with divine, then with any other foreknowledge. We may be free, and yet another may have reason to be perfectly certain what use we shall make of our freedom.

44 If history dealt only with external phenomena, the establishment of this simple and obvious law would suffice and we should have finished our argument. But the law of history relates to man. A particle of matter cannot tell us that it does not feel the law of attraction or repulsion and that that law is untrue, but man, who is the subject of history, says plainly: I am free and am therefore not subject to the law.

The presence of the problem of man's free will, though unexpressed, is felt at every step of history.

All seriously thinking historians have involuntarily encountered this question. All the contradictions and obscurities of history and the false path historical science has followed are due solely to the lack of a solution of that question.

If the will of every man were free, that is, if each man could act as he pleased, all history would be a series of disconnected incidents.

If in a thousand years even one man in a million could act freely, that is, as he chose, it is evident that one single free act of that man's in violation of the laws governing human action would destroy the possibility of the existence of any laws for the whole of humanity.

If there be a single law governing the actions of men, free will cannot exist, for then man's will is subject to that law.

In this contradiction lies the problem of free will, which from most ancient times has occupied the best human minds and from most ancient times has been presented in its whole tremendous significance.

The problem is that regarding man as a subject of observation from whatever point of view—theological, historical, ethical, or philosophic—we find a general law of necessity to which he (like all that exists) is subject. But regarding him from within ourselves as what we are conscious of, we feel ourselves to be free.

This consciousness is a source of self-cognition quite apart from and independent of reason. Through his reason man observes himself, but only through consciousness does he know himself.

Apart from consciousness of self no observation or application of reason is conceivable.

To understand, observe, and draw conclusions, man must first of all be conscious of himself as living. A man is only conscious of himself as a living being by the fact that he wills, that is, is conscious of his volition. But his will—which forms the essence of his life—man recognizes (and can but recognize) as free.

If, observing himself, man sees that his will is always directed by one and the same law (whether he observes the necessity of taking food, using his brain, or anything else) he cannot recognize this never-varying direction of his will otherwise than as a limitation of it. Were it not free it could not be limited, A man's will seems to him to be limited just because he is not conscious of it except as free.

You say: I am not free. But I have lifted my hand and let it fall. Everyone understands that this illogical reply is an irrefutable demonstration of freedom.

That reply is the expression of a consciousness that is not subject to reason.

If the consciousness of freedom were not a separate and independent source of self-consciousness it would be

subject to reasoning and to experience, but in fact such subjection does not exist and is inconceivable.

A series of experiments and arguments proves to every man that he, as an object of observation, is subject to certain laws, and man submits to them and never resists the laws of gravity or impermeability once he has become acquainted with them. But the same series of experiments and arguments proves to him that the complete freedom of which he is conscious in himself is impossible, and that his every action depends on his organization, his character, and the motives acting upon him: yet man never submits to the deductions of these experiments and arguments. Having learned from experiment and argument that a stone falls downwards, a man indubitably believes this and always expects the law that he has learned to be fulfilled.

But learning just as certainly that his will is subject to laws, he does not and cannot believe this.

However often experiment and reasoning may show a man that under the same conditions and with the same character he will do the same thing as before, yet when under the same conditions and with the same character he approaches for the thousandth time the action that always ends in the same way, he feels as certainly convinced as before the experiment that he can act as he pleases. Every man, savage or sage, however incontestably reason and experiment may prove to him that it is impossible to imagine two different courses of action in precisely the same conditions, feels that without this irrational conception (which constitutes the essence of freedom) he cannot imagine life. He feels that however impossible it may be, it is so, for without this conception

of freedom not only would he be unable to understand life, but he would be unable to live for a single moment.

He could not live, because all man's efforts, all his impulses to life, are only efforts to increase freedom. Wealth and poverty, fame and obscurity, power and subordination, strength and weakness, health and disease, culture and ignorance, work and leisure, repletion and hunger, virtue and vice, are only greater or lesser degrees of freedom.

A man having no freedom cannot be conceived of except as deprived of life.

If the conception of freedom appears to reason to be a senseless contradiction like the possibility of performing two actions at one and the same instant of time, or of an effect without a cause, that only proves that consciousness is not subject to reason.

This unshakable, irrefutable consciousness of freedom, uncontrolled by experiment or argument, recognized by all thinkers and felt by everyone without exception, this consciousness without which no conception of man is possible constitutes the other side of the question.

Man is the creation of an all-powerful, all-good, and all-seeing God. What is sin, the conception of which arises from the consciousness of man's freedom? That is a question for theology.

The actions of men are subject to general immutable laws expressed in statistics. What is man's responsibility to society, the conception of which results from the conception of freedom? That is a question for jurisprudence.

Man's actions proceed from his innate character and the motives acting upon him. What is conscience and the perception of right and wrong in actions that follows from

the consciousness of freedom? That is a question for ethics.

Man in connection with the general life of humanity appears subject to laws which determine that life. But the same man apart from that connection appears to be free. How should the past life of nations and of humanity be regarded—as the result of the free, or as the result of the constrained, activity of man? That is a question for history.

Only in our self-confident day of the popularization of knowledge—thanks to that most powerful engine of ignorance, the diffusion of printed matter—has the question of the freedom of will been put on a level on which the question itself cannot exist. In our time the majority of so-called advanced people—that is, the crowd of ignoramuses—have taken the work of the naturalists who deal with one side of the question for a solution of the whole problem.

They say and write and print that the soul and freedom do not exist for the life of man is expressed by muscular movements and muscular movements are conditioned by the activity of the nerves; the soul and free will do not exist because at an unknown period of time we sprang from the apes. They say this, not at all suspecting that thousands of years ago that same law of necessity which with such ardor they are now trying to prove by physiology and comparative zoology was not merely acknowledged by all the religions and all the thinkers, but has never been denied. They do not see that the role of the natural sciences in this matter is merely to serve as an instrument for the illumination of one side of it. For the fact that, from the point of view of observation, reason and the will are merely secretions of the brain,

and that man following the general law may have developed from lower animals at some unknown period of time, only explains from a fresh side the truth admitted thousands of years ago by all the religious and philosophic theories—that from the point of view of reason man is subject to the law of necessity; but it does not advance by a hair's breadth the solution of the question, which has another, opposite, side, based on the consciousness of freedom.

Tolstoy, War and Peace, II Epilogue, VIII

- 45 Man's free will differs from every other force in that man is directly conscious of it, but in the eyes of reason it in no way differs from any other force. The forces of gravitation, electricity, or chemical affinity are only distinguished from one another in that they are differently defined by reason. Just so the force of man's free will is distinguished by reason from the other forces of nature only by the definition reason gives it. Freedom, apart from necessity, that is, apart from the law's of reason that define it, differs in no way from gravitation, or heat, or the force that makes things grow; for reason, it is only a momentary undefinable sensation of life.

Tolstoy, War and Peace, II Epilogue, X

- 46 When scientific and moral postulates war thus with each other and objective proof is not to be had, the only course is voluntary choice, for scepticism itself, if systematic, is also voluntary choice. If, meanwhile, the will be undetermined, it would seem only fitting that the belief in its indetermination should be voluntarily chosen from

amongst other possible beliefs. Freedom's first deed should be to affirm itself.

William James, Psychology, XXVI

47 Both free will and determinism have been inveighed against and called absurd, because each, in the eyes of its enemies, has seemed to prevent the 'imputability' of good or bad deeds to their authors. Queer antinomy this! Free will means novelty, the grafting on to the past of something not involved therein. If our acts were predetermined, if we merely transmitted the push of the whole past, the freewillists say, how could we be praised or blamed for anything? We should be 'agents' only, not 'principals,' and where then would be our precious imputability and responsibility?

But where would it be if we *had* free will? rejoin the determinists. If a 'free' act be sheer novelty, that comes not *from* me, the previous me, but *ex nihilo*, and simply tacks itself on to me, how can I, the previous I, be responsible? How can I have any permanent *character* that will stand still long enough for praise or blame to be awarded? The chaplet of my days tumbles into a cast of disconnected beads as soon as the thread of inner necessity is drawn out by the preposterous indeterminist doctrine....

It may be good *ad hominem*, but otherwise it is pitiful. For I ask you, quite apart from other reasons, whether any man, woman or child, with a sense for realities, ought not to be ashamed to plead such principles as either dignity or imputability. Instinct and utility between them can safely be trusted to carry on the social business of punishment and praise. If a man does good acts we shall praise him, if he does bad acts we shall punish him—

anyhow, and quite apart from theories as to whether the acts result from what was previous in him or are novelties in a strict sense. To make our human ethics revolve about the question of 'merit' is a piteous unreality—God alone can know our merits, if we have any. The real ground for supposing free will is indeed pragmatic, but it has nothing to do with this contemptible right to punish which has made such a noise in past discussions of the subject.

Free will pragmatically means *novelties in the world*, the right to expect that in its deepest elements as well as in its surface phenomena, the future may not identically repeat and imitate the past. That imitation *en masse* is there, who can deny? The general "uniformity of nature" is presupposed by every lesser law. But nature may be only approximately uniform; and persons in whom knowledge of the world's past has bred pessimism (or doubts as to the world's good character, which become certainties if that character be supposed eternally fixed) may naturally welcome free will as a *melioristic* doctrine. It holds up improvement as at least possible; whereas determinism assures us that our whole notion of possibility is born of human ignorance, and that necessity and impossibility between them rule the destinies of the world.

William James, Pragmatism, III

- 48 The existence of strict causality implies that the actions, the mental processes, and especially the will of every individual are completely determined at any given moment by the state of his mind, taken as a whole, in the previous moment, and by any influences acting upon him coming from the external world. We have no reason

whatever for doubting the truth of this assertion. But the question of free will is not concerned with the question whether there is such a definite connection, but whether the person in question is aware of this connection. This, and this alone, determines whether a person can or cannot feel free. If a man were able to forecast his own future solely on the ground of causality, then and then only we would have to deny this consciousness of freedom of the will. Such a contingency is, however, impossible, since it contains a logical contradiction. Complete knowledge implies that the object apprehended is not altered by any events taking place in the knowing subject; and if subject and object are identical, this assumption does not apply. To put it more concretely, the knowledge of any motive or of any activity of will is an inner experience, from which a fresh motive may spring; consequently such an awareness increases the number of possible motives. But as soon as this is recognized, the recognition brings about a fresh act of awareness, which in its turn can generate yet another activity of the will. In this way the chain proceeds, without it ever being possible to reach a motive which is definitely decisive for any future action; in other words, to reach an awareness which is not in its turn the occasion of a fresh act of will. When we look back upon a finished action, which we can contemplate as a whole, the case is completely different. Here knowledge no longer influences will, and hence a strictly causal consideration of motives and will is possible, at least in theory.

If these considerations appear unintelligible—if it is thought that a mind could completely grasp the causes of its present state, provided it were intelligent enough—

then such an argument is akin to saying that a giant who is big enough to look down on everybody else should be able to look down on himself as well. The fact is that no person, however clever, can derive the decisive motives of his own conscious actions from the causal law alone; he requires another law—the ethical law, for which the highest intelligence and the most subtle self-analysis are no adequate substitute.

Planck, Universe in the Light of Modern Physics, 6

- 49 To foresee future objective alternatives and to be able by deliberation to choose one of them and thereby weight its chances in the struggle for future existence, measures our freedom. It is assumed sometimes that if it can be shown that deliberation determines choice and deliberation is determined by character and conditions, there is no freedom. This is like saying that because a flower comes from root and stem it cannot bear fruit. The question is not what are the antecedents of deliberation and choice, but what are their consequences. What do they do that is distinctive? The answer is that they give us all (lie control of future possibilities which is open to us. And this control is the crux of our freedom. Without it, we are pushed from behind.

Dewey, Human Nature and Conduct, IV, 3

- 50 We are free when our acts spring from our whole personality, when they express it, when they have that indefinable resemblance to it which one sometimes finds between the artist and his work. It is no use asserting that we are then yielding to the all-powerful influence of our character. Our character is still ourselves; and

because we are pleased to split the person into two parts so that by an effort of abstraction we may consider in turn the self which feels or thinks and the self which acts, it would be very strange to conclude that one of the two selves is coercing the other.

Bergson, Time and Free Will, III

- 51 Human free will does not exclude but presupposes the vast and complex dynamism of instincts, tendencies, psycho-physical dispositions, acquired habits, and hereditary traits, and it is at the top point where this dynamism emerges in the world of spirit that freedom of choice is exercised, to give or withhold decisive efficacy to the inclinations and urges of nature. It follows from this that freedom, as well as responsibility, is capable of a multiplicity of degrees of which the Author of being alone is judge. It does not follow from this that freedom does not exist—on the contrary! If it admits of degrees, then it exists.

Maritain, The Conquest of Freedom

- 52 It must be made clear that not only particular and partial goods, offered us by the finite world, but all the concrete goods which we may love and desire in this life, are thus the object of the will's free choice. Even the noblest good, even the divine good, is thus, and for the same reason, the object of the will's free choice.

Maritain, Scholasticism and Politics, V

- 53 Human-reality is free because it is not enough. It is free because it is perpetually wrenched away from itself and because it has been separated by a nothingness from

what it is and from what it will be. It is free, finally, because its present being is itself a nothingness in the form of the "reflection-reflecting." Man is free because he is not himself but presence to himself. The being which is what it is can not be free. Freedom is precisely (he nothingness which is made-to-be at the heart of man and which forces human-reality to make itself instead of to be. As we have seen, for human reality, to be is to choose oneself; nothing comes to it from the outside or from within which it can receive or accept.

Sartre, Being and Nothingness, Pt. IV, I, 1

Chapter 6

KNOWLEDGE

Chapter 6 is divided into seven sections: 6.1 The Characteristics and Conditions of Human Knowledge, 6.2 Experience, 6.3 Truth, 6.4 Error, Ignorance, and the Limits of Human Knowledge, 6.5 Opinion, Belief, and Faith, 6.6 Doubt and Skepticism, and 6.7 Reasoning, Demonstration, and Disputation.

Man is pre-eminently a knowing animal. As one famous statement that comes down to us from antiquity puts it, “all men by nature desire to know.” Knowing, feeling, and doing—these three, in separation and in combination, round out the whole orbit of human performance.

After the opening section of the chapter, in which the most general and persistent questions about knowledge are raised and discussed, the sections that follow deal with the contributions and values of experience, with truth as the good that is attained when we possess knowledge, with error as the contrary of truth and ignorance as the privation of knowledge, with opinion and belief as alternatives to knowledge, or even substitutes for it, with doubt and skepticism as checks against unwarranted assertions of knowledge, and with the ratiocinative process as that is involved in our effort to know, in the defence of our own opinions, and in the criticism of the opinions advanced by others.

The chapter most closely related to this one is, of course, Chapter 5 on Mind; but the reader will also find relevant passages in Chapter 17 on Philosophy, Science, and Mathematics, and some passages in Chapter 19 on Nature and the Cosmos, particularly Section 19.3 on Cause and Section 19.4 on Chance.

...

6.1 The Characteristics and Conditions of Human Knowledge

On a number of points, the quotations collected here tend to be in substantial agreement: that knowledge, or the truth that is attained when we know, is the essential good of the mind; that it is both good in itself, to be loved for its own sake, and also good as a means to be used in action and production; that, while man aspires to know all that is knowable, human knowledge at its best is imperfect and limited; and that knowledge is a relation between a knower and an object known.

Other points made by some of the authors quoted are not concurred in or mentioned by others, such as the distinction between that which is more knowable in itself and that which is more knowable to us; the comparison between man's finite or limited knowledge and God's infinite knowledge; the difference between sensitive and intellectual knowledge; the difference between simple apprehensions which assert nothing and so are neither true nor false and judgments which, affirming or denying

something, are capable of truth and falsity; the difference between knowledge by acquaintance (or knowledge *of*) and knowledge by description (or knowledge *about*); the difference between scientific and technical knowledge (or between know-that and know-how); and the difference between speculative and practical knowledge (or knowing what *is* the case and knowing what *ought* to be done or sought).

Beyond this, the reader will find that the quotations exhibit a pattern of manifold and intricate disagreements about the process of knowing itself—how we know whatever it is that we do know; about the precise nature of the relationship between knower and known; about the existential status of the object known; about the grades of human knowledge, either in terms of the character of the objects known or in terms of the degree of certainty or uncertainty with which something is known; about the distinction between knowledge and opinion; and about the limits of human knowledge. Some of these matters, merely hinted at in the passages quoted here, are more fully discussed in later sections of this chapter, especially Sections 6.4, 6.5, and 6.6.

■ ■ ■

1 The fear of the Lord is the beginning of knowledge: but fools despise wisdom and instruction.

Proverbs 1:7

2 *Persian soldier.* 'Tis the sorest of all human ills, to abound in knowledge and yet have no power over action.

Herodotus, History, IX, 16

- 3 *Socrates*. In questions of just and unjust, fair and foul, good and evil, which are the subjects of our present consultation, ought we to follow the opinion of the many and to fear them; or the opinion of the one man who has understanding? ought we not to fear and reverence him more than all the rest of the world: and if we desert him shall we not destroy and injure that principle in us which may be assumed to be improved by justice and deteriorated by injustice?

Plato, Crito, 47B

- 4 *Socrates*. What again shall we say of the actual acquirement of knowledge?—is the body, if invited to share in the enquiry, a hinderer or a helper? I mean to say, have sight and hearing any truth in them? Are they not, as the poets are always telling us, inaccurate witnesses? and yet, if even they are inaccurate and indistinct, what is to be said of the other senses?—for you will allow that they are the best of them?

Certainly, he [Simmias] replied.

Then when does the soul attain truth?—for in attempting to consider anything in company with the she is obviously deceived.

True.

Then must not true existence be revealed to her in thought, if at all?

Yes.

And thought is best when the mind is gathered into herself and none of these things trouble her—neither sounds nor sights nor pain nor any pleasure,—when she takes leave of the body, and has as little as possible to do

with it, when she has no bodily sense or desire, but is aspiring after true being?

Certainly.

And in this the philosopher dishonours the body; his soul runs away from his body and desires to be alone and by herself?

That is true.

Well, but there is another thing, Simmias: Is there or is there not an absolute justice?

Assuredly there is.

And an absolute beauty and absolute good?

Of course.

But did you ever behold any of them with your eyes?

Certainly not.

Or did you ever reach them with any other bodily sense?—and I speak not of these alone, but of absolute greatness, and health, and strength, and of the essence or true nature of everything. Has the reality of them ever been perceived by you through the bodily organs? or rather, is not the nearest approach to the knowledge of their several natures made by him who so orders his intellectual vision as to have the most exact conception of the essence of each thing which he considers?

Certainly.

And he attains to the purest knowledge of them who goes to each with the mind alone, not introducing or intruding in the act of thought sight or any other sense together with reason, but with the very light of the mind in her own clearness searches into the very truth of each; he who has got rid, as far as he can, of eyes and ears and, so to speak, of the whole body, these being in his opinion distracting elements which when they infect the soul

hinder her from acquiring truth and knowledge—who, if not he, is likely to attain to the knowledge of true being?

Plato, Phaedo, 65A

5 *Socrates*. You have to imagine . . . that there are two ruling powers, and that one of them is set over the intellectual world, the other over the visible. I do not say heaven, lest you should fancy that I am playing upon the name. May I suppose that you have this distinction of the visible and intelligible fixed in your mind?

Glaucón. I have.

Now take a line which has been cut into two unequal parts, and divide each of them again in the same proportion, and suppose the two main divisions to answer, one to the visible and the other to the intelligible, and then compare the subdivisions in respect of their clearness and want of clearness, and you will find that the first section in the sphere of the visible consists of images. And by images I mean, in the first place, shadows, and in the second place, reflections in water and in solid, smooth and polished bodies and the like: Do you understand?

Yes, I understand.

Imagine, now, the other section, of which this is only the resemblance, to include the animals which we see, and everything that grows or is made.

Very good.

Would you not admit that both the sections of this division have different degrees of truth, and that the copy is to the original as the sphere of opinion is to the sphere of knowledge?

Most undoubtedly.

Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

In what manner?

Thus:—There are two subdivisions, in the lower of which the soul uses the figures given by the former division as images; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images as in the former case, but proceeding only in and through the ideas themselves.

I do not quite understand your meaning, he said.

Then I will try again; you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science; these are their hypotheses, which they and every body are supposed to know, and therefore they do not deign to give any account of them either to themselves or others; but they begin with them, and go on until they arrive at last, and in a consistent manner, at their conclusion?

Yes, he said, I know.

And do you not know also that although they make use of the visible forms and reason about them, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on—the forms which they draw or make, and which have shadows and reflections in water of their own, are converted by them into images, but they are really

seeking to behold the things themselves, which can only be seen with the $c > x$ of the mind?

That is true.

And of this kind I spoke as the intelligible, although in the search after it the soul is compelled to use hypotheses; no! ascending to a first principle, because she is unable to rise above the region of hypothesis, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows and reflections of them a greater distinctness, and therefore a higher value.

I understand, he said, that you are speaking of the province of geometry and the sister arts.

And when I speak of the other division of the intelligible, you will understand me to speak of that other sort of knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses—that is to say, as steps and points of departure into a world which is above hypotheses, in order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, from ideas, through ideas, and in ideas she ends.

I understand you, he replied; not perfectly, for you seem to me to be describing a task which is really tremendous; but, at any rate, I understand you to say that knowledge and ϕ ysics, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who

contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

You have quite conceived my meaning, I said; and now, corresponding to these four divisions, let there be four faculties in the soul—reason answering to the highest, understanding to the second, faith (or conviction) to the third, and perception of shadows to the last—and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

Plato, Republic, VI, 509B

6 For everything that exists there are three instruments by which the knowledge of it is necessarily imparted; fourth, there is the knowledge itself, and, as fifth, we must count the thing itself which is known and truly exists. the first is the name, the second the definition, the third the image, and the fourth the knowledge. If you wish to learn what I mean, take these in the ease of one instance, and so understand them in the ease of all. A circle is a thing spoken of, and its name is that very word which we have just uttered. The second thing belonging to it is its definition, made up of names and verbal forms. For that which has the name "round," "annular," or "circle," might be defined as that which has the distance from its circumference to its centre everywhere equal. Third, comes that which is drawn and rubbed out again, or turned on a lathe and broken up—none of which things

can happen to the circle itself—to which the other things mentioned have reference; for it IS something of a different order from them. Fourth, comes knowledge, intelligence and right opinion about these things. Under this one head we must group everything which has its existence, not in words nor in bodily shapes, but in souls — from which it is clear that it is something different from the nature of the circle itself and from the three things mentioned before. Of these things intelligence comes closest in kinship and likeness to the fifth, and the others are farther distant.

The same applies to straight as well as to circular form, to colours, to the good, the beautiful, the just, to all bodies whether manufactured or coming into being in the course of nature, to fire, water, and all such things, to every living being, to character in souls, and to all things done and suffered. For in the case of all these no one, if he has not somehow or other got hold of the four things first mentioned, can ever be completely a partaker of knowledge of the fifth. Further, on account of the weakness of language, these (i.e., the four) attempt to show what each thing is like, not less than what each thing is. For this reason no man of intelligence will venture to express his philosophical views in language, especially not in language that is unchangeable, which is true of that which is set down in written characters.

Plato, Seventh Letter

- 7 It does not appear to be true in all cases that correlatives come into existence simultaneously. The object of knowledge would appear to exist before knowledge itself, for it is usually the case that we acquire knowledge of objects already existing; it would be difficult, if not

impossible, to find a branch of knowledge the beginning of the existence of which was contemporaneous with that of its object.

Again, while the object of knowledge, if it ceases to exist, cancels at the same time the knowledge which was its correlative, the converse of this is not true. It is true that if the object of knowledge does not exist there can be no knowledge: for there will no longer be anything to know. Yet it is equally true that if the knowledge of a certain object does not exist, the object may nevertheless quite well exist. Thus, in the case of the squaring of the circle, if indeed that process is an object of knowledge, though it itself exists as an object of knowledge, yet the knowledge of it has not yet come into existence. Again, if all animals ceased to exist, there would be no knowledge, but there might yet be many objects of knowledge.

Aristotle, Categories, 7b21

- 8 Knowledge, as a genus, is explained by reference to something else, for we mean a knowledge of something. But particular branches of knowledge are not thus explained. The knowledge of grammar is not relative to anything external, nor is the knowledge of music, but these, if relative at all, are relative only in virtue of their genera; thus grammar is said to be the *knowledge* of something, not the grammar of something; similarly music is the *knowledge* of something, not the music of something.

Thus individual branches of knowledge are not relative. And it is because we possess these individual branches of knowledge that we are said to be such and such. It is these that we actually possess: we are called

experts because we possess knowledge in some particular branch.

Aristotle, Categories, 11a24

- 9 There is a difference between what is prior and better known in the order of being and what is prior and better known to man. I mean that objects nearer to sense are prior and better known to man; objects without qualification prior and better known are those further from sense. Now the most universal causes are furthest from sense and particular causes are nearest to sense, and they are thus exactly opposed to one another.

Aristotle, Posterior Analytics, 71b34

- 10 It is hard to be sure whether one knows or not; for it is hard to be sure whether one's knowledge is based on the basic truths appropriate to each attribute—the differentia of true knowledge. We think we have scientific knowledge if we have reasoned from true and primary premisses. But that is not so: the conclusion must be homogeneous with the basic facts of the science.

Aristotle, Posterior Analytics, 76a26

- 11 In the case of all discoveries the results of previous labours that have been handed down from others have been advanced bit by bit by those who have taken them on, whereas the original discoveries generally make an advance that is small at first though much more useful than the development which later springs out of them. For it may be that in everything, as the saying is, 'the first start is the main part': and for this reason also it is the most difficult; for in proportion as it is most potent in

its influence, so it is smallest in its compass and therefore most difficult to see: whereas when this is once discovered, it is easier to add and develop the remainder in connexion with it.

Aristotle, On Sophistical Refutations, 183b17

- 12 When the objects of an inquiry, in any department, have principles, conditions, or elements, it is through acquaintance with these that knowledge, that is to say scientific knowledge, is attained. For we do not think that we know a thing until we are acquainted with its primary conditions or first principles, and have carried our analysis as far as its simplest elements. Plainly therefore in the science of Nature, as in other branches of study, our first task will be to try to determine what relates to its principles.

The natural way of doing this is to start from the things which are more knowable and obvious to us and proceed towards those which are clearer and more knowable by nature; for the same things are not 'knowable relatively to us' and 'knowable' without qualification. So in the present inquiry we must follow this method and advance from what is more obscure by nature, but clearer to us, towards what is more clear and more knowable by nature.

Aristotle, Physics, 184a10

- 13 All men by nature desire to know. An indication of this is the delight we take in our senses; for even apart from their usefulness they are loved for themselves; and above all others the sense of sight. For not only with a view to action, but even when we are not going to do anything,

we prefer seeing (one might say) to everything else. The reason is that this, most of all the senses, makes us know and brings to light many differences between things.

Aristotle, Metaphysics, 980a1

- 14 For all men begin, as we said, by wondering that things are as they are, as they do about self-moving marionettes, or about the solstices or the incommensurability of the diagonal of a square with the side; for it seems wonderful to all who have not yet seen the reason, that there is a thing which cannot be measured even by the smallest unit. But we must end in the contrary and, according to the proverb, the better state, as is the case in these instances too when men learn the cause; for there is nothing which would surprise a geometer so much as if the diagonal turned out to be commensurable.

Aristotle, Metaphysics, 983a13

- 15 It is absurd to seek at the same time knowledge and the way of attaining knowledge; and it is not easy to get even one of the two.

Aristotle, Metaphysics, 995a13

- 16 Since men may know the same thing in many way's, we say that he who recognizes what a thing is by its being so and so knows more fully than he who recognizes it by its not being so and so, and in the former class itself one know-s more fully than another, and he knows most fully who knows what a thing is, not he who knows its quantity or quality or what it can by nature do or have done to it.

Aristotle, Metaphysics, 996b14

17 That there is no science of the accidental is obvious; for all science is either of that which is always or of that which is for the most part. (For how else is one to learn or to teach another? the thing must be determined as occurring either always or for the most part, e.g. that honey-water is useful for a patient in a fever is true for the most part.) But that which is contrary to the usual law science will be unable to state, i.e. when the thing does not happen, e.g. 'on the day of new moon'; for even that which happens on the day of new moon happens then either always or for the most part; but the accidental is contrary to such laws.

Aristotle, Metaphysics, 1027a19

18 What *scientific knowledge* is, if we are to speak exactly and not follow mere similarities, is plain from what follows. we all suppose that what we know is not even capable of being otherwise; of things capable of being otherwise we do not know, when they have passed outside our observation, whether they exist or not. Therefore the object of scientific knowledge is of necessity. Therefore it is eternal; for things that are of necessity in the unqualified sense are all eternal; and things that are eternal are ungenerated and imperishable. Again, every science is thought to be capable of being taught, and its object of being learned. And all teaching starts from what is already known, as we maintain in the *Analytics* also; for it proceeds sometimes through induction and sometimes by syllogism. Now induction is the starting-point which knowledge even of the universal presupposes, while syllogism proceeds, from universals. There are therefore starting-points from which syllogism proceeds, which are not reached by

sylllogism; it is therefore by induction that they are acquired. Scientific knowledge is, then, a state of capacity to demonstrate, and has the other limiting characteristics which we specify in the *Analytics*, for it is when a man believes in a certain way and the starting-points are known to him that he has scientific knowledge, since if they are not better known to him than the conclusion, he will have his knowledge only incidentally.

Aristotle, Ethics, 1139b19

- 19 The fact that men use the language that flows from knowledge proves nothing; for even men under the influence of these passions utter scientific proofs and verses of Empedocles, and those who have just begun to learn a science can string together its phrases, but do not yet know it; for it has to become part of themselves, and that takes time.

Aristotle, Ethics, 1147a17

- 20 It is one thing ... to remember, another to know. To remember is to safeguard something entrusted to your memory, whereas to know, by contrast, is actually to make each item your own, and not to be dependent on some original and be constantly looking to see what the master said,

Seneca, Letters to Lucilius, 33

- 21 Now as touching things offered unto idols, w^c know that we all have knowledge. Knowledge puffeth up, but charity edifieth.

And if any man think that he knoweth any thing, he knoweth nothing yet as he ought to know.

But if any man love God, the same is known of him,

1 Corinthians 8:1-3

22 Knowledge, if it does not determine action, is dead to us.

Plotinus, First Ennead, II, 4

23 Yet, Lord God of truth, is any man pleasing to You for knowing such things? Surely' a man is unhappy even if he knows all these things but does not know' You; and that man is happy who knows You even though he knows nothing of them, and the man who knows both You and them is not the happier for them but only on account of You: if knowing You he glorifies You as You are and gives thanks and does not become vain in his thoughts. For just as he is better who knows he possesses a tree and gives thanks to You for the use it is to him, although he does not know how many cubits high it is or the width of its spread, than another man who can measure it and number its branches but neither possesses it nor knows and loves Him who created it; so it would be absurd to doubt that a true Christian— who in some sense possesses all this world of riches and who having nothing yet possesses all things by cleaving unto You whom all things serve—is better though he does not even know the circles of the Great Bear than one who can measure the heavens and number the stars and balance the elements, if in all this he neglects You who have *ordered all things in measure and number and weight*.

Augustine, Confessions, V, 4

24 The knowledge of the creature is, in comparison of the knowledge of the Creator, but a twilight; and so it dawns

and breaks into morning when the creature is drawn to the praise and love of the Creator; and night never falls when the Creator is not forsaken through love of the creature.

Augustine, City of God, XI, 7

25 Certain it is that, though philosophers disagree regarding the nature of things, and the mode of investigating truth, and of the good to which all our actions ought to tend, yet in these three great general questions all their intellectual energy is spent. And though there be a confusing diversity of opinion, every man striving to establish his own opinion in regard to each of these questions, yet no one of them all doubts that nature has some cause, science some method, life some end and aim. Then, again, there are three things which every artificer must possess if he is to effect anything—nature, education, practice. Nature is to be judged by capacity, education by knowledge, practice by its fruit.

Augustine, City of God, XI, 25

26 In ourselves beholding His image, let us, like that younger son of the gospel, come to ourselves, and arise and return to Him from whom by our sin we had departed. There our being will have no death, our knowledge no error, our love no mishap.

Augustine, City of God, XI, 28

27 Owing to the liability of the human mind to fall into mistakes, this very pursuit of knowledge may be a snare to (man] unless he has a divine Master, whom he may

obey without misgiving, and who may at the same time give him such help as to persevere his own freedom.

Augustine, City of God, XIX, 14

28 I think that it is well to warn studious and able young men, who fear God and are seeking for happiness of life, not to venture heedlessly upon the pursuit of the branches of learning that are in vogue beyond the pale of the Church of Christ, as if these could secure for them the happiness they seek; but soberly and carefully to discriminate among them. And if they find any of those which have been instituted by men varying by reason of the varying pleasure of their founders, and unknown by reason of erroneous conjectures, especially if they involve entering into fellowship with devils by means of leagues and covenants about signs, let these be utterly rejected and held in detestation. Let the young men also withdraw their attention from such institutions of men as are unnecessary and luxurious. But for the sake of the necessities of this life we must not neglect the arrangements of men that enable us to carry on intercourse with those around us. I think, however, there is nothing useful in the other branches of learning that are found among the heathen, except information about objects, either past or present, that relate to the bodily senses, in which are included also the experiments and conclusions of the useful mechanical arts, except also the sciences of reasoning and of numbers. And in regard to all these we must hold by the maxim, "Not too much of anything"; especially in the case of those which, pertaining as they do to the senses, are subject to the relations of space and time.

Augustine, Christian Doctrine, II, 39

29 When the student of the Holy Scriptures... shall enter upon his investigations, let him constantly meditate upon that saying of the apostle's, "Knowledge puffeth up, but charity edifieth." For so he will feel that, whatever may be the riches he brings with him out of Egypt, yet unless he has kept the passover, he cannot be safe. Now Christ is our passover sacrificed for us.... Let them remember, then, that those who celebrated the passover at that time in type and shadow, when they were ordered to mark their door-posts with the blood of the lamb, used hyssop to mark them with. Now this is a meek and lowly herb, and yet nothing is stronger and more penetrating than its roots; that being rooted and grounded in love, we may be able to comprehend with all saints what is the breadth, and length, and depth, and height— that is, to comprehend the cross of our Lord, the breadth of which is indicated by the transverse wood on which the hands are stretched, its length by the part from the ground up to the cross-bar on which the whole body from the head downwards is fixed, its height by the part from the cross-bar to the top on which the head lies, and its depth by the part which is hidden, being fixed in the earth. And by this sign of the cross all Christian action is symbolized, viz., to do good works in Christ, to cling with constancy to Him, to hope for heaven, and not to desecrate the sacraments. And purified by this Christian action, shall be able to know even "the love of Christ which passeth knowledge."

Augustine, Christian Doctrine, II, 41

30 The brevity of our life, the dullness of our senses, the torpor of our indifference, the futility of our occupation, suffer us to know but little: and that little is soon shaken and then torn from the mind by that traitor to learning, that hostile and faithless stepmother to memory, oblivion.

John of Salisbury, Prologue to the Policraticus

31 Our soul possesses two cognitive powers. One is the act of any corporeal organ, which naturally knows things existing in individual matter; hence sense knows only the singular. But there is another kind of cognitive power in the soul, called the intellect, and this is not the act of any corporeal organ. Therefore the intellect naturally knows natures which have being only in individual matter; not however as they are in individual matter, but according as they are abstracted from it by the consideration of the intellect. Hence it follows that through the intellect we can understand things of this kind as universal, and this is beyond the power of sense. Now the angelic intellect naturally knows natures not existing in matter; but this is beyond the natural power of the intellect of our soul in the state of its present life, united as it is to the body.

Aquinas, Summa Theologica, I, 12, 4

32 Each thing is known insofar as its likeness is in the one who knows. Now this takes place in two ways. For since things which are like one and the same thing are like each other, the knowing power can be assimilated to any knowable object in two ways. In one way it is assimilated by the object itself, when it is directly informed by its likeness, and then the object is known in itself. In another

way when informed by a species which resembles the object; and in this way the knowledge is not of the thing in itself, but of the thing in its likeness. For the knowledge of a man in himself differs from the knowledge of him in his image.

Aquinas, Summa Theological I, 12, 9

- 33 A thing is said to be comprehended when the end of the knowledge of it is attained, and this is accomplished when it is known as perfectly as it is knowable; as, for instance, a demonstrable proposition is comprehended when known by demonstration, but not, however, when it is known by some probable reason.

Aquinas, Summa Theologica, I, 14, 3

- 34 As the Philosopher [Aristotle] says, "one knowledge is preferable to another, either because it is about a higher object, or because it is more certain." Hence if the subject be equally good and sublime, that virtue will be the greater which "possesses more certain knowledge. But a virtue which is less certain about a higher and better object, is preferable to that which is more certain about an object of inferior degree. Hence the Philosopher says that it is a great thing to be able to know something about celestial beings, though it be based on weak and probable reasoning; and again, that it is better to know a little about sublime things, than much about mean things. Accordingly wisdom, to which knowledge about God pertains, is beyond the reach of man, especially in this life, so as to be his possession, for this belongs to God alone; and yet this little knowledge about God which

we can have through wisdom is preferable to all other knowledge.

Aquinas, Summa Theologica, I, 14, 5

35 Some knowledge is speculative only, some is practical only, and some is partly speculative and partly practical. In proof of this it must be observed that knowledge can be called speculative in three ways. First, on the part of the things known, which are not operable by the knower; such is the knowledge of man about natural or divine things. Secondly, as regards the manner of knowing—as, for instance, if a builder consider a house by defining and dividing, and considering what belongs to it in general, for this is to consider operable things in a speculative manner, and not as they are operable; for operable means the application of form to matter, and not the resolution of the composite into its universal formal principles. Thirdly, as regards the end; "for the practical intellect differs in its end from the speculative," as the Philosopher [Aristotle] says. For the practical intellect is ordered to the end of the operation, whereas the end of the speculative intellect is the consideration of truth. Hence if a builder should consider how a house can be made, not ordering this to the end of operation, but only to know (how to do it), this would be only a speculative consideration as regards the end, although it concerns an operable thing. Therefore knowledge which is speculative by reason of the thing itself known, is merely speculative. But that which is speculative either in its mode or as to its end is partly speculative and partly practical; and when it is ordered to an operative end it is simply practical.

Aquinas, Summa Theologica, I, 14, 16

- 36 The intellect knows principles naturally; and this knowledge in man causes the knowledge of conclusions, which are known by him not naturally, but by discovery, or by teaching.

Aquinas, Summa Theologica, I, 60, 2

- 37 Knowledge is loved not that any good may come to it but that it may be possessed.

Aquinas, Summa Theologica, I, 60, 3

- 38 The action of the intellect consists in this—that the notion of the thing understood is in the one who understands, while the act of the will consists in this—that the will is inclined to the thing itself as it is in itself. And therefore the Philosopher [Aristotle] says in the *Metaphysics* that good and evil, which are objects of the will, are in things, but truth and error, which are objects of the intellect, are in the mind. When, therefore, the thing in which there is good is nobler than the soul itself, in which is the idea understood, by comparison with such a thing the will is higher than the intellect. But when the thing which is good is less noble than the soul, then even in comparison with that thing the intellect is higher than the will. Therefore the love of God is better than the knowledge of God; but, on the contrary, the knowledge of corporeal things is better than the love of them. Absolutely, however, the intellect is nobler than the will.

Aquinas, Summa Theologica, I, 82, 3

- 39 Material things known must exist in the knower not materially, but immaterially. The reason of this is because

the act of knowledge extends to things outside the knower, for we also know' the things that are outside us. Now by matter the form of a thing is determined to some one thing. Therefore it is clear that knowledge is in inverse ratio to materiality. And consequently things that are not receptive of forms save materially, have no power of knowledge whatever—such as plants, as the Philosopher [Aristotle] says. But the more immaterially a thing has the form of the thing known, the more perfect is its knowledge. Therefore the intellect which abstracts the species not only from matter, but also from the individuating conditions of matter, has more perfect knowledge than the senses, which receive the form of the thing known, without matter indeed, but subject to material conditions. Moreover, among the senses, sight has the most perfect knowledge because it is the least material... while among intellects the more perfect is the more immaterial.

Aquinas, Summa Theologica, I, 84, 2

40 Plato held that naturally man's intellect is filled with all intelligible species, but that, by being united to the body, it is hindered from the realization of its act. But this seems to be wrong. First, because, if the soul has a natural knowledge of all things, it seems impossible for the soul so far to forget this natural knowledge as not to know that it has it. For no man forgets what he knows naturally; that, for instance, every whole is larger than the part, and the like. And especially unreasonable does this seem if we suppose that it is natural to the soul to be united to the body . . . for it is unreasonable that the natural operation of a thing be totally hindered by that which belongs to it naturally. Secondly, the falseness of

this opinion is clearly proved from the fact that if a sense be wanting, the knowledge of what is apprehended through that sense is wanting also; for instance, a man who is born blind can have no knowledge of colours. This would not be the case if the soul had innate species of all intelligible things. We must therefore conclude that the soul does not know corporeal things through innate species.

Aquinas, Summa Theologica, I, 84, 3

- 41 Good is the cause of love, as being its object. But good is not the object of the appetite, except as apprehended. And therefore love demands some apprehension of the good that is loved.... Accordingly knowledge is the cause of love for the same reason as good is, which can be loved only if known.

Aquinas, Summa Theologica, I-II, 27, 2

- 42 Something is required for the perfection of knowledge that is not requisite for the perfection of love. For knowledge pertains to the reason, whose function consists in distinguishing things which in reality are united, and in uniting together, after a fashion, things that are distinct, by comparing one with another. Consequently the perfection of knowledge requires that man should know one by one all that is in a thing, such as its parts, powers, and properties. On the other hand, love is in the appetitive power, which regards a thing as it is in itself; therefore it suffices, for the perfection of love, that a thing be loved according as it is apprehended in itself. Hence it is, therefore, that a thing is loved more than it is known, since it can be loved perfectly, even

without being perfectly known. This is most evident in regard to the sciences, which some love through having a certain summary knowledge of them; for instance, they know that rhetoric is a science that enables man to persuade others, and this is what they love in rhetoric. The same applies to the love of God.

Aquinas, Summa Theologica, I-II, 27, 2

43 As saith the Philosopher [Aristotle] in the beginning of the First Philosophy, 'All men by nature desire to know'; the reason whereof may be, that each thing, impelled by its own natural foresight, inclines to its own perfection; wherefore, inasmuch as knowledge is the distinguishing perfection of our soul, wherein consists our distinguishing blessedness, all of us are naturally subject to the longing for it.

Dante, Convivio, I, 1

44 Before Noah's flood the world was highly learned, by reason men lived a long time, and so attained great experience and wisdom; now, ere we begin rightly to come to the true knowledge of a thing, we lie down and die. God will not have it that we should attain a higher knowledge of things.

Luther, Table Talk, H160

45 In truth, knowledge is a great and very useful quality; those who despise it give evidence enough of their stupidity. But yet I do not set its value at that extreme measure that some attribute to it, like Herillus the philosopher, who placed in it the sovereign good, and held that it was in its power to make us wise and content.

That I do not believe, nor what others have said, that knowledge is the mother of all virtue, and that all vice is produced by ignorance. If that is true, it is subject to a long interpretation.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

46 *Leonles*. How blest am I
In my just censure, in my true opinion!
Alack, for lesser knowledge! how accursed
In being so blest! There may be in the cup
A spider steep'd, and one may drink, depart,
And yet partake no venom, for his knowledge
Is not infected; but if one present
The abhorr'd ingredient to his eye, make known
How he hath drunk, he cracks his gorge, his sides.
With violent hefts. I have drunk, and seen the spider.

Shakespeare, Winter's Tale, II, i, 36

47 The contemplation of God's creatures and works produced! (having regard to the works and creatures themselves) knowledge, but having regard to God, no perfect knowledge, but wonder which is broken knowledge.

Bacon, Advancement of Learning, Bk. I, I, 3

48 The commandment of knowledge is yet higher than the commandment over the will: for it is a commandment over the reason, belief, and understanding of man, which is the highest part of the mind, and giveth law to the will itself. For there is no power on earth which setteth up a throne or chair of estate in the spirits and souls of men,

and in their cogitations, imaginations, opinions, and beliefs, but knowledge and learning.

Bacon, Advancement of Learning, Bk. I, VIII, 3

49 Let this be a rule, that all partitions of knowledges be accepted rather for lines and veins than for sections and separations; and that the continuance and cōtinuēss of knowledge be preserved. For the contrary hereof hath made particular sciences to become barren, shallow, and erroneous, while they have not been nourished and maintained from the common fountain.

Bacon, Advancement of Learning, Bk. II, IX, 1

50 Howbeit (if we will truly consider of it) more worthy it is to believe than to know as we now know. For in knowledge man's mind suffereth from sense; but in belief it suffereth from spirit, such one as it holdeth for more authorized than itself, and so suffereth from the worthier agent. Otherwise it is of the state of man glorified; for then faith shall cease, and we shall know as we are known.

Bacon, Advancement of Learning, Bk. II, XXV, 2

51 The human understanding, when any proposition has been once laid down (either from general admission and belief, or from the pleasure it affords), forces everything else to add fresh support and confirmation; and although most cogent and abundant instances may exist to the contrary, yet either does not observe or despises them, or gets rid of and rejects them by some distinction, with violent and injurious prejudice, rather than sacrifice the authority of its first conclusions.

Bacon, Novum Organum, I, 46

52 How much more exalted will that discovery be, which leads to the easy discovery of everything else! Yet (to speak the truth) in the same manner as we are very thankful for light which enables us to enter on our way, to practise arts, to read, to distinguish each other, and yet sight is more excellent and beautiful than the various uses of light; so is the contemplation of things as they are, free from superstition or imposture, error or confusion, much more dignified in itself than all the advantage to be derived from discoveries.

Bacon, Novum Organum, I, 129

53 Again, the meanness of my estate doth somewhat move me: for though I cannot accuse myself that I am either prodigal or slothful, yet my health is not to spend, nor my course to get. Lastly, I confess that I have as vast contemplative ends, as I have moderate civil ends: for I have taken all knowledge to be my province; and if I could purge it of two sorts of rovers, whereof the one with frivolous disputations, confutations, and verbosities, the other with blind experiments and auricular traditions and impostures, hath committed so many spoils, I hope I should bring in industrious observations, grounded conclusions, and profitable inventions and discoveries; the best state of that province.

Bacon, Letter to Lord Burghley (1592)

54 In the subjects we propose to investigate, our inquiries should be directed, not to what others have thought, nor to what we ourselves conjecture, but to what we can

clearly and perspicuously behold and with certainty deduce; for knowledge is not won in any other way.

Descartes, Rules for Direction of the Mind, III

55 Since we cannot be universal and know all that is to be known of everything, we ought to know a little about everything. For it is far better to know something about everything than to know all about one thing. This universality is the best. If we can have both, still better; but if we must choose, we ought to choose the former. And the world feels this and does so; for the world is often a good judge.

Pascal, Pensées, I, 37

56 Our intellect holds the same position in the world of thought as our body occupies in the expanse of nature.

Limited as we are in every way, this state which holds the mean between two extremes is present in all our impotence. Our senses perceive no extreme. Too much sound deafens us; too much light dazzles us; too great distance or proximity hinders our view. Too great length and too great brevity of discourse tend to obscurity; too much truth is paralysing (I know some who cannot understand that to take four from nothing leaves nothing). First principles are too self-evident for us; too much pleasure disagrees with us. Too many concords are annoying in music; too many benefits irritate us; we wish to have the wherewithal to overpay our debts.... We feel neither extreme heat nor extreme cold. Excessive qualities are prejudicial to us and not perceptible by the senses; we do not feel but suffer them. Extreme youth and extreme age hinder the mind, as also too much and

too little education. In short, extremes are for us as though they were not, and we are not within their notice. They escape us, or we them.

This is our true state; this is what makes us incapable of certain knowledge and of absolute ignorance. We sail within a vast sphere, ever drifting in uncertainty, driven from end to end. When we think to attach ourselves to any point and to fasten to it, it wavers and leaves us; and if we follow it, it eludes our grasp, slips past us, and vanishes for ever. Nothing stays for us. This is our natural condition and yet most contrary to our inclination; we burn with desire to find solid ground and an ultimate sure foundation whereon to build a tower reaching to the Infinite. But our whole groundwork cracks, and the earth opens to abysses.

Let us, therefore, not look for certainty and stability. Our reason is always deceived by fickle shadows; nothing can fix the finite between the two Infinities, which both enclose and fly from it.

If this be well understood, I think that we shall remain at rest, each in the state wherein nature has placed him. As this sphere which has fallen to us as our lot is always distant from either extreme, what matters it that man should have a little more knowledge of the universe? If he has it, he but gets a little higher. Is he not always infinitely removed from the end, and is not the duration of our life equally removed from eternity, even if it lasts ten years longer?

In comparison with these Infinities, all finites are equal, and I see no reason for fixing our imagination on one more than on another. The only comparison which we make of ourselves to the finite is painful to us.

Pascal, Pensees, II, 72

57 We must not think to make a staple commodity of all the knowledge in the land, to mark and licence it like our broadcloth and our woolpacks.

Milton, Areopagitica

58 We boast our light; but if we look not wisely on the Sun itself, it smites us into darkness. Who can discern those planets that are oft combust, and those stars of brightest magnitude that rise and set with the Sun, until the opposite motion of their orbs bring them to such a place in the firmament, where they may be seen evening or morning? The light which we have gained was given us, not to be ever staring on, but by it to discover onward things more remote from our knowledge.

Milton, Areopagitica

59 To be still searching what we know not by what we know, still closing up truth to truth as we find it (for all her body is homogeneous and proportional), this is the golden rule in theology as well as in arithmetic, and makes up the best harmony in a Church; not the forced and outward union of cold and neutral, and inwardly divided minds.

Milton, Areopagitica

60 A person who knows anything, by that very fact knows that he knows, and knows that he knows that he knows, and so *ad infinitum*.

Spinoza, Ethics, 11, Prop, 21, Schol.

61 All efforts which we make through reason are nothing but efforts to understand, and the mind, in so far as it uses reason, adjudges nothing as profitable to itself excepting that which conduces to understanding.

Spinoza, Ethics, IV, Prop. 26

62 We do not know that anything is certainly good or evil excepting that which actually conduces to understanding, or which can prevent us from understanding.

Spinoza, Ethics, IV, Prop. 27

63 The highest good of the mind is the knowledge of God, and the highest virtue of the mind is to know God.

Spinoza, Ethics, IV, Prop. 28

64 Faith. There is... knowledge and knowledge. Knowledge that resteth in the bare speculation of things, and knowledge that is accompanied with the grace of faith and love, which puts a man upon doing even the will of God from the heart: the first of these will serve the Talker, but without the other the true Christian is not content.

Bunyan, Pilgrim's Progress, I

65 He that hawks at larks and sparrows has no less sport, though a much less considerable quarry, than he that flies at nobler game: and he is little acquainted with the subject of this treatise—the understanding—who does not know that, as it is the most elevated faculty of the soul, so it is employed with a greater and more constant delight than any of the other. Its searches after truth are a sort of hawking and hunting, wherein the very pursuit

makes a great part of the pleasure. Every step the mind takes in its progress towards Knowledge makes some discovery, which is not only new, but the best too, for the time at least.

For the understanding, like the eye, judging of objects only by its own sight, cannot but be pleased with what it discovers, having less regret for what has escaped it, because it is unknown. Thus he who has raised himself above the alms-basket, and, not content to live lazily on scraps of begged opinions, sets his own thoughts on work, to find and follow truth, will (whatever he lights on) not miss the hunter's satisfaction; every moment of his pursuit will reward his pains with some delight; and he will have reason to think his time not ill spent, even when he cannot much boast of any great acquisition.

Locke, Concerning Human Understandings Epistle to the Reader

66 Though the comprehension of our understandings comes exceeding short of the vast extent of things, yet we shall have cause enough to magnify the bountiful Author of our being, for that proportion and degree of knowledge he has bestowed on us, so far above all the rest of the inhabitants of this our mansion. Men have reason to be well satisfied with what God hath thought fit for them, since he hath given them... whatsoever is necessary for the conveniences of life and information of virtue; and has put within the reach of their discovery, the comfortable provision for this life, and the way that leads to a better. How short soever their knowledge may come of a universal or perfect comprehension of whatsoever is, it yet secures their great concernments, that they have light enough to lead them to the knowledge of their

Maker, and the sight of their own duties. ... It will be no excuse to an idle and untoward servant, who would not attend his business by candle light, to plead that he had not broad sunshine. The Candle that is set up in us shines bright enough for all our purposes. The discoveries we can make with this ought to satisfy us; and we shall then use our understandings right, when we entertain all objects in that way and proportion that they are suited to our faculties, and upon those grounds they are capable of being proposed to us; and not peremptorily or intemperately require demonstration, and demand certainty, where probability only is to be had, and which is sufficient to govern all our concernments. If we will disbelieve everything, because we cannot certainly know all things, we shall do much what as wisely as he who would not use his legs, but sit still and perish, because he had no wings to fly.

Locke, Concerning Human Understandings, Intro.

- 67 Since the mind, in all its thoughts and reasonings, hath no other immediate object but its own ideas, which it alone does or can contemplate, it is evident that our knowledge is only conversant about them.. . . *Knowledge* then seems to me to be nothing but *the perception of the connexion of and agreement, or disagreement and repugnancy of any of our ideas*. In this alone it consists. Where this perception is, there is knowledge, and where it is not, there, though we may fancy, guess, or believe, yet we always come short of knowledge.

Locke, Concerning Human Understandings Bk. IV, I, 1-2

68 The knowledge of our own being we have by intuition. The existence of a God, reason clearly makes known to us, as has been shown.

The knowledge of the existence of *any other thing* we can have only by *sensation*: for there being no necessary connexion of real existence with any *idea* a man hath in his memory; nor of any other existence but that of God with the existence of any particular man: no particular man can know the existence of any other being, but only when, by actual operating upon him, it makes itself perceived by him. For, the having the idea of anything in our mind, no more proves the existence of that thing, than the picture of a man evidences his being in the world, or the visions of a dream make thereby a true history.

Locke, Concerning Human Understanding, Bk. IV, XI, 1

69 We should believe that God has dealt more bountifully with the sons of men than to give them a strong desire for that knowledge which he had placed quite out of their reach.

Berkeley, Principles of Human Knowledge, Intro., 3

70 It is evident to any one who takes a survey of the objects of human knowledge, that they are either ideas actually imprinted on the senses; or else such as are perceived by attending to the passions and operations of the mind; or lastly, ideas formed by help of memory and imagination—either compounding, dividing, or barely representing those originally perceived in the aforesaid ways. By sight I have the ideas of light and colours, with their several degrees and variations. By touch I perceive hard and soft,

heat and cold, motion and resistance, and of all these more and less either as to quantity or degree. Smelling furnishes me with odours; the palate with tastes; and hearing conveys sounds to the mind in all their variety of tone and composition. And as several of these are observed to accompany each other, they come to be marked by one name, and so to be reputed as one thing. Thus, for example a certain colour, taste, smell, figure and consistence having been observed to go together, are accounted one distinct thing, signified by the name *apple*; other collections of ideas constitute a stone, a tree, a book, and the like sensible things—which as they are pleasing or disagreeable excite the passions of love, hatred, joy, grief, and so forth.

But, besides all that endless variety of ideas or objects of knowledge, there is likewise something which knows or perceives them, and exercises divers operations, as willing, imagining, remembering, about them. This perceiving, active being is what I call *mind, spirit, soul, or myself*. By which words I do not denote any one of my ideas, but a thing entirely distinct from them, wherein, they exist, or, which is the same thing, whereby they are perceived—for the existence of an idea consists in being perceived.

That neither our thoughts, nor passions, nor ideas formed by the imagination, exist without the mind, is what everybody will allow. And it seems no less evident that the various sensations or ideas imprinted on the sense, however blended or combined together (that is, whatever objects they compose), cannot exist otherwise than in a mind perceiving them.—I think an intuitive knowledge may be obtained of this by any one That shall attend to what is meant by the term *exists*, when applied

to sensible things. The table I write on I say exists, that is, I see and feel it; and if I were out of my study I should say it existed—meaning thereby that if I was in my study I might perceive it, or that some other spirit actually does perceive it. There was an odour, that is, it was smelt; there was a sound, that is, it was heard; a colour or figure, and it was perceived by sight or touch. This is all that I can understand by these and the like expressions. For as to what is said of the absolute existence of unthinking things without any relation to their being perceived, that seems perfectly unintelligible. Their *esse* is *percepi*, nor is it possible they should have any existence out of the minds or thinking things which perceive them.

It is indeed an opinion strangely prevailing amongst men, that houses, mountains, rivers, and in a word all sensible objects, have an existence, natural or real, distinct from their being perceived by the understanding. But, with how great an assurance and acquiescence soever this principle may be entertained in the world, yet whoever shall find in his heart to call it in question may, if I mistake not, perceive it to involve a manifest contradiction. For, what are the forementioned objects but the things we perceive by sense? and what do we perceive besides our own ideas or sensations? and is it not plainly repugnant that any one of these, or any combination of them, should exist unperceived?

Berkeley, Principles of Human Knowledge, 1-4

71 As several gentlemen in these times, by the wonderful force of genius only, without the least assistance of learning, perhaps without being well able to read, have made a considerable figure in the republic of letters; the modern critics, I am told, have lately begun to assert, that

all kind of learning is entirely useless to a writer; and, indeed, no other than a kind of fetters on the natural sprightliness and activity of the imagination, which is thus weighed down, and prevented from soaring to those high flights which otherwise it would be able to reach.

This doctrine, I am afraid, is at present carried much too far: for why should writing differ so much from all other arts? The nimbleness of a dancing-master is not at all prejudiced by being taught to move; nor doth any mechanic, I believe exercise his tools the worse by having learnt to use them. For my own part, I cannot conceive that Homer or Virgil would have writ with more fire, if, instead of being masters of all the learning of their times, they had been as ignorant as most of the authors of the present age. Nor do I believe that all the imagination, fire, and judgment of Pitt, could have produced those orations that have made the senate of England, in these our times, a rival in eloquence to Greece and Rome, if he had not been so well read in the writings of Demosthenes and Cicero, as to have transferred their whole spirit into his speeches, and, with their spirit, their knowledge too.

I would not here be understood to insist on the same fund of learning in any of my brethren, as Cicero persuades us is necessary to the composition of an orator. On the contrary, very little reading is, I conceive, necessary to the poet, less to the critic, and the least of all to the politician. For the first, perhaps, Byshe's Art of Poetry, and a few of our modern poets, may suffice; for the second, a moderate heap of plays; and, for the last, an indifferent collection of political journals.

To say the truth, I require no more than that a man should have some little knowledge of the subject on which he treats, according to the old maxim of law, *Quam*

quisque norit artem in ea se exerceat. With this alone a writer may sometimes do tolerably well; and, indeed, without this, all the other learning in the world will stand him in little stead.

For instance, let us suppose that Homer and Virgil, Aristotle and Cicero, Thucydides and Livy, could have met all together, and have clubbed their several talents to have composed a treatise on the art of dancing: I believe it will be readily agreed they could not have equalled the excellent treatise which Mr. Essex hath given us on that subject, entitled, *The Rudiments of Genteel Education*. And, indeed, should the excellent Mr. Broughton be prevailed on to set fist to paper, and to complete the above-said rudiments, by delivering down the true principles of athletics, I question whether the world will have any cause to lament, that none of the great writers, either antient or modern, have ever treated about that noble and useful art.

To avoid a multiplicity of examples in so plain a case, and to come at once to my point, I am apt to conceive, that one reason why many English writers have totally failed in describing the manners of upper life, may possibly be, that in reality they know nothing of it.

Fielding, Tom Jones, XIV, 1

72 Man is a reasonable being; and as such, receives from science his proper food and nourishment: But so narrow are the bounds of human understanding, that little satisfaction can be hoped for in this particular, either from the extent of security or his acquisitions. Man is a sociable, no less than a reasonable being: But neither can he always enjoy company agreeable and amusing, or preserve the proper relish for them. Man is also an active

being; and from that disposition, as well as from the various necessities of human life, must submit to business and occupation: But the mind requires some relaxation, and cannot always support its bent to care and industry. It seems, then, that nature has pointed out a mixed kind of life as most suitable to the human race, and secretly admonished them to allow none of these biases to *draw* too much, so as to incapacitate them for other occupations and entertainments. Indulge your passion for science, says she, but let your science be human, and such as may have a direct reference to action and society. Abstruse thought and profound researches I prohibit, and will severely punish, by the pensive melancholy which they introduce, by the endless uncertainty in which they involve you, and by the cold reception which your pretended discoveries shall meet with, when communicated.

Hume, Concerning Human Understandings I, 4

73 The sweetest and most inoffensive path of life leads through the avenues of science and learning; and whoever can either remove any obstructions in this way, or open up any new prospect, ought so far to be esteemed a benefactor to mankind. And though these researches may appear painful and fatiguing, it is with some minds as with some bodies, which being endowed with vigorous and florid health, require severe exercise, and reap a pleasure from what, to the generality of mankind, may seem burdensome and laborious. Obscurity, indeed, is painful to the mind as well as to the eye; but to bring light from obscurity, by whatever labour, must needs be delightful and rejoicing.

Hume, Concerning Human Understandings, I, 6

74 What though these reasonings concerning human nature seem abstract, and of difficult comprehension? This affords no presumption of their falsehood. On the contrary, it seems impossible, that what has hitherto escaped so many wise and profound philosophers can be very obvious and easy. And whatever pains these researches may cost us, we may think ourselves sufficiently rewarded, not only in point of profit but of pleasure, if, by that means, we can make any addition to our stock of knowledge, in subjects of such unspeakable importance.

Hume, Concerning Human Understandings, I, 10

75 Whatever moralists may hold, the human understanding is greatly indebted to the passions, which, it is universally allowed, are also much indebted to the understanding. It is by the activity of the passions that our reason is improved; for we desire knowledge only because we wish to enjoy; and it is impossible to conceive any reason why a person who has neither fears nor desires should give himself the trouble of reasoning.

Rousseau, Origin of Inequality, I

76 Knowledge, for most of those who cultivate it, is only a kind of money. They value it greatly, but only in proportion as it is communicated; it is good only in commerce. Take from the learned the pleasure of being listened to, and knowledge would cease to be anything to them.

Rousseau, La Nouvelle Heloise, XII

77 There are... many subjects of study which seem but remotely allied to useful knowledge and of little importance to happiness or virtue; nor is it easy to forbear some sallies of merriment or expressions of pity when we see a man wrinkled with attention and emaciated with solicitude in the investigation of questions of which, without visible inconvenience, the world may expire in ignorance.

Johnson, Rambler No. 83

78 Knowledge always desires increase: it is like fire, which must first be kindled by some external agent, but which will afterwards propagate itself.

Johnson, Letter to William Drummond (Aug. 13, 1766)

79 Deign on the passing world to turn thine eyes. And pause awhile from letters, to be wise.

Johnson, Vanity of Human Wishes, 157

80 "Sir, (said he [Johnson]) a desire of knowledge is the natural feeling of mankind; and every human being, whose mind is not debauched, will be willing to give all that he has to get knowledge."

Boswell, Life of Johnson (July 30, 1763)

81 He [Johnson] observed, "All knowledge is of itself of some value. There is nothing so minute or inconsiderable, that I would not rather know it than not. In the same manner, all power, of whatever sort, is of itself desirable. A man would not submit to learn to hem a ruffle, of his wife, or his wife's maid; but if a mere wish could attain it, he would rather wish to be able to hem a ruffle."

Boswell, Life of Johnson (Apr. 14, 1775)

82 Mathematical science affords us a brilliant example, how far, independently of all experience, we may carry our *a priori* knowledge. It is true that the mathematician occupies himself with objects and cognitions only in so far as they can be represented by means of intuition. But this circumstance is easily overlooked, because the said intuition can itself be given *a priori*, and therefore is hardly to be distinguished from a mere pure conception. Deceived by such a proof of the power of reason, we can perceive no limits to the extension of our knowledge. The light dove cleaving in free flight the thin air, whose resistance it feels, might imagine that her movements would be far more free and rapid in airless space. Just in the same way did Plato, abandoning the world of sense because of the narrow limits it sets to the understanding, venture upon the wings of ideas beyond it, into the void space of pure intellect. He did not reflect that he made no real progress by all his efforts; for he met with no resistance which might serve him for a support, as it were, whereon to rest, and on which he might apply his powers, in order to let the intellect acquire momentum for its progress. It is, indeed, the common fate of human reason in speculation, to finish the imposing edifice of thought as rapidly as possible, and then for the first time to begin to examine whether the foundation is a solid one or no. Arrived at this point, all sorts of excuses are sought after, in order to console us for its want of stability, or rather, indeed, to enable us to dispense altogether with so late and dangerous an investigation.

Kant, Critique of Pure Reason, Introduction, III

83 All our knowledge begins with sense, proceeds thence to understanding, and ends with reason, beyond which nothing higher can be discovered in the human mind for elaborating the matter of intuition and subjecting it to the highest unity of thought.

Kant, Critique of Pure Reason, Transcendental Dialectic

84 It is a maxim universally admitted in geometry, and indeed in every branch of knowledge, that, in the progress of investigation, we should proceed from known facts to what is unknown. In early infancy, our ideas spring from our wants; the sensation of want excites the idea of the object by which it is to be gratified. In this manner, from a series of sensations, observations, and analyses, a successive train of ideas arises, so linked together that an attentive observer may trace back to a certain point the order and connection of the whole sum of human knowledge.

Lavoisier, Elements of Chemistry, Pref.

85 *Faust*. I've studied now Philosophy
And Jurisprudence, Medicine,
And even, alas! Theology
All through and through with ardour keen!
Here now I stand, poor fool, and see
I'm just as wise as formerly.
Am called a Master, even Doctor too,
And now I've nearly ten years through
Pulled my students by their noses to and fro
And up and down, across, about,
And see there's nothing we can know!
That all but burns my heart right out.

Goethe, Faust, I, 354

86 *Wagner*. But, ah, the world! the mind and heart of men!
Of these we each would fain know something just the
same.

Faust. Yes, "know"! Men call it so, but then
Who dares to call the child by its right name?
The few who have some part of it descried,
Yet fools enough to guard not their full hearts, revealing
To riffraff both their insight and their feeling,
Men have of old burned at the stake and crucified.

Goethe, Faust, I, 586

87 *1st Destiny*. Knowledge is not happiness, and science
But an exchange of ignorance for that
Which is another kind of ignorance.

Byron, Manfred, II, iv, 431

88 It is... the wish for rational insight, not the ambition to
amass a mere heap of acquirements, that should be
presupposed in every case as possessing the mind of the
learner in the study of science.

Hegel, Philosophy of History, Introduction, 3

89 Knowledge is the knowing that we can not know.

Emerson, Montaigne; or, The Skeptic

90 Knowledge comes, but wisdom lingers,

Tennyson, Locksley Hall, 141

91 Who loves not Knowledge? Who shall rail
Against her beauty? May she mix

With men and prosper! Who shall fix
Her pillars? Let her work prevail.

Tennyson, In Memoriam, CXIV

92 What is most of our boasted so-called knowledge but a conceit that we know something, which robs us of the advantage of our actual ignorance?

Thoreau, Walking

93 In science, as in life, learning and knowledge are distinct, and the study of things, and not of books, is the source of the latter.

T. H. Huxley, A Lobster, or The Study of Zoology

94 The nature of our mind leads us to seek the essence or the why of things. Thus we aim beyond the goal that it is given us to reach; for experience soon teaches us that we cannot get beyond the how, i.e., beyond the immediate cause or the necessary conditions of phenomena.

Claude Bernard, Experimental Medicine, II, 1

95 The nature or very essence of phenomena, whether vital or mineral, will always remain unknown. The essence of the simplest mineral phenomenon is as completely unknown to chemists and physicists to-day as is the essence of intellectual phenomena or of any other vital phenomenon to physiologists. That, moreover, is easy to apprehend; knowledge of the inmost nature or the absolute, in the simplest phenomenon, would demand knowledge of the whole universe; for every phenomenon of the universe is evidently a sort of radiation from that universe to whose harmony it contributes. In living bodies

absolute truth would be still harder to attain; because, besides implying knowledge of the universe outside a living body, it would also demand complete knowledge of the Organism which, as we have long been saying, is a little world (microcosm) in the great universe (macrocosm). Absolute knowledge could, therefore, leave nothing outside itself; and only on condition of knowing everything could man be granted its attainment. Man behaves as if he were destined to reach this absolute knowledge; and the incessant why which he puts to nature proves it. Indeed, this hope, constantly disappointed, constantly reborn, sustains and always will sustain successive generations in the passionate search for truth.

Claude Bernard, Experimental Medicine, II, 1

- 96 The communication of knowledge certainly is either a condition or the means of that sense of enlargement or enlightenment, of which at this day we hear so much in certain quarters: this cannot be denied; but next, it is equally plain, that such communication is not the whole of the process. The enlargement consists, not merely in the passive reception into the mind of a number of ideas hitherto unknown to it, but in the mind's energetic and simultaneous action upon and towards and among those new ideas, which are rushing in upon it. It is the action of a formative power, reducing to order and meaning the matter of our acquirements; it is a making the objects of our knowledge subjectively our own, or, to use a familiar word, it is a digestion of what we receive, into the substance of our previous state of thought; and without this no enlargement is said to follow. There is no enlargement, unless there be a comparison of ideas one

with another, as they come before the mind, and a systematizing of them. We feel our minds to be growing and expanding then, when we not only learn, but refer what we learn to what we know already. It is not the mere addition to our knowledge that is the illumination; but the locomotion, the movement onwards, of that mental centre, to which both what we know, and what we are learning, the accumulating mass of our acquirements, gravitates. And therefore a truly great intellect, and recognized to be such by the common opinion of mankind, such as the intellect of Aristotle, or of St. Thomas, or of Newton, or of Goethe (I purposely take instances within and without the Catholic pale, when I would speak of the intellect as such), is one which takes a connected view of old and new, past and present, far and near, and which has an insight into the influence of all these one on another; without which there is no whole, and no centre. It possesses the knowledge, not only of things, but also of their mutual and true relations; knowledge, not merely considered as acquirement, but as philosophy.

Newman, Idea of a University, Discourse VI

- 97 It is as easy by taking thought to add a cubit to one's stature, as it is to produce an idea acceptable to any of the Muses by merely straining for it, before it is ready to come. We haunt in vain the sacred well and throne of Mnemosyne; the deeper workings of the spirit take place in their own slow way, without our connivance. Let but their bugle sound, and we may then make our effort, sure of an oblation for the altar of whatsoever divinity its savor gratifies. Beside this inward process, there is the operation of the environment, which goes to break up

habits destined to be broken up and so to render the mind lively. Everybody knows that the long continuance of a routine of habit make us lethargic, while a succession of surprises wonderfully brightens the ideas. Where there is a motion, where history is a-making, there is the focus of mental activity, and it has been said that the arts and sciences reside within the temple of Janus, waking when that is open, but slumbering when it is closed.

C. S. Peirce, Evolutionary Love

98 Better know nothing than half-know many things!

Nietzsche, Thus Spake Zarathustra, IV, 64

99 *The psychologist's attitude towards cognition ... is a thorough-going dualism.* It supposes two elements, mind knowing and thing known, and treats them as irreducible. Neither gets out of itself or into the other, neither in any way is the other, neither makes the other. They just stand face to face in a common world, and one simply knows, or is known unto, its counterpart. This singular relation is not to be expressed in any lower terms, or translated into any more intelligible name. Some sort of signal must be given by the thing to the mind's brain, or the knowing will not occur—we find as a matter of fact that the mere existence of a thing outside the brain is not a sufficient cause for our knowing it; it must strike the brain in some way, as well as be there, to be known. But the brain being struck, the knowledge is constituted by a new construction that occurs altogether in the mind. The thing remains the same whether known or not. And when once there, the knowledge may remain there, whatever becomes of the thing.

William James, Psychology, VIII

100 There are two kinds of *knowledge* broadly and practically distinguishable; we may call them respectively *knowledge of acquaintance* and *knowledge-about*. ... I am acquainted with many people and things, which I know very little about, except their presence in the places where I have met them. I know the color blue when I see it, and the flavor of a pear when I taste it! I know an inch when I move my finger through it; a second of time, when I feel it pass; an effort of attention when I make it; a difference between two things when I notice it; but *about* the inner nature of these facts or what makes them what they are, I can say nothing at all. I cannot impart acquaintance with them to any one who has not already made it himself. I cannot *describe* them, make a blind man guess what blue is like, define to a child a syllogism, or tell a philosopher in just what respect distance is just what it is, and differs from other forms of relation. At most, I can say to my friends, Go to certain places and act in certain ways, and these objects will probably come. All the elementary natures of the world, its highest genera, the simple qualities of matter and mind, together with the kinds of relation that subsist between them, must either not be known at all, or known in this dumb way of acquaintance without *knowledge-about*. In minds able to speak at all there is, it is true, *some* knowledge about everything. Things can at least be classed, and the times of their appearance told. But in general, the less we analyze a thing, and the fewer of its relations we perceive, the less we know about it and the more our familiarity with it is of the acquaintance-type. The two kinds of knowledge are, therefore, as the human

mind practically exerts them, relative terms. That is, the same thought of a thing may be called knowledge-about it in comparison with a simpler thought, or acquaintance with it in comparison with a thought of it that is more articulate and explicit still.

The grammatical sentence expresses this. Its "subject" stands for an object of acquaintance which, by the addition of the predicate, is to get something known about it. We may already know a good deal, when we hear the subject named—its name may have rich connotations. But, know we much or little then, we know more still when the sentence is done. We can relapse at will into a mere condition of acquaintance with an object by scattering our attention and staring at it in a vacuous trance-like way. we can ascend to knowledge about it by rallying our wits and proceeding to notice and analyze and think. What we are only acquainted with is only present to our minds; we have it, or the idea of it. But when we know about it, we do more than merely have it; we seem, as we think over its relations, to subject it to a sort of treatment and to operate upon it with our thought. The words feeling and thought give voice to the antithesis. Through feelings we become acquainted with things, but only by our thoughts do we know about them. Feelings are the germ and starting point of cognition, thoughts the developed tree. The minimum of grammatical subject, of objective presence, of reality known about, the mere beginning of knowledge, must be named by the word that says the least. Such a word is the interjection, as *lo! there! ecce! voila!* or the article or demonstrative pronoun introducing the sentence, as *the, it, that*.

William James, Psychology, VIII

101 Common sense appears ... as a perfectly definite stage in our understanding of things, a stage that satisfies in an extraordinarily successful way the purposes for which we think. 'Things' do exist, even when we do not see them. Their 'kinds' also exist. Their 'qualities' are what they act by, and are what we act on; and these also exist. These lamps shed their quality of light on every object in this room. we intercept it on its way whenever we hold up an opaque screen. It is the very sound that my lips emit that travels into your ears. It is the sensible heat of the fire that migrates into the water in which we boil an egg; and we can change the heat into coolness by dropping in a lump of ice. At this stage of philosophy all non-European men without exception have remained. It suffices for all the necessary practical ends of life; and, among our race even, it is only the highly sophisticated specimens, the minds debauched by learning, as Berkeley calls them, who have ever even suspected common sense of not being absolutely true.

But when we look back, and speculate as to how the common-sense categories may have achieved their wonderful supremacy, no reason appears why it may not have been by a process just like that by which the conceptions due to Democritus, Berkeley, or Darwin, achieved their similar triumphs in more recent times. In other words, they may have been successfully discovered by prehistoric geniuses whose names the night of antiquity has covered up; they may have been verified by the immediate facts of experience which they first fitted; and then from fact to fact and from man to man they may have spread, until all language rested on them and we

are now incapable of thinking naturally in any other terms. Such a view would only follow the rule that has proved elsewhere so fertile, of assuming the vast and remote to conform to the law's of formation that we can observe at work in the small and near.

William James, Pragmatism, V

102 I maintain that the notion of 'mere knowledge' is a high abstraction which we should dismiss from our minds. Knowledge is always accompanied with accessories of emotion and purpose. Also we must remember that there are grades in the generality of ideas. Thus a general idea occurs in history in special forms determined by peculiar circumstances of race and of stage of civilization. The higher generalities rarely receive any accurate verbal expression.

Whitehead, Adventures of Ideas, I, 1

103 It is unconsciously assumed, as a premiss for a *reductio ad absurdum* of the analytic view, that, if A and B are immediate data, and A differs from B, then the fact that they differ must also be an immediate datum. It is difficult to say how this assumption arose, but I think it is to be connected with the confusion between "acquaintance" and "knowledge about." Acquaintance, which is what we derive from sense, does not, theoretically at least, imply even the smallest "knowledge about," i.e. it does not imply knowledge of any proposition concerning the object with which we are acquainted. It is a mistake to speak as if acquaintance had degrees: there is merely acquaintance and non-acquaintance. When we speak of becoming "better

acquainted," as for instance with a person, what we must mean is, becoming acquainted with more parts of a certain whole; but the acquaintance with each part is either complete or non-existent. Thus it is a mistake to say that if we were perfectly acquainted with an object we should know all about it. "Knowledge about" is knowledge of propositions, which is not involved necessarily in acquaintance with the constituents of the propositions. To know that two shades of colour are different is knowledge about them; hence acquaintance with the two shades does not in any way necessitate the knowledge that they are different.

Russell, Theory of Continuity

104 From the point of view of knowledge, though not of logic, there is an important difference between positive and negative general propositions, namely that some general negative propositions seem to result from observation as directly as "This is not blue". ... In *Through the Looking Glass*, the king says to Alice, "Who do you see coming along the road?" and she replies, "I see nobody coming," to which the king retorts, "What good eyes you must have! It's as much as I can do to see somebody by this light." The point, for us, is that "I see nobody" is ⁷¹⁰/ equivalent to "I do not see somebody." The latter statement is true if my eyes are shut, and affords no evidence that there is not somebody; but when I say, "I see nobody," I mean, "I see, but I do not see somebody," which is prima-facie evidence that there is not somebody. Such negative judgments are just as important as positive judgments in building up our empirical knowledge.

Russell, Human Knowledge, II, 10

105 Are there general *facts*? We may restate this question in the following form: Suppose I knew the truth or falsehood of every sentence not containing the word "all" or the word "some" or an equivalent of either of these words; what, then, should I not know? Would what I should not know be only something about my knowledge and belief, or would it be something that involves no reference to knowledge or belief? I am supposing that I can say. "Brown is here," "Jones is here," "Robinson is here," but not "Some men are here," still less "Exactly three men are here" or "Every man here is called 'Brown' or 'Jones' or 'Robinson.'" And I am supposing that though I know the truth or falsehood of every sentence of a certain sort, I do not know that my knowledge has this completeness. If I knew my list to be complete I could infer that there are three men here, but, as it is, I do not know that there are no others.

Russell, Human Knowledge, II, 10

106 It is clear that knowledge is a sub-class of true beliefs: every ease of knowledge is a ease of true belief, but not vice versa. It is very easy to give examples of true beliefs that are not knowledge. There is the man who looks at a clock which is not going, though he thinks it is, and who happens to look at it at the moment when it is right; this man acquires a true belief as to the time of day, but cannot be said to have knowledge. There is the man who believes, truly, that the last name of the Prime Minister in 1906 began with a B, but who believes this because he thinks that Balfour was Prime Minister then, whereas in fact it was Campbell Bannerman. There is the lucky

optimist who, having bought a ticket for a lottery, has an unshakable conviction that he will win, and, being lucky, does win. Such instances can be multiplied indefinitely, and show that you cannot claim to have known merely because you turned out to be right.

What character in addition to truth must a belief have in order to count as knowledge? It is plain that a plain man would say there must be sound evidence to support the belief. As a matter of common sense this is right in most of the cases in which doubt arises in practice, but if intended as a complete account of the matter it is very inadequate. "Evidence" consists, on the one hand, of certain matters of fact that are accepted as indubitable, and, on the other hand, of certain principles by means of which inferences are drawn from the matters of fact. It is obvious that this process is unsatisfactory unless we know the matters of fact and the principles of inference not merely by means of evidence, for otherwise we become involved in a vicious circle or an endless regress. We must therefore concentrate our attention on the matters of fact and the principles of inference. We may then say that what is known consists, first, of certain matters of fact and certain principles of inference, neither of which stands in need of extraneous evidence, and secondly, of all that can be ascertained by applying the principles of inference to the matters of fact. Traditionally, the matters of fact are those given in perception and memory, while the principles of inference are those of deductive and inductive logic.

There are various unsatisfactory features in this traditional doctrine, though I am not at all sure that, in the end, we can substitute anything very much better.

Russell, Human Knowledge, II, 11

107 It is difficult to define knowledge, difficult to decide whether we have any knowledge, and difficult, even if it is conceded that we sometimes have knowledge, to discover whether we can ever know that we have knowledge in this or that particular case.

Russell, Analysis of Mind, XIII

108 Knowing always has a *particular* purpose, and its solution must be a function of its conditions in connection with *additional* ones which are brought to bear. Every reflective knowledge, in other words, has a specific task which is set by a concrete and empirical situation, so that it can perform that task only by detecting and remaining faithful to the conditions in the situation in which the difficulty arises, while its purpose is a reorganization of its factors in order to get unity.

So far, however, there is no accomplished knowledge, but only knowledge coming to be— learning, in the classic Greek conception. Thinking gets no farther, as *thinking*, than a statement of elements constituting the difficulty at hand and a statement—a propounding, a proposition--of a method for resolving them. In fixing the framework of every reflective situation, this state of affairs also determines the further step which is needed if there is to be knowledge—knowledge in the eulogistic sense, as distinct from opinion, dogma, and guesswork, or from what casually passes current as knowledge. Overt action is demanded if the worth or validity of the reflective considerations is to be determined. Otherwise, we have, at most, only a hypothesis that the conditions of the difficulty are such and such, and that the way to go at

them so as to get over or through them is thus and so. This way must be tried in action; it must be applied, physically, in the situation. By finding out what then happens, we test our intellectual findings—our logical terms or projected metes and bounds. If the required reorganization is effected, they are confirmed, and reflection (on that topic) ceases; if not, there is frustration, and inquiry continues. That all knowledge, as issuing from reflection, is experimental (in the literal physical sense of experimental) is then a constituent proposition of this doctrine.

Upon this view, thinking, or knowledge-getting, is far from being the armchair thing it is often supposed to be. The reason it is not an armchair thing is that it is not an event going on exclusively within the cortex or the vocal organs. It involves the explorations by which relevant data are procured and the physical analyses by which they are refined and made precise; it comprises the readings by which information is got hold of, the words which are experimented with, and the calculations by which the significance of entertained conceptions or hypotheses is elaborated. Hands and feet, apparatus and appliances of all kinds are as much a part of it as changes in the brain. Since these physical operations (including the cerebral events) and equipments are a part of thinking, thinking is mental, not because of a peculiar stuff which enters into it or of peculiar non-natural activities which constitute it, but because of what physical acts and appliances do: the distinctive purpose for which they are employed and the distinctive results which they accomplish.

Dewey, Essays in Experimental Logic, Introduction, 2

109 Let me... call attention to an ambiguity in the term "knowledge." The statement that all knowledge involves reflection—or, more concretely, that it denotes an inference from evidence—gives offense to many; it seems a departure from fact as well as a wilful limitation of the word "knowledge." I have... endeavored to mitigate the obnoxiousness of the doctrine by referring to "knowledge which is intellectual or logical in character." Lest this expression be regarded as a futile evasion of a real issue, I shall now be more explicit.

It may well be admitted that there is a real sense in which knowledge (as distinct from thinking or inquiring with a guess attached) does not come into existence till thinking has terminated in the experimental act which fulfils the specifications set forth in thinking. But what is also true is that the object thus determined is an object of knowledge only because of the thinking which has preceded it and to which it sets a happy term. To run against a hard and painful stone is not of itself, I should say, an act of knowing; but if running into a hard and painful thing is an outcome predicted after inspection of data and elaboration of a hypothesis, then the hardness and the painful bruise which define the thing as a stone also constitute it emphatically an object of knowledge. In short, the object of knowledge in the strict sense is its objective; and this objective is not constituted till it is reached. Now this conclusion—as the word denotes—is thinking brought to a close, done with. If the reader does not find this statement satisfactory, he may, pending further discussion, at least recognize that the doctrine set forth has no difficulty in connecting knowledge with inference, and at the same time admitting that knowledge in the emphatic sense does not exist till

inference has ceased. Seen from this point of view, so-called immediate knowledge or simple apprehension or acquaintance-knowledge represents a critical skill, a certainty of response which has accrued in consequence of reflection. A like sureness of footing apart from prior investigations and testings is found in instinct and habit. I do not deny that these may be better than knowing, but I see no reason for complicating an already too confused situation by giving them the name "knowledge" with its usual intellectual implications. From this point of view, the subject-matter of knowledge is precisely that which we do not think of, or mentally refer to in any way, being that which is taken as matter of course, but it is nevertheless knowledge in virtue of the inquiry which has led up to it.

Dewey, Essays in Experimental Logic, Intro., 2

- 110 Knowledge becomes relative, as soon as the intellect is made a kind of absolute.—We regard the human intellect, on the contrary, as relative to the needs of action. Postulate action, and the very form of the intellect can be deduced from it. This form is therefore neither irreducible nor inexplicable. And, precisely because it is not independent, knowledge cannot be said to depend on it: knowledge ceases to be a product of the intellect and becomes, in a certain sense, part and parcel of reality.

Bergson, Creative Evolution, II

- 111 In order to know an object, I must know not its external but all its internal qualities.

Wittgenstein, Tractatus Logico Philosophicus, 2.01231

112 Only if there are objects can there be a fixed form of the world.

The fixed, the existent and the object are one.

The object is the fixed, the existent; the configuration is the changing, the variable.

The configuration of the objects forms the atomic fact.

In the atomic fact objects hang one in another, like the members of a chain.

In the atomic fact the objects are combined in a definite way.

The way in which objects hang together in the atomic fact is the structure of the atomic fact.

The form is the possibility of the structure.

The structure of the fact consists of the structures of the atomic facts.

The totality of existent atomic facts is the world.

The totality of existent atomic facts also determines which atomic facts do not exist.

The existence and non-existence of atomic facts is the reality.

(The existence of atomic facts we also call a positive fact, their non-existence a negative fact.)

Atomic facts are independent of one another.

From the existence or non-existence of an atomic fact we cannot infer the existence or nonexistence of another.

The total reality is the world.

We make to ourselves pictures of facts.

The picture presents the facts in logical space, the existence and non-existence of atomic facts.

The picture is a model of reality.

To the objects correspond in the picture the elements of the picture.

The elements of the picture stand, in the picture, for the objects.

The picture consists in the fact that its elements are combined with one another in a definite way.

The picture is a fact.

That the elements of the picture are combined with one another in a definite way, represents that the things are so combined with one another.

This connexion of the elements of the picture is called its structure, and the possibility of this structure is called the form of representation of the picture.

The form of representation is the possibility that the things are combined with one another as are the elements of the picture.

Thus the picture is linked with reality; it reaches up to it.

It is like a scale applied to reality.

Wittgenstein, Tractatus Logico-Philosophicus, 2.026-2.1512

113 Knowledge is not eating, and we cannot expect to devour and possess *what we mean*. Knowledge is recognition of something absent; it is a salutation, not an embrace. It is an advance on sensation precisely because it is representative.

Santayana, Life of Reason, I, 3

114 Superstition, and sometimes philosophy, accepts imagination as a truer avenue to knowledge than is contact with things; but this is precisely what I endeavour to avoid by distinguishing matter, or the substance of dynamic things, from essence, or the direct datum,

sensuous or intelligible, or intuition. Intuition represents the free life of the mind, the poetry native to it, which I am far from despising; but this is the subjective or ideal element in thought which we must discount if we are anxious to possess true knowledge.

Santayana, Realms of Being, Intro.

115 The enormous infusion of error that sense, passion, and language bring with them into human knowledge is therefore less misleading than might be supposed. Knowledge is not truth, but a view or expression of the truth; a glimpse of it secured by some animal with special organs under special circumstances. A lover of paradox might say that to be partly wrong is a condition of being partly right; or more soberly, that to be partial is, for knowledge, a condition of existing at all. To be partial and also to be relative: so that all the sensuous colour and local perspective proper to human views, and all the moral bias pervading them, far from rendering knowledge impossible, supply instruments for exploration, divers sensitive centres and divers inks, whereby in divers ways the facts may be recorded.

Santayana, Realm of Truth, VII
